CERTIFICATION

I, Michelle Lapin, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 487 West 129th Street Site (Restrictive Declaration No. R-158). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the Site.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f).

Site Location and Current Usage

The Site is located at 487 West 129th Street in the Harlem neighborhood of Manhattan, New York and is identified as Block 1969, Lot 6 on the New York City Tax Map. Figure 1 shows the Site location. A map of the Site is shown in Figure 2. The Site is bounded by West 130th Street to the north, a warehouse to the east, West 129th Street to the south, and a one-story warehouse to the west (used by the Metropolitan Opera House for stage set storage). The warehouse to the west and the extant structure at 487 West 129th were once a single building, but were divided into the current configuration in 2006. The warehouse to the west is considered a Site abutter and is not part of the redevelopment project.

Summary of Proposed Redevelopment Plan

The proposed project involves the demolition of the on-site one-story warehouse, and the construction of a new residential building with three basement levels, the lowest of which would be occupied by a parking garage and utility rooms. Excavation for the proposed construction is expected to a depth of approximately thirteen feet below the existing floor grade, which is the same as the adjacent West 129th Street sidewalk grade. West 130th Street is approximately 17.5 to 24.5 feet higher than West 129th Street adjacent to the Site. A potential perched water table has been noted in the southwestern corner of the Site; thus, limited dewatering may be necessary for the proposed construction.

Summary of Past Uses of Site and Areas of Concern

According to historical Sanborn fire insurance maps reviewed for the Phase I ESA, the on-site building was constructed prior to 1902 and was used historically as the Metropolitan Street Railway Company Third Avenue Division Power Station, the Third Avenue Railway Company car house and repair shop, and after 1951, a Metropolitan Opera Association warehouse. The surrounding area was historically occupied by residential and commercial buildings and auto-related properties, some with gasoline underground storage tanks (USTs). A garage and auto repair shop with two 550-gallon gasoline USTs and one 825-gallon gasoline UST was east-

adjacent to the Site between approximately 1912 and the summer of 2014 (the building is currently vacant and under renovation). The property south of the Site across West 129th Street was used as a railway company car house between approximately 1902 and 1912, and was subsequently used as a bus garage and repair shop. According to Sanborn maps and regulatory databases, both this bus garage and a second garage, located southeast of the site across West 129th Street since approximately 1951, contained several petroleum USTs. The most recent Site inspection (in October 2014) noted that the two garages south of the Site across West 129th Street remain in operation.

The Areas of Concern (AOCs) identified for this Site include:

1. Historical uses of the Site as a railway power station and a railway car house and repair shop.
2. Urban fill materials beneath the Site.
3. New York City Buildings Department (NYCDOB) records indicating historical fuel use at the Site address (i.e., potentially on-site or in the off-site Metropolitan Opera warehouse, which was historically part of the same building as the Site). AKRF's Phase I ESAs did not identify any petroleum storage tanks or spills reported for the Site, and no evidence of a petroleum storage tank (i.e., fill ports, vent pipes, etc.) was noted.
4. On-site active-status New York State Department of Environmental Conservation (NYSDEC) Spill No. 1407581.
5. Potential for subsurface contamination due to past and present uses in the surrounding area (i.e., garages and rail car/bus/auto repair, petroleum storage, reported spills, and a hazardous waste generator listing involving chlorinated solvents for the east-adjacent auto repair shop/vacant warehouse).

Summary of the Work Performed under the Remedial Investigation

On behalf of Inner City Contacting, LLC, AKRF, Inc. performed the following scope of work:

1. Conducted several Site inspections in 2007-2014 to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Installed 9 soil borings across the entire project Site, and collected 16 soil samples (1 to 2 from each boring) for chemical analysis from the soil borings to evaluate soil quality;

3. Installed 4 temporary groundwater monitoring wells in soil borings throughout the Site and collected 4 groundwater samples for chemical analysis to evaluate groundwater quality;

