## LIST OF ACRONYMS

Acronym	Definition
AGV	Air Guidance Value
AOC	Area of Concern
AST	Aboveground Storage Tank
CAMP	Community Air Monitoring Plan
COC	Contaminant of Concern
CPP	Citizen Participation Plan
CSM	Conceptual Site Model
DER-10	New York State Department of Environmental Conservation Technical Guide 10
DRO	Diesel Range Organics
ESA	Environmental Site Assessment
FID	Flame Ionization Detector
GPS	Global Positioning System
GPR	Ground Penetrating Radar
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
IRM	Interim Remedial Measure
MTBE	Methyl Tert-Butyl Ether
NAPL	Non-aqueous Phase Liquid
NYC BCP	New York City Brownfield Cleanup Program
NYC DOB	New York City Department of Buildings
NYC DOHMH	New York City Department of Health and Mental Hygiene
NYC OER	New York City Office of Environmental Remediation
NYS DOH ELAP	New York State Department of Health Environmental Laboratory Accreditation Program
OSHA	Occupational Safety and Health Administration
PID	Photoionization Detector
QEP	Qualified Environmental Professional
RCRA	Resource Conservation and Recovery Act

REC	Recognized Environmental Condition
RI	Remedial Investigation
RIR	Remedial Investigation Report
SCO	Soil Cleanup Objective
SPEED	Searchable Property Environmental Electronic Database
SVOC	Semi-Volatile Organic Compound
TCLP	Toxicity Characteristic Leaching Procedure
TOV	Total Organic Vapors
TPH	Total Petroleum Hydrocarbons
UST	Underground Storage Tank
VOC	Volatile Organic Compound

## **CERTIFICATION**

I, Joel Landes, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Highline 131410 Site, (NYC BCP Site No. 12CBCP027M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

## **EXECUTIVE SUMMARY**

This Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

### **Site Location and Current Usage**

The Highline 131410 Site (hereafter referred to as the “Site”) is located at 42-46 10<sup>th</sup> Avenue and 449-451 West 13<sup>th</sup> Street in the Greenwich Village section of Manhattan, New York and is identified as Block 646, Lot 1 (Lots 1, 5, 6 7, 8, and 9) on the New York City Tax Map. The Site is a 23,500 square-foot “L”-shaped lot and is bounded by West 14<sup>th</sup> Street to the north, Washington Street to the east, West 13<sup>th</sup> Street to the south, and 10<sup>th</sup> Avenue to the west. A map of the Site location and Site boundary is shown on Figures 1 and 2, respectively.

The southern portion of the Site is improved with several interconnected 3-story buildings (referred to as the building) encompassing approximately 15,800 square feet. The northern portion of the Site is vacant and surrounded by wooden construction fencing with a locked gate on 10<sup>th</sup> Avenue. The three-story buildings that were previously located in the northern portion of the Site were destroyed by fire in approximately 2003. The elevated Highline Park runs northwest to southeast above the easternmost portion of the Site.

### **Summary of Proposed Redevelopment Plan**

Detailed construction plans for the Site have not been finalized, but the proposed development consists of a 13-story mixed-use retail and office building with a single cellar level. The first floor level will have a footprint of approximately 23,420 square feet with approximately 207 feet of frontage along Tenth Avenue and 153 feet of frontage along West 13<sup>th</sup> Street. The first floor building footprint will encompass the entire Site. The proposed cellar level will have a slightly smaller footprint of approximately 20,650 square feet; no cellar is proposed underneath the Highline in the eastern portion of the Site. Soil will be excavated to accommodate the proposed cellar and building foundation elements to about 15 feet below grade surface (bgs). The proposed elevator pits and sump pits excavations will extend to about 18 feet bgs. The

approximate soil volume that will be excavated during development of the Site is 11,500 cubic yards.

### **Summary of Past Uses of Site and Areas of Concern**

A September 2010 Phase I Environmental Site Assessment (ESA) for the Site reported that the Site was developed with several multi-story buildings and a lumber yard as early as 1895. The Site was redeveloped into a multi-building cold-storage facility in the early 1900s. Potential coal burning and coal storage associated with an independent electric power plant was partially located in the eastern portion of the Site from 1904 to 1921. On-site recognized environmental conditions (RECs) identified during the Phase I ESA included three aboveground fuel oil storage tanks (AST), a groundwater monitoring well located in the 14<sup>th</sup> Street sidewalk, historic industrial Site usage, and historic urban fill. Several off-site RECs, including a cross-gradient petroleum spill (Spill No. 09-11962), were also identified.

An RI was conducted to further investigate the RECs identified during the Phase I ESA and to identify features of environmental significance that define Areas of Concern (AOC). AOCs generally include areas where existing or former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal of hazardous materials. The AOCs identified for this Site include:

1. Historic urban fill with concentrations of metals above New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs); and
2. Off-site historic petroleum release (NYSDEC Spill No. 10-09353) identified beneath the sidewalk along 10<sup>th</sup> Avenue adjacent to the Site. Petroleum-related VOCs were detected at concentrations that marginally exceed their Class GA standards in groundwater sampled near NYSDEC Spill No. 10-09353.

### **Summary of the Work Performed under the Remedial Investigation**

RI activities included the following:

1. Geophysical survey;

2. Advancement of 17 soil boring and the collection of 17 grab soil samples and one composite soil sample for laboratory analyses;
3. Installation of three permanent monitoring wells and seven temporary monitoring wells, and the collection of 12 groundwater samples for laboratory analyses;
4. Installation of three sub-surface soil vapor points and the collection of three sub-surface soil vapor samples for laboratory analyses;
5. Collection of two liquid samples from on-site 55-gallon drums for laboratory analyses;
6. Collection of two liquid samples from historic refrigerant piping for laboratory analyses;  
and
7. Review of historical data pertaining to cross-gradient NYSDEC Spill No. 09-11962.

#### **Summary of Environmental Findings**

1. Groundwater depth at the Site ranges from 10 to 12 feet bgs and flows southwest toward the Hudson River;
2. The Site is underlain by urban fill consisting of fine to coarse gravel with some concrete, brick, construction debris and some fine to coarse sand. The fill layer generally extends to approximately 12 feet bgs and is underlain by successive strata of organic soil, gravel, sand, silt, and sand overlying bedrock. Based on the findings of a geotechnical investigation conducted by Langan in 2010, depth to bedrock at the Site is approximately 66 to 80 feet bgs;
3. Five metals (arsenic, copper, lead, nickel, and zinc) were detected in several soil samples above NYSDEC Part 375 Unrestricted Use SCOs. One sample marginally exceeds Track 2 Restricted Commercial SCOs for arsenic. A variety of SVOCs were identified in soil samples but none exceeded Track 1 Unrestricted SCOs. These SVOCs were primarily PAH compounds. The occurrence of metals and SVOCs is consistent with findings of urban fill beneath the property. PCBs did not exceed Track 1 Unrestricted SCOs in any soil samples. No VOCs were identified in soil samples above Track 1 Unrestricted SCOs except acetone which was found in most soil samples and total xylenes (on the west side of the site near the off-site USTs). No VOC exceeded Track 2 Restricted Commercial

SCOs in any soil sample. Methylene chloride was also found in soil samples below Track 1 SCOs. Acetone and methylene chloride are commonly used in chemical labs to extract samples and both parameters were identified in lab blanks. Their occurrence is attributed to lab impacts and not to site contamination. Low levels of individual xylenes and ethylbenzene were detected in several samples but below Track 1 SCOs. Chlorinated hydrocarbons PCE and TCE were not identified in soil samples.

4. Groundwater samples contained concentrations of several parameters above Part 703.5 Class GA groundwater quality standards (GQS). Metals mercury and selenium were marginally above GQS in one and two samples, respectively. Elevated sodium concentrations suggest low level saline intrusion effects or influence of road salt application. Total PCB Aroclors exceed GQS in one of 12 groundwater samples and is not detected in all others. BTEX and associated petroleum compounds were identified in groundwater samples in the vicinity of an off-site petroleum spill on the west side of the property. Exceedances of GQS were limited to benzene and toluene which marginally exceeded GQS in one of twelve groundwater samples, and chloroform in three samples. Chloroform was identified in three wells on the northern, cross-gradient perimeter of the property. Runoff from an up-gradient, off-site car wash in this area may be the source of chloroform in groundwater. PCE and TCE were not detected in groundwater samples. One SVOC (naphthalene) was identified above GQS in one sample in the vicinity of the off-site sidewalk petroleum spill.
5. The geophysical survey revealed evidence of two underground storage tanks (UST) off-site beneath the sidewalk along 10<sup>th</sup> Avenue, adjacent to the Site;
6. An off-site historic petroleum release was identified in the vicinity of the USTs along 10<sup>th</sup> Avenue and NYSDEC Spill No. 10-09353 was assigned. Approximately 125 cubic yards of petroleum-impacted soil associated with the spill was identified over an approximate area of 600 square feet. Petroleum impacts extend to the west to 10<sup>th</sup> Avenue; the western extent of the off-site spill was not determined; and
7. Soil vapor samples showed a variety of BTEX and associated VOCs at relatively low concentrations. PCE was identified at low concentration (below 3 µg/m<sup>3</sup>) in one of three soil vapor samples. TCE and other chlorinated hydrocarbons were not detected.

# REMEDIAL INVESTIGATION REPORT

## 1.0 SITE BACKGROUND

William Gottlieb Real Estate/Tenth Avenue, LLC has applied to be enrolled in the New York City Brownfield Cleanup Program (NYC BCP) to investigate and remediate the 23,500-square foot Highline 131410 site located at 42-46 10<sup>th</sup> Avenue and 449-451 West 13<sup>th</sup> Street in the Greenwich Village section of Manhattan, New York (the “Site”). Mixed commercial and residential use is proposed for the Site.

The Remedial Investigation (RI) work was performed between November 22, 2010 and December 27, 2010. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### 1.1 SITE LOCATION AND CURRENT USAGE

The Site is located at 42-46 10<sup>th</sup> Avenue and 449-451 West 13<sup>th</sup> Street in the Greenwich Village section of Manhattan, New York and is identified as Block 646, Lot 1 (Lots 1, 5, 6 7, 8, and 9) on the New York City Tax Map. The Site is a 23,500 square-foot “L”-shaped lot and is bounded by West 14<sup>th</sup> Street to the north, Washington Street to the east, West 13<sup>th</sup> Street to the south, and 10<sup>th</sup> Avenue to the west. A map of the Site location and Site boundary is shown on Figures 1 and 2, respectively.

The southern portion of the Site is improved with several interconnected 3-story buildings (referred to as the building) encompassing approximately 15,800 square feet. The northern portion of the Site is vacant and surrounded by wooden construction fencing with a locked gate on 10<sup>th</sup> Avenue. The three-story buildings that were previously located in the northern portion of the Site were destroyed by fire in approximately 2003. The elevated Highline Park runs northwest to southeast above the easternmost portion of the Site.

## **1.2 PROPOSED REDEVELOPMENT PLAN**

Detailed construction plans for the Site have not been finalized, but the proposed development consists of a 13-story mixed-use retail and office building with a single cellar level. The first floor level will have a footprint of approximately 23,420 square feet with approximately 207 feet of frontage along Tenth Avenue and 153 feet of frontage along West 13<sup>th</sup> Street. The first floor building footprint will encompass the entire Site. The proposed cellar level will have a slightly smaller footprint of approximately 20,650 square feet; no cellar is proposed underneath the Highline in the eastern portion of the Site. Soil will be excavated to accommodate the proposed cellar and building foundation elements to about 15 feet below grade surface (bgs). The proposed elevator pits and sump pits excavations will extend to about 18 feet bgs. The approximate soil volume that will be excavated during development of the Site is 11,500 cubic yards.

## **1.3 DESCRIPTION OF SURROUNDING PROPERTY**

The surrounding area is zoned for commercial, industrial, and manufacturing uses and is comprised primarily of multi-story commercial and residential buildings with ground-level retail space and restaurants. Adjacent property usage includes a gasoline filling station to the north, a multi-story building under construction, an abandoned commercial building with two roll-up garage doors, and Highline Park to the east, a multi-story hotel to the south, and a 3-story hotel and a river front park to the west.

According to the New York City Office of Environmental Remediation (NYC OER) Searchable Property Environmental Database (SPEED), no day-care facilities, schools, or hospitals are located within 500 feet of the Site. The elevated Highline Park is located above the eastern portion of the Site. The Hudson River is located approximately 250 feet west of the Site.

## **2.0 SITE HISTORY**

### **2.1 PAST USES AND OWNERSHIP**

A review of historic Viele maps indicates that the Hudson River originally extended approximately 200 feet east of 10<sup>th</sup> Avenue at 13<sup>th</sup> Street, indicating that most of the Site consists of made land, filled in for development purposes in the late 1800s. The Site was developed with several multi-story buildings and a lumber yard as early as 1895. The Site was redeveloped into a multi-building cold-storage facility in the early 1900s. Potential coal burning and coal storage associated with an independent electric plant was partially located in northeast corner of Lot 1 from 1904 to 1921.

### **2.2 PREVIOUS INVESTIGATIONS**

Phase I ESA, Langan Engineering & Environmental Services, September 2010

The Phase I Environmental Site Assessment (ESA) identified the following on-site recognized environmental conditions (RECs):

#### *REC 1 – Petroleum or Chemical Bulk Storage*

During the Site reconnaissance, three above ground storage tanks (ASTs) were observed in the eastern end of the basement. Two ASTs, each with an approximate capacity of 10,000 gallons, were observed within a concrete vault. An approximately 750-gallon AST was observed immediately south of the AST vault. Contents of the ASTs were not confirmed; however, it is believed that they stored fuel oil for low-pressure boilers that were identified in New York City Department of Building (NYCDOB) records.

#### *REC 2 – Monitoring Well*

A monitoring well was observed on the 14<sup>th</sup> Street sidewalk near the northern Site property line and three apparent abandoned boreholes were observed along the 10<sup>th</sup> Avenue sidewalk at the western extent of the Site.

### *REC 3 – Historic Site Usage*

An independent electric plant was located in the center of the block in 1904. The southern portion of this facility extended onto the Site. Potential coal burning and storage associated with this plant may have impacted soil and groundwater at the Site. In addition, Central Tool and Machine Co. were identified at 48 10<sup>th</sup> Avenue in 1973.

### *REC 4 – Historic Fill*

A review of historic Viele maps indicates that the Hudson River originally extended approximately 200 feet east of 10<sup>th</sup> Avenue at 13th Street, indicating that most of the Site consists of made land filled in for development purposes in the late 1800s. Historic urban fill typically consists of ash, demolition debris, and municipal waste products; it may contain several types of contamination at concentrations above current regulatory levels, including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals.

The following off-site RECs were identified at surrounding Properties:

#### *REC 1 - Open Spill Incident at a Mobil Gasoline Station at 461-469 West 14<sup>th</sup> Street*

New York State Department of Environmental Conservation (NYSDEC) Spill No. 09-11962 was opened in February 11, 2010 and addresses several outstanding issues associated with historic spills at the gas station. Benzene, toluene, ethylbenzene, xylene (BTEX), and methyl-tert butyl ether (MTBE) remain in soil and groundwater at concentrations significantly greater than applicable New York State Standards.

#### *REC 2 - Historic Use of Surrounding Properties*

The following historical uses of surrounding properties were also identified: a gasoline filling station was located at 501 West 14<sup>th</sup> Street, approximately 150 feet north, northwest (cross-gradient) of the Site, from 1969-1996; unspecified manufacturing activities were documented at 445 West 14<sup>th</sup> Street, approximately 200 feet northeast (up-gradient) of the Site, between 1969 and 2005; and a paint shop was located at 456 West 14<sup>th</sup> Street in 1895, which was up-gradient and adjoined the northern portion of the Site to the east.

An electronic copy of the Phase I ESA report is presented as Appendix A.

### **2.3 AREAS OF CONCERN**

An RI was performed to investigate the RECs identified during the Phase I ESA and to identify features of environmental significance that define Areas of Concern (AOC). AOCs generally include areas where existing or former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal of hazardous materials. Sanborn Fire Insurance maps available for this Site were reviewed to identify historical features of environmental significance.

The AOCs identified for this site include:

1. Historic urban fill, with concentrations of metals above NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (SCO); and
2. Off-site historic petroleum release (NYSDEC Spill No. 10-09353) identified beneath
3. The sidewalk along 10<sup>th</sup> Avenue adjacent to the Site. Petroleum-related VOCs were detected at concentrations that marginally exceed their NYSDEC Ambient Water Quality Standards and Guidance Values (AWQS/GV) in groundwater sampled near NYSDEC Spill No. 10-09353.

### **3.0 PROJECT MANAGEMENT**

#### **3.1 PROJECT ORGANIZATION**

The Professional Engineer (P.E.) and Qualified Environmental Professional (QEP) responsible for the preparation of this RIR are Joel Landes and Michael Burke, respectively.

#### **3.2 HEALTH AND SAFETY**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

#### **3.3 MATERIALS MANAGEMENT**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

#### **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

Langan conducted the RI work between November 22, 2010 and December 27, 2010 to characterize soil, groundwater, and soil vapor conditions at the Site and investigate potential impacts from recognized environmental conditions (RECs) identified in Langan's Phase I ESA, dated September 2010.

Activities conducted included:

1. Geophysical survey;
2. Advancement of 17 soil boring and the collection of 17 grab soil samples and one composite soil sample for laboratory analyses;
3. Installation of three permanent monitoring wells and seven temporary monitoring wells, and the collection of 12 groundwater samples for laboratory analyses (3 observation wells installed during a geotechnical investigation were also sampled);
4. Installation of three sub-surface soil vapor points and the collection of three sub-surface soil vapor samples for laboratory analyses;
5. Collection of two liquid samples from on-site 55-gallon drums for laboratory analyses;
6. Collection of two liquid samples from historic refrigerant piping for laboratory analyses; and
7. Review of historical data pertaining to cross-gradient NYSDEC Spill No. 09-11962.

The RI was conducted in general accordance with the Phase II ESI Work Plan, included as Appendix B, with the following exceptions:

1. Three additional borings were advanced to investigate two geophysical anomalies indicative of underground storage tanks (UST) identified near the southwest corner of the Site;
2. Two offset borings, and one temporary monitoring well, were advanced to delineate the extent of off-site petroleum impacts identified near borings SB-14 and SB-15;
3. One composite and one grab soil sample were collected for waste characterization purposes from the delineation borings;

4. Three permanent monitoring wells were installed near the northern property line to investigate potential petroleum impacts associated with NYSDEC Spill No. 09-11962 at the adjoining off-site property to the north;
5. Two samples were collected from historic refrigerant pipes that remain in the building to characterize the unidentified liquid;
6. Additional lead analysis was performed via TCLP on soil samples collected from borings SB-2 and SB-5; and
7. Proposed sub-slab vapor points were not installed in the basement of the existing building because the basement slab elevation was in groundwater.

The following is a detailed summary of the environmental investigation activities. A map showing soil boring, groundwater monitoring well, and soil vapor locations is provided as Figure 2.

#### **4.1 GEOPHYSICAL INVESTIGATION**

Before any subsurface sampling was conducted, NOVA Geophysical Services (NOVA) of Douglaston, New York, conducted a geophysical survey at the Site on November 22, 2010 and November 23, 2010. A Langan field engineer supervised NOVA during the Survey. Due to existing mechanical equipment and standing water, the geophysical survey was primarily limited to locating buried utilities in the basement of the existing building. A more thorough survey was conducted in the vacant (northern) portion of the Site and in the southwestern portion of the Site (along 10<sup>th</sup> Avenue) to investigate potential UST locations and to trace the location and alignment of sub-surface stormwater drains. Accessible portions of the Site and proposed soil boring locations were first screened using the Geonics<sup>(tm)</sup> electromagnetic detector by carrying the instrument over the boring locations in 5 foot x 5 foot traverses. When geophysical anomalies indicative of utilities or USTs were identified, a Ditch-witch<sup>(tm)</sup> utility locator was used to determine if the anomalies were utilities or other large sub-surface metal objects. GPR profiles were then collected over each metal-detector anomaly and inspected for reflections, which could be indicative of USTs. Soil borings were placed upon completion of the geophysical survey to avoid subsurface structures or utilities and to obtain sub-surface information adjacent to potential USTs. A copy of the geophysical report is included in Appendix C.

## **4.2 SOIL INVESTIGATION**

Langan retained Craig Geotechnical Testing Company, Inc. (Craig Test) of Mays Landing, New Jersey to complete the RI borings. The soil investigation included 17 environmental soil borings (SB-1 through SB-17). Borings were advanced to depths of up to 12 feet bgs using a Geoprobe<sup>®</sup> 7720 track-mounted direct-push rig. Due to spatial and access limitations, borings SB-7 through SB-11 were advanced using a hand-held direct-push sampler. A Langan field engineer supervised Craig Test during drilling. Soil boring locations are presented on Figure 3.

Soil samples were collected continuously to the completion depth of each boring in 4-foot Macrocore<sup>®</sup> sample barrels with dedicated acetate liners. Soil samples were inspected for visual and olfactory evidence of contamination and screened for total organic vapors (TOVs) with a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Field observations were documented in the field in boring logs by the supervising Langan engineer and are included in Appendix D.

## **4.3 GROUNDWATER INVESTIGATION**

Seven of the 17 soil borings were converted into temporary groundwater monitoring wells (TMW4 through TMW10) and three were converted into permanent wells (TMW1 through TMW3). Temporary wells were constructed with a 10-foot length of 0.01-inch slotted, 1-inch diameter, Schedule 40 polyvinyl chloride (PVC) screen and attached risers. Permanent groundwater monitoring wells were constructed with a 10-foot length of 0.01-inch slotted, 1-inch diameter, Schedule 40 PVC screen. Clean sand (Morie #2) was used to fill the annulus around the well screen to a height of approximately two feet above the top of the screened interval. A two-foot layer of hydrated bentonite clay was placed above the sand pack to seal the well. The remainder of the annular space was filled with a cement-bentonite grout to just below grade. Well construction was completed with a 4-foot, protective steel standpipe cover.

Following installation and development, each well was sampled using a peristaltic pump. Prior to sample collection, a minimum of three well volumes was purged from each well and groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential) had stabilized with turbidity measurements below 50 Nephelometric Turbidity Units (NTU) or after a period of 45 minutes had passed, whichever

occurred first. Groundwater monitoring well locations are presented on Figure 4. Groundwater sampling logs are included as Appendix E.

#### **4.4 SOIL VAPOR INVESTIGATION**

Three sub-surface soil vapor samples (SV1 through SV3) were collected by advancing an expendable steel point and post-run-tubing (PRT) system to the depth just above the capillary fringe (approximately 9.5 feet bgs) with the Geoprobe<sup>®</sup> rig. An expendable steel point was placed in a holder attached to a 4-foot drive rod. The drive rod was installed by Craig Test to 10 feet bgs and then retracted approximately 6-inches to create a void beneath the drive rods and the soil. Prior to sample collection, each sub-surface vapor point was purged using a PID at a rate of 0.5 liters per minute (L/min) to evacuate a minimum of three sample tubing volumes. As a quality assurance/quality control (QA/QC) measure, an inert tracer gas (helium) was introduced into an above-grade sampling chamber to ensure that the soil vapor sampling points were properly sealed above the target sampling depth, thereby preventing sub-surface infiltration of ambient air. Proposed sub-slab vapor points were not installed in the basement of the existing building because the basement elevation was about the same as groundwater.

#### **4.5 DRUM INVESTIGATION**

Two partially filled, unlabeled 55-gallon drums were identified in the basement of the existing building and sampled during this RI. Prior to sample collection, the Langan engineer inspected the condition of the drums for indications of leaks and/or spills or other signs of deterioration (i.e., rust, pitting, etc.). Langan screened the opening and surrounding areas for TOVs using a PID; VOCs were not detected. The liquid in each drum was sampled using a peristaltic pump and dedicated polyethylene tubing.

#### **4.6 REFRIGERATOR PIPE INVESTIGATION**

The mounted piping that remained in the basement and second floor cold storage rooms of the existing building were also investigated during this RI. The objective of this phase of the investigation was to characterize any residual liquid that remained in the pipes and to determine whether any special disposal requirements are necessary while handling this material. Residual liquid was only identified in mounted piping in the basement; pipes located in the second floor cold storage room did not contain fluid. Sections of the mounted piping were opened using hand

tools and a Sawzall<sup>®</sup>, and screened for TOVs using a PID. The piping was sealed immediately after samples were collected.

#### **4.7 HISTORICAL DATA REVIEW**

As part of this RI, a Freedom of Information Act (FOIA) request was submitted to the NYSDEC for any available information pertaining to NYSDEC Spill No. 09-11962 at the adjoining property to the north of the Site (i.e., Chelsea Car Wash) at 58-76 10th Avenue/461-469 West 14th Street. The NYSDEC's FOIA response included two Phase II Subsurface Investigation Reports, including the Limited Phase II Subsurface Investigation, prepared by Property Solutions Inc. and dated August 2008 and the Limited Subsurface Investigation Report, prepared by Environmental Maintenance Contractors, Inc. and dated May 2010. Each report was reviewed and the data was evaluated to determine the potential for the spill at the adjoining property to impact groundwater at the Site.

## **5.0 SAMPLE COLLECTION AND CHEMICAL ANALYSIS**

Sampling performed as part of the field investigation was conducted for all AOCs and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators, where applicable. Media including soil, groundwater, and soil vapor were sampled and evaluated during the RI. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

### **5.1 SOIL SAMPLING METHODOLOGY AND LABORATORY ANALYSES**

A total of 17 grab soil samples and one composite soil sample were collected from the 17 soil borings advanced on the Site and submitted for laboratory analyses. Grab soil samples were collected from borings SB-1 and SB-4 at two distinct depth intervals; 6 to 8 feet bgs and 10 to 12 feet bgs. One grab soil sample was collected from each of the remaining borings. With the exception of petroleum impacts identified near the southwest corner of the Site, field evidence of a chemical or petroleum release was not evident. Therefore, soil samples were collected from varying intervals within the historic fill for laboratory analyses.

Borings SB-13 through SB-17 were added to the scope of work to investigate off-site petroleum-impacted soil and geophysical anomalies indicative of two off-site USTs in the sidewalk near the southwest corner of the Site beneath the sidewalk along 10<sup>th</sup> Avenue. Three soil samples were collected from borings SB-13, SB-14 and SB-17 at the interval just below apparent petroleum impacts to confirm the vertical extent of the release. In addition, one composite soil sample was collected from petroleum-impacted soil in borings SB-14, SB-15, and SB-16 to characterize soil for disposal purposes.

Soil samples were collected into laboratory-supplied containers and were delivered via courier under standard chain-of-custody protocol to York Analytical Laboratories, Inc (York), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory in Stratford, Connecticut. Grab soil samples were analyzed

for Target Compound List (TCL) VOCs by Environmental Protection Agency (EPA) Method 8260, TCL SVOCs by EPA Method 8270, Target Analyte List (TAL) metals by EPA Methods 6010B/7471A, and polychlorinated biphenyls (PCBs) by EPA Method 8082. Based on the total lead concentration in sample SB-2 (10-12') and SB-5 (10-12'), additional lead analysis was performed via the Toxicity Characteristic Leaching Procedure (TCLP) to determine whether this soil will be considered a Resource Conservation and Recovery Act (RCRA) characteristic hazardous waste upon excavation.

Composite soil sample SB-14/15/16 was collected from petroleum-impacted soil around SB-14, SB-15 and SB-16 for waste characterization purposes. The composite waste characterization sample was analyzed for TCL SVOCs, RCRA metals, PCBs, pesticides, and herbicides. In addition, one grab soil sample (SB-14) was analyzed for total petroleum hydrocarbons (TPH) diesel range organics (DRO) via EPA Method 8100M and petroleum identification via EPA Method 8015B. Soil sample analytical methods and comparison criteria are summarized in the following table:

<b>Factor</b>	<b>Description</b>
Laboratory Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> <li>• VOCs by EPA Method 8260B</li> <li>• SVOCs by EPA Method 8270C</li> <li>• PCBs by EPA Method 8082A</li> <li>• TPH DRO by EPA Method 8100M</li> <li>• Petroleum ID by EPA Method 8015B</li> <li>• TAL Metals by EPA Method 6020/7000 series</li> <li>• RCRA 8 Metals by EPA Method 6010/7000 series</li> <li>• Lead via TCLP</li> </ul>

<b>Factor</b>	<b>Description</b>
Standards, Criterion and Guidance	Soil samples were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR), Part 375 Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs) and Track 2 Restricted Commercial SCOs.

## 5.2 GROUNDWATER SAMPLING METHODOLOGY AND LABORATORY ANALYSES

Twelve groundwater samples were collected from temporary monitoring wells TMW-4 through TMW-9, permanent monitoring wells TMW-1 through TMW-3, and from existing monitoring wells B2-OW, B3-OW, and B7-OW, and submitted for laboratory analyses. Existing wells B2-OW, B3-OW and B7-OW were installed by Langan during a previous geotechnical investigation. Groundwater was not collected from off-site temporary monitoring well TMW-10 in the vicinity of the USTs in the sidewalk due to the presence of light non-aqueous phase liquid (LNAPL) observed at the water table. Prior to sample collection, the wells were purged using a peristaltic pump fitted with dedicated disposable polyethylene tubing. Field indicator parameters (pH, temperature, conductivity, dissolved oxygen, redox potential, and turbidity) were monitored and recorded during purging at five minute intervals using a Horiba® U-22 water quality meter. Approximately 5 to 7 gallons were purged from each well.

After field indicator parameters stabilized, groundwater samples were collected directly from the discharge line into laboratory-supplied sample containers, sealed, labeled, placed in ice-chilled coolers, and submitted to York under standard chain-of-custody protocol.

Groundwater samples were analyzed for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, TAL total (unfiltered) metals by EPA Methods 6010B/7471A and PCBs by EPA method 8082. Groundwater sample analytical methods and comparison criteria are summarized in the following table:

Factor	Description
Laboratory Analytical Methods	Groundwater analytical methods: <ul style="list-style-type: none"> <li>• VOCs by EPA Method 8260</li> <li>• SVOCs by EPA Method 8270</li> <li>• TAL Total Metals by EPA Method 6010/7000 series</li> <li>• PCBs by EPA Method 8082</li> </ul>
Standards, Criterion and Guidance	Groundwater samples were compared to NYSDEC AWQS/GV.

### 5.3 SOIL VAPOR SAMPLING METHODOLOGY AND LABORATORY ANALYSES

Three sub-surface soil vapor samples were collected and submitted for laboratory analyses. The samples were collected in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006. Prior to sampling, the soil vapor points were screened using a PID. As a QA/QC measure, an inert tracer gas (e.g., helium) was introduced to the sampling chamber to ensure that the soil vapor sampling points were properly sealed and ambient air was not infiltrating the sample. Soil vapor samples were collected into laboratory-supplied, batch certified 2.7-liter Summa<sup>®</sup> canisters with flow controllers calibrated for a sampling rate of .045 L/min for 60 minutes of sampling. An ambient air sample (AA1) was also collected during the investigation to determine the outdoor air background concentrations and to assess if the air quality at the Site has been adversely impacted by surrounding facilities. AA1 was collected into an individually-certified-clean 2.7-Liter stainless steel SUMMA<sup>®</sup> canister fitted with a laboratory-calibrated low-flow regulator. Winds were from the north at approximately 7 miles per hour (mph) during collection of AA1. The sub-surface soil vapor and ambient air samples were delivered via courier service to York under standard chain-of-custody protocol and analyzed for VOCs by EPA Method TO-15. Soil vapor sample analytical methods and comparison criteria are summarized in the following table:

<b>Factor</b>	<b>Description</b>
Laboratory Analytical Methods	Soil Vapor analytical methods: <ul style="list-style-type: none"> <li>• VOCs by TO-15 VOC parameters</li> </ul>
Standards, Criterion and Guidance	Soil Vapor samples were compared to NYSDOH Air Guideline Values (AGV) and to background levels of VOCs in indoor air presented in the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 (NYSDOH Guidance), including: Upper Fence Limit indoor air values from “Table C-1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes,” 90 <sup>th</sup> Percentile indoor air values from “Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method,” and the 95 <sup>th</sup> Percentile Indoor Air Values from Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006); and ASTM E 2600-08 Appendix X7.

#### 5.4 DRUM SAMPLING METHODOLOGY AND LABORATORY ANALYSES

Two liquid samples were collected from both 55-gallon drums. Each sample was collected into laboratory supplied glassware and delivered via courier service to York under standard chain-of-custody protocol and analyzed for TPH via EPA Method 8100M. In addition, one of the drum samples (Drum 2) was also analyzed for PCBs. Liquid analytical methods are summarized in the following table:

<b>Factor</b>	<b>Description</b>
Laboratory Analytical Methods	TPH by EPA Method 8100 M PCBs by EPA Method 8082

## 5.5 REFRIGERATOR PIPE SAMPLING METHODOLOGY AND LABORATORY ANALYSES

Two samples were collected from liquid that drained from refrigerant pipes located in the basement of the building. The samples were collected into laboratory supplied glassware, delivered via courier service to York under standard chain-of-custody protocol, and analyzed for TCL VOCs, TCL SVOCs, TAL total (unfiltered) metals, PCBs, and ammonia. After sampling was complete, the pipe openings were sealed by Craig Test using hydrated bentonite. Liquid analytical methods are summarized in the following table:

<b>Factor</b>	<b>Description</b>
Laboratory Analytical Methods	<ul style="list-style-type: none"> <li>• VOCs by EPA Method 8260</li> <li>• SVOCs by EPA Method 8270</li> <li>• TAL Total Metals by EPA Method 6010/7000 series</li> <li>• PCBs by EPA Method 8082</li> </ul>
Standards, Criterion and Guidance	<ul style="list-style-type: none"> <li>• Groundwater samples were compared to NYSDEC AWQS/GV.</li> </ul>

## **6.0 OBSERVATIONS AND RESULTS**

### **6.1 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS**

#### **Geology**

Geological surface features (e.g., rock outcroppings) were not observed on the Site. Based on a review of the “Bedrock and Engineering Geologic Maps of New York County and parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson counties, New Jersey” (Baskerville Map), dated 1994 and prepared by Charles A Baskerville, the Site is underlain by bedrock of the middle Ordovician to lower Cambrian Hartland Formation, which consists of interbedded mica schist, gneiss, and amphibolite. Based on observations made during a geotechnical investigation performed at the Site by Langan and this RI, the subsurface strata consists of fill material to a depth of at least 12 bgs. Fill material consists of fine to coarse gravel with some concrete, brick, construction debris and some fine to coarse sand. The urban fill layer is underlain by successive strata of organic soil, gravel, sand, silt, and sand overlying bedrock. The depth to bedrock at the Site is approximately 66 to 80 feet bgs.

#### **Hydrogeology**

Groundwater measurements recorded during this RI ranged from approximately 10 to 12 feet bgs. Temporary monitoring wells were not surveyed during this RI, however, groundwater flow direction was evaluated during a previous geotechnical evaluation by Langan and flows southwest toward the Hudson River. Groundwater in this area of New York City is not used as a potable (drinking) water source. The potable water supply is provided by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

### **6.2 GEOPHYSICAL SURVEY**

Two off-site geophysical anomalies, each consistent with a UST, were located by NOVA on the sidewalk to the west of the existing building. Each anomaly measured approximately 10 feet by 4 feet and was oriented north - south. One of the anomalies appeared to be connected to an out-of-service fill port observed near the existing Site building; however, a fill port associated with the second anomaly was not identified.

Several minor geophysical anomalies indicative of former building foundations (i.e., steel beams, bricks, concrete blocks, and unconsolidated soil) were located at the Site. In addition, out-of-service and active sub-surface utilities (electric, sewer, gas and water) were located on the sidewalk to the west of the Site. All proposed boring locations were cleared of utilities and marked at the Site. A copy of the geophysical report, including a map of the surveyed areas, is included as Appendix C.

### **6.3 SUBSURFACE OBSERVATIONS**

Fill material, predominantly consisting of fine to coarse gravel with some concrete, brick, construction debris and some fine to coarse sand, was identified at the surface of the vacant portion of the (northern portion) and beneath the concrete slab of the on-site building (southern portion), and extended into groundwater, up to 12 feet bgs. This fill layer is classified as Historic Urban Fill as defined in the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 3, 2010. Depth to groundwater ranges from 10 to 12 feet bgs and was identified immediately beneath the basement of the existing building.

Petroleum-related odors and staining, residual petroleum in unsaturated soil, and PID readings ranging from 5.2 to 26.2 parts per million (ppm) were identified in borings SB-9/TMW-6, SB-14, and SB-15 adjacent to the suspect off-site USTs that were identified in the sidewalk near the southwest corner of the Site (see discussion in Section 6.2). Petroleum-related odors and LNAPL were also identified on purged groundwater at TMW-6 and SB-14/TMW-10. Based on field observations that were indicative of a historic petroleum release, the NYSDEC was notified of the condition and NYSDEC Spill No. 10-09353 was assigned to the historic spill. Five delineation borings (SB-13 – SB-17) were added to the scope of work to investigate the off-site geophysical anomalies indicative of USTs and to delineate the horizontal and vertical extent of the petroleum release identified in boring SB-9. Based on the field observations, the extent of petroleum impacts associated with NYSDEC Spill No. 10-09353 spans an area of approximately 600 square feet. Petroleum impacts extend west to 10<sup>th</sup> Avenue; the western extent of the spill was not determined.

## 6.4 SOIL SAMPLING ANALYTICAL RESULTS

Seventeen grab soil samples and one composite soil sample were submitted to York for analysis. Analytical results were compared to NYSDEC Part 375 Unrestricted Use SCOs. The analytical results for soil samples are summarized in Table 1 and are shown on Figure 3. Composite sample SB-14/15/16 was collected from off-site petroleum-impacted soil for waste characterization purposes. A complete copy of the York laboratory reports is included in Appendix F.

### VOCs

Nine VOCs were detected in soil throughout the Site; however, only two VOCs (acetone and total xylenes) were detected at concentrations above the Unrestricted Use SCOs. No VOC exceeded Track 2 Restricted Commercial SCOs in any soil sample. Acetone exceeded its Unrestricted Use SCO (0.055 micrograms per kilogram) in 10 of the 17 grab soil samples and ranged from 0.057 milligram per kilogram (mg/kg) to 0.09610 mg/kg. Acetone was also detected in the associated analysis batch blank in all but one sample and is considered a laboratory artifact and not representative of Site conditions. An estimated xylene concentration of 0.51 mg/kg was detected in boring SB-7, exceeding the Unrestricted Use SCO of 0.26 mg/kg. There was no evidence of a chemical or petroleum release at SB-7. Based on the proximity of SB-7 to the suspected USTs under the sidewalk, the source of xylenes appears to be NYSDEC Spill No. 10-09353.

### SVOCs

Sixteen SVOCs were detected in soil throughout the Site; however, none of the SVOCs were detected at concentrations greater than their respective Part 375 Unrestricted Use SCOs.

### Metals

Eighteen metals were detected in soil samples throughout the Site, including five at concentrations greater than their respective Part 375 Unrestricted Use SCOs. The following five metals were detected at concentrations greater than their respective Unrestricted Use SCOs<sup>1</sup>:

- arsenic – 16.5 mg/kg in SB-13(6 – 8') [13 mg/kg];
- copper – 60.6 mg/kg in SB-17(10'-12') to 234 mg/kg in SB-12(0-2') [50 mg/kg];
- lead – 71.9 in SB-12(0-2') to 957 mg/kg in SB-5(10'-12') [63 mg/kg];
- nickel – 48.0 mg/kg in SB-2(10'-12') [30 mg/kg];
- zinc – 113 mg/kg in SB-10(0-2') to 559 mg/kg in SB-3 (10'-12') [109 mg/kg]

One sample marginally exceeds Track 2 Restricted Commercial SCOs for arsenic. Due to the elevated concentrations of total lead in samples SB-2(10'-12') and SB-5(10'-12'), additional analysis via the Toxicity Characteristic Leaching Procedure (TCLP) was performed on these samples to determine whether excess soil generated during site development will be classified as a RCRA Hazardous Waste. The TCLP lead results for SB-2(10'-12') and SB-5(10'-12') were 0.0218 milligrams per liter (mg/L) and 0.300 mg/L, respectively, which are below the RCRA regulatory limit of 5 mg/L. Excess soil that is generated during site development will be classified as a non-hazardous waste.

Based on their random occurrence throughout the Site, the metals detected at concentrations greater than the SCOs appear to be a constituent of the heterogeneous historic fill material and are not related to a spill or separate contaminant source.

#### PCBs

PCBs were not detected at concentrations that exceed the Part 375 Track 1 Unrestricted Use SCOs.

#### Pesticides and Herbicides and RCRA Metals

Pesticides and herbicides were not detected in composite soil sample SB-14/15/16. None of the RCRA metals were detected in the composite soil sample. Soil that is excavated from the

---

<sup>1</sup>Part 375 Unrestricted Use SCOs shown in brackets

Site during remediation of NYSDEC Spill No. 10-09353 will be characterized as non-hazardous petroleum contaminated waste.

#### Identification of Petroleum Impacted Soils

The results of the petroleum identification analysis performed on petroleum-impacted soil associated with NYSDEC Spill No. 10-09353 indicate that the NAPL resembles a mixture of #2 fuel oil and lubricating oil. The reported TPH DRO concentration in soil from the spill area is 15,400 mg/kg. Soil excavated during remediation of the spill will be considered a non-hazardous petroleum-impacted material. Disposal of this material at a permitted thermal treatment facility may be required.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site.

### **6.5 GROUNDWATER SAMPLING ANALYTICAL RESULTS**

Twelve groundwater samples were submitted for laboratory analysis. No groundwater sample was collected from temporary monitoring well TMW-10 due to the presence of LNAPL. Analytical results were compared to the NYSDEC AWQS/GVs for Class GA (drinking water) groundwater. Analytical results from the groundwater samples are summarized in Table 2 and presented on Figure 4. A complete copy of the York laboratory reports is included in Appendix F.

#### VOCs

Twelve VOCs were detected in groundwater samples, including three which exceeded the NYSDEC AWQS/GVs. The following three VOCs were detected at concentrations above their respective AWQS/GV<sup>2</sup>:

- benzene – 1.5 micrograms per liter ( $\mu\text{g/L}$ ) in TMW-6 [1  $\mu\text{g/L}$ ];
- Chloroform – 21  $\mu\text{g/L}$  in TMW-2 and B3-OW to 27  $\mu\text{g/L}$  in TMW-1 [7  $\mu\text{g/L}$ ], and;
- Toluene – 5.9  $\mu\text{g/L}$  in TMW-9 [5  $\mu\text{g/L}$ ].

---

<sup>2</sup>AWQS Class GA Standard or Guidance Value shown in parentheses

Chloroform was only detected in groundwater along the northern property line. Chloroform is known to form as a result of the chlorination of naturally occurring organic materials found in raw water supplies. According to NYCDEP test data from 2004 – 2009, the average and maximum chloroform concentrations in New York City tap water are 27.22 µg/L and 44.6 µg/L, respectively, which is within the range detected at the Site. Based on this data, the source of chloroform in groundwater appears to be runoff from the Chelsea Car Wash, which is located at the adjoining property north of the Site. The VOCs benzene and toluene were detected at concentrations that marginally exceed their Class GA AWQS/GVs in groundwater sampled near NYSDEC Spill No. 10-09353 and are likely associated with the spill.

### SVOCs

Four SVOCs were detected in unfiltered groundwater samples, including one which exceeded the NYSDEC AWQS/GV. Naphthalene was detected in temporary monitoring well TMW-6 at a concentration of 15.9 µg/L, exceeding the Class GA standard of 10 µg/L. TMW-6 is located off-site within the petroleum-impacted area associated with NYSDEC Spill No. 10-09353. Because naphthalene is a constituent of No. 2 fuel oil, the occurrence of this SVOC in groundwater is attributed to the petroleum release.

### Metals

Sixteen metals were detected in groundwater samples throughout the Site, including two which exceed the NYSDEC AWQS/GVs. The following two metals exceeded their respective AWQS/GV<sup>3</sup>:

- mercury – 1.4 µg/L in TMW-5 (0.7 µg/L); and
- selenium – 11 µg/L in TMW-9 to 16 ug/L in TMW-6 (10 µg/L).

These metals were also detected in historic fill material that was sampled during this RI. Based on the occurrence of mercury and selenium in both soil and groundwater and because temporary monitoring wells were installed without a sand filter pack, the occurrence of these

---

<sup>3</sup>TOGS AWQS Class GA Standard or Guidance Value shown in parentheses

metals appears to be primarily due to entrained sediment in the sample and not actual groundwater conditions.

### PCBs

A total PCB concentration of 0.503 µg/L was detected in the groundwater sampled at temporary monitoring well TMW-5, exceeding the TOGS Class GA standard of 0.09 µg/L. Based on the occurrence of PCBs at low concentrations in soil samples SB-7 and SB-10, collected in the vicinity of TMW-5, its low solubility and because temporary monitoring wells were installed without a sand filter pack, the occurrence of PCBs appears to be primarily due to entrained sediment in the sample and not actual groundwater conditions.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site.

## **6.6 SOIL VAPOR SAMPLING ANALYTICAL RESULTS**

Three sub-surface vapor samples and one ambient air sample were submitted for laboratory analysis. Laboratory analytical results from the sub-surface and ambient air samples were compared to the NYSDOH AGVs and NYSDOH Decision Matrices 1 and 2. In addition, sub-surface soil vapor sample results were compared to the ambient air sample results and several indoor air background data base concentrations that are presented in Appendix C of the NYSDOH Guidance, including Upper Fence Limit Indoor Air Values from “Table C-1 NYSDOH 2003: Study of VOCs in Air of Fuel Oil Heated Homes,” 90<sup>th</sup> Percentile Indoor Air Values from “Table C-2 – EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method,” and the 95<sup>th</sup> Percentile Indoor Air Values from “Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air”. The analytical results for sub-surface and ambient air samples are summarized in Tables 3 and 4 and are shown on Figure 5. A complete copy of the York laboratory reports is included in Appendix F.

A review of the sub-surface soil vapor sample results indicates that 16 of the 61 VOCs analyzed using EPA Method TO-15 were detected in at least one of the three soil vapor samples. None of the VOCs exceeded the NYSDOH AGVs. The following nine VOCs were detected in

sample SV-3 at concentrations above all of the background comparison criteria: 1,2,4-trimethylbenzene; acetone; cyclohexane; ethylbenzene; methyl chloride; chloromethane; n-hexane; o-xylene; m,p-xylene; and toluene. The detected vapor concentrations were within an order of magnitude of the anticipated indoor air background concentrations and are not considered an environmental concern.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site.

## **6.7 DRUM SAMPLING ANALYTICAL RESULTS**

Petroleum identification analysis was performed on liquid stored in two, unlabeled 55-gallon drums in the basement of the on-site building. Sample results were indicative of a lubricating oil (Drum 1) and transmission fluid (Drum 2). Both drums appeared to be in good condition (i.e., no rust or pitting) and there was no evidence of a release in the area surrounding the drums.

## **6.8 REFRIGERATOR PIPE SAMPLING ANALYTICAL RESULTS**

Residual liquid that remained in mounted piping in the basement was characterized to determine whether any special disposal requirements will be necessary while handling this material. The liquid was screened with a PID and no VOCs were detected. PCBs and SVOCs were not detected. VOCs were not detected above Class GA standards. The metals arsenic, barium, cadmium, chromium, lead and silver were detected at concentrations that exceed drinking water standards, but not at concentrations that are characteristic of a RCRA hazardous waste. In addition, ammonia (as nitrogen) was detected in the pipe liquid at a concentration of 1,560 µg/L. The pipes should be drained during demolition and care should be taken to collect any residual liquid. This material should be disposed as a non-hazardous liquid waste in accordance with local, city and state regulations.

Analytical results from the refrigerator pipe liquid samples are summarized in Table 5. A complete copy of the York laboratory reports is included in Appendix F.

## **6.9 HISTORICAL REPORT REVIEW FINDINGS**

Based on our review of both Phase II reports for the adjoining property to the north of the Site, groundwater flows to the southwest and has been impacted as a result of NYSDEC Spill No. 09-11962. Gasoline-related VOCs and SVOCs remain in soil and groundwater at concentrations significantly higher than their respective New York State standards. However, soil and groundwater at the Site have not been impacted as a result of this spill.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the findings of this RIR, we conclude the following:

### Conclusions

- Groundwater depths at the Site range from 10 to 12 feet bgs and flows southwest toward the Hudson River;
- The Site is underlain by historic urban fill consisting of fine to coarse gravel with some concrete, brick, construction debris and some fine to coarse sand. The fill layer generally extends to approximately 12 feet bgs and is underlain by successive strata of organic soil, gravel, sand, silt, and sand overlying bedrock. The depth to bedrock at the Site is approximately 66 to 80 feet bgs;
- Five metals (arsenic, copper, lead, nickel, and zinc) were detected in soil samples above NYSDEC Part 375 Unrestricted Use SCOs. These contaminants appear to be constituents of the urban fill at the Site;
- Groundwater samples contained concentrations of the VOC (chloroform) above its AWQS/GV. Runoff from an up-gradient, off-site car wash appears to be the source of chloroform in groundwater. The metals mercury and selenium were also detected in groundwater samples at concentrations above AWGS/GV;
- The geophysical survey revealed anomalies indicative of two underground storage tanks (UST) beneath the sidewalk along 10<sup>th</sup> Avenue, adjacent to the Site;
- An off-site historic petroleum release was identified in the vicinity of the USTs along 10<sup>th</sup> Avenue and NYSDEC Spill No. 10-09353 was assigned. Approximately 125 cubic yards of petroleum-impacted soil associated with the spill was identified over an approximate area of 600 square feet. Petroleum impacts extend to the west to 10<sup>th</sup> Avenue; the western extent of the spill was not determined; and
- Petroleum-related VOCs (benzene and toluene) were detected at concentrations that marginally exceed AGQS/GV in groundwater sampled in the vicinity of spill.

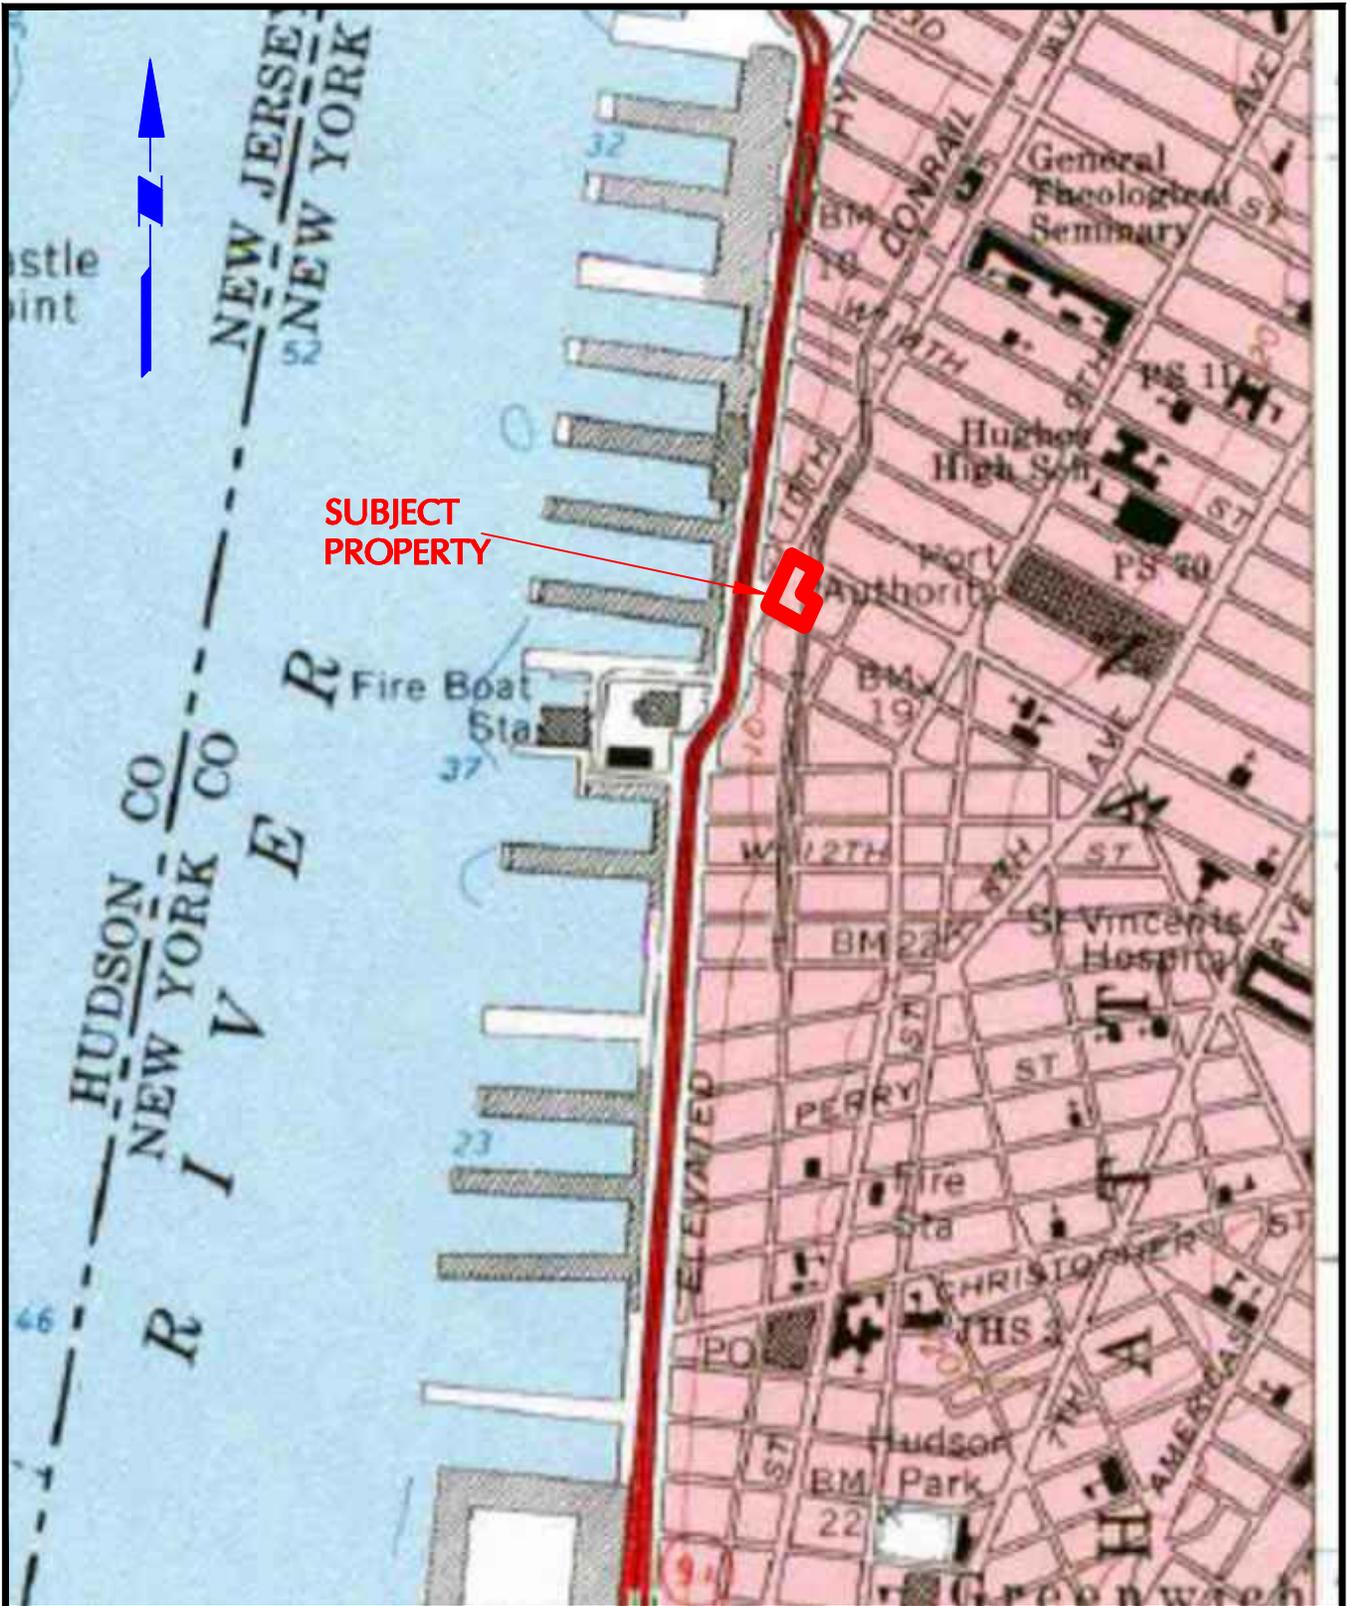

## Recommendations

For the Site to be suitable for its intended use as a mixed use multi-story building, Langan recommends the following:

- Excess soil that will be generated during the  $\pm 15$  foot excavation that will occur during development of the Site will be considered a regulated solid waste. Soil should be handled and transported in accordance with applicable local, state and federal regulations to a disposal facility that is permitted to accept this material. This material should be properly characterized prior to transportation to an off-site disposal facility.
- Excavation of any petroleum-impacted soil associated with NYSDEC Spill No. 10-09353 and off-site disposal of soil to a facility that is permitted to accept this material is required. Soil must be handled in accordance with applicable local, state and federal regulations. Additional waste characterization analysis should be performed in accordance with the disposal facility's requirements.
- Mounted refrigerant pipes should be drained during demolition and care should be taken to collect any residual liquid. This material should be disposed as a non-hazardous liquid waste in accordance with local, city and state regulations. In addition, the demolition contractor should consider health and safety concerns associated with ammonia exposure while dismantling the pipes.
- Proposed sub-slab vapor points were not installed in the basement of the existing building because the elevation of the basement slab is about the same as groundwater. As such, waterproofing must be incorporated into the building foundation design. The waterproofing membrane will also act as a vapor barrier that will mitigate any vapor associated with residual petroleum impacts associated with NYSDEC Spill 09-11962 and 10-09353.
- The proposed building will cover the entire Site footprint; however, construction plans have not been finalized. Upon completion of the new construction, if any soil is exposed (i.e., soil is not covered by a paved or other impermeable surface), it should be covered with at least two feet of fill material meeting the Part 375 Unrestricted Use SCO.