4. Installed 5 soil vapor probes around the Site perimeter and collected five samples for chemical analysis.

Summary of Environmental Findings

1. Based on a 2005 survey, the Site is at an elevation of approximately 36.4 feet above the Manhattan Borough Datum (MBD), which is the elevation of south-adjacent West 129th Street. Regional surface topography slopes down to the southwest. The north-adjacent West 130th Street is at an elevation of approximately 60.8 to 53.9 feet MBD.
2. Depth to groundwater ranges from approximately 23.7 to 27 feet below the Site building floor. The 2008 and 2014 RI borings in the southwestern corner of the Site identified apparent perched groundwater approximately 10.5 to 13 feet below the building floor.
3. Groundwater flow beneath the Site is expected to be southwesterly (toward the Hudson River, approximately 0.45 mile away) based on surface topography. However, actual water table depth and groundwater flow direction can be affected by many factors including subsurface openings or obstructions such as basements, underground utilities, bedrock geology, the A/B/C/D Line subway tunnels approximately 1,000 feet to the east, and other factors beyond the scope of this assessment. Groundwater in Manhattan is not used as a source of potable water.
4. A 2012 geotechnical study encountered weathered bedrock approximately 35 to 61 feet below the Site building floor, and competent bedrock was encountered approximately 36 to 66 feet below the building floor, sloping down toward the south.
5. The stratigraphy of the Site, from the surface down, consists of approximately 5 to 12 feet of fill (sand, gravel, silt, brick, concrete, ash and glass) above a layer of apparent native soil (sand, gravel, and silt). The 2012 geotechnical study identified apparent concrete layers approximately 5 to 10 feet below the building floor, possibly associated with historical rail car repair pits.
6. Analytical results for soil/fill samples were compared to 6 NYCRR Part 375 Soil Cleanup Objectives for Unrestricted Use (USCOs) and Restricted - Residential Use (RRSCOs). Soil/fill samples collected during the RI showed elevated concentrations of primarily

petroleum-related VOCs in the deeper samples (12-14') collected from 2008 boring SB-2 and 2014 boring WC-2, both advanced in the southwestern corner of the Site. These VOCs included: 1,2,4-trimethylbenzene (max. concentration of 87 ppm); 1,3,5-trimethylbenzene (max. concentration of 33 ppm); naphthalene (max. concentration of 44 ppm); n-propylbenzene (max. concentration of 11 ppm); and total xylenes (max. concentration of 41.6 ppm) exceeding Unrestricted Use SCOs. 1,2,4-trimethylbenzene also exceeded its Restricted Residential Use SCO. VOC concentrations were higher in the 2008 sample, although it was not clear whether this is representative of attenuation with time or sample variability. Low levels of petroleum-related VOCs were also detected in shallow soil samples. SVOC concentrations exceeded Restricted Residential Use SCOs in 2008 sample SB-3 (0-2') and 2014 sample WC-2 (12-14'), and included benzo(a)anthracene (max. concentration of 26 ppm); benzo(a)pyrene (max. concentration of 24 ppm); benzo(b)fluoranthene (max. concentration of 31 ppm); benzo(k)fluoranthene (max. concentration of 11 ppm); chrysene (max. concentration of 25 ppm); dibenzo(a,h)anthracene (max. concentration of 3.3 ppm); and indeno (1,2,3-cd)pyrene (max. concentration of 16 ppm). Dibenzofuran (max. concentration of 7.9 ppm) also exceeded its Unrestricted Use SCO, but was detected below its Restricted Residential SCO. Concentrations of SVOCs in these two samples were generally similar. Ash, which commonly contains elevated SVOC concentrations, was observed in 2008 boring SB-3. Metals including barium, chromium, copper, lead, manganese, mercury, nickel, silver, and zinc exceeded their respective Unrestricted Use SCOs. Of these metals, barium (max. of 1,800 ppm), lead (max. of 1,400 ppm), manganese (max. of 34,000 ppm), and mercury (max. of 0.97 ppm) also exceeded their respective Restricted Residential SCO in one or more soil sample. No pesticides or PCB were detected in the soil samples analyzed. The detected VOC and SVOC concentrations were indicative of petroleum contamination in the southwestern corner of the Site and/or urban fill materials containing SVOCs. The detected concentrations of metals in the samples appeared to be primarily either naturally occurring or attributable to urban fill. However, significantly higher concentrations of several metals including barium, manganese, silver, chromium, cobalt, nickel, and thallium were detected in 2014 sample WC-3 (26-28') compared to the other soil samples, suggesting a potential release at this location (e.g., from a leaking drain historically used for chemical disposal). Based on observations of contamination