**Notes and Qualifiers**  
 Soil sample results were compared to New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR PART 375-6 Unrestricted Use Soil Cleanup Objectives (SCOs)  
 Results exceeding NYSDEC Part 375 Unrestricted Use SCOs are highlighted and in **BOLD**.  
 Method Detection Limits Exceeding Part 375 Unrestricted Use SCOs are *italicized*  
 mg/kg: milligrams per kilogram  
 TAL = Target Analyte List  
 RCRA = Resource Conservation and Recovery Act  
 U = Analyte was not detected at or above the reporting limit.  
 \* = Result compared to RCRA Hazardous Waste Limits  
 - = No NYSDEC Part 375 Unrestricted Use SCO or Supplemental Residential SCO is established for this analyte  
 NA = Not analyzed.  
 ND = Not Detected

**Notes and Qualifiers**

Soil sample results were compared to New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR PART 375-6 Unrestricted Use Soil Cleanup Objectives (SCOs)

Results exceeding NYSDEC Part 375 Unrestricted Use SCOs are highlighted and in **BOLD**.

Method Detection Limits Exceeding Part 375 Unrestricted Use SCOs are *italicized*

mg/kg: milligrams per kilogram

U = Analyte was not detected at or above the reporting limit.

- = No NYSDEC Part 375 Unrestricted Use SCO or Supplemental Residential SCO is established for this analyte

NA = Not analyzed.

**Notes and Qualifiers**

Groundwater samples were compared to New York State Department of Environmental Conservation (NYSDEC) Ambient Water Quality Standards (AWQS) or Guidance Values

Results exceeding NYSDEC AWQS or Guidance Values are highlighted and in **BOLD**

Method Detection Limits Exceeding NYSDEC AWQS or Guidance Values are *italicized*

µg/L: Micrograms per Liter

U = Analyte was not detected at or above the reporting limit.

J = Result is an estimated concentration.

B = Analyte is found in the associated analysis batch blank.

ND = Not detected

\* = Value is a TOGS Guidance Value and not a standard

~ = No TOGS AWQS or Guidance Value is established for this analyte

**Notes and Qualifiers**

Results that exceed all three background guidelines: NYSDOH Fuel Oil 2003, Upper Fence Value, U.S. Environmental Protection Agency (USEPA) Base Database 90th Percentile Indoor Air, and Health Effects Institute (HEI) 2005 95th Percentile Indoor Air are highlighted in **bold**.

µg/m<sup>3</sup>: micrograms per cubic meter

U = Analyte was not detected at or above the reporting limit

B = Analyte is found in the associated analysis batch blank.

J = Analyte was detected below the Reporting Limit (RL) but greater than or equal to the Method Detection Limit (MDL), and therefore is an estimated concentration.

## EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, P.C. (Langan) was retained by William Gottlieb Real Estate (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for an assemblage of properties on the city block located between 13<sup>th</sup> Street, 14<sup>th</sup> Street, 10<sup>th</sup> Avenue, and Washington Street in the Chelsea section of the borough of Manhattan, New York. The Subject Property consists of 42-56 10<sup>th</sup> Avenue and 449-451 West 13<sup>th</sup> Street (Block 646, Lots 1, 5, 6, 7, 8, and 9). A site location map is provided as Figure 1.

The Subject Property is "L"-shaped and occupies an approximate area of 23,500 square feet. Lot 1 is improved with 2 abandoned 3-story buildings encompassing an approximate area of 15,800 square feet. Lots 5-9 are vacant and surrounded by wood construction fencing with a locked gate on 10<sup>th</sup> Avenue. Three-story buildings that were previously located on Lots 5-9 were destroyed in a fire in approximately 2003. The Highline Park runs northwest-southeast above the easternmost portion of the Subject Property. The buildings on Lot 1 and the former buildings on Lots 5-9 were previously used for cold storage of beef products. Redevelopment plans for the Subject Property have not been finalized, but it is assumed that at least one basement level will be incorporated into the project design.

This Phase I ESA was conducted in general accordance with the American Society for Testing Materials (ASTM) Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Properties of hazardous substances or petroleum products as defined in ASTM E1527-05 as a recognized environmental condition (REC).

The Phase I ESA identified the following RECs on the Subject Property:

### REC 1 – Petroleum or Chemical Bulk Storage

During the Site reconnaissance, three above ground storage tanks (ASTs) were observed in the eastern end of the basement. Two ASTs, each with an approximate capacity of 10,000 gallons, were observed within a concrete vault. Approximately 1 foot of standing water was identified on the vault floor and the ceiling of the vault is partially collapsed. An approximate 750-gallon AST was observed immediately south of the AST vault. Contents of the ASTs were not confirmed; however, it is believed that they stored fuel oil for low-pressure boilers that were identified in New York City Department of Building (NYCDOB) records. Each of the tanks was

covered in rust. Due to the insufficient lighting and built-up sediment on the floor surrounding the 750-gallon AST and the standing water in the AST vault, Langan was unable to thoroughly inspect the areas beneath the tanks for staining or evidence of a petroleum release. . Potential spills or leaks of petroleum contained in the identified ASTs may have adversely impacted soil and groundwater at the Subject Property and is considered a REC.

#### REC 2 – Monitoring Wells

A monitoring well was observed on the 14<sup>th</sup> Street sidewalk at the northern extent of the Subject Property and three apparent abandoned boreholes were observed along the 10<sup>th</sup> Avenue sidewalk at the western extent of the Subject Property. The monitoring well and abandoned boreholes may be related to a previous environmental investigation and/or monitoring at the Subject Property and is considered a REC.

#### REC 3 – Historic Site Usage

An independent electric plant was located in the center of the block in 1904. The southern portion of this facility extended onto Lot 1 of the Subject Property. Potential coal burning and storage associated with this plant may have impacted soil and groundwater at the Subject Property.

Central Tool and Machine Co. was identified at 48 10<sup>th</sup> Avenue in 1973. Leaks or spills of petroleum products and/or solvents used at this facility may have adversely impacted soil and groundwater at the Subject Property.

#### REC 4– Historic Fill

A review of historic Viele maps indicates that the Hudson River originally extended approximately 200 feet east of 10<sup>th</sup> Avenue at 13th Street, indicating that most of the Subject Property consists of made land filled in for development purposes in the late 1800s. Historic urban fill typically consists of ash, demolition debris and municipal waste products and may contain several types of contamination at concentrations above current regulatory levels, including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals. The presence of historic fill at the Subject Property is a REC.

The following RECs were identified at surrounding Properties:

REC 1 - Open Spill Incident at a Mobil Gasoline Station at 461-469 West 14<sup>th</sup> Street

NYSDEC Spill No. 0911962 has been open since February 11, 2010 and addresses several outstanding issues associated with historic spill at the gas station. Benzene, toluene, ethylbenzene, xylene (BTEX), and methyl-tert butyl ether (MTBE) remain in soil and groundwater at concentrations significantly greater than applicable New York State Standards. Investigation reports and work plans related to this facility have not been approved by the NYSDEC. Based on the nature of this spill, regulatory status, and close proximity to the Subject Property (adjoining to the north across 14<sup>th</sup> Street), it has the potential to adversely impact groundwater at the Subject Property and is considered a REC.

REC 2 - Historic Use of Surrounding Properties

The following historical uses of surrounding properties are considered RECs:

- A Gasoline filling station was located at 501 West 14<sup>th</sup> Street, approximately 150 feet north, northwest (cross-gradient) of the Subject Property, from 1969-1996. Leaks or spills of petroleum products at this facility may have adversely impacted groundwater at the subject Property.
- Unspecified manufacturing activities were documented at 445 West 14<sup>th</sup> Street, approximately 200 feet northeast (up-gradient) of the Subject Property, between 1969 and 2005. Leaks or spills of solvents and/or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.
- A paint shop was located at 456 West 14<sup>th</sup> Street, which is up-gradient and adjoins Lots 5-9 to the east, in 1895. Leaks or spills of paints containing solvents, lead or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.

**Asbestos, Lead, and Polychlorinated Biphenyl (PCBs)**

Based on the age of the building located on Lot 1, several building materials may contain asbestos-containing materials (ACM), lead based paint (LBP), or polychlorinated biphenyls (PCBs). The potential presence of ACM, LBP or PCBs is an environmental concern. Langan is conducting a hazardous materials survey to identify and quantify ACM, LBP, and PCBs at the Subject Property. The findings for this investigation will be presented in a separate report from this Phase I ESA.

## **1.0 INTRODUCTION**

Langan Engineering and Environmental Services, P.C. (Langan) was retained by William Gottlieb Real Estate (the "User") to prepare a Phase I Environmental Site Assessment (ESA) for an assemblage of properties on the city block located between 13<sup>th</sup> Street, 14<sup>th</sup> Street, 10<sup>th</sup> Avenue, and Washington Street in the Chelsea neighborhood of the borough of Manhattan, New York. Street addresses associated with the Subject Property include 42-56 10<sup>th</sup> Avenue (Block 646, Lots 1, 5, 6, 7, 8, and 9).

The purpose of this ESA is to identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-05, which states:

"The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

### **1.1 Scope of the ESA**

This ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-05. Any significant scope-of-work additions, deletions, or deviations to ASTM E1527-05 are noted in Section 9.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing readily available information and environmental data relating to the Subject Properties; reviewing readily available maps and records maintained by federal, state, and local regulatory agencies; interviewing readily available persons knowledgeable about the Subject Properties; and conducting a site visit. The specific scope of this assessment included the following:

1. A site reconnaissance to inspect on-site conditions and assess the location of the Subject Property with respect to surrounding property uses and natural surface

features. Photographs taken as part of the site reconnaissance are provided in Appendix A.

2. A review of the User and Owner/Operator/Site-Manager questionnaires. A copy of the questionnaires is included in Appendix B.
3. A review of readily available environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search distance. The environmental database report is provided by Environmental Data Resources, Inc. (EDR) and a copy of the report is included in Appendix C.
4. Freedom of Information Act (FOIA) requests were sent to federal, state, and local agencies. Copies of the FOIA requests are included in Appendix D.
5. New York City Department of Buildings (NYCDOB) records and a Planning Commission Zoning Map were reviewed. Available NYCDOB records and the Zoning Map are included in Appendices E and F, respectively.
6. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
7. A review and interpretation of aerial photographs, historical Viele maps, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices G, H, I, J, and K, respectively.
8. A review of an Environmental Lien search for the Subject Property. A copy of the environmental lien search report is included as Appendix L.
9. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area with a propensity for elevated radon levels.

## **1.2 Assumptions, Limitations, and Exceptions**

This Phase I ESA report was prepared for William Gottlieb Real Estate, for the Subject Property located at 42-56 10<sup>th</sup> Avenue (Block 646, Lots 1, 5, 6, 7, 8, and 9) in Manhattan, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Subject Property addressed herein, or by any third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.2, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-05. Intrusive sampling (i.e. soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Properties. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Subject Property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot "insure" or "certify" that the Subject Properties are free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-05 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visit.

## 2.0 SITE DESCRIPTION

### 2.1 Location and Description

The Subject Property consists of 42-56 10<sup>th</sup> Avenue (Block 646, Lots 1, 5, 6, 7, 8, and 9) in Manhattan, New York. The Subject Property is "L"-shaped and occupies an approximate area of 23,500 square feet. Lot 1 is improved with two abandoned 3-story buildings encompassing an approximate area of 15,800 square feet. Lots 5-9 are vacant and surrounded by wood construction fencing with a locked gate on 10<sup>th</sup> Avenue. Three-story buildings that were previously located on Lots 5-9 were destroyed in a fire in approximately 2003. The Highline Park runs northwest-southeast above the easternmost portion of the Subject Property. The buildings on Lot 1 and the former buildings on Lots 5-9 were previously used for cold storage of beef products.

Based on visual observations of the surrounding area during the site reconnaissance, the Subject Property is located in an urban area characterized by multi-story commercial and residential buildings with ground-level retail and restaurants. According to the United States Geological Survey (USGS) Brooklyn Quadrangle 7.5-minute Series Topographic Map, the Subject Property is relatively flat and the surrounding area slopes gently towards the west. Groundwater at the Subject Property is presumed to flow west towards the Hudson River.

### 2.2 Current Use of the Subject Property

The Subject Property is consists of both vacant land and a vacant three-story building. The existing and former buildings at the Subject Property were used for cold storage of beef products. Site reconnaissance photographs are included in Appendix A.

### 2.3 Description of Site Improvements

Improvements at the Subject Property are summarized in the following table:

SITE IMPROVEMENTS	
<b>Size of the Subject Property</b>	Approximately 23,500 square feet
<b>Buildings/Spaces/Structures</b>	One 3-story brick building with an approximate footprint of 15,800 square feet located on Lot 1

<b>SITE IMPROVEMENTS</b>	
<b>Unimproved Areas</b>	Lots 5-9 are vacant and covered with gravel and demolition debris, including brick and concrete fragments.
<b>Surface Water</b>	Surface water is not located on the Subject Property; however, the Hudson River is located approximately 200 feet to the west.
<b>Potable Water Source</b>	New York City (water supply disconnected)
<b>Sanitary and Storm Sewer Utilities</b>	New York City
<b>Electrical Utilities</b>	Consolidated Edison Company of New York, Inc.
<b>Construction Completion Date</b>	1900
<b>General Construction Type</b>	Brick and concrete
<b>Cooling and Ventilation System Type</b>	Air conditioning units were not observed. Most of the building was previously used for cold storage.
<b>Heating System Type</b>	The building is not currently heated. Three ASTS are located in the basement; however, boilers were not observed in the accessible areas.
<b>Emergency Power</b>	Not applicable

Photographs of the Subject Property are provided in Appendix A.

#### **2.4 Current Use of Adjoining and Surrounding Properties**

The Subject Property is bound by West 14<sup>th</sup> Street and a Mobil gasoline filling station to the north, a multi-story building under construction and an abandoned commercial building with two roll-up garage doors to the east, West 13<sup>th</sup> Street and a multi-story hotel to the south, and the intersection of 10<sup>th</sup> and 11<sup>th</sup> Avenues, a 3-story hotel, and a river front park to the west.

Beyond the adjoining properties, the surrounding area is comprised primarily of multi-story commercial and residential buildings with ground-level retail space and restaurants.

Spills or leaks associated with the northern adjoining Mobil station may have adversely impacted groundwater at the Subject Property; therefore, this facility is considered a REC.

DRAFT

### 3.0 USER PROVIDED INFORMATION

#### 3.1 Previous Environmental Reports

Previous environmental reports were not reviewed as part of this Phase I ESA.

#### 3.2 Title Records

Langan researched prior ownership records and environmental conditions for the Site at [www.propertyshark.com/mason/nyc/index.html](http://www.propertyshark.com/mason/nyc/index.html). Property Shark listed William Gottlieb Real Estate as the owner of the Subject Property. The following table lists available deed transaction information for the Site.

Date	First Party	Second Party
<b>42-46 10th Ave (Lot 1)</b>		
12/1/2005	Csx Transportation, In C	The City Of New York
1/28/2005	Consolidated Rail Corporation	New York Central Lines, LLC
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
3/20/2000	Consolidated Rail Corp.	New York Central Lines LLC
9/3/1999	Stanmart Co., LLC	40-56 Tenth Ave, LLC
11/21/1995	Stanmart Co.	Stanmart Co., LLC
8/25/1986	Markman, Shirley Exc	Stanmart Co.
	Gingold, Stanleyexc	
	Gingold, Isidore Lwt	
8/25/1986	Markmman, Martin	Stanmart Co.
8/25/1986	Gingold, Stanley	Stanmart Co.
10/1/1985	Commissioner Of Finance	City Of New York
12/15/1978	Despatch Shops Inc	Consolidated Rail Corp
12/15/1978	Penn Central Transport	Consolidated Rail Corp
<b>48 10th Ave (Lot 5)</b>		
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
9/3/1999	Gingold Packing Corp.	40-56 Tenth Ave. LLC
<b>50 10th Ave (Lot 6)</b>		
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.

<b>Date</b>	<b>First Party</b>	<b>Second Party</b>
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
9/3/1999	Gingold Packing Corp.	40-56 Tenth Ave. LLC
<b>52 10th Ave (Lot 7)</b>		
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
9/3/1999	Gingold Packing Corp.	40-56 Tenth Ave. LLC
<b>54 10th Ave (Lot 8)</b>		
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
9/3/1999	Gingold Packing Corp.	40-56 Tenth Ave. LLC
<b>56 10th Ave (Lot 9)</b>		
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
3/29/2000	Msh Refrigeration Corp.	Washington Refrigeration Corp.
9/3/1999	Gingold Packing Corp.	40-56 Tenth Ave. LLC

The review of ownership information did not indicate RECs at the Site.

### **3.3 User and Owner/Operator Questionnaire**

As per the ASTM E1527-05 guidance, questionnaires were provided to the User/Owner in order to obtain specialized User knowledge. As of the date of this report, the questionnaires have not yet been returned. Should the completed questionnaires alter any of the findings or conclusions of this Phase I ESA, an addendum will be issued. The addendum will summarize the revised findings and conclusions.

## 4.0 RECORDS REVIEW

### 4.1 Environmental Records

The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-05. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the sites identified represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites identified in standard and additional environmental record databases, within the prescribed search radius and appearing in the EDR Report.

<b>DATABASE RECORD SUMMARY</b>			
<b>Database Reviewed (Date of government version)</b>	<b>Minimum Search Area</b>	<b>Site listed</b>	<b>Number of Sites Within Minimum Search Area</b>
<b>USEPA DATABASES</b>			
National Priorities List (NPL) (3/31/2010)	1 Mile Radius	No	1
Delisted NPL (3/31/2010)	1/2 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and CERCLIS No Further Remediation Action Planned (NFRAP) (1/29/2010 and 6/23/2009, respectively)	1/2 Mile Radius	No	1
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (3/25/2010)	1 Mile Radius	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDF) (2/17/2010)	1/2 Mile Radius	No	0
RCRA Generators (2/17/2010)	Subject Property and Adjoining	No	0
Facility Information System (FINDS) Database (4/14/2010)	Subject Property	No	0

<b>DATABASE RECORD SUMMARY</b>			
<b>Database Reviewed (Date of government version)</b>	<b>Minimum Search Area</b>	<b>Site listed</b>	<b>Number of Sites Within Minimum Search Area</b>
Environmental Response Notification System (ERNS) (12/31/2009)	Subject Property	No	0
Engineering Controls (EC) Sites Lists (12/20/2009)	Subject Property	No	0
Institutional Controls (IC) Sites Lists (12/20/2009)	Subject Property	No	0
<b>NYSDEC DATABASES</b>			
Hazardous Waste Disposal Sites (SHWS) and Delisted SHWS (NY - 5/24/2010 and NJ - 1/7/2010)	1 Mile Radius	No	5
Hazardous Substance Waste Disposal Site Inventory (HSWDS) (1/1/03)	1/2 Mile Radius	No	0
Solid Waste or Landfill Facilities (SWF/LF) (7/14/2010)	1/2 Mile Radius	No	1
LTANKS (5/24/2010)	1/2 Mile Radius	No	72
SPILLS Information Database (NY SPILLS) (5/24/2010)	1/8 Mile Radius	No	45
EC Sites Lists (5/24/2010)	Subject Property	No	0
IC Sites Lists (5/24/2010)	Subject Property	No	0
Voluntary Cleanup Program (VCP) (5/24/2010)	1/2 Mile Radius	No	1
Brownfields (5/24/2010)	1/2 Mile Radius	No	2
Chemical Bulk Storage (CBS) Underground storage tank (UST) and aboveground storage tanks (AST) Databases (1/1/2002)	Subject Property and Adjoining	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases (01/01/2002)	Subject Property and Adjoining	No	0
Registered and Historical Drycleaners (DRYCLEANERS) (3/23/2010)	1/4 Mile Radius (N/A)	No	2
Petroleum Bulk Storage Facilities (PBS) UST and AST Databases (6/17/2010)	Subject Property and Adjoining	No	0
<b>EDR (PROPRIETARY) DATABASES</b>			
EDR Former Manufactured Gas Plant (MGP) Sites (N/A)	1 Mile Radius (N/A)	No	3

N/A Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-05.

A description of the databases reviewed is provided in the EDR Report (Appendix C). A summary of sites identified within the prescribed search area is presented below:

#### **4.1.1 Federal Agency Database Findings**

##### **NPL Database**

The NPL is a subset of the CERCLIS and lists properties that are ranked as high priority for cleanup under the Superfund program. The Site was not listed in the NPL database. The Hudson River PCB cleanup was identified in the database; however, this cleanup is focused around Albany, New York and is therefore not considered a REC in relation to the Site.

##### **CERCLIS and CERCLIS NFRAP Database**

The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP) are also included in this database. The Site was not listed in the CERCLIS or CERCLIS NFRAP databases. The Hudson River PCB Cleanup was listed in the CERCLIS database. As stated above, this cleanup is located well north of New York City in Upstate New York and is not considered a REC in relation to the Site.

##### **Other Federal Databases**

No Delisted NPL, Resource Conservation and Recovery Act (RCRA) CORRACTS Facilities, RCRA Treatment, Storage, and Disposal Facilities (TSDF), RCRA Generators, Emergency Response Notification System (ERNS), Facility Index Information System (FINDS), Engineering Controls (EC), or Institutional Controls (IC) sites were listed within their respective minimum search distances as specified by ASTM E1527-05.

#### **4.1.2 State Agency Database Findings**

##### **Inactive Hazardous Waste Disposal Sites**

SHWS Databases are state inventories of inactive hazardous waste sites. The Subject Property was not listed in the SWHS database; however, 5 SHWS facilities were identified within 1 mile of the Subject Property. The identified SHWS sites are all located in New Jersey and are not considered RECs in relation to the Subject Property.

### **Solid Waste Facilities or Landfill (SW/LF)**

The SW/LF database is a comprehensive listing of State permitted/recorded solid waste facilities. The Subject Property was not listed in the SW/LF database; however, one facility within a ½-mile radius of the Subject Property was identified. The identified SW/LF site is located more than 800 feet south, southwest from the Subject Property at a topographically cross-gradient location and is not considered a REC.

### **Leaking Underground Storage Tanks Database**

The Leaking Storage Tanks (LTANKS) database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The primary causes of the LTANK incidents include tank test failures, tank failures, and tank overfills. As per ASTM E1527-05, the approximate minimum search distance required for LTANK incidents is within ½ mile of the Subject Property. The Subject Property was not listed in the LTANK database; however, 72 LTANK sites were identified within 1/2 mile of the Subject Property. The 72 LTANK incidents identified have either been granted closed status by the NYSDEC or are located more than 500 feet from the Subject Property at cross- or down-gradient locations and are not considered RECs.

### **Spills Database**

The NY Spills database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to NYSDEC. As per ASTM E1527-05, the approximate minimum search distance required for spills is within 1/8-mile of the Subject Property. The Subject Property was not listed in the NY-Spills database; however, 45 spill incidents were identified within 1/8 mile of the Subject Property. Forty-four of the listed spill incidents have either been closed by the NYSDEC or are located more than 230 feet from the Subject Property at cross- to down-gradient locations and are not considered RECs. One spill has the potential to impact the Subject Property and is described below:

**Site Name: Gas Station/Car Wash**

**Site Address: 461-469 West 14<sup>th</sup> Street**

**Location:** This gasoline filling station adjoins the Subject Property across West 14<sup>th</sup> Street and is topographically cross-gradient.