above the soil-water interface and laboratory analytical results, Spill No. 1407581 has been reported to NYSDEC.

7. Groundwater sample analytical results were compared to NYSDEC Part 703.5 Class GA Ambient Water Quality Standards (drinking water standards) (GQS). Groundwater samples showed elevated concentrations of petroleum-related VOCs in sample GW-2 from the southwestern corner of the Site, with 1,2,4,5-tetramethylbenzene [340 parts per billion (ppb)], 1,2,4-trimethylbenzene (1,600 ppb), 1,3,5-trimethylbenzene (410 ppb), ethylbenzene (300 ppb), isopropylbenzene (120 ppb), n-butylbenzene (73 ppb), n-propylbenzene (160 ppb), p/m-xylene (800 ppb), o-xylene (59 ppb), and p-isopropyltoluene (88 ppb) exceeding their Class GA standards of 5 ppb. Naphthalene was detected at 860 ppb, exceeding its Class GA standard of 10 ppb. These VOCs were not detected in the other groundwater samples analyzed. VOCs associated with chlorinated solvents including cis-1,2-dichloroethene (max. of 20 ppb) and tetrachloroethene (max. of 11 ppb) were detected in three groundwater samples. SVOCs were detected in all four groundwater samples, including benzo(a)anthracene (max. of 0.24 ppb); benzo(a)pyrene (max. of 0.27 ppb); benzo(b)fluoranthene (max. of 0.23 ppb); benzo(k)fluoranthene (max. of 0.1 ppb); chrysene (max. of 0.23 ppb); indeno(1,2,3-cd)pyrene (max. of 0.09 ppb); and naphthalene (max. of 300 ppb). Several metals were identified in groundwater, but only antimony, iron, manganese, and sodium exceeded their respective GQSs in the filtered water samples. No PCBs or pesticides were detected in the groundwater samples. The detected concentrations of petroleum-related VOCs are likely attributable to a release in the southwestern corner of the Site. The detected chlorinated VOCs were not identified in the soil samples, and are likely attributable to an off-site source. The detected SVOC concentrations were likely attributable to some combination of petroleum contamination in the southwestern corner of the Site and fill particles entrained in the samples. Groundwater laboratory analytical data is summarized in Tables 5 through 8, with the sampling locations and exceedances of Class GA standards shown on Figure 4.
8. Soil vapor samples collected during the RI showed concentrations of VOCs generally associated with petroleum and solvents. There are no standards or guidelines for soil vapor, so detected concentrations were (conservatively) compared to indoor air ranges published in the 2006 *New York State Department of Health (NYSDOH) Guidance for*