**Description:** Spill No. 0911962 was opened on February 11, 2010 to address unresolved issues from previously opened spills at the same facility that were

reported and administratively closed between 2001 and 2006. In 2005 methyl-tert-butyl-ether (MTBE) was detected at concentrations of 556 parts per billion (ppb) and 8,207 ppb in soil and groundwater, respectively. Several volatile organic compounds (VOCs), including the following compounds: benzene (500 ppb), toluene (39,698 ppb), ethylbenzene (24,720 ppb), and xylenes (209,336 ppb), were also detected in soil at concentrations significantly greater than applicable state standards in 2005. In the spring of 2010, ethylbenzene and xylenes were detected in soil at concentrations of 4,900 ppb and 49,400 ppb respectively. The VOCs toluene (160 ppb), ethylbenzene (810 ppb), and xylene (4,400) remained in groundwater at concentrations greater than applicable state standards in the Spring of 2010. Based on the information provided in the EDR report, investigation reports and work plans related to this facility have not been approved by the NYSDEC. The NYSDEC has requested installation of down-gradient wells and asked that site wells be surveyed to determine site-specific groundwater flow direction.

Based on the nature of this spill, regulatory status, and close proximity to the Subject Property, it is considered a REC.

### **Voluntary Cleanup Program (VCP) Database**

The VCP uses private funds to remediate contaminated sites to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination. The Subject Property was not listed in the VCP database; however, one VCP site was identified within 1 mile of the Subject Property. The identified VCP site was incorrectly mapped 1,300 feet northeast of the Subject Property. This site is actually located at 14<sup>th</sup> Street and Avenue C, approximately 2 miles east of the Subject Property and is not considered a REC.

### **Brownfields Database**

The Brownfields database contains a list of properties that may present environmental issues with redevelopment of the area. Potential hazards include petroleum, hazardous waste, pollutants, and contamination. The Subject Property was not listed in the Brownfields database; however, two Brownfield sites were identified within ½ mile of the Subject Property. The identified Brownfield sites are described below:

**Site Name: 19<sup>th</sup> Street Development Site**

**Site Address: 80 11<sup>th</sup> Avenue**

**Location:** The site is approximately 1,200 feet north and cross-gradient relative to the Subject Property.

**Description:** This site is a former manufactured gas plant (MGP) contaminated with MGP-related waste and petroleum products. Remediation included excavation, installation of subsurface barriers, and a ventilation system. The site was issued a certificate of completion on September 27, 2006. Based on distance and presumed groundwater flow, this Brownfield site is not considered a REC.

**Site Name:** West 17<sup>th</sup> Street and 10 Avenue

**Site Address:** 440-452 West 17<sup>th</sup> Street, 446-459 West 16<sup>th</sup> Street

**Location:** The site is approximately 800 feet northeast and cross- to up-gradient relative to the Subject Property.

**Description:** The site was contaminated with benzene, toluene, ethylbenzene, xylenes (BTEX) and chlorinated solvents due to past uses of petroleum and historic fill. Remediation was completed and included excavation of historic fill and native soil. Groundwater was treated in-situ with Oxygen Release Compound (ORC). A certificate of completion was issued on October 6, 2008. Based on its status and distance from the Subject Property, this Brownfield site is not considered a REC.

**Registered and Historical Drycleaners**

This database includes the listing of all registered dry cleaning facilities. The Subject Property was not listed in the dry cleaners database; however, two dry cleaners were identified within one-quarter mile of the Subject Property. One of the listed dry cleaners is located 700 feet south from the Subject Property at a topographically cross-gradient location. The other dry cleaner listed is located topographically up-gradient from the Subject Property, but more than 1,250 feet east, northeast. Based on their distance and location relative to the presumed groundwater flow direction, neither of the identified dry cleaners are considered RECs.

### **Other State Databases**

No Hazardous Substance Waste Disposal (HSWDS), Petroleum Bulk Storage UST and AST, Chemical Bulk Storage (CBS) UST and AST, or Major Oil Storage Facilities (MOSF) UST and AST were listed within their respective minimum search distances as specified by ASTM E1527-05.

DRAFT

### **4.1.3 Other Database Findings**

#### **MGP Sites**

The MGP database is a propriety database that includes records of manufactured coal gas plants compiled by EDR. The Subject Property was not listed in the MGP database; however, three MGP sites were reported within 1 mile of the Subject Property. The identified MGP sites are located at cross-gradient locations more than 1,100 feet from Subject Property and are not considered RECs.

### **4.1.4 Local Regulatory Agency Findings**

#### **FOIA Requests**

FOIA requests were submitted to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC; and
- USEPA, Region 2.

FOIA requests were sent on August 12, 2010. As of the date of this report, FOIA responses have not been received. Should any future responses alter the conclusions provided within this report, we will issue modified conclusions as an addendum to this report. Copies of the FOIA requests are included in Appendix D.

#### **NYCDOB**

Langan conducted a records search through the NYCDOB online query system on August 30, 2010. Below is a summary of the information available on the NYCDOB web site regarding the Subject Property:

#### **Lot 1 (42-46 10<sup>th</sup> Avenue)**

Lot 1 (42-46 10<sup>th</sup> Avenue) is classified as "E9-warehouse" with 4 buildings. A certificate of occupancy (CO), dated July 16, 1934, for this lot indicated cold storage in the cellar and first-

third floors. A commercial low-pressure boiler was located in the basement, but was disconnected in 1994. Three active environmental control board (ECB) violations are associated with this lot. The violations are related to elevator maintenance and building exterior maintenance and are not considered RECs.

**Lot 5 (48 10<sup>th</sup> Avenue)**

Lot 5 (48 10<sup>th</sup> Avenue) is classified as "V1-vacant land" with one building previously located on the lot. A CO, dated November 22, 1923, indicated use for storage and a packing house. One active ECB violation related to construction not conforming to plans is associated with the lot. Based on the nature of the ECB violation, it is not considered a REC. Boiler records were not available.

**Lot 6 (50 10<sup>th</sup> Avenue)**

Lot 6 (50 10<sup>th</sup> Avenue) is classified as "V1-vacant land" with one building previously located on the Lot. Two open ECB violations are associated with this Lot and are related to construction not conforming to plans and working without a permit. The ECB violations are not considered RECs. CO and boiler records were not available.

**Lot 7 (52 10<sup>th</sup> Avenue)**

Lot 7 (52 10<sup>th</sup> Avenue) was classified as "V1-vacant land" with one building previously located on the lot. Seven ECB violations related to sidewalk and sidewalk shed maintenance, miscellaneous construction violations, working without a permit, and work not conforming to plans, were listed in association with this lot. Based on the nature of the violations, they are not considered RECs. CO and boiler records were not available.

**Lot 8 ( 54 10<sup>th</sup> Avenue)**

Lot 8 (54 10<sup>th</sup> Avenue) was classified as "V1-vacant land" with one building previously located on the lot. Five low-pressure boilers were located in the building, but were disconnected in 1994. Five ECB violations related to sidewalk maintenance, miscellaneous construction violations, working without a permit, and work not conforming to plans, were listed in association with this lot. Based on the nature of the violations, they are not considered RECs. CO documents were not available.

## **Lot 9 ( 56 10th Avenue)**

Lot 9 (56 10th Avenue) was classified as "V1-vacant land" with one building previously located on the lot. A Stop Work Order was issued for this lot, under address 458 West 14<sup>th</sup> Street, on June 2, 2008 for demolition work without a permit. Five ECB violations related to sidewalk shed and building maintenance, and working without a permit were listed in association with this lot. Based on the nature of the violations and the Stop Work Order, they are not considered RECs. CO and boiler records were not found.

The lots comprising the Subject Property are not listed with "E" restrictions, which indicate potential environmental concerns. Potential petroleum bulk storage related to the boilers previously located on Lots 1 and 8 is a REC, as leaks or spills of petroleum may have adversely impacted soil and groundwater at the Subject Property. Copies of the available NYCDOB records are provided in Appendix E.

## **Zoning Department**

According to the New York City Planning Commission Zoning Map 6a, the Subject Property is located in a M1-5 manufacturing district. Restrictive "E" or "D" declarations were not identified on Subject Property. A copy of the zoning map and resolution is provided in Appendix F.

## **4.2 Physical Setting Sources**

### **4.2.1 Topography**

Based on the USGS Brooklyn Quadrangle Topographic Maps (7.5-minute series), the elevation of the Subject Property is approximately 10 feet above mean sea level (MSL). The topography of the Subject Property is generally flat, and the surrounding area slopes gently to the west towards the Hudson River.

### **4.2.2 Geology**

Predominant geological surface features (e.g., rock outcroppings) were not observed on the Subject Property. Based on a review of the "Bedrock and Engineering Geologic Maps of New York County and parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey" (Baskerville Map), dated 1994 and prepared by Charles A. Baskerville, the Site is underlain by bedrock of the middle Ordovician to lower Cambrian Hartland Formation, which consists of interbedded mica schist, gneiss, and amphibolite. According to the Baskerville Map, bedrock beneath the Subject Property is approximately 70

feet below mean sea level in a former drainage and shoreline area. Based on a geotechnical investigation performed by Langan at the Subject Property, bedrock was encountered at depth ranging from 66 feet to 86 feet bgs.

### **4.2.3 Hydrology**

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Based geotechnical investigations performed at the Subject Property by Langan, depth to groundwater is approximately 12 feet bgs. Groundwater is presumed to flow west towards the Hudson River.

Except for parts of Jamaica, Queens, groundwater in New York City not used as a potable water source. Potable water is provided to the Subject Property by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

## **4.3 Historical Use Information**

Langan reviewed available historic resources (including aerial photographs, historical Viele maps, Sanborn and topographic maps, and city directories) dated 1891 to 2006. Findings of the reviews are presented below.

### **4.3.1 Aerial Photographs**

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1943, 1953, 1966, 1976, 1985, 1994, and 2006. Copies of aerial photographs are included in Appendix G. Pertinent findings are summarized in the following table:

HISTORICAL AERIAL PHOTOGRAPH SUMMARY	
YEAR	COMMENTS
1943, 1953, 1966, and 1976	<p><b>Subject Property:</b> The Subject Property was developed with multiple buildings with elevated railroad tracks above the building on the easternmost portion of the Subject Property.</p> <p><b>Surrounding Area:</b> The surrounding area is a fully developed urban area comprised of multi-story residential and commercial buildings. Several piers are located on the Hudson River to the west of the Subject Property.</p>
1985 and 1994	<p><b>Subject Property:</b> The Subject Property is relatively unchanged from the previous aerial photograph.</p> <p><b>Surrounding Area:</b> The surrounding area is primarily unchanged from the previous photo, except that several piers along the Hudson River have been demolished.</p>
2006	<p><b>Subject Property:</b> The buildings on Lots 5 – 9 are no longer present. With the exception of the buildings that are no longer present, the Subject Property is relatively unchanged from the previous aerial photograph.</p> <p><b>Surrounding Area:</b> The surrounding area is primarily unchanged from the previous photo, except that several piers along the Hudson River have been demolished.</p>

Langan’s review of the aerial photographs did not identify RECs at the Subject Property or surrounding properties.

#### 4.3.2 Historical Viele Maps

Langan reviewed the Sanitary and Topographical Map of the City and Island of New York, which was created by Egert L. Viele in 1865 (Viele Map). According to the Viele Map, the Hudson River originally extended to approximately 200 feet east of 10<sup>th</sup> Avenue at 13<sup>th</sup> Street, indicating that most of the Subject Property consists of made land created for development purposes in the late 1800s. Historic urban fill typically consists of ash, demolition debris and municipal waste products and may contain several types of contamination at concentrations above current regulatory levels, including VOCs, semi-volatile organic compounds (SVOCs), and metals. The presence of historic fill at the Subject Property is a REC. A copy of the Viele Map is included in Appendix H.

#### 4.3.3 Sanborn Fire Insurance Maps

Langan reviewed Sanborn Maps for the Subject Property for the years 1895, 1904, 1921, 1950, 1969, 1975, 1979, 1980, 1983, 1985, 1987, 1988, 1991-1996, and 2001-2005. Sanborn Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Copies of the maps are provided in Appendix I. A summary of the Sanborn Maps is presented the following table.

<b>SANBORN MAP SUMMARY</b>	
<b>YEAR</b>	<b>COMMENTS</b>
1895	<p><b>Subject Property:</b> The Subject Property is comprised of 6 lots. Lot 1 is occupied by a lumber yard with two 5-story buildings, a 4-story building, and a 2-story building. Use of the buildings on Lot 1 is not specified. Lots 5, 6, 7, and 8 are each improved with a 3-story building of unspecified use and Lot 9 is improved with a 3-story building, a 1-story building, and a 2-story building with a basement, each of unspecified use.</p> <p><b>Surrounding Area:</b> The surrounding properties are mostly developed with multi-story commercial and residential buildings, stores, stables, lumber, wagon, granite, and coal yards, and manufacturers. A paint shop was located at 456 West 14<sup>th</sup> Street, which adjoins Lots 5-9 to the east. A paper box manufacturer is located at 859-877 Washington Street, approximately 200 feet east of the Subject Property, a print works facility is located at 444-448 West 14<sup>th</sup> Street, approximately 300 feet east of the Subject Property, and a piano action factory is located at 20-24 10<sup>th</sup> Avenue, approximately 150 feet south (cross-gradient) of the Subject Property.</p>
1904	<p><b>Subject Property:</b> Lot 1 is occupied by a 2- to 3-story ice plant, a 5-story building with ground-level store, a 3-story cold storage building, and a 2- to 3-story independent electric plant. Lots 5-8 are improved with six connected 3-story buildings of unspecified use. Lot 9 is occupied by a 3-story residential building with ground-level store, a 1-story building of unspecified use, and a stable.</p> <p><b>Surrounding Area:</b> Properties west of 10<sup>th</sup> Avenue were demolished so that piers could be constructed along the Hudson River, and 11<sup>th</sup> Avenue was extended southward to intersect with 10<sup>th</sup> Avenue at 12<sup>th</sup> Street. Surrounding properties are primarily occupied by multi-story residential and commercial buildings, warehouses, manufacturing facilities, cold storage facilities, food markets, stables, farriers, stores, and lumber, metal, and coal yards. An independent electric plant that extends onto Lot 1 of the Subject Property is located in the center of the block and bound by buildings on all sides. The print works facility is still located at 444-448 West 14<sup>th</sup> Street and a manufacturer of store fixtures is now located at 113 West 14<sup>th</sup> Street, approximately 150 feet east of the Subject Property.</p>
1921	<p><b>Subject Property:</b> The Subject Property is relatively unchanged from the 1904 Sanborn map.</p> <p><b>Surrounding Area:</b> Surrounding properties appear primarily unchanged from the 1904 Sanborn map, except that a hotel now adjoins the Subject Property to the west across 10<sup>th</sup> Avenue.</p>

<b>SANBORN MAP SUMMARY</b>	
<b>YEAR</b>	<b>COMMENTS</b>
1950	<p><b>Subject Property:</b> Lot 1 is occupied by two 3-story buildings and two 4-story buildings, each used for cold storage. Lots 5-9 were each occupied by a 3-story cold storage facility. The land on the eastern half of lots 5-9 is now vacant. An elevated N.Y. Central Rail Road steel viaduct runs northwest-southeast over the eastern portion of Lot 1.</p> <p><b>Surrounding Area:</b> Surrounding properties are primarily occupied by cold storage facilities, food markets, garages, auto storage facilities, and other commercial buildings. A gasoline filling station is located at 501 West 14<sup>th</sup> Street, approximately 150 feet northwest of the Subject Property.</p>
1969, 1975, 1979, 1980, 1983, 1985, 1988, and 1991-1996	<p><b>Subject Property:</b> The Subject Property appears primarily unchanged from the 1950 Sanborn Map.</p> <p><b>Surrounding Area:</b> Surrounding properties are primarily unchanged from the 1950 Sanborn map, except unspecified manufacturing is indicated at 445 West 14<sup>th</sup> Street, approximately 200 feet northeast of the Subject Property. The gasoline filling station at 501 West 14<sup>th</sup> Street is still present.</p>
2001- 2005	<p><b>Subject Property:</b> The Subject Property appears primarily unchanged from the 1996 Sanborn Map.</p> <p><b>Surrounding Area:</b> Surrounding properties are primarily unchanged from the 1996 Sanborn map, except that the southern adjoining property formerly occupied by a food market is now a parking lot, the gasoline filling station at 501 West 14<sup>th</sup> Street is no longer present, and a new gasoline filling station is located at 76 10<sup>th</sup> Avenue, approximately 200 feet north (cross-gradient) of the Subject Property. Based on its cross-gradient location relative to the Subject Property, the new filling station is not a REC. Unspecified manufacturing activities are still documented at 445 West 14<sup>th</sup> Street.</p>

Langan's Sanborn Map review revealed that the Subject Property was developed with several multi-story buildings and a lumber yard as early as 1895. The Subject Property was redeveloped into a multi-building cold-storage facility in the early 1900s. Potential coal burning and storage associated with an independent electric plant partially located in northeast corner of Lot 1 from 1904 to 1921 may have impacted soil and groundwater at the Subject Property and is considered a REC.

According to the Sanborn Map review, surrounding properties were primarily occupied by cold storage facilities, warehouses, food markets, manufacturing facilities, hotels, and other commercial buildings. The following RECs were identified on surrounding properties:

- A paint shop was located at 466 west 14<sup>th</sup> Street, which adjoins Lots 5-9 to the east, in 1895. Leaks or spills of paints containing lead, solvents or other chemicals may have impacted groundwater at the Subject Property.

- A gasoline filling station was located at 501 West 14<sup>th</sup> Street, approximately 150 feet northwest (cross-gradient) of the Subject Property, from 1969-1996. Leaks or spills of petroleum products at this facility may have adversely impacted groundwater at the Subject Property.
- Unspecified manufacturing activities were documented at 445 West 14<sup>th</sup> Street, approximately 200 feet northeast (up-gradient) of the Subject Property, between 1969 and 2005. Leaks or spills of solvents and/or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.
- A paint shop was located at 456 West 14<sup>th</sup> Street, which is up-gradient and adjoins Lots 5-9 to the east, in 1895. Leaks or spills of paints containing lead, solvents or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.

#### 4.3.4 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the years 1891, 1900, 1905, 1947, 1955, 1967, and 1981. Based on a review of the available maps, the Subject Property has been located within a fully developed urban street grid since at least 1891. Several piers were located along the Hudson River to the west of the Subject Property. Elevated railroad tracks are shown above the easternmost portion of the Subject Property beginning in 1947. Schools and a hospital were identified at surrounding properties beginning in 1955. A review of the historical topographic maps did not reveal evidence of RECs in relation to the Subject Property. Copies of the topographic maps are provided in Appendix J.

#### 4.3.5 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1920 through 2006. A copy of the City Directory Abstract is provided in Appendix K. A summary of the City Directory Abstract is presented in the following table.

CITY DIRECTORY SUMMARY		
YEAR	LISTED ADDRESS	OCCUPANT(S)
1920	Subject Property and surrounding properties were not listed.	
1923	Subject Property and surrounding properties were not listed.	

<b>CITY DIRECTORY SUMMARY</b>		
<b>YEAR</b>	<b>LISTED ADDRESS</b>	<b>OCCUPANT(S)</b>
1927	<b>Subject Property</b>	Subject Property was listed as beef/food distribution companies and other commercial businesses.
	<b>Surrounding Properties</b>	Surrounding Properties were listed as a shipping company, beef/food distributor, restaurant, and clothing store.
1931	<b>Subject Property</b>	The Subject Property was not listed
	<b>Surrounding Properties</b>	Surrounding properties were listed as residences.
1934	Subject Property and surrounding properties were not listed.	
1938	<b>Subject Property</b>	The Subject Property was listed as Wilson & Co.
	<b>Surrounding Properties</b>	Surrounding properties listings included a meat/food distributor and a residence.
1942	<b>Subject Property</b>	The Subject Property was listed as a cold storage facility and a meat packing company.
	<b>Surrounding Properties</b>	Surrounding properties listings included a meat/food distributor and a residence.
1947	<b>Subject Property</b>	The Subject Property was listed as a cold storage facility.
	<b>Surrounding Properties</b>	Surrounding properties listings included commercial businesses.
1950	<b>Subject Property</b>	The Subject Property listings included a meat packing company, a cold storage facility, and other commercial businesses.
	<b>Surrounding Properties</b>	Surrounding properties were listed as meat packing facilities, a tavern, commercial businesses, and a residence.
1956	<b>Subject Property</b>	The Subject Property listings included a hotel supply company, a cold storage facility, and other commercial businesses.
	<b>Surrounding Properties</b>	Surrounding properties were listed as meat packing facilities and commercial businesses.
1958	<b>Subject Property</b>	The Subject Property listings included a hotel supply company and a cold storage facility.
	<b>Surrounding Properties</b>	Surrounding properties were listed as residences and commercial businesses.
1963	<b>Subject Property</b>	The Subject Property listings included a hotel supply company and a cold storage facility.
	<b>Surrounding Properties</b>	Surrounding properties were listed as commercial businesses and a shipping company.
1968	<b>Subject Property</b>	The Subject Property was not listed.
	<b>Surrounding Properties</b>	Surrounding properties were listed as residences, meat packing companies, and commercial businesses.

<b>CITY DIRECTORY SUMMARY</b>		
<b>YEAR</b>	<b>LISTED ADDRESS</b>	<b>OCCUPANT(S)</b>
1973	<b>Subject Property</b>	Subject Property listings included a hotel supply company and offices. Central Tool and Machine Co. was listed at 48 10 <sup>th</sup> Avenue.
	<b>Surrounding Properties</b>	Surrounding properties listings included residences and a furniture company.
1978	<b>Subject Property</b>	Subject Property listings included a hotel supply company and commercial businesses.
	<b>Surrounding Properties</b>	Surrounding properties were listed as residences, meat packing companies, and commercial businesses.
1983	<b>Subject Property</b>	Subject Property listings included a hotel supply company and commercial businesses.
	<b>Surrounding Properties</b>	Surrounding properties were listed as residences, a clothing store, beef distribution center, and commercial businesses.
1988	<b>Subject Property</b>	The Subject Property was listed as a hotel supply company and commercial offices.
	<b>Surrounding Properties</b>	Surrounding properties listings included residences, offices, and beef distribution centers.
1993	<b>Subject Property</b>	Subject Property was listed as a hotel supply company.
	<b>Surrounding Properties</b>	Surrounding properties were listed as food and beef distribution centers.
1998	<b>Subject Property</b>	Subject Property listings included North Atlantic Harvest, Inc., a hotel supply company, and Alma Gourmet, Ltd.
	<b>Surrounding Properties</b>	Surrounding properties include a French eatery, meat and poultry companies, and a Catholic Youth Organization.
2000	<b>Subject Property</b>	The Subject Property was listed as a wholesale company, North Atlantic Harvest, Inc., and a hotel supply company.
	<b>Surrounding Properties</b>	A French eatery was identified at 42 10 <sup>th</sup> Avenue.
2006	<b>Subject Property</b>	The Subject Property was listed as a wholesale company, North Atlantic Harvest, Inc., and a hotel supply company.
	<b>Surrounding Properties</b>	Surrounding properties were not listed.

A review of the City Directory Abstract did not reveal evidence of RECs at the Subject Property with the exception of Central Tool and Machine Co., which was listed at 48 10<sup>th</sup> Avenue in 1973. Leaks or spills of petroleum products or solvents used at this facility may have adversely impacted soil and groundwater at the Subject Property. RECs were not identified at surrounding properties based on the review of the City Directory Abstract.

#### **4.3.6 Environmental Lien Search**

Langan contracted EDR to conduct an environmental lien search for the Subject Property. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no environmental liens or other activity and use limitations (AUL) associated with the Subject Property. A copy of the environmental lien search is provided in Appendix L.

DRAFT

## **5.0 SITE RECONNAISSANCE**

### **5.1 Methodology and Limiting Conditions**

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to the adjacent and surrounding properties.

The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures. A description of the observed adjacent and surrounding properties is provided in Section 2.2.

#### **5.1.1 Date and Time of Inspections**

The site inspection was conducted by Ms. Jennifer Armstrong of Langan at 10:00 am on August 11, 2010. The weather at the time of the inspection was sunny and approximately 85°F. Ms. Armstrong was accompanied by Mauricio (last name unknown) and two other Gottlieb laborers, during the Site Reconnaissance. Tommy Meane of Langan was also present during the Site reconnaissance.

### **5.2 General Site Setting and Reconnaissance Observations**

#### **Buildings, Other Structures, Foundations**

Lot 1 is improved with two 3-story brick buildings: one at 42-46 10<sup>th</sup> Avenue and the other at 449-451 West 13<sup>th</sup> Street. Lots 5-9 are vacant and enclosed with wooden construction fencing. Gravel and demolition debris, including brick and concrete fragments, were observed covering the ground surface of Lots 5-9. The Highline Park runs northwest-southeast above the easternmost portion of the Subject Property. Concrete and plywood patching was observed on the 10<sup>th</sup> Avenue sidewalk along the western exterior wall of the building. The patches may indicate filled in basement entrances, former conveyor belt locations, or former underground storage tank locations.

Langan was not provided access to 449-451 West 13<sup>th</sup> Street during the site inspection. Basement areas within 42-46 10<sup>th</sup> Avenue were not fully accessible during the reconnaissance due to safety concerns including collapsing ceilings, insufficient lighting, and unstable flooring.

The following is a summary of observations in the building at 42-46 10<sup>th</sup> Avenue on Lot 1:

### Basement

Much of the northwestern portion of the basement was inaccessible due to insufficient lighting and unsecure flooring. Approximately 2 to 3 inches of moist sediment was present atop the concrete slab. Rusted mechanical equipment and piping, likely used for refrigeration purposes, was observed in the north-central portion of the basement. A sump was observed in the northwest corner of the basement near the base of the stairs. Most of the southwestern portion of the basement was inaccessible due to a collapsing ceiling and piled up trash bags. A conveyor belt angled toward the sidewalk was observed along the western exterior wall near West 13<sup>th</sup> Street.

Three ASTs were observed in the eastern end of the basement. Two ASTs, each with an approximate capacity of 10,000 gallons, were observed within a concrete vault. Approximately 1 foot of standing water was observed on the vault floor. An approximate 750-gallon AST was observed immediately south of the AST vault. A significant amount of rust was observed on each of the ASTs. Contents of the ASTs are unknown and the Gottlieb laborers were not aware of their purpose. Due to the insufficient lighting and built up sediment on the floor in the area of the 750-gallon AST and the standing water in the AST vault, Langan was not able to adequately inspect the areas beneath the tanks for evidence of a petroleum release. Fill ports and vent pipes associated with the tanks were not observed; however, concrete patching on the 13<sup>th</sup> sidewalk and a penetration in the sidewalk along the southern exterior wall of the building may be the former locations of a fill port and/or vent pipes.

### Ground-level – Third Floor

Cold storage rooms and office spaces with concrete and wooden flooring were observed throughout the first through third floors. Cold storage areas consisted of walk-in freezer rooms or a series of metal rods lining the walls and ceilings. Office waste (i.e. paper, computer parts), debris, file boxes, paper, clothing, furniture, wood pallets, lumber, and metal sheeting were observed throughout the first-third floors. An approximate 20-square foot area of wooden flooring in the center of the third floor has collapsed. Standing water was observed near the

collapsed portion of the third floor. A loading door opening leading to the Highline Park is located at the eastern extent of the third floor.

Three inoperative elevators were observed in the building: one is located in the northeastern part of the building and the other on the northwestern end. The pits for these elevators were not inspected. An elevator pit filled with water was observed in the southwestern portion of the basement. The Gottlieb laborers were not aware if the elevators were hydraulic or electrical. Apparent elevator equipment rooms are located on the roof, indicating that the elevators were most likely operated by a cable pulley system and probably not hydraulic.

A monitoring well was observed on the southern 14<sup>th</sup> Street sidewalk near the northern extent of the Subject Property. Three apparent abandoned boreholes were observed along the 10<sup>th</sup> Avenue sidewalk at the western extent of the Subject Property. The monitoring well is likely related to the NYSDEC spill at the Mobil gasoline station adjoining the Subject Property to the north across West 14<sup>th</sup> Street. Three additional wells were observed on the western and southern perimeters of the Mobil Station. The monitoring well and abandoned boreholes indicate previous sub-surface investigation at the Subject Property. An apparent Con Edison vault is also located on the 14<sup>th</sup> Street sidewalk long the northern Subject Property border.

### **Pits, Ponds, Lagoons**

Langan did not observe pits, ponds, or lagoons on the Subject Property.

### **Pools of Liquid**

Standing water was observed in an AST vault at the eastern end of the basement, in an elevator pit in the southwestern portion of the basement, and in the central portion of the third floor in the building at 42-46 10<sup>th</sup> Avenue. Standing water appeared clear; there was no evidence of a petroleum release.

### **Storm Drains and Cisterns**

Langan did not observe storm drains, wells, or cisterns at the Subject Property, with the exception of a catch basin for the city sewer system on the sidewalk at the corner of 10<sup>th</sup> Avenue and 13<sup>th</sup> Street.

### **Polychlorinated Biphenyl (PCB) Transformers and Suspect Equipment**

Langan did not observe transformers at the Subject Property; however, suspect PCB-containing fluorescent light ballasts were observed throughout the building at 42-46 10<sup>th</sup> Avenue.

### **Storage Containers and Drums**

An unlabeled 55-gallon drum, partially filled with an unknown liquid, was observed on the ground-level near the basement stairwell. An unlabeled 55-gallon drum, also partially filled with an unknown liquid, and two 5-gallon paint containers were observed in the northeastern portion of the second floor. Compressed-gas containers of refrigerant were observed in the southeastern portion of the second floor.

### **Air Emissions or Wastewater Discharges**

Sources of air emissions or wastewater discharges were not observed at the Subject Property; however, an exhaust pipe was observed on the southern exterior wall of 449-451 West 13<sup>th</sup> Street. This building is currently vacant and systems are not in operation; therefore, active air emissions at the Subject Property are not a concern.

### **Sumps**

A sump was observed in the northwest corner of the basement near the base of the stairwell. Based on the shallow groundwater depth (approximately 12 feet bgs) at the Subject Property, additional sumps are likely located in the basement.

### **USTs or ASTs**

Three ASTs were observed in the eastern end of the basement. Two ASTs, each with an approximate capacity of 10,000 gallons, were observed within a concrete vault. Approximately 1 foot of standing water was observed on the vault floor. The source of water could not be determined. An approximate 750-gallon AST was observed immediately south of the AST vault. A significant amount of rust was observed on each of the ASTs. Contents or use of the ASTs are unknown. Due to the insufficient lighting and built up sediment on the floor in the area of the 750-gallon AST and the standing water in the AST vault, Langan was not able to adequately inspect the areas beneath the tanks for evidence of a release. Fill ports and vent pipes associated with the tanks were not observed; however, concrete patching on the 13<sup>th</sup> sidewalk and a penetration in the sidewalk along the southern exterior wall of the building may be the former locations of a fill port and/or vent pipe.

### **Monitoring Wells or Remedial Activities**

A monitoring well was observed on the adjoining 14<sup>th</sup> Street sidewalk and three apparent abandoned boreholes were observed along the 10<sup>th</sup> Avenue sidewalk near the western extent

of the Subject Property. The monitoring well is likely related to the NYSDEC spill at the Mobil gasoline station adjoining the Subject Property to the north across West 14<sup>th</sup> Street. Three additional wells were observed on the western and southern perimeters of the Mobil Station. The monitoring well and abandoned boreholes indicate previous environmental investigation and/or remediation at the Subject Property.

### **Stained or Discolored Soils**

Evidence of stained or discolored soils was not observed at the Subject Property.

### **Leachate or Seeps**

Leachate or seeps were not observed at the Subject Property.

### **Site Reconnaissance Conclusions**

Based on the observed conditions associated with the site reconnaissance, the following RECs were identified:

- Potential spills or leaks of petroleum products from the identified ASTs may have adversely impacted soil and groundwater at the Subject Property.
- The monitoring well on the adjoining 14<sup>th</sup> Street sidewalk and abandoned boreholes on the 10<sup>th</sup> Avenue sidewalk indicate previous environmental investigation and/or remedial activities with potential impacts to soil at the western extent of the Subject Property.

## **6.0 INTERVIEWS**

### **6.1 Site Owner**

The Site owner was not interviewed as part of this Phase I ESA.

### **6.2 Owners/Tenants of Adjacent Properties**

Owners/tenants of adjacent properties were not available to be interviewed at the time of the site reconnaissance.

DRAFT

## **7.0 ADDITIONAL SERVICES**

### **7.1 Radon**

According to the USEPA Map of Radon Zones, the Borough of Manhattan has a low radon potential (less than 2 picocuries per liter [pCi/L]). The Map of Radon Zones has been compiled as a general guideline and does not necessarily reflect radon concentrations at specific localities. The USEPA recommends that actions be taken to minimize radon exposure when the radon potential in living areas exceeds 4 pCi/L. The NYSDOH has estimated that 0.9% of living areas and 4% of basements of homes in Manhattan have radon concentrations above 4 pCi/L. Based on the available information, elevated concentrations of radon in indoor air at the Subject Property are unlikely.

### **7.2 Asbestos-Containing Material, Lead-Based Paint, and Polychlorinated Biphenyls**

Based on the age of the building located on Lot 1, several building materials may contain asbestos-containing materials (ACM), lead based paint (LBP), or polychlorinated biphenyls (PCBs). The potential presence of ACM, LBP and PCBs is an environmental concern. Langan is conducting a hazardous materials survey to identify and quantify ACM, LBP, and PCBs at the Subject Property. The findings for this investigation will be presented in a separate report.

## **8.0 DEVIATIONS AND DATA GAPS**

### **8.1 Deviations**

Langan has performed a Phase I ESA of the Subject Properties utilizing a standard of good commercial and customary practice that is consistent with the ASTM E1527-05 and the 40 Code of Federal Regulations (CFR) Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

### **8.2 Data Gaps**

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E 1527-05, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without data gaps, with the exception of the following:

- The building at 449-451 West 13<sup>th</sup> Street was inaccessible during the Site reconnaissance and
- Several basement areas were not accessed during the Site reconnaissance due to safety concerns, including collapsing ceilings, insufficient lighting, and questionable floor stability.

This data gap does not impact the general findings of this Phase I ESA as several RECs were identified based on historic usage of the Subject Property and existing site conditions. It is

assumed that the building at 449-451 13<sup>th</sup> Street is comprised of spaces similar to 42-46 10<sup>th</sup> Avenue with previous use of petroleum products and refrigerants. Specific investigation activities recommended for the Subject Property may be more extensive based on observations in the basement areas not previously addressed.

DRAFT

## 9.0 FINDINGS AND OPINIONS

This Phase I ESA was conducted in general accordance with the ASTM Practice E1527-05 (Standard Practice for ESA: Phase I ESA Process) and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-05 as a REC.

The Phase I ESA identified the following RECs on the Subject Property:

### REC 1 – Petroleum or Chemical Bulk Storage

During the Site reconnaissance, three above ground storage tanks (ASTs) were observed in the eastern end of the basement. Two ASTs, each with an approximate capacity of 10,000 gallons, were observed within a concrete vault. Approximately 1 foot of standing water was identified on the vault floor and the ceiling of the vault is partially collapsed. An approximate 750-gallon AST was observed immediately south of the AST vault. Contents of the ASTs were not confirmed; however, it is believed that they stored fuel oil for low-pressure boilers that were identified in New York City Department of Building (NYCDOB) records. Each of the tanks was covered in rust. Due to the insufficient lighting and built-up sediment on the floor surrounding the 750-gallon AST and the standing water in the AST vault, Langan was unable to thoroughly inspect the areas beneath the tanks for staining or evidence of a petroleum release. . Potential spills or leaks of petroleum contained in the identified ASTs may have adversely impacted soil and groundwater at the Subject Property and is considered a REC.

### REC 2 – Monitoring Wells

A monitoring well was observed on the 14<sup>th</sup> Street sidewalk at the northern extent of the Subject Property and three apparent abandoned boreholes were observed along the 10<sup>th</sup> Avenue sidewalk at the western extent of the Subject Property. The monitoring well and abandoned boreholes may be related to a previous environmental investigation and/or monitoring at the Subject Property and is considered a REC.

### REC 3 – Historic Site Usage

An independent electric plant was located in the center of the block in 1904. The southern portion of this facility extended onto Lot 1 of the Subject Property. Potential coal burning and

storage associated with this plant may have impacted soil and groundwater at the Subject Property.

Central Tool and Machine Co. was identified at 48 10<sup>th</sup> Avenue in 1973. Leaks or spills of petroleum products and/or solvents used at this facility may have adversely impacted soil and groundwater at the Subject Property.

#### REC 4– Historic Fill

A review of historic Viele maps indicates that the Hudson River originally extended approximately 200 feet east of 10<sup>th</sup> Avenue at 13<sup>th</sup> Street, indicating that most of the Subject Property consists of made land filled in for development purposes in the late 1800s. Historic urban fill typically consists of ash, demolition debris and municipal waste products and may contain several types of contamination at concentrations above current regulatory levels, including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals. The presence of historic fill at the Subject Property is a REC.

The following RECs were identified at surrounding Properties:

#### REC 1 - Open Spill Incident at a Mobil Gasoline Station at 461-469 West 14<sup>th</sup> Street

NYSDEC Spill No. 0911962 has been open since February 11, 2010 and addresses several outstanding issues associated with historic spill at the gas station. Benzene, toluene, ethylbenzene, xylene (BTEX), and methyl-tert butyl ether (MTBE) remain in soil and groundwater at concentrations significantly greater than applicable New York State Standards. Investigation reports and work plans related to this facility have not been approved by the NYSDEC. Based on the nature of this spill, regulatory status, and close proximity to the Subject Property (adjoining to the north across 14<sup>th</sup> Street), it has the potential to adversely impact groundwater at the Subject Property and is considered a REC.

#### REC 2 - Historic Use of Surrounding Properties

The following historical uses of surrounding properties are considered RECs:

- A Gasoline filling station was located at 501 West 14<sup>th</sup> Street, approximately 150 feet north, northwest (cross-gradient) of the Subject Property, from 1969-1996. Leaks or spills of petroleum products at this facility may have adversely impacted groundwater at the subject Property.
- Unspecified manufacturing activities were documented at 445 West 14<sup>th</sup> Street, approximately 200 feet northeast (up-gradient) of the Subject Property, between 1969

and 2005. Leaks or spills of solvents and/or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.

- A paint shop was located at 456 West 14<sup>th</sup> Street, which is up-gradient and adjoins Lots 5-9 to the east, in 1895. Leaks or spills of paints containing solvents, lead or other chemicals at this facility may have adversely impacted groundwater at the Subject Property.

**Asbestos, Lead, and Polychlorinated Biphenyl (PCBs)**

Based on the age of the building located on Lot 1, several building materials may contain asbestos-containing materials (ACM), lead based paint (LBP), or polychlorinated biphenyls (PCBs). The potential presence of ACM, LBP or PCBs is an environmental concern. Langan is conducting a hazardous materials survey to identify and quantify ACM, LBP, and PCBs at the Subject Property. The findings for this investigation will be presented in a separate report from this Phase I ESA.

## 11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312.10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Properties. They have developed and performed the AAls in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are provided in Appendix M.

## ASTM PRACTICE E 1527-05: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to  
Langan Engineering and Environmental Services Inc.

---

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

---

### **General Information**

**User/Client Name (s):** \_\_\_\_\_

**Property Name:** \_\_\_\_\_

**Address:** \_\_\_\_\_  
\_\_\_\_\_

**Property Type:** \_\_\_\_\_

**Type of Property Transaction:**

- |                       |                          |
|-----------------------|--------------------------|
| Purchase of property  | <input type="checkbox"/> |
| Financing of property | <input type="checkbox"/> |
| Sale of property      | <input type="checkbox"/> |
| Ground Lease          | <input type="checkbox"/> |
| Build to Suit Lease   | <input type="checkbox"/> |
| Other _____           |                          |

**Reason Why Phase I ESA is required:** \_\_\_\_\_

**Site Contact (s):** \_\_\_\_\_

### **Required Information**

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

**(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).**      **Yes**      **No**

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.]

**(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).**      **Yes**      **No**

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any activity and use limitations and to report these limitations to the environmental professional conducting a Phase I Environmental Site Assessment.]

**(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28).** Yes No

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

**(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).** Yes No

- (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.]
- (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
- (c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.

**(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).** Yes No

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property?
- (b.) Do you know of specific chemicals that are present or once were present at the property?
- (c.) Do you know of spills or other chemical releases that have taken place at the property?
- (d.) Do you know of any environmental cleanups that have taken place at the property?

**(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31).** Yes No

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

**SIGNATURE:**

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/31/2010 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

#### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 7 RCRA-CESQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/20/2009 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 07/14/2010 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/24/2010 has revealed that there are 72 NY LTANKS sites within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 62 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 06/17/2010 has revealed that there are 23 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size

A review of the NY CBS list, as provided by EDR, and dated 06/17/2010 has revealed that there is 1 NY CBS site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***State and tribal voluntary cleanup sites***

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 05/24/2010 has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### Local Lists of Registered Storage Tanks

NY HIST UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY HIST UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 22 NY HIST UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/24/2010 has revealed that there are 45 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 29 NY Hist Spills sites within approximately 0.125 miles of the target property.

## EXECUTIVE SUMMARY

### Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 26 RCRA-NonGen sites within approximately 0.25 miles of the target property.

### EDR PROPRIETARY RECORDS

#### ***EDR Proprietary Records***

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste.

## EXECUTIVE SUMMARY

Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1 mile of the target property.

Pathway: SURFACE WATER PATHWAY  
Scoring: 4

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977,

MAP FINDINGS

**HUDSON RIVER PCBs (Continued)**

**1000384273**

PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology

companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

**Environmental Interest/Information System**

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

boring logs for borings SB-07 to SB-10. 2:54 PM:- spoke with Allan and asked him to submit copy of Phase I report and boring logs for SB-07 to SB-10 and scaled site map including locations of all existing tanks, dispenser islands, borings and wells and site specific groundwater flow direction. Allan mentioned that Phase II work was done by Property Solutions Inc. in 2008 and EMC was reported spill based on results of Phase II in 2008. EMC hasn't done any soil/groundwater investigation themselves. 4:37 PM:- left message for Mr. Randberg at Stellar management. 02/22/10-Hiralkumar Patel. 10:09 AM:- received message from Mr. Randberg. 10:42 AM:- received email from Francis Oliver from EMC with boring logs for borings B-7 to B-10. no high PID noted in these borings. 10:48 AM:- spoke with Mr. Randberg. Mr. Randberg mentioned that his company owns office building at 450 W 15th Street and doesn't own gas station/car wash. Mr. Randberg mentioned that gas station, car wash and office building were owned by single company back in days, but was separated and someone else owns property of gas station/car wash. Mr. Randberg bought 450 W 15th street in late 2006. 1:30 PM:- left message for Mr. Munoz. 1:52 PM:- spoke with Mr. Miller who gave property owner's contact info. Mulnick LLC. \*\*owner of car wash/gas station property\*\* c/o Milk Studios 450 W 15th Street, 8th Floor New York, NY 10011 Attn.: Erez Shternlicht PH. (212) 645-2797 email: erez@milkstudios.com 2:02 PM:- left message for Ketty at Mr. Shternlicht's office. 2:12 PM:- received message from Ketty (917-515-2055). 2:35 PM:- spoke with Mr. Shternlicht. he confirmed that he owned both properties in 2005 and then sold office building in 2006. informed him about unresolved spill issue from 2005. 02/23/10-Hiralkumar Patel. 8:08 AM:- sent email to Mr. Munoz with copy of PBS form to correct site address (as tanks are located at 70 10th ave and not at 450 W 15th street). 9:08 AM:- sent letter to Mr. Munoz and Mr. Shternlicht requiring Phase I, scaled site plan including former tank systems and boring/wells and work plan for complete delineation of soil and groundwater contamination. Phase I and work plan are due on 03/23/10. letter emailed to Mr. Munoz, Mr. Shternlicht, Mr. Miller, Mr. Stumbo and Mr. Randberg. 02/25/10-Hiralkumar Patel. 10:50 AM:- received email from EMC with letter from Mulnick Realty, LLC. authorizing 459 W 14th Realty Associates, LLC. to conduct remediation at the site. 03/02/10-Hiralkumar Patel. 2:35 PM:- received work plan including two

scaled site maps. first map, dated 03/13/1998, is plan with proposed tanks and pump islands locations (that could be before tank system installed). and this map doesn't show location of other tanks on property. second map, dated 02/15/2009, shows recent boring/well locations and proposed well locations on map. proposed work plan is not acceptable as proposing to install three wells more than 90 ft apart from each other. requires monitoring wells within 25 ft distance from each other. 2:41 PM:- received Phase I report from Allan from EMC. as per Sanborn maps review, site was wagon yard and iron and metal yard from 1895 to 1921, vacant lot from 1950 to 2000 and then converted to gas station/car wash/lube change facility. 03/11/10-Hiralkumar Patel. 3:26 PM:- spoke with (and sent email to) Francis at EMC. informed him that proposed wells are more than 90 ft away from each other and any underground utility/structure can affect groundwater flow direction. asked Francis to submit revised work plan including wells within 25 ft from each other in each affected area. also asked him to submit scaled site map showing all existing tank systems (including remote fill ports, dispenser islands/boiler, piping etc. and not proposed plan as submitted earlier), all former/current borings/wells, and location of proposed wells. 03/17/10-Hiralkumar Patel. 1:27 PM:- received investigation work plan from Allan Ciriaco from EMC. proposed to install total of 13 monitoring wells. proposed work plan is not acceptable as doesn't include any investigation downgradient from the site (along 10th ave). 03/23/10-Hiralkumar Patel. 11:03 AM:- left message for Mr. Stumbo at EMC. 3:54 PM:- received message from Mr. Stumbo. 03/24/10-Hiralkumar Patel. 8:20 AM:- sent email to Mr. Stumbo informing that the proposed work plan is not acceptable as doesn't include any downgradient investigation. asked to submit revised work plan. email copied to Francis (EMC), Mr. Munoz, Mr. Miller and Mr. Shternlicht. 9:55 AM:- received revised work plan. 11:25 AM:- sent work plan approval letter to Mr. Munoz and Mr. Shternlicht. letter emailed to Mr. Munoz, Mr. Shternlicht, Mr. Miller and Mr. Stumbo. 05/04/10-Hiralkumar Patel. 11:27 AM:- received email from Allan from EMC with investigation report. abstract: - installed total of 13 soil borings to a depth of 20 ft bg - collected soil sample at highest PID reading - installed monitoring wells at each boring locations to depth of 20 ft bg with 10 ft of screen - found groundwater at 13 ft bg - soil encountered at the subject site generally consisted of brown coarse to fine sand with some gravel soil analyticals:

-----620 05/05/10-Hiralkumar Patel. 2:19 PM:- sent email to Allan requiring him to submit revised report as following missing: - boring logs doesn't include PID readings and any petroleum odors at different depths - sample recovery info missing in boring logs MW-7 and MW-8 - boring log for MW-2 is missing - well size - no info about soil sampling depths - submitted site map is not clear and un-scaled - site-specific groundwater flow direction asked Allan to submit scaled site map with following: - existing tanks, dispenser island and remote fill ports - all current/previous boring/wells - site specific groundwater flow direction also asked Allan about deepest dry soil sample, as report only indicates about soil sample at highest PID readings. email copied to Mr. Stumbo, Mr. Munoz, Mr. Shternlicht and Mr. Miller. 3:45 PM:- received call from Allan and requested extension for submitting required scaled site map. approved Allan's request and asked to submit revised report with missing information by end of 05/14/10. 05/06/10-Hiralkumar Patel. 2:24 PM:- received email from Allan with revised report. revised report is not acceptable as doesn't include site-specific groundwater flow direction and scaled site map. also report has added appendix with PID readings during boring, but requires to have detailed boring logs with soil description, observations and PID readings on one page. as per report, wells installed on-site are 2 inch in diameter.

05/07/10-Hiralkumar Patel. 11:30 AM:- spoke with Allan. informed him that the submitted revised report is not acceptable. asked him to submit re-revised report with: - detailed boring log with soil type, observation and PID readings (instead of separate appendix for PID readings) - site-specific groundwater flow direction (instead of assumptions based on nearby river) - scaled site map including only property line, building outline, underground gasoline tanks, remote fill ports, dispenser islands, current/former boring/well locations and site-specific groundwater flow direction - sample depth info in summary table of soil analyticals 12:45 PM:- left message for Mr. Shternlicht. 12:47 PM:- left message for Mr. Miller. 1:51 PM:- sent email to Allan requiring to submit re-revised report. email copied to Mr. Miller, Mr. Munoz and Mr. Shternlicht. checked PBS record. site address in PBS record hasn't changed yet. 2:01 PM:- sent email to Mr. Munoz with PBS correction form and asked him to submit correction form by the end of 05/21/10 to avoid legal referral. email copied to Mr. Miller and Mr. Shternlicht. 05/11/10-Hiralkumar Patel. 4:51 PM:- received email from Allan with work plan for additional soil/groundwater investigation. 05/12/10-Hiralkumar Patel. 2:00 PM:- received call from Allan inquiring about approval status on submitted work plan. informed Allan that the department is still waiting for re-revised investigation report. so, once report is received and reviewed, the department will send STIP to property owner and submitted work plan will be reviewed only after STIP signed. 2:15

PM:- received re-revised report from Allan which is still missing site-specific groundwater flow direction. 3:25 pm:- spoke with Rich at EMC about site-specific groundwater flow direction. Rich mentioned that they can't triangulate existing wells as groundwater in all wells found at same depth during soil borings. no well survey has done yet. asked Rich to survey existing wells to confirm groundwater depth and determine site-specific groundwater flow direction and then submit revised report including site-specific groundwater flow direction and groundwater contour map. 05/17/10-Hiralkumar Patel. 11:15 AM:- spoke with Allan. asked him to find out source and discharge of water used in car wash operation. 12:35 PM:- received call from Allan. he mentioned that water for car wash comes from city supply system and used water goes into city sewer system. 05/18/10-Hiralkumar Patel. 9:10 AM:- received email from Allan with GW contour map. after discussing with DEC Austin, case transferred to DEC Vadim. summary: - line was found leaking supplying super gas to dispenser #6 (leak was found in portion between dispenser #7 to #6) - found high MTBE (no other components) in soil and groundwater sample from boring installed in area between dispenser #7 and #6 along 10th ave - found high VOC contamination (BTEX and MTBE) in soil samples at groundwater interface along 10th Avenue which is western (and downgradient) side of the property - according to Phase II done in Aug. 2008, groundwater was found at 12 ft bg - according to Phase II done in Aug. 2008, site has total of eight dispenser islands: five are located in the southern portion of the site parallel to West 14th street and three are located in the northern portion of the site parallel to 10th ave DEC requires: 1) scaled site including all current/former tank systems, 2) complete soil and groundwater investigation, 3) site specific groundwater flow direction, 4) correction of PBS record (PBS record shows site address as 450 W 15th street, but tanks are located at 70 10th Ave) \*\*refer to spill #: 0412142 also.\*\*

Remarks: SOIL SAMPLES POSITIVE FOR PETROCHEMICAL CONTAMINATION.

DEC Memo:

A consultant (no name) called on 6/24/2003 to say the station had been condemned and removed as part of the west side highway improvements. This specific site is now a part of developed city park (Part of Hudson River Park). 4/12/04-Vought-Spill transferred from Sullivan to Sun as per Rommel. 6/29/04 PBS shows tanks removed in 1993. David Oil was owner. Transferred from Sun to Foley. (KMF) 5/3/05 501 W 14th St is also known as 65-79 11th Ave. Property is vacant land between 14th and 15th Streets and 10th and 11th Avenues. Block 686, Lot 29. Requested Hank Alpert submit tank closure report for tanks removed in 1993. 5/3/05 Email from Hank Alpert, owner of David Oil. In December of 1996, the NYS Department of Transportation, Real Estate Division acquired the property under a condemnation involving the restructuring of the Westside Highway. As a result of the condemnation, NYS now owns the property. As part of the settlement, the State purchased all underground storage tanks and presumably removed them.

Remarks: 4K TANK, PETROTITE .6GPH, SYSTEM TEST; WILL EXCAVATE, ISOLATE & RETEST

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ" e2mis 151252 On 11/24/03 at 09:58 B. Prescod # 53868 I&A Splicer called to report that he found a spill of unknown substance that he believes to be of an oil type. He reports that there is 15 gal. of oil & 15 gal of water. He says that it maybe a type of fuel but it does not smell like a fuel. He tried to diaper it up but was unable he says some came up but there was more there. He found this at 09:55 licated at F/O 427 W. 14 St. He was there responding to a

"B" ticket of a water leak. The cause and source are unknown at this time. He does not have sample jars or a chain of custody on the truck so he called his supervisor & they will be going over to the location. He was told to take 3 samples pcb, ID, & flashpoint. & mark it priority E. Than call back with the follow up information. He was also instucted to stay on location. 11/24/03 10:48 J. Cumberbatch # 10660 supervisor called to report that there was only 1 pt of oil & that it would be able to be diapered up. He will call back when it is finished. 11/24/03 11:07 J. Cumberbatch # 10660 I&A supervisor called to report that the oil was completly diapered up. The diapers will be disposed of at the W. 28 St. yard in the pcb drum. He says that the cleanup was completed at 11:05. He also states that there is no visible sign of any oil in the structure. 11/24/03 12:23 J. Cumberbatch called back with the spill tag # 18035 & a chain of custody # AA-03059. He will take 3 samples pcb, ID, & flashpoint. 11/24 @ 23:45 Lab Sequence Number: 03-09510-001 Total PCB <1.0 ppm 11/25/03 @08:59 Lab Sequence Number: 03-09510-002 Flash point > 140 deg F 11/26/03 Lab Sequence Number: 03-09511-001 Insufficient amount of sample extracted to perform oil identification. Note: Based on the above lab results of less than 1 ppm PCB and no aroclor and insufficient amount extracted to perform an oil ID, it is apparent that all the oil was cleaned up as detailed above. No source of oil was discovered.

DEC Memo: 12/08/09 Ketani made a site visit to building where the complaint came from and visited the construction site. 12/08/09 - Raphael Ketani. I made a site visit to 450 West 15th Street. I went to the fourth floor to meet Michele Smith at Adam Inc. (Adam and Eve). I noticed a slight odor in the vicinity of the elevators as I got off and entered the area in front of the elevators. I went through a heavy metal door and sensed a noticeable odor - about a moderate odor. It smelled like a type of cloth preservative. I was escorted to Ms. Smith's (212) 994-7292 office. On the way there, I passed by cubicles and areas where clothing was being stored. The piles were small, but there were many of them. Ms. Smith was sitting in an alcove off of an inner hallway with three other women. The air was stagnant and warm. She said that the odors have been bad and that she was getting migraines from the odors. One woman had her kerchief over her mouth and nose. Another woman complained about feeling bad. Ms. Smith said that the odors were coming from the ventilation system. I looked at the duct which was hanging above them. There was one small vent to supply air. Ms. Smith said that there were holes in the duct piping. I looked and saw two small holes. I told her that odors can be picked up by a poorly sealed duct system from anywhere in the building, and carried to other offices. She asked whether I had smelled the odor at the entrance to the office. I told her that I had and that it smelled like a clothing preservative (the office is a clothing design company and lots of clothing was hanging in many locations). Ms. Smith said that the odors weren't present until a few weeks ago (the weather had turned cooler at about the same time). She asked whether the odors were toxic. I told her that it would depend on the chemical concentrations and the air circulation conditions in the office. I tried to sense the odors with the PID meter, but it went dead. I asked her whether she had called the NYC

**COMMERCIAL BLDG (Continued)**

**S110138742**

DEP. She and another woman said "Yes," but they were transferred to 911. I asked what happened then. She said that nothing happened as she didn't consider the situation an emergency and so she didn't talk to the operator. Ms. Smith said that a company was doing construction behind the building at the end of West 14th Street, and that another company was doing construction up the block. I told her that I will check out the situation. One woman asked whether the odor was asbestos. I told her that asbestos has no odor. She asked whether they were breathing in asbestos. I told her that I could not determine this and that I was not a health inspector, just an oil spill inspector. I went downstairs and met Thomas Ortiz, the assistant engineer (212) 741-8171. He showed me the building behind his. This was an older, tall concrete and brick building that was being gutted and refurbished (see E-docs). The steel girders were still showing. Mr. Ortiz pointed out the air intake grills for his building (see E-docs). The grills were facing this building that was across the street. He said that when the trucks load up on the construction debris, you can smell the odor. I asked him how much dust he gets from the construction. He said that he changes the air filters 3 times per month because they get dirty. I told him to change the filters more often if the dust is bad. He also said that the drivers of the diesel trucks run their engines when they are parked in the loading dock. I told him that this also contributes to the odors. He agreed. I asked him what type of fuel is used to heat the building. He said that it's oil or gas, depending on what they need due to the weather. Mr. Ortiz brought me to the head engineer, Marlon Campbell (917) 559-6901. Mr. Campbell explained that the construction site up the block was also generating odors. I went to the site with him and met Carlo Verlazza, the Safety Officer from Pro Safety Services. Mr. Verlazza said that he was working for Urban Foundation. He explained that the construction crew was applying glue to the black fabric that was covering the bare concrete. This was to waterproof the foundation. He showed me a portion of the work where the workers were rolling the glue onto the fabric. Then he showed me a finished part of the waterproofing with layers of blue styrofoam (or something that looked like it). Next, he showed me the glue. It contained toluene, benzene, xylene, heptane, and one other component. It had a musty odor. Next, I went back to talk to Ms. Smith and explain what I had found out. I told her about the glue, the dust from the construction site behind her building, the diesel exhaust, the piles of clothing, and that the building sometimes uses natural gas to generate heat. I told her that the odors are a combination of all five factors. She thanked me for finding out what was going on and I told her to call me again if the odors get bad. I returned to my office and tried to contact Joseph Manfredonia of Pav-Lak (212) 929-4043, the head of the construction project. Mr. Manfredonia didn't activate his voice mail system. So I couldn't leave a message to ask him about the dust from the construction site. As the odors were not strong in Ms. Smith's office, and as Mr. Ortiz will try to change the filters in the air system more frequently, and as part of the odor mix seemed like it could be coming from the clothing outgassing in the office's stagnant air, I am closing the spill case. 12/10/09 - Raphael Ketani. I finally got ahold of Mr. Manfredonia. He said that he has been on the project for a year. I told him that people from 450 West 15th Street have been complaining about the dust in the building coming in from his construction site. He said that everyone tries to be careful about making dust and that protective

methods are used to limit the spread of the dust. I told him that the main problem seems to be the trucks loading with broken demolition debris. I added that the ventilation intake louvres face his site and that the dust is entering through these portals. I told him that he should use some time of spray to hold down the dust. He said that he will do this when the weather isn't freezing. Mr. Manfredonia said that he will bring up the dust issue at the next trades meeting. I asked him whether there was any asbestos. He said that the project has been going on for 10 years and so he doesn't know whether there ever was asbestos. I thanked him for his help.

Spiller Phone: (646) 486-4541  
Spiller Extention: Not reported  
DEC Region: 2  
DER Facility ID: 272857  
DEC Memo: See duplicate spill #0412147. 2/14/2005 - Sangesland spoke to "Quilvio" who manages the Chelsea Car Wash/Gas Station. Station is only about 5 years old - all new equipment & alarms - Also the site is right next to the West Side Hwy and the water table is quite high. A water sump pump under the station runs constantly at a very high rate. Any groundwater which may have been under the station around the time of the spill is long gone at this point. Quilvio said he got a gasoline delivery about 3 or 4 weeks ago from Island Transportation. Island overfilled the tanks and the alarms went off. The Island delivery man left without doing any remediation. Quilvio says there was gasoline in 3 manholes around on the site. He called American Resource Technology (Chelsea's regular test & repair company). They came and cleaned the overfill buckets and checked the system. ExxonMobil is somehow involved as a distributor??? Exxon environmental people came to the site to test the air in 2 nearby basements. There continues to be a problem with gasoline smell in the basement next door. Quilvio is now going to hire a contractor to run a couple of test borings in the area to determine if any of the gasoline went into the ground, or if it was all contained in the overfill buckets. 2/14/05 Spoke to Frank Messina, ExxonMobil Global Remediation (908-730-2055). ExxonMobil only supplies the station with fuel. He stated that ExxonMobil may have initially sent someone to test the air if they did not realize the station was independent. Filed spill report #1016151 with DEP. (KMF) 2/15/05 Changed address from 62-76 10th Ave to 450 W 15th St. Spoke to Quilvio Monoz, operator of Tenth Avenue Car Wash (PBS 2-604379). Quilvio called ExxonMobil territory manager, Mike Romano. ExxonMobil sent Geologic Services Corp., Michael Meyerhofer, with PID. He tested basements which returned negative. Q. Monoz hired American Resource Technology (Bob Arcaro, 718-234-0024) to test the lines. They will also be doing borings around the tanks. Q. Monoz stated he will be taking responsibility for now but feels Island Transportation is responsible for the overfill. (KMF) 2/15/05 Spoke to Bob Arcaro, American Resource Technology. Will be testing fill lines since Q. Monoz stated

there was product in the sumps during delivery. The drain plugs in the spill containment boxes would not open. They will probably change these first and then test fill lines. He stated he wasn't sure that there was product lost to the subsurface or that borings were necessary. I requested he do the line tests and speak further with the operator to determine how much product was lost. If borings are necessary, Bill Klein from Franklin will probably do the work. (KMF) 07/28/05 A limited subsurface investigation report by Fenley & Nicol dated 4-13-05 (See File) was reviewed. Report recommends an extended subsurface investigation to determine the extent of hydrocarbon impact. Attempted to contact Fenley & Nicol- unsuccessful. 2:00pm Called Bob Arcaro (718-234-0024). No answer. LNK. 08/19/05 Bob Arcaro never returned call. Next step- recontact either Fenley & Nicol or Bob Arcaro to determine if a subsurface investigation was completed and if there is a report available. LNK. 04/12/06 - Hough - Received additional documents from Fenley & Nicol concerning limited subsurface investigation. Report concludes that there was no significant impact from the overfill event. Spill should be closed. However there is another open spill on the site 01-03052. Next Step: Regional follow-up on older open spill and verification of finding of report from the most recent spill. Activities may include site visit and obtaining documentation of other remedial activities related to residual impacts from older spill. 02/22/10-Hiralkumar Patel. while investigating spill #: 0911962, came across this spill number. this spill was reported as 500 gal gasoline spilled during delivery at the gas station which is located at 70 10th Avenue. Mr. Shternlicht owned two properties during spill event: 450 W 15th Street (address in spill report) and 70 10th Avenue (where gas tanks located and actual spill occurred). then Mr. Shternlicht sold property at 450 W 15th Street and new owner Mr. Randberg bought it in late 2006. Mulnick LLC. \*\*owner of car wash/gas station property\*\* c/o Milk Studios 450 W 15th Street, 8th Floor New York, NY 10011 Attn.: Erez Shternlicht PH. (212) 645-2797 email: erez@milkstudios.com base on available information, spill was happened on 70 10th Avenue (aka 461-469 W 14th Street and 58-76 10th Ave). refer to spill #: 0911962 for further details.

Remarks:

The delivery guy pumped 72 inches of material into the tank. The alarms went off and the delivery man just drove off. 200 gallons have been recovered and lost 200-300 gallons into the ground. (OFF TEH WESTSIDE HIGHWAY)

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 01/01/2006  
Facility name: BABOON PRODS  
Classification: Not a generator, verified

Date form received by agency: 07/09/1996  
Facility name: BABOON PRODS  
Classification: Conditionally Exempt Small Quantity Generator

Violation Status: No violations found

FINDS:

Registry ID: 110004526442

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 182770  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE" 10/3/03 - AUSTIN - TRANSFERRED FROM HALE TO TIBBE - END See also 98-01078 and 98-01081. 10/07/04: As per O'Dowd's notes, an underground transfer line was cut by a contractor(Felix Equities)working for DOT. The pump was running, causing approximately a 200 gallon spill of diesel, mostly to a storm sewer. NYCT tried to contain and clean. Clean Ventures was hired to standby. O'Dowd and Tomsello responded to the site. NYC OEM, USCG, DOT, URS, Franklin Company, NYC DEP and NYCT were onsite. Piping was excavated and exposed. Pipes were repaired. Contaminated soil was left. Eric Jones, NYCT, said the whole area was going to be excavated in August of 1998. USCG did find some oil in the river but they were not concenred. NYCT cleaned the drains and manholes and Allstate Power Vac pumped out manholes. As per NYCT's e-mail dated 10/05/04, Ramon Paez remembers that this spill was within the existing plume and that was why no additional investigation was required. Neither OSS nor DOB has any further information about this spill. Refer to 91-06100.  
Remarks: CONTRACTOR ACCIDENTALLY HIT A TRANSFER LINE UNDER GROUND - UNK QTY SPILLED SO FAR

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER" OLD BUILDING. #6 FUEL OIL SPILL. sCALE PIT FULL OF OIL. sIDEWALK ELEVATOR W/ OIL. gEOTECHNICAL BEING DONE IN BASEMENT. #6 OIL UNDER SLAB. gROUNDWATER PROBLEM UNder building. Could have been over filling. confirming contamination is coming from site with wells. Will then put in a drainage system and oil water system. I said make corings into wells. Deliniate extent of plume and put in a system. Jim Allen Nac Env 212-829-0880. 11/30/99. Preliminary GW sampling shows MTBE. 1/10/2000 jIM ALLEN, nAC eNV. 212-829-0880 REMOVED AN ABOVE GROUND TANK, NOT SOURCE. REDOOING ENTIRE BUILDING, TRENCH SYSTEM IN BUILDING FULL OF OIL, LEAD TO SUMP PUMP. cLEANED WITH GUZZLERS.bRIAN cOSTELLO,PROJECT MANAGER. REMOVED 60,000 GALLONS OF OIL/WATER. oIL CAME FROM 16000 GALLON ast. uNDER THAT AND ELEVATOR PIT AND ALL OVER THE ROOM . oVER FILLING AND TURNING OFF THE BOILER. COULD HAVE BEEN DUMPING. TANK CLEANED, NOT CLOSED (TANK #6, NOW #2) CLEANED OUT. WANT TO PUT IN o/W SEPPERATOR. oIL UNDER BASEMENT SLAB. nEED TO PUT IN A SYSTEM. oil definitely from the site. central drainage pit still loaded with oil. 3/11/03 - SAMUEL- File available in active unassigned spill files. 1/21/2004 Case reassigned from Tomasello to Sawyer. 11.30.05 Sharif// I rec'd a call yesterday from Ms. Dawn Ruffini(Ground Water & Environmental Services),631-582-4187 ext.23 regarding the current status of that spill case.As per our telephone conversation, GES, on behalf of their client, is requesting that RW-5 be allowed to be covered with floor tile. Due to the recent renovations to this building, RW-5 is located directly within the catering hall that has been constructed in the basement of the building, and would prove to be detrimental to the tenants in the course of their business.From a technical standpoint, RW-5 does not seem to be a critical monitoring/sampling point. It has not shown any floating product since GES began monitoring the site in 2003,but the current level of contaminants require remedial works to be continued.Recovery piping has already been installed in RW-5 (and runs within the floor and walls), so this well would still be utilized for remedial purposes. A Total Phase/Vacuum Enhanced Groundwater Extraction system is currently installed at the site, and RW-5 is connected into the system. When this spill is considered to be inactivated, RW-5 would be accessed and properly abandoned at that time.I received reports/maps/most recent data for this site. GES is currently in the process of completing the 2nd and 3rd Quarter Status reports for this site, which will be sent to DEC shortly. However, they request a determination on the acceptability of covering RW-5 with floor tile in the mean time, as construction in this area should be completed within the next few days/week. Project Manager's decision on this matter is requested as soon as possible. This case has been transferred from Sharif Rahman to Koon Tang for reassignment to his staff. 12/07/05: This spill case transferred from S. Rahman to J. Kolleeny. 12/07/05: Spoke with Dawn Ruffini of GES about the site, which has a high-vac. extraction system installed but not yet started up, and also reviewed Dawn's email to Sharif about covering over recovery well RW-5 with floor tile. Sent email to Dawn requesting additional information (most recent gw data for other wells) and asking about feasibility of installing a monitoring well somewhere to the east of RW-5. Also, Dawn said that GES is behind in their quarterly report submissions, but they will submit combined 2nd & 3rd Quarter 2005 report within two weeks. I pointed out that they must complete SVE data sheets and have a monitoring & maintenance plan before system can be activated. - J. Kolleeny 01/04/06: Received Site

**COMMERCIAL BUILDING (Continued)**

**S104282742**

Status Update Report for 2nd & 3rd Quarters 2005; will review. - J. Kolleeny 03/28/06: Spoke with Matt Schieferststein of GES on phone, he said they plan to start-up remedial system soon but asked about air permitting requirement. I told him that the RP must sign a stipulation agreement and SVE/air stripper data sheets must be completed for system's vapor discharge before start-up. I emailed him a link to DEC's Guidance for Petroleum Spill Stipulation Agreements, and told him I would prepare a stip for his client, GVA Williams (it was formerly ATC Management). - J. Kolleeny 04/14/06: Reviewed Site Status Update Reports for 2nd & 3rd Quarters 2005, 4th Quarter 2005, and 1st Quarter 2006. Groundwater monitoring results show decreasing trend in dissolved contaminant levels. GES emailed pdf copies of a Corrective Action Plan prepared by Impact Environmental in October 2001, and a DEC approval letter of CAP signed by Kevin Hale. I prepared a Stipulation Agreement with cover letter and "CAP" (implementation schedule), requesting remedial design plans and completed air stripper data sheets within 30 days of effective date of STIP, and mailed it to Kerri Breslin of GVA Williams on 4/14/06. Requested signed Stip back by May 5, 2006. - J. Kolleeny 5/17/06: Received signed stip from RP (Kerri Breslin) in early May, had it counter-signed by Acting Regional Director Lou Oliva on 5/15/06. Sent copies of fully executed Stip to RP and GES. - J. Kolleeny 6/23/06: Received Remedial Design Plan on 6/20/06, requested by STIP Corrective Action Plan. On 6/23/06, sent email requesting modifications: "1. In discussion of Monitoring & Maintenance Plan, paragraph describing monthly collection of air samples from air stripper should explicitly state that both influent (untreated) and effluent (treated) air samples will be collected for analysis. Also, laboratory analysis should include a number for Total VOCs or TPH or an equivalent, to better evaluate nature of contaminants being stripped from recovered groundwater. 2. Monitoring & Maintenance Plan states that five accessible groundwater recovery wells will be gauged, purged and sampled on a quarterly basis and analyzed for BTEX and MTBE. However, to better evaluate impacts to groundwater and progress of remediation, I request that samples be analyzed for full range of petroleum-related VOCs and SVOCs, at least for a baseline sampling event which should be conducted prior to system activation (unless a quarterly sampling event has been performed since January '06 First Quarter sampling event), and for first round of quarterly sampling after system start-up. If these requested changes are acceptable to you and your client, please revise Remedial Design Plan accordingly and submit revised page(s) to my attention." - J. Kolleeny 07/25/06: Having received no response to my 6/23/06 email, sent another email to Heather Cloud of GES, asking her to respond to my request for modifications to the Remedial Design Plan, and for revised hard and electronic copies of the report. - J. Kolleeny 07/26/06: Received revised version of Remedial Design Plan via email from Heather Cloud of GES. Will review. - J. Kolleeny 8/17/06: Reviewed revised Remedial Design Plan, called Heather Cloud and pointed out possible error in air stripper data sheet calculations, asked for corrected data sheets with supporting calculations, and also asked for monitoring and maintenance requirements to be summarized in an O&M table. She said no problem, will get these items to me soon. - J. Kolleeny 8/21/06: Reviewed 2nd Quarter 2006 Site Status Update Report by GES, dated 8/14/06. Groundwater sampling in May '06 indicated huge, anomalous increase in toluene in recovery well RW-1 (from 1.5 ppb in January '06 to 4,720 ppb in May '06).

**COMMERCIAL BUILDING (Continued)**

**S104282742**

Other recovery wells sampled showed relatively low levels of BTEX & MTBE. Upcoming sampling rounds will be analyzed for full list of VOCs and SVOCs. GES plans to connect RW-1 to the installed pump & treat system, and will start up system upon receipt of NYCDEP sewer discharge permit, hopefully before end of August '06. No response needed. - J. Kolleeny 08/28/06: Received 2nd revised remedial design plan from GES, with corrected air stripper data sheets and relevant text, plus table with monitoring and maintenance requirements (in eDocs). Mailed approval letter (also in eDocs) to Kerri Breslin of GVA Williams; emailed pdf of letter to Heather Cloud and Matthew Schieferstein of GES. - J. Kolleeny 10/31/06: Received email on 10/13/06 from Heather Cloud of GES with electronic copy of letter report "Project Status Update" (in eDocs) summarizing baseline groundwater sampling event on Aug. 18, 2006, noting that only benzene exceeds limit in two wells, at 5.7 ppb in RW-2 and 4.0 ppb in RW-3. In light of this, GES requested waiver of requirement to activate and operate groundwater extraction portion of on-site remedial system. They also requested reducing groundwater analytical parameters from full list of VOCs to BTEX plus MTBE. Subsequently spoke with Heather who said recent well gauging at site found there has been a drop in water table so there is currently no water in any recovery wells. On Oct. 23, I emailed Heather asking for documentation of water table drop. On Oct. 24th, she sent email with groundwater gauging and sampling data table showing all wells were dry on 9/22/06, and stating: "On August 18, 2006, GES conducted 3rd quarter groundwater sampling event. During event, all recovery wells had approximately 8-9 feet of water column except RW-1 which was dry. Since RW-1 was dry during August event, GES visited site again on September 22 to sample RW-1. During this visit, it was noted that RW-1 as well as other on-site recovery wells (RW-2 through RW-4 and RW-6) were dry. Total depth of recovery wells ranges from 9-10 feet below grade. Historically, depth to water on-site has ranged from 0.21 to 3.85 feet below top of casing. During additional site visits on September 29, October 7, October 12-13, and October 16, all on-site recovery wells were dry. During September 22 visit, it was noted that 2 dewatering projects are currently taking place northwest of site approximately 3 blocks away and northeast of site approximately 2 blocks away. Specifics regarding dewatering projects is unknown; however, these activities could explain sudden drop in water table." Received hard copy of Project Status Update report on Oct. 30th. On Oct. 31, 2006, I issued a letter (in eDocs) to Kerrie Breslin of GVA Williams (copied Heather Cloud and Matt Schieferstein of GES) approving request to waive system startup requirement, on condition that vapor extraction portion of system continue to operate to address soil contamination recently discovered in and around small vault under floor (see spill no. 0607761), and noting that DEC may require activation of system if groundwater monitoring shows increase in contaminant levels, so system should be maintained in state of readiness. My letter requested one more round of groundwater sampling with samples analyzed for full range of VOCs, then reconsidering request to reduce parameters to BTEX + MTBE. - JK 11/24/06: Received electronic copy of 3rd Quarter '06 monitoring report by email from Heather Cloud of GES on 11/21/06 (in eDocs). Sent email to Heather saying: "I have two comments: First, report states that "a waiver will be requested." Actually, waiver was requested and request was approved in a letter I sent on October 31, 2006. Since this report is dated Nov. 21st, this should be reflected in it. Second, in your

**COMMERCIAL BUILDING (Continued)**

**S104282742**

recent email responding to my suggestion that drop in water table afforded an opportunity to treat soil contamination that was formerly in saturated zone, you said that system at site was designed to recover groundwater not vapors, and that since latest groundwater results were so low, little or nothing would be gained by modifying system to recover soil vapors. [See remarks for spill 0607761, for contaminated vault area which is being treated by vapor extraction.] I'm not sure I agree. Last time well RW-1 was sampled (May '06), groundwater had 4,720 ppb toluene, and only BTEX + MtBE were analyzed for. Last time RW-5 was sampled (October '05), it had 23.6 ppb benzene and 228 ppb MTBE. I think it's likely, or at least possible, that there was a smear zone of soil contamination that's been left high and dry (and thus accessible to vapor extraction). If and when water table rises again, this smear zone may contribute to groundwater contamination and necessitate operation of groundwater recovery system. What difficulties would be involved in modifying system to recover soil vapors? If recovery wells had tubing in them, those tubes must now terminate in vadose zone rather than saturated zone; can tubes be hooked up to a vacuum blower? At least, could a pilot test be done with one recovery well and a sample of recovered vapor be screened with a PID and analyzed at a lab for petroleum hydrocarbons? Please let me know what you think." Have not yet received response. - J. Kolleeny 11/27/06: Received email response from Heather Cloud of GES: "In response to your questions: 1) 3rd QTR Report covers activities from July 1 to September 30, 2006; therefore, we did not incorporate any activities or requests conducted/made in October. These will be incorporated in 4th QTR Report. 2) In terms of RW-1, we had a sudden increase in toluene between 1st QTR (1.5 ppb toluene) and 2nd QTR (4,720 ppb toluene) sampling events. Historically, toluene concentrations in this well have been relatively low and depth to groundwater did not fluctuate. As we previously discussed, we believe that this was possibly an anomalous reading; however, since water table dropped significantly we could not verify with another round of sampling. To modify system, we will have to hard pipe wells to pull vapors from smear zone. We will not be able to just hook up vacuum blower to existing tubing. It's not that difficult of a task, so we can make modifications if this is something you would like us to proceed with. If so, can you please give me something in writing saying so?" I spoke with Heather on 11/28/06 and asked if it would be possible to modify one recovery well to extract vapors, and perform a pilot test? She said she thought it could be done with a portable blower. I agreed to send correspondence to RP Kerry Breslin requesting that this be done. - J. Kolleeny 11/29/06: Received hard copy of 3rd Quarter Site Status Report by GES dated 11/21/06; as noted above, report was already reviewed as electronic document. Put report in file cabinet. - JK 12/04/06: Sent letter (in eDocs) to Kerrie Breslin of GVA Williams by email (with cc to Heather Cloud and Matthew Schieferstein of GES) and by regular mail requesting that one of on-site groundwater recovery wells be modified to perform a SVE pilot test, to see if residual soil contamination left in unsaturated zone because of recent drop in water table can be addressed by SVE. - J. Kolleeny 12/18/06: Received email from Heather Cloud of GES saying that on Dec. 14th they tied in well RW-1 to SVE system for pilot test I requested. They ran system for 2 hours and got PID reading at wellhead of 4.2 ppm; since PID was low, they didn't take sample for lab analysis. They left RW-1 tied in to system and will return on Dec. 21st to monitor vapors. I asked

them to take a sample for lab even if PID readings are low, since PID doesn't always correlate well with lab results. Heather agreed to analyze a sample for BTEX + MTBE and TPH. - J. Kolleeney 02/01/07: Sent email to Heather Cloud of GES on 1/2/07 asking if they took a lab sample of recovered vapors from RW-1 on 12/21/06, as I had requested. Received email reply from Heather on 1/4/07 saying sample was taken on 21st but data not back yet; will forward as soon as she gets it. On 1/9/07 received email from Heather with lab results; air sample was analyzed for BTEX, MTBE and TPH, all were non-detect. Based on this, she proposed discontinuing vapor extraction from RW-1 and not tying in extraction wells to SVE system. I reviewed data and noted that detection limits seemed high; sent following email to Heather on 1/10/07: "I looked at air results, and I noticed that method reporting limits seem unusually high: 0.5 milligrams per cubic meter (mg/m3) for MTBE & BET, 1.5 mg/m3 for X, and 50 mg/m3 for TPH (which I'm guessing is C1-C4 Hydrocarbons and C4-C10 Hydrocarbons). For comparison, I looked at Oct. '06 lab results for influent/effluent samples from vault area (spill 0607761), and detection limits were mostly below 100 micrograms/cubic meter (ug/m3), an order of magnitude lower, at least. I also noticed that Oct. '06 analyses were done by "Air Toxics Ltd.," whereas recent SVE pilot test analyses were done by TestAmerica. Can you please look into this and let me know why detection/reporting limits were so high? Also, was PID reading taken on sample collected for lab, and was it non-detect as before? I may be beating a dead horse, but I wouldn't want to miss some BTEX recovery in sample because of elevated lab detection limit." On 1/24/07, received email reply from Heather: "1. Laboratory Reporting Method: I touched base with Test America, they informed me that method reporting/detection limits for air analytical results (BTEX, MTBE, & TPH via EPA Method 18) are their standard values. These are limits they calibrate their equipment to; therefore, they cannot lower detection limits. In terms of October samples, we submitted those samples to Test America for VOCs via Method TO-15. Test America could not run this analysis, so they subbed it out to Air Toxics. For Method TO-15, Air Toxics has a lower detection limit. In terms of PID readings, we recorded 14.2 ppm when we collected air sample from RW-1. 2. Groundwater: While at site last week to conduct weekly O&M for Spill #06-07761, we checked all wells for groundwater. Groundwater has returned in ALL wells. Average depth to water is approximately 0.5-1 ft below surface. In light of this, we can no longer extract vapors from RW-1, so we disconnected RW-1 from system. Also, since water is back, we collected a full round of samples from ALL wells, and submitted water samples for VOCs STARS list. We collected samples yesterday, so we should have analytical results back in a couple of weeks. If you'd like, I can forward you results once we get them. Additionally, these results will be submitted in 1st Qtr. '07 Site Status Update Report that will be submitted in April." I replied to Heather on 1/29/07 that GW results need not be submitted prior to 1st Quarter '07 Site Status Update Report. - J. Kolleeney 03/05/07: Received electronic copy of 4th Quarter '06 Site Status Report (in eDocs) by email on 3/2/07 from Heather Cloud of GES; will review when hard copy is received. - J. Kolleeney 03/16/07: Received hard copy of 4th Quarter '06 site status report, provides details of vapor problems in Level 3 telecommunications room associated with spill 0607761, when vault with contaminated soil was found. Also notes that no groundwater was present in monitoring wells and that DEC therefore approved a waiver

of requirement to start up and operate groundwater recovery & treatment system. Information regarding return of groundwater to wells and collection/analysis of GW samples will appear in 1st Quarter '07 report. - J. Kolleeny 06/22/07: Reviewed 1st & 2nd Quarter 2007 Site Status Update Report / Spill Closure Request dated 6/7/07, by Groundwater & Environmental Services, Inc. (GES). Report (in eDocs) presents groundwater data for Jan. and Apr. '07 events, as well as historical data, showing no significant residual groundwater contamination, and SVE system monitoring data (related to spill no. 0607761, reported when vault beneath floor of on-site bldg's telecom room was found and emitting petroleum odors) showing vapors from vault appear to have abated and system is no longer recovering significant hydrocarbons. Based on data, GES requests closure of spills 9908159 and 0607761. I sent letter (in eDocs) to Ms. Jessica Chiamulera of 85 Tenth Avenue Associates, LLC (new property owner, replacing Kerrie Breslin of GVA Williams), copies to Heather Cloud and Matthew Schiefferstein of GES, approving closure of spill 9908159, related to groundwater contamination, saying NFA letter will be sent separately, but asking that for spill 0607761, SVE system be pulsed by shutting down for 2 weeks and re-starting, to see if vapors are detected in telecom room while system is off and if there is a spike in vapor recovery when system is re-started. I then sent NFA letter (in eDocs) to Ms. Chiamulera, with copies to Heather Cloud and Matt Schiefferstein of GES. - J. Kolleeny

DER Facility ID: 211709  
DEC Memo: 10/24/06: This spill case transferred from Shariff Rahman to Jon Kolleeny, since JK is already managing another spill case at this location (9908159) which is being addressed by a remedial system (dual-phase extraction) and is under a Stipulation Agreement. On Oct. 6, during installation of telecommunications equipment/cables beneath floor of on-site building, a 4' x 4' concrete vault was discovered, partly filled with soil and containing an 18" pipe with valve of unknown use. Strong odors were noted, and Fire Dept. and NYCDEP responded. LEL measured up to 30%. On Oct.7, consultant working on other spill at this site, Groundwater Environmental Services, Inc. (GES) was called to site. They had PID reading in vault of 1,100 ppm, and 8.5 ppm in the room. They called in a spill, and NYSDEC responded (S. Rahman). They dug soil from vault and cleaned vault interior. PID in vault went down to 2 ppm, but after half hour, went back up to 300 ppm. They closed and sealed vault. Heather Cloud of GES provided information and updates on the situation by email: 10/11/06, 1:19 PM email: As requested, please find attached Site Map showing location of vault and 18" pipe [see eDocs image folder]. Also, I have attached a proposed well location map depicting 5 soil borings in vicinity of vault. As soon as I get photos, I will forward them to you. We are scheduled to advance soil borings tomorrow and Friday (10/12 & 10/13). At a minimum, we will advance 5 soil borings (1 in vault and 1 in all principal directions surrounding vault) to identify source and delineate. If any of 4 borings surrounding vault come back impacted, we will step off and delineate horizontally. All soil borings will be advanced until soil is vertically delineated or until we can't go any farther with hand tools (hand auger), whichever comes first. We will screen soils from each boring in 6-inch intervals. Additionally, we will submit select samples for laboratory analysis. The analysis will be dependent on results of most recent samples submitted [i.e., waste characterization samples]. If we encounter groundwater while advancing soil borings, we will also collect groundwater samples. As an interim remedial plan, we are currently onsite installing an XP blower and duct to properly vent room. At this point, we will utilize this setup until we have identified

**GVA WILLIAMS (Continued)**

**S108294794**

source and defined extent of impact. As soon as we have identified source and extent of impact, we will design/install a more permanent system to address impacted area. We are also currently monitoring air space within room as well as in vault. As soon as I hear back from my crew, I will provide you with most recent PID & LEL readings.

10/11/06, 5:21 Heather Cloud email: I wanted to give you an update on the PID/LEL readings, interim remedial plan, and plans for investigation - PID/LEL Readings: - When we arrived onsite, PID/LEL readings in breathing space were 0ppm/0% LEL - We opened vault and PID/LEL readings inside vault were 1,100 ppm/38% LEL; PID/LEL readings in breathing space after opening vault were 25 ppm/0% LEL - Currently vault is closed, and PID/LEL readings in breathing space are 18 ppm/0% LEL and PID/LEL readings next to vault at floor are 50-60 ppm/30% LEL Interim Remedial Plan: We have decided to pipe vault to one of our recovery wells (RW-1) that is tied in to system. We will then have influent air go through carbon unit and discharge through existing vapor exhaust stack. We will complete this work this week. Once we get this all piped, we will collect influent and effluent air samples and submit them for TO-15 analysis. In meantime, we are still venting room and have area secured without access. Soil boring Investigation: - We have to use a core drill to break through concrete within vault and outside of vault before we can use hand auger. Since LEL level within vault is 38% and core drill can create a spark, we will not be able to advance a soil boring within vault until LEL level is below 10%. We will continue to monitor this area and advance a soil boring as soon as LEL level is within an acceptable range. Also, we will advance soil borings as close to vault as possible. If levels outside of vault continue to be above 10%, we will have to step off until we are within an acceptable LEL range. - To answer your question regarding soil boring proposed to south of vault, that boring is actually in basement in a walkway located beneath sidewalk. Since it is not outside, we will have to advance it by hand as well. I will continue to update you as we progress. 10/20/06 Heather Cloud email: Below is an update on spill #06-07761. Soil Analytical Results: We just received soil analytical results [waste classification] from lab (see attached [in eDocs document folder]). Based upon results, it appears that impact is leaded gasoline. Lead came back hazardous. With exception of Bis(2-ethylhexyl)phthalate (a common lab contaminant), SVOCs were non-detect. Fingerprint ID came back as diesel. Since SVOCs were non-detect, we have a call in to lab to see how this was determined. Based upon recent analytical results, we anticipate submitting future samples for VOCs-STARs list and RCRA Metals. Interim Remedial Plan: Last Friday, we completed piping from vault to our existing remedial system at site (I have attached a couple of photos [in eDocs image folder]). As discussed below, we have piping tied into RW-1, which is tied into system. Influent air goes into air stripper and then to 1,000-pound vapor phase carbon unit. Following completion of piping, we started system and collected influent and effluent air samples [see PID screening of air samples in eDocs document folder]. Both samples were submitted for TO-15 analysis (standard turnaround). I anticipate receiving samples either late next week or early following week. As soon as I have results, I will forward them to you. As a follow-up, we conducted site visits on Monday and Tuesday of this week to monitor background air space in telecommunications room (vault room) as well as influent and effluent to system. On Monday, LEL readings were 0 and PID readings were <5 ppm. Background readings

and O&M data from Tuesday visit are attached. Soil boring Investigation: We advanced 4 soil borings surrounding vault (as indicated on previously submitted proposed boring location map). All soil borings were advanced to refusal. Concrete and construction debris was encountered in all borings; therefore, hand borings could not be advanced past concrete/construction debris. Additionally, water was not encountered in any borings, so groundwater samples were not collected. - Soil boring B-1 was advanced approximately 6 inches off of pipe to south of vault. We encountered refusal (concrete/construction debris) at 6.5 feet and could not advance hand auger any farther. Impact was noted between 4.5 and 6 feet below surface. Highest PID reading was encountered at 5.5 feet (181 ppm). Based upon recent soil analytical results, we will submit sample with highest PID reading (5.5 feet) and bottom sample (6.5 feet) for VOCs-STARs list and RCRA Metals. - Soil boring B-2 was advanced approximately 6 inches off eastern edge of concrete vault. We encountered refusal (concrete/construction debris) at 4 feet and could not advance hand auger any farther. Highest PID reading (8.8 ppm) was noted at 2 feet below surface. Because all samples were <10 ppm PID, we are planning on submitting sample collected at bottom of boring for laboratory analysis. - Soil boring B-3 was advanced 1 foot off northern edge of concrete vault. We encountered refusal (concrete/construction debris) at 1.5 feet and could not advance hand auger any farther. Highest PID reading (9.6 ppm) was noted at 1 foot below surface. Because all samples were <10 ppm PID, we are planning on submitting sample collected at bottom of boring for laboratory analysis. - Soil boring B-4 was advanced 6 inches off western edge of concrete vault. We encountered refusal (concrete/construction debris) at 2.5 feet and could not advance hand auger any farther. Highest PID reading (0.6 ppm) was noted at 2.5 feet below surface. We are planning on submitting sample collected at bottom of boring for laboratory analysis. We should receive analytical results back within 10 days. Based upon initial results, we will evaluate plan of action for further investigation and remediation. JK 11/12/06: Received email from Heather Cloud of GES on 11/20/06 with results of soil borings around vault, weekly PID monitoring of recovered vapors, and lab analyses of influent/effluent vapor samples for October 2006. Soil results showed all VOCs either non-detect or below TAGM 4046. PID monitoring shows decreasing VOC levels at vault. Lab analyses of influent/effluent show some hydrocarbons detected, but benzene in discharge is in compliance (non-detect). I sent email back on 11/20/06 asking if these data, and summaries of associated activities, can be incorporated into quarterly monitoring reports for spill 9908159 at this site, which is under stipulation agreement. I also asked if vapors were being extracted only from vault area, or from recovery wells for groundwater extraction system at site in addition to vault area, pointing out that recent drop in water table afforded opportunity to treat contaminated soil that was formerly under water. Heather sent reply on 11/21/06 saying data and discussion for vault area will be incorporated into quarterly reports for site, which will reference both spill numbers, and that vapors are currently only being extracted from vault area. She stated: "In order to extract vapors from existing recovery wells, we would have to make modifications to existing GW extraction piping configuration. With existing setup, we just have flexible hosing that extracts groundwater. Considering that GW concentrations in recovery wells are close to NYSDEC Groundwater Standards, we would not anticipate there

being a lot of vapors to extract." For further discussion of this issue, see remarks for spill no. 9908157. - J. Kolleeny 12/08/06: Received email from Heather Cloud of GES reporting that vapors have been detected in building basement. GES sent a field tech, who got PID readings of 70 ppm in vault room, and 120 ppm adjacent to vault. They believe a portion of vault may not be properly sealed; they are making sure vault is completely sealed, monitoring for vapors in breathing space of vault room, and keeping people out of room. I sent email reply expressing surprise that after weeks of SVE on vault, and presumably negative pressure exerted on vault, vapors would escape from an improperly sealed portion of vault. I suggested that a more aggressive approach be taken, asked if vault and pipe within are active, have any current use, and if not, suggested that entire vault be removed to access contaminated source material below/around vault. Asked that Heather get back to me with her opinion on this. - J. Kolleeny 02/01/07: Received email update on 1/24/07 from Heather Cloud of GES: Vault is still tied into system and we are conducting weekly visits to monitor vapors. During last 2 O&M visits, PID readings at vault sample port were 10.2 ppm and 5.1 ppm. All activities conducted for Spill #06-07761 between October and December 2006 will be included in Site Status Update Report we are currently preparing. [Report will be archived in eDocs folder for spill 9908159.] - J. Kolleeny 03/16/07: Reviewed hard copy of GES 4th Quarter '06 site status report (in eDocs for spill no. 9908159). Report provides details of vapor problems in Level 3 telecommunications room associated with spill 0607761, when vault with contaminated soil was found. Also notes that no groundwater was present in monitoring wells and that DEC therefore approved a waiver of requirement to start up and operate groundwater recovery & treatment system. Information regarding return of groundwater to wells and collection/analysis of GW samples will appear in 1st Quarter '07 report. - J. Kolleeny 06/22/07: Reviewed 1st & 2nd Quarter 2007 Site Status Update Report / Spill Closure Request dated 6/7/07, by Groundwater & Environmental Services, Inc. (GES). Report (in eDocs) presents groundwater data for Jan. and Apr. '07 events, as well as historical data, showing no significant residual groundwater contamination, and SVE system monitoring data (related to spill no. 0607761, reported when vault beneath floor of on-site bldg's telecom room was found and emitting petroleum odors) showing vapors from vault appear to have abated and system is no longer recovering significant hydrocarbons. Based on data, GES requests closure of spills 9908159 and 0607761. I sent letter (in eDocs) to Ms. Jessica Chiamulera of 85 Tenth Avenue Associates, LLC (new property owner, replacing Kerrie Breslin of GVA Williams), copies to Heather Cloud and Matthew Schiefferstein of GES, approving closure of spill 9908159, related to groundwater contamination, saying NFA letter will be sent separately, but asking that for spill 0607761, SVE system be pulsed by shutting down for 2 weeks and re-starting, to see if vapors are detected in telecom room while system is off and if there is a spike in vapor recovery when system is re-started. - J. Kolleeny 09/21/07: Reviewed GES report, "Spill Closure Request" dated Sept. 7, 2007 (in eDocs). Report presents PID and lab data for vapor influent and effluent of SVE system operating to address vapor problem emanating from vault discovered beneath floor of telecommunications room in on-site building. PID results show no positive readings since June 2007 (last screening 8/14/07), lab results show very low levels of a few VOC compounds in SVE influent. Based on data, GES requested

closure of spill case. I contacted Heather Cloud of GES on 9/20/07 and asked about ultimate disposition of vault. She sent email reply stating: "As discussed on phone, vault in Level 3 Communications room will be properly abandoned upon receipt of spill closure. Specifically, vault lid will be removed, vault will be filled with bentonite, and vault will be capped with concrete." Based on data in report and Ms. Cloud's statement regarding vault, I closed spill and issued NFA letter (in eDocs). - J. Kolleeny

Remarks: Odor emanating from concrete vault in basement. PID readings went down, now starting to come back up. ~300. Soil has been cleaned out that was in vault. Will caulk/seal cover. Reg. #2 is already addressing spill @ this location.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Phone: (516) 938-5476  
DEC Region: 2  
DER Facility ID: 339091  
DEC Memo: 01/03/08-Hiralkumar Patel. left message for John at Gemstar.  
01/08/08-Hiralkumar Patel. spoke with John. they found contamination under tanks. they removed two 2000 gal diesel USTs and installed three new tanks. John submitted report to Anthony at LiRo. spoke with Anthony (516-214-8106) at LiRo. he will mail copy of closure report.  
01/15/08-Hiralkumar Patel. received report from LiRo. abstract: - removed and disposed two 2000 gal diesel USTs, including all piping and appurtenances - removed 504.44 tons of contaminated soil - USTs were located side by side outside the east side of building in the north east corner of lot - new tanks are intalled at same location - found base of of tanks at 8 fg bg and bottom of concrete slab was at 9 ft bg - groundwater was encountered at approx. 8 ft bg - groundwater that infiltrated the excavation after the slab was removed had slight sheen - collected soil samples near the groundwater interface of each sidewall and end walls of the excavation at approx. 8 ft bg - one groundwater sample was collected in lieu of the base samples - two soil samples were collected beneath the former dispenser islands at approx. 3 ft bg - dispenser island inside the garage area was contained and appeared to be in good condition no VOCs found, some SVOCs found in sidewall samples. minor contamination. new tanks has already been installed. based on submitted report, case closed.

Remarks: SOIL TESTING CAME BACK WITH CONTAMINATION:

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER" 6/8/2004 Sangesland spoke with Johnathan Hacker. He said the property was sold and the new owner is: 17th & 10th Associates LLC c/o Taconic Investment Properties 111 Eighth Ave - 15th Flr New York, NY 10011 Attn: Charles Bendit 212-220-9945 A new contaminated soil letter was sent out 6/8/2004 6/24/2004 Sangesland spoke with Mr. Bendit asking for an update on the cleanup of the site. He said he has a meeting scheduled with Dan Walsh and Vadim Brevdo of DEC Brownfields on July 21st. At that time the owners will probably bring the property into the Brownfields program for a redevelopment/cleanup. 12/12/05- DEC Piper determined that this site has entered into the BCP. Re-Assigned to Joe O'Connell. END.

Remarks: SOIL IMPACTED WITH PETROLEUM: THERE WAS ALSO A PREVIOUS SPILL ABOUT 10-15 YEARS AGO:

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Enforcement lead agency: Not reported  
Proposed penalty amount: Not reported  
Final penalty amount: Not reported  
Paid penalty amount: Not reported

Evaluation Action Summary:

Evaluation date: 08/01/2003  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Listing - General  
Date achieved compliance: 12/01/2003  
Evaluation lead agency: EPA

FINDS:

Registry ID: 110004495984

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Violation Status: No violations found

**FINDS:**

Registry ID: 110004438877

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 11/04/1993  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: EPA Contractor/Grantee

FINDS:

Registry ID: 110004403146

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site Description:

**Actual:  
 12 ft.**

The Site is located in an urban area of New York County (Manhattan) located on the east side of 10th Avenue between W. 16th and W. 17th Streets (not including the building on the southeast corner of 10th Ave. and W. 17th St.) The former site features include several buildings and a paved parking lot. The site buildings were unused and were demolished. The most recent uses of the site include a warehouse for electrical construction equipment; an electrical contractor area; a vehicle garage and outdoor parking area; an outdoor garden supplies store; a restaurant; auto body shop; and classroom space for a theater company. Surrounding uses include multi-story residential buildings with and without lower-level commercial uses, parking, and playgrounds. The High Line , an elevated rail line which was used in the past for freight and is now unused, is to the west of and partially over the western end of the site (with aerial easement). Prior uses include various freight and automobile uses, with underground fuel storage tanks, and unspecified manufacturing. An investigation pertaining to the removal of underground storage tanks occurred in the early 1990's. A Phase I and limited Phase II Environmental Site Assessment was performed in 2004. A Remedial

Investigation was conducted under the BCP in 2005. The RI Report was approved in March 2006. The Remedial Action Work Plan with Stipulations was approved by the Department on April 26, 2006. A track 4 cleanup was achieved for the site. Engineering and Institutional Controls have been instituted to manage the residual contamination. These controls have been memorialized in the Environmental Easement that has been recorded in the new York County Clerk's office. The Final Engineering Report and Site Management Pla were submitted in November 2007, and a Certificate of Completion was issued on October 6, 2008.

Env Problem: Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum and historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs - e.g. benzene, toluene, ethylbenzene, xylene, naphthalene) and semi-volatile organic compounds of petroleum origin and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Exceedances of SCGs for both soil and groundwater had been identified. As part of the remediation, the petroleum contaminated soil was removed from the site as designated under OU-1 of the RAWP and the historic fill was excavated and disposed of at regulated facilities. Some clean native soil was also removed from below the contaminated zone. Groundwater was treated in situ and the clean effluent was discharged to the nearby City combined sewer. The contaminated soil and groundwater in OU-2 were remediated through injection of ORC (Oxygen Release Compound) into the underlying groundwater and subsoil. The top one foot of soil was removed through excavation. A Part 375 track 4 cleanup was attained for the site. Engineering controls in the form of the composite cover which consists of a vapor-barrier membrane and the concrete foundation of the redevelopment and in addition a sub-slab depressurization system in the OU-2 redevelopment were installed to manage the residual contamination. Institutional controls which include use restrictions and prohibitions have also been memorialized in an Environmental Easement that has been recorded in the New York County Clerk's Office. A Site Management Plan and Final Engineering Report have been submitted and approved. The Certificate of Completion was issued on October 6, 2008. The first periodic review report is due for submittal on August 3, 2009.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. The remedial action work plan for the site calls for the removal of contaminated soil from the site prior to construction of a residential building on-site. Soil gas is contaminated by chlorinated solvents that are likely due to an off-site source. The site owner will include measures in the building construction to prevent soil vapor migration into the building.

Env Problem: Environmental Easement that has been recorded in the new York County Clerk's office. The Final Engineering Report and Site Management Pla were submitted in November 2007, and a Certificate of Completion was issued on October 6, 2008.

Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum and historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs - e.g. benzene, toluene, ethylbenzene, xylene, naphthalene) and semi-volatile organic compounds of petroleum origin and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Exceedances of SCGs for both soil and groundwater had been identified. As part of the remediation, the petroleum contaminated soil was removed from the site as designated under OU-1 of the RAWP and the historic fill was excavated and disposed of at regulated facilities. Some clean native soil was also removed from below the contaminated zone. Groundwater was treated in situ and the clean effluent was discharged to the nearby City combined sewer. The contaminated soil and groundwater in OU-2 were remediated through injection of ORC (Oxygen Release Compound) into the underlying groundwater and subsoil. The top one foot of soil was removed through excavation. A Part 375 track 4 cleanup was attained for the site. Engineering controls in the form of the composite cover which consists of a vapor-barrier membrane and the concrete foundation of the redevelopment and in addition a sub-slab depressurization system in the OU-2 redevelopment were installed to manage the residual contamination. Institutional controls which include use restrictions and prohibitions have also been memorialized in an Environmental Easement that has been recorded in the New York County Clerk's Office. A Site Management Plan and Final Engineering Report have been submitted and approved. The Certificate of Completion was issued on October 6, 2008. The first periodic review report is due for submittal on August 3, 2009.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. The remedial action work plan for the site calls for the removal of contaminated soil from the site prior to construction of a residential building on-site. Soil gas is contaminated by chlorinated solvents that are likely due to an off-site source. The site owner will include measures in the building construction to prevent soil vapor migration into the building.

Site Description: The Site is located in an urban area of New York County (Manhattan) located on the east side of 10th Avenue between W. 16th and W. 17th Streets (not including the building on the southeast corner of 10th Ave. and W. 17th St.) The former site features include several buildings and a paved parking lot. The site buildings were unused and were demolished. The most recent uses of the site include a warehouse for electrical construction equipment; an electrical contractor area; a vehicle garage and outdoor parking area; an outdoor garden supplies

store; a restaurant; auto body shop; and classroom space for a theater company. Surrounding uses include multi-story residential buildings with and without lower-level commercial uses, parking, and playgrounds. The High Line, an elevated rail line which was used in the past for freight and is now unused, is to the west of and partially over the western end of the site (with aerial easement). Prior uses include various freight and automobile uses, with underground fuel storage tanks, and unspecified manufacturing. An investigation pertaining to the removal of underground storage tanks occurred in the early 1990's. A Phase I and limited Phase II Environmental Site Assessment was performed in 2004. A Remedial Investigation was conducted under the BCP in 2005. The RI Report was approved in March 2006. The Remedial Action Work Plan with Stipulations was approved by the Department on April 26, 2006. A track 4 cleanup was achieved for the site. Engineering and Institutional Controls have been instituted to manage the residual contamination. These controls have been memorialized in the Environmental Easement that has been recorded in the New York County Clerk's office. The Final Engineering Report and Site Management Plan were submitted in November 2007, and a Certificate of Completion was issued on October 6, 2008.

Env Problem:

Based on the investigations conducted at the site, the primary contaminants of concern were related to the past uses of petroleum and historic fill which was present across the entire site. The site soils were contaminated with volatile organic compounds (VOCs - e.g. benzene, toluene, ethylbenzene, xylene, naphthalene) and semi-volatile organic compounds of petroleum origin and, to a much lesser degree with chlorinated solvents (e.g. tetrachloroethene). Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009  
Waste name: MERCURY

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO" 11/29/05 - L. Alden - Sent letter seeking information to owner: Chelsea/Village Associates, LLC., c/o Vectra Management Group, 424 W. 33rd St., Suite 540, NY, NY 10001. 12/8/05 - L. Alden - Received reply from Kinsey Corp, owner's agent. Letter included documents regarding replacement of the tank with the hole in the top, but did not indicate if soil was investigated. If there was a hole in the top of the tank, oil could have easily seeped out, contaminating soil. Kinsey info only tells of abandoning the tank and replacing it with an AST. 12/30/05 - L. Alden - Phoned John Calcaterra, of Kinsey. He had no further information. Called Eastmond. Was told I needed to speak with Rene Lewis, but he was on vacation. 4/10/06 - L. Alden - Called Rene Lewis (718-378-3000), but he is again on vacation. Suggested action: Call Lewis again for information. 11/16/06 - Austin - Reassigned to Ketani for followup/review - end 12/5/06 - Raphael Ketani. The site is 351-355 West 14 St., NY, 10011. Block and lot 00738/0008. Phone number is (212) 255-3579. According to the PBS record #2-605606, the owners are Chelsea/Village GE Associates LP c/o Kinsey Corp., 163 W. 23 St., NY, 10011. There was a 2500 gal. tank

with #6 oil installed in 3/1/01, but a hole was found in it while a cleaning was being performed by A. L. Eastmond (718) 378-3000. The spill date is 11/13/2000. The tank was removed on 12/1/01 and a 1080 gal. tank was installed in its place with #2 oil. According to the NYC Property Tax database, the owners are Chelsea/Village Associates, LLC. However, Cooper Square Realty, Inc., 6 East 43 St., NY, 10017-4609 is listed as the addressee one page in from the first results web page. The phone numbers to Cooper Square are (212) 634-8900/682-7373. I tried the phone numbers for Cooper Square. I was told that Joe Simson ext. 407 was the property manager, but I could not get through. Also, there was no phone listing in the Manhattan White Pages for Chelsea/Village GE Associates or Chelsea/Village Associates, LLC. I sent out CSLs. 12/6/06 - Raphael Ketani. Mr. Simpson called me back. He said that he works for Cooper Square Realty Inc. He said he will do a records search and send DEC the information we need. 6/22/07 - Raphael Ketani. I tried to reach Mr. Simpson, but could only leave a message. I may have to make a site visit to find out what the situation is. 6/25/07 - Raphael Ketani. Mr. Simpson called to say that he will FAX over the documents DEC needs regarding the tank replacement. He said that, as far as he knew, there was no soil contamination. 10/23/07 - Raphael Ketani. I tried to reach Mr. Simpson, but was told he was no longer with the company. I was connected to Mike Basile (bay-zil) (212) 634-8900, ext. 408. I explained to him that there had been a leaking tank that was replaced and contaminated soil. I told him that DEC needed manifests for the contaminated soil that was removed, possible end point results, and a revision of the PBS database to show that the old tank was removed. He said that he will look into the matter and get back to me. 12/7/07 - Raphael Ketani. I checked the PBS record. The old 2500 gal. tank is listed as removed and the newer 1080 gal. tank is listed as installed. I tried to contact Mr. Basile, but could only leave a message that manifests and end point results were needed. 12/12/07 - Raphael Ketani. I reached Mr. Basile. He said that the property manager is David Lipsik, (212) 634-5445. He transferred me over, but I could only leave a message regarding the manifests and end point results. 12/13/07 - Raphael Ketani. I contacted Mr. Lipsik. He said he didn't have any information regarding the spill and tank removal as Cooper Square wasn't the managing company during 2000. I told him that I needed documentation regarding the soil removal, end point sample results, and an updated PBS. He directed me to Melissa Wilson in the Compliance Division of his company (212) 634-5437. I told Ms. Wilson what DEC needed and she said she will research the records for the building and get back to me. 2/25/08 - Raphael Ketani. I tried to contact Ms. Wilson, but could only leave a message. Ms. Wilson called me back. She said she had left a voice mail on 1/3/08. I told her that we have nothing in our records regarding this. She asked what documents DEC needed. I told her that DEC needed manifests for the tank and removed soil, and soil end point analytical results. She said that she will look in her records and try to find these documents. I told her to let me know one way or the other. She said she will. 2/26/08 - Raphael Ketani. Ben Hawkins of Cooper Square Realty (212) 634-8988 called to say that he is taking over the case from Ms. Wilson. He said he will look for the missing soil manifests and the end point analytical results. I told him that if these documents can't be found, then a new investigation will need to be performed. I told him an investigation plan will have to be written and submitted to DEC for approval. I asked him where

S104877200

the new tank is. He said it's in the same place as the old tank. I told him that the owners of the property, Cooper Square, and the cleanup company will have to work something out. With that, the conversation ended. 3/24/08 - Raphael Ketani. I tried to contact Mr. Hawkins, but could only leave a message. 3/26/08 - Raphael Ketani. I contacted Mr. Hawkins. I asked him why DEC hasn't received an investigation report. He sounded hesitant and said that he didn't know which investigation/remediation company to choose. He said that there were many listed in the phone books. I told him to pick some, tell them that the job entails 6 borings and samples and get some prices to present to the board or the owner of the building. He said he will do this. I warned him that if DEC doesn't hear back that things are moving forward, then we will send a warning letter that legal action can and may be taken. He said that he understood. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The site needs an investigation for contaminated soil and groundwater. Mr. Hawkins has not responded back to me. Therefore, a more strongly worded letter needs to go out explaining that if there is no action by a certain date, then the Department will consider the parties in violation. 3/11/09- A. L. Eastmond and Sons, INC. sent the report dated 2/17/09, The report included the soil results of two samples taken 12/2/08 under the tank from right and left side. The analytical results for the samples collected indicate non detectables levels of VOCs and SVOCs. Spill Closed.

Remarks: caller cleaned tank and found a hole in tank - tank is underneath the sidewalk

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND" 11/17/99 Call from Mark Turoff - Environmental consultant hired to work this job. pager 917-525-3087 cell 917-750-1843 Mr. Turoff requested an extension in time until late December. Sangesland asked several specific questions about what was being done on the site now (new tenent moving in?) Are there any other tanks on the site? will the tank be removed or abandoned in place? Mr. Turoff knew nothing. Sangesland asked him to answer these questions and plan what needed to be done. Submit that in writing and

**S106719717**

then "PERHAPS" the actual work could be postponed until late Dec. '99  
11/26/99 - Mr. Turoff sent a letter dated 11/22/99 requesting an extension of deadline date. NONE of the information requested in 11/17/99 telephone conversation was submitted in this letter. Mr. Turoff requested a written extension of the deadline, but since he did not submit what was requested, no such letter will be sent out.  
12/6/99 - Call from owner saying Trinity Consulting was on site chopping open the floor .... (no notification was made to DEC about this work).... Sampling will be done 12/7/99 early AM 12/7/99 - Six GeoProbe borings were pushed down to 10' - 12' to bedrock. Sangesland was on site for the first 4 borings - all appeared clean. Borings will be sent in for testing. If the results come back clean, the site will be closed out. 12/29/99 - Trinity sent in data from several soil borings. After Sangesland left the site on 11/7/99 another tank was found in the garage. This new tank was a clean motor oil storage tank used to put into cars during service. Borings were done around this one also. All borings were tested to EPA 8270. All results were below detection limits except for 1 taken near the fill line of the "used motor oil" tank. The one high sample had the following values: (Eco Test Lab) all below 300 ug/kg except: Fluoranthene = 420 Pyrene = 380 Benzo(a)anthracene = 440 Chrysene = 440 Benzo(b)fluoranthene = 500 Benzo(k)fluoranthene = 500 DEC status on this site is NOT closed, but it will be listed as "inactive" with no further action required.  
Since the source is gone and the contamination was just around the fill line and not wide spread, DEC direction is to have the tanks filled and taken out of service. Over time "natural attenuation" should remediate the site. In it's expected use as an art gallery with a concrete floor, this should have no impact on either health or environment. In the future if the use of the property changes, this issue may need to be addressed again. 1/11/2000 - Vinnie Lovari from Island Tank (718-967-9424) was given permission to open up the tanks, recheck size and then closed them out in place. PBS Registration paperwork will be sent after the work is done. 1/26/2000 - Spill event is closed out.

Remarks: TANK IN GROUND FOUND TO BE LEAKING-NO FURTHER INFO AT THIS TIME.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 202960  
DEC Memo: 03/18/10- Zhune spoke to Eric Sutphen 908-3920136 from Hess. he said there are two 275 gallons tanks # 6 oil. Tank # 1 was overfilled due to faulty gauge. Aproximately 2 to 3 gallons went to the floor of the tank room. There is a drain on the back of the building some oil went to this drain. Eastmond is doing the cleanup. Mr. Body Super 212-595-8614. 04/15/10-Zhune received a letter from Eastmond describing the scope of work performed at this site: Removed all petroleum contaminated debris(garbage bags, boards, bricks amd assorted debris)About 75 bags apply. Apply industrial degreaser to affected areas(brick wall,concrete floor and steel stairs)and pressure wash surface. Collect generated water/oil (300 gallons)with vaccum truck. As per Rene there was like 1/4 of oil in the drain. Eastmond pumped out the drain. 04/12/10- Zhune spoke to Mr. body superintended of the building. he said the spill was cleanedup with their satisfacction. Spill closed.

Remarks: Eastman Environmental enroute for Cleanup - down drain for bldg - unsure of where it goes

(RJF) 3/2/06: Case reassigned from Feng to Andersen. Mailed assessment required letter, due back 5/2/06. 3/21/06: Letter returned to sender. Resent letter. 4/3/06: Email from Annesta says that the State of NY took ownership of this property by eminent domain on 10/16/96. 4/5/06: Emailed City DOT asking if they own the property and requesting permission for Annesta to drill on the site. 4/17/06: Resent letter to Annesta stating that, as a previous owner, they are still required to conduct an investigation. I noted that they should contact DOT prior to scheduling work at the site. Investigation due by 6/17/06. 4/20/06: Received call from Tom Fink, attorney (phone 585-546-6448). This lot was taken over by the city during the west side highway expansion. It is not accessible to perform an investigation. 5/1/06: Case closed. NFA issued. 5/3/06: Received a letter from city DOT indicating that the site is privately owned.  
Remarks: 4K TK FAILED PETRO, L R =-0.086 GPH. 4K TK SYS FAILED PETRO, L R = -1.77 GPH.

 Site Description: The site is located along 11th Avenue, between 18th and 19th Streets. It is the location of an office building designed by Frank Gehry. This site was a transition to the BCP from former Site V00624. Remediation was completed in accordance with a Remedial Action Work Plan approved under the VCP. An Environmental Easement for the property was filed on July 31, 2006, restricting future use to industrial/commercial, and requiring: 1) monitoring and maintenance of the subsurface barrier, 2) continuous operation of a sub-level ventilation system 3) annual certification. The Final Engineering Report, which documents the successful remediation of this site, was approved on August 31, 2006. A Certificate of Completion was issued for this site on September 27, 2006. Institutional controls required by the environmental easement were certified February 9, 2007. Annual certification of institutional and engineering controls was provided on March 25, 2008 and approved on April 25th.

Env Problem: The site was significantly contaminated with MGP wastes and petroleum. The RAWP required excavation of the site to depths of 15 to 18 feet across the site to accommodate the construction of a new office building with subsurface parking. Subsurface barriers and an active ventilation system were also components of the site remedy. Construction activities started in summer 2004 and were official completed with the approval of the Final Engineering Report on August 31, 2006.

Handler accessibility indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown  
Mixed waste (haz. and radioactive): Unknown  
Recycler of hazardous waste: No  
Transporter of hazardous waste: Unknown  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: Unknown  
Furnace exemption: Unknown  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Historical Generators:

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL" 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. letter to be sent Previous note by JBMCCULL of C.O. Spill transferred back to R-2 3/7/08 - Austin - Assigned to Ketani for further investigation - end 7/10/08 - Raphael Ketani. There is no paper file. The spill happened on 8/10/94. They stuck a probe to 9' and found contaminated soil. The contaminant is #2 oil or diesel. They were planning to pull the tanks and remove the contaminated soil. The address is 501-513 W. 19 Street, Manhattan. I could not find a PBS case no matter which address, or which alternate address I used. I checked Property Shark for the alternate addresses. 513 W. 19 Street has an alternate address of 511 W. 19 Street, and block and lot 691/25. 501 W. 19 Street has alternate addresses of 153 10th

Avenue, 501-505 W. 19 Street, and 153-159 10th Avenue. Block and lot are 691/29. In the NYC Property Tax listings, the owner of these two parcels is Tenth Avenue Realty Associates, LP, 362 Kingsland Avenue, Brklyn, 11222-1905. I sent a CSL to Tenth Avenue Realty Associates. 7/14/08 - Raphael Ketani. I received a call today from Ron Tramosch of Core Environmental (718) 762-0544. He said he represents his client, 10th Avenue Realty. He said they gave him a the CSL letter. He explained that the property was bought in May 1995 from Broadway Building Materials. The site was changed from a building materials store to a truck servicing business (Mendon Trucking). During August 2006, they received an offer to sell the property. It consists of 3 lots, each of which fronts on 10th Avenue. Core did a Phase I. During September 2007, Core was asked to do a Phase II. This was when the two 550 diesel tanks were discovered. The NYC DOB records showed the 2 tanks. They were installed in 1940 and removed in 1994. The primary address is 153 10th Avenue. The soil and groundwater samples show contamination. There is also contamination from the MGP site across the street - 8200 ppb of 2-methyl naphthalene. There will be condos built on the site. There is an E-designation, but the project has not moved through the NYC DEP offices, yet. I told him that the tanks have to be registered and that the DEC needs copies of a plan showing the installation of a vapor barrier. He said both of these items will be taken care of. I told him that DEC can't close its spill case until these things are done. He said he understood. Lastly, I told him that DEC will review the Phase I and Phase II, and that we may require additional investigative work. 7/16/08 - Raphael Ketani. Yesterday, I received the Phase I and Phase II for the site. The work and reports were put together and submitted by CORE Environmental. I began my review of the reports. The Phase I stated that the proposed site remedy will be: excavation to 13' below grade for construction; installation of a containment wall; installation of vapor barrier below foundation and an active venting system; site management plan to address residual contamination; institutional controls in the form of an environmental easement. The Phase I also stated that there is an adjoining site to the north that had leaking gas tanks, an adjoining site to the southwest that had a leaking diesel tank, and a site to the southwest that was an MGP factory. There are 8 active ASTs on the site for storing various oil and waste oil products, and two 550 gal. USTs. An oil water separator is below ground. Groundwater is believed to be 7' to 9' below the surface. The Phase II had the soil and groundwater analytical results. Boring SB-10 was the only soil sample with elevated results. Ethylbenzene had 5600 ppb (limit 5500 ppb) and n-propylbenzene had 4800 ppb (limit 3700 ppb). There were 4 other VOC analytes with hits in the thousands of ppbs, but they didn't exceed TAGM. All of the other borings were completely non-detect for all of the VOCs. For the SVOCs, almost all of the analytes were non-detect in soil samples. SB-6 had 6 TAGM exceedences, but these were benzo series analytes and the hits were in the low thousands of ppbs. No hits for VOCs and SVOCs were detected in the groundwater sample from MW-3. However, MW-1 had 6 VOC hits from 53 ppb to 180 ppb, and 3 SVOC hits from 1100 ppb to 8200 ppb. MW-1 is near the fuel USTs and the fuel pump. With the exception of the 3 SVOC hits, no other SVOC analytes were detected. These SVOC analytes (2-methynaphthalene, fluorene, and phenanthrene) can all come from the MGP process. The former MGP site and its gas tanks were very near the site to the west and south. I finished my review and sent an approval letter for the Phase I and Phase II. I also stated

in the letter that they should collect as much of the groundwater as possible and take another water sample to check on the level of contamination. Lastly, I told them that the two USTs and the waste oil tanks need to be registered, and that DEC needs something in writing confirming that a vapor barrier will be installed. The area the site is in was heavily industrialized. The low level VOC contamination probably originated from the USTs and/or the fuel pump and associated lines. I spoke to Mr. Tramosch (718) 762-0544 and told him about the letter that will be sent to Tenth Avenue Realty Associates, regarding the Phase I and Phase II and the analytical results. I mentioned that the letter will contain a request to do groundwater collection, the taking of another groundwater sample at MW-1 to confirm the contamination levels, submission of a PBS registration form for all of the USTs and waste oil tanks, and submission of a document stating that a vapor barrier will be installed. The contact person at NYC DEP is: Angela Licita, Permitting, NYC DEP, 59-17 Junction Blvd., 10th Floor, Elmhurst, NY, 11373. 7/22/08 - Raphael Ketani. Mr. Tramosch called regarding the 7/16/08 letter I had sent. The main issue was the installation of a vapor barrier. He said that the owner of the property doesn't have a developer on board, or in mind for the property. Development of the site for a condominium building is years away. I told him that the Spills Unit deals with short term cases, and can not wait several years for the developer to produce an architectural plan showing a vapor barrier. I reminded Mr. Tramosch that the DEC is requiring groundwater extraction, water resampling one month from the extraction date, along with a plan showing the vapor barrier. I told him that DEC is concerned with the public safety and that NYC DEP will also require the vapor barrier as this will be a residential building. He said he understood. I told him that a possible solution is for DEC to issue an NFA letter when the contaminated groundwater is gone, or present at much lower levels near TAGM, and have the vapor barrier listed on the letter as a requirement of construction. Mr. Tramosch said this would be a reasonable solution. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. A report needs to be submitted containing the volume of water collected and the analytical results from a groundwater sample taken one month later. All of the tanks that were or still are present on site need to be registered. The case manager may want to request specs for the vapor barrier.

Remarks:

Updated By: GWCROSS  
 Site Description: This site is located at the corner of Avenue C and 14th street in Manhattan. It is presently occupied by the Stuyvesant Town apartment buildings. The site is the location of former gas purification and storage facilities from the East 14th Street works, which was located across Avenue C at the East River Generating Station (Site 231007). A Site Characterization was completed in early 2004. An RI report was received in April 2007. It was determined that additional investigation was need. Additional RI field work the Stuyvesant Town sites was completed in Fall 2008. The Final RI Report was approved in August 2009. An Interim Site Management Plan (ISMP) is currently being implemented which consists of Quarterly Indoor Air Sampling and NAPL Monitoring and Recovery. DEC is currently waiting for a draft Alternatives Analysis.

Env Problem: Relatively low levels of soil contamination have been found at the site. A No Further Action remedy is likely; however, the recent default of Tishman Speyer (the site owner) has made it difficult to determine who is responsible for management of the site. It is hoped that this will be resolved during 2010.

Health Problem: Public water is provided to the area, thereby preventing exposures to groundwater. Site-related contamination has been found, but it is not available for direct contact. Current data indicate that vapors are not migrating into the on-site residential building. Additional data will be assessed as it becomes available.

DEC Memo: Spill originally assigned to Sullivan and closed on 11/14/1991. Re-opened due to spill 0012509 (Merritt Engineering working for potential buyer, found contamination) and 9504874 (Con Ed excavation on south side of street, soils saturated with diesel). Site investigation and remediation to be tracked by this spill number 9011674. Rommel. 12/6/04 Spill address originally 528 W19th Street, changed to 542 (both of which are actually listed by City as 80-94 11th Street or just 80 11th Street. 542 W19th Street is address on PBS 2-032239. Stip mailed to Barry Haskell 362 Kingsland Avenue Brooklyn NY 11222 Deadline for return of signed stip 1/24/05. Rommel 12/23/04 Received call from Mark at Sive, Paget and Riesel, PC 212-421-2150 who represent the developer (Georgetown). MGP site is being handled by Joe Moloughney under BCP program. The remediation will remove all soil between 18th and 19th Streets to 15 feet. The four tanks were already pulled during remediation and ten others were found and also pulled. The developer has been informed that they must complete the tank registration and closure process for all the tanks on-site and they have assured me they will do so. Spill closed. Rommel Not reported

Remarks: (4) 550 GAL TANKS WERE DISCOVERED DURING A ROUTINE CON ED STREET PATROL,NYCDEP WAS TOLD THAT TANKS FAILED 10 YEAR PBS TEST IN 1990, TANKS WERE NOT IN USE BUT NOT CLOSED PROPERLY.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 120725  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT" 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 3/9/04-Vought-File review by Vought: Letter from DEC(O'Dowd) to Getty(Ochoterena)-12/10/97. Letter sent requiring installation of three monitoring wells in response to tank test failure on 12/3/92. Report due to DEC by close of business 1/30/98. Site notes by DEC O'Dowd-meeting held on 11/12/97. Site planned for construction of new residential building. Tank Closure Report (Tyree Organization William Conroy)-April 1998. Reason for tank closure is property divestment. One pump island located adjacent to 10th Avenue. Removal of twelve (550-gallon) gasoline USTs and one (550-gallon) waste oil from 3/23-3/25/98. "Multistory commercial and apartment buildings located across 10th Avenue to the west, church with a school and playground located across West 20th Street to the north of the subject property". Six endpoint samples were collected including five from the gasoline excavation and one composite sample from the waste oil excavation. Soil analytials show 9990ppb toluene(south wall), 10600ppb naphthalene(south wall), 10000ppb toulene(west wall), 15900ppb napthalene(west wall), 156ppb MTBE (Bottom). Waste oil soil endpoint shows 427ppb benzo(a)anthracene and 411ppb benzo(b)fluoranthene. Addendum to the Tank Closure Report (Tyree Org)-5/25/98. "The additional work consisted of further excavation of th west wall and the south wall of the gasoline tankfield excavation. The additional excavation resulted in clean(STARS Memo) endpoint soil samples from the two walls." Excavation indicated the presence of a former basement filled with demolition debris. Depth to groundwater estimated at 9" below grade. Two additional soil endpoints were collected for analysis. Soil endpoint analyticals show not TAGM 4046 Soil Cleanup Objective exceedances after second excavation event. Project Summary Report (Tyree Org)-5/25/98."One groundwater sampling event prior to the destruction of the wells during removal of

underground storage tanks." Groundwater analyticals show 173ppb MTBE(W-1), 1200ppb MTBE(W-2) and 1890ppb MTBE(W-3). Groundwater flow direction not determined. Closure Request (Tyree Org)-7/8/99. "The property was sold by Tyree's client to the 20th Street Association, LLC. The owner has excavated the property for construction purposes". "These three wells were destroyed in March 1998 when the gasoline tanks were removed". A total of 305.11 tons of soil were removed from teh tankfield excavation. "The entire lot (approximately 114' x 100') has been excavated to the property lines and to a depth of approximately 15'. Tyree requests closure based on 1)only ethylbenzene in one well at 6.1ppb 2)the levels of MTBE were probably significantly reduced by removal of approximately 9 feet of unsaturated and 6' of saturated soil 3)approximately 8550 tons of soil were removed. Tyree requests no further action. Vought reviewed site with DEC Rommel which resulted in spill closure. ORIGINAL SPILL ASSIGNED TO O'DOWD.

DEC Region: 2  
DER Facility ID: 194620  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL C" 3/11/03 - SAMUEL- File available in active unassigned spill files. 03/26/04 - Reassigned from Samuel to Rommel 08/26/05 - Follup letter sent to property owner to address a TTF at the site. It has also been discovered that there is a property transfer in the works and that ATC is the consulting firm handling any environmental work at the site. Therefore, a copy of the spill report and the Region 2 form letter was sent to the ATC project manager for his reference. 8/31/05 - ATC is doing work at the site and believes the tank was removed. A geophysical investigation was performed. The investigation located the remnants of a filler pipe but found no tank. A patch of pavement was observed consistent with the removal of

a 500 gal tank. Three borings (one up gradient, two down gradient) were performed and samples taken. ATC asked that an NFA letter be sent based on the analytical results coming back negative for contamination. A letter report would be submitted stating results and conclusions. 11/8/05 - No letter report has been received so ATC was contacted. Contamination had been detected in one of the borings so no report was sent. The work plan calls for expanding the investigation once the building on site is demolished which should occur in January or February of 2006. At that point additional borings are to be performed to determine the extent of the contamination and subsequent remedial actions will be proposed. 08/18/2006 - IABELBY: Contacted ATC PM (Jason Hayes, 212-479-5427) to inquire about status of investigation. He stated that further demolition was planned for the site and that the investigation could continue at that point. He was informed that any further contact with the department should be directed to the Region 2 office. NEXT STEP: follow up with consultant to ascertain progress. 8/28/2007 Sangesland spoke to rep from Langan Engineering. He says they have finished work on the site (excavation?endpoints?) He would like to submit a closure report for final review. Case reassigned to Kumar Patel. 08/28/07-Hiralkumar Patel. received message from Jason Hayes from Langan engineering. they excavated contaminated soil during site development and report is ready. Mr. Hayes asked for address to send report. Jason Hayes Langan Engineering Ph. (212) 479-5427 email: jahayes@langan.com sent email to Mr. Hayes requiring submission of closure report alongwith investigation report, that was done in 2005 and during that time found contaminated soil. 08/29/07-Hiralkumar Patel. received email from Mr. Hayes. he mentioned that there was no report produced for investigation work done in 2005. he will include description and analyticals of that work in closure report. 09/10/07-Hiralkumar Patel. received closure report from Mr. Hayes. abstract: - 550 gal gasoline UST that was failed the tightness test was removed at some point between 1996 and 2005 <----- - depth to groundwater at teh site is estimated at approx. 8 ft bg and presumable flows northwest-west towards the nearby Hudson river - found concrete patch in building (could be UST location), staining on concrete, a sump in the southwest corner and a centrally located floor drain, during 2005 Phase I - site was in use as auto garage in past - Langan performed a GPR survey on Aug. 26, 2005 and did not reveal evidence of USTs - rectangular concrete patched-area was identified along the southern site boundry near the sidewalk, a disconnected fill line was traced from the sidewalk to the potential UST area - fill port in the siewalk is filled with concrete - completed 8 direct-push soil borings at the site - borings were advanced to 10 ft bg - 3 mud-rotary borings were completed as part of a Geotechnical investigation - nine soil samples were collected: one sample from each of geoprobe borings, and one sample from a geotechnical boring (B2) - soil samples were collected from 4 to 10 ft bg - no staining, odor or elevated PID readings were observed in the soil samples with the exception of one soil sample at location E4 - boring E4, adjacent to a sump in the southwest corner of the site, staining and petroleum odor were observed at approx. 9 ft bg - PID readings for boring E4 were observed upto 60 ppm - fill material extended to an approx. depth ranging from 6 ft to 9 ft bg - excavated impacted soil to an approx. depth of 10 ft bg - 4 endpoint samples were collected: one sidewall sample from east, west and north sidewalls and one bottom sample - sidewall samples were collected at approx. 6 inches above

**S102399190**

the base of the excavation area, approx. 9 ft bg - base sample was collected from a depth of approx. 10 to 10.5 ft bg - sample was not collected from the south sidewall due to the presence of an foundation wall at the southern site border - area of final excavation was approx. 610 sq.ft. with depth of 10 ft bg - groundwater was encountered at approx. 10 ft bg - 220 tons of petroleum impacted soil was removed - found SVOC contamination in sample E2 during 2005 investigation. sample was taken at depth of 3.5-4.5 ft bg. no contamination found in sample E4 where they found heavy PID (60 ppm) - no contamination found in endpoint samples report doesn't have information about location of dispenser island and any investigation along old fill line. spoke with Mr. Hayes. he mentioned that they did GPR survey in entire site and didn't found any area that could be location of dispenser island. as per Mr. Hayes, this small gasoline tank was in use to fill up cars under repair and dispenser point could be right on tank. he also mentioned that previous boring E1 was at point where suspected fill line ends inside building and from that point to fill port, fill line runs about 10 ft under sidewalk. no contamination was found in E1. discuss with DEC Austin. based on submitted report, he asked to close the case. case closed.

Remarks: test = air pressure at 5lbs they discontinued test, they are underground tanks

REPLACED OR SHE COULD SWITCH TO GAS HEAT. 1/23/97 INSPECTED 613 HUDSON STREET WITH METER ALONG WITH DR. DODELSON AND TENANT. I COULD NOT DETECT ANY OIL ODORS IN HOUSE WITH MY NOSE, NOR DID I GET ANY HITS ON THE METER. TENANT STATED THAT SHE COULD SMELL OIL STILL BUT ALSO STATED THAT THE SMELL WAS FADING WITH TIME. I TOLD HER THAT THE ODOR SHOULD DISSIPATE WITHIN A COUPLE OF DAYS SINCE THERE WAS NO MORE PRODUCT IN HER BASEMENT. 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang.

Remarks: CALLER STATES UNKNOWN COMPANY WAS MAKING DELIVERY TO RESTAURANT NEXT TO HIS HOUSE WHEN PRODUCT SPILLED ON SIDEWALK AND SOME ENTERED HIS RESIDENCE / THERE IS AN ODOR OF OIL IN RESIDENCE / SAND WAS PLACED ON SPILL

VIOLATIONS. FERRANTINO OIL COMPANY DOING CLEANUP. VENT PIPE HAS NO VENT WHISTLE OR HIGH LEVEL ALARM AND CANNOT BE SEEN BY DRIVER DURING FILLS. FERRANTINO CHECKED TANK AT LOCATION LAST NITE AND FOUND IT TO BE LEAKING. OIL REMOVED AND SPILL IN BASEMENT CLEANED. SPILL INTO ADJACENT BASEMENT IN PROGRESS. 1/21/97 UPDATE: CALL BACK FROM LUST RESIDENCE, OIL ODOR STILL PERSISTING. MULQUEEN RESPONDED ON 1/20/97 AND INSPECTED BOTH PROPERTIES. FOUND THAT OIL WAS NOT CLEANED UP IN 317 W. 12. CALLED BACK FERRANTINO AND PTC, WAITED FOR CLEANUP CREW WHICH DUG MORE SOIL OUT OF 613 AND STARTED CLEANUP OF 317. NOTIFIED ELSA CARDIER, OWNER OF 317 THAT THE TANKS WERE PROBABLY NO GOOD AND WOULD EITHER HAVE TO BE REMOVED AND REPLACED OR SHE COULD SWITCH TO GAS HEAT. 1/23/97 INSPECTED 613 HUDSON STREET WITH METER ALONG WITH DR. DODELSON AND TENANT. I COULD NOT DETECT ANY OIL ODORS IN HOUSE WITH MY NOSE, NOR DID I GET ANY HITS ON THE METER. TENANT STATED THAT SHE COULD SMELL OIL STILL BUT ALSO STATED THAT THE SMELL WAS FADING WITH TIME. I TOLD HER THAT THE ODOR SHOULD DISSIPATE WITHIN A COUPLE OF DAYS SINCE THERE WAS NO MORE PRODUCT IN HER BASEMENT.

Spill Cause: CALLER STATES UNKNOWN COMPANY WAS MAKING DELIVERY TO RESTAURANT NEXT TO HIS HOUSE WHEN PRODUCT SPILLED ON SIDEWALK AND SOME ENTERED HIS RESIDENCE / THERE IS AN ODOR OF OIL IN RESIDENCE / SAND WAS PLACED ON SPILL