Evaluating Soil Vapor Intrusion in the State of New York. VOCs typically associated with petroleum (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, 4-ethyltoluene, benzene, ethylbenzene, heptane, n-hexane, xylenes, and toluene), were present at concentrations ranging from 3.76 to 3,640 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). VOCs typically associated with solvents (1,3-butadiene, 2-butanone, carbon disulfide, chloroform, cis-1,2-dichloroethene, cyclohexane, ethyl alcohol, isopropyl alcohol, styrene, tertiary butyl alcohol, tetrachloroethene, tetrahydrofuran, trichloroethene, and vinyl chloride) were present at concentrations ranging from 1.37 to 967 $\mu\text{g}/\text{m}^3$. Chloromethane (R-40), dichlorodifluoromethane and trichlorofluoromethane, commonly associated with refrigerants, were detected at trace concentrations. Acetone, which may be associated with solvents or fill materials and is also a common laboratory contaminant, was detected in four samples at concentrations ranging from 14.9 to 143 $\mu\text{g}/\text{m}^3$. Methylene chloride (a solvent and common laboratory contaminant) was detected in one sample at 3.26 $\mu\text{g}/\text{m}^3$. No VOCs were detected in exceedance of NYSDOH Air Guidance Values (AGVs). The detected VOCs were likely attributable to some combination of petroleum contamination in the southwestern corner of the Site, fill materials, and/or off-site sources. Soil vapor laboratory analytical data is summarized in Table 9, with the sampling locations and exceedances of NYSDOH indoor air ranges shown on Figure 5.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Inner City Contracting, LLC is proposing to investigate and remediate an approximately 20,000-square foot (sf) site located at 487 West 129th Street in the Harlem neighborhood of Manhattan, New York. Mixed use (residential, parking and medical offices) is proposed for the Site. The RI work was performed on February 29, 2008 and October 7 and 8, 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 487 West 129th Street in the Harlem neighborhood of Manhattan, New York and is identified as Block 1969, Lot 6 on the New York City Tax Map. Figure 1 shows the Site location. The Site is approximately 20,000 sf and is bounded by West 130th Street to the north, West 129th Street to the south, an auto repair shop and vacant warehouse to the east, and the western half of a one-story warehouse used for stage set storage to the west. A map of the Site is shown on Figure 2. Currently, the Site is vacant and contains the eastern half of a one-story warehouse.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will involve the demolition of the on-site half of the existing one-story warehouse, and the construction of two new mixed-use buildings with parking and utility rooms on the lowest (parking) level, which would be shared between the buildings and would occupy the entire Site. The southern building (Building A) would abut West 129th Street and would have nine above-grade floors with residential uses above the parking level. The northern building (Building B) would abut West 130th Street, and would have: a cellar level (above the parking level) occupied by utility rooms, recreational space, and a doctor's office; a basement level (above the cellar) occupied by a mechanical room and a doctor's office; and nine above-grade floors with residential uses. An outdoor plaza would be located between the two buildings, above the parking level. The proposed project would entail excavation to approximately 15 feet below the existing building's foundation (at the West 129th Street level) for an approximately three-foot (at a minimum) foundation slab. Layout of the proposed

development is presented in Appendix E. The current zoning designation is R7A (residential with high lot coverage). The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The neighborhood surrounding the Site includes a mix of institutional, residential, and auto-related uses, including the New York City Housing Authority Manhattanville Houses, the campus of the College of the City of New York, several large garage and warehousing buildings, and numerous large residential apartment buildings.

The Site consists of the vacant eastern portion of a one-story warehouse, formerly used by the Metropolitan Opera House to store stage sets. The off-site western portion of the warehouse is separated from the Site by a demising wall (constructed in early 2006) and is used for Metropolitan Opera stage set storage. The structure to the east (formerly a warehouse and auto repair shop) is under interior renovation to become an enclosed private parking facility. Three- and four-story residential buildings, with those on Amsterdam Avenue containing ground floor retail, are located along Amsterdam and Convent Avenues.

The block south of the Site includes a New York City Transit Authority/Manhattan and Bronx Surface Transit Operating Authority bus depot, and a Verizon garage. The remainder of this block is occupied by three- and four-story warehouses and parking facilities. The warehouses appear to be vacant or underutilized.

The blocks north and east of the Site contain several five- to ten-story apartment buildings. These buildings are located on parcels of one acre or more. Portions of the City College of New York campus and a Catholic Church are located approximately 400 feet north of the Site.

NYCHA's Manhattanville houses and Intermediate School (I.S.) 286/172 are located west of the Site across Amsterdam Avenue. Sheltering Arms Park (a public park under the jurisdiction of the New York City Department of Parks and Recreation) is on the corner of West 129th Street and Amsterdam Avenue. Figure 2 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to historical Sanborn fire insurance maps reviewed for the Phase I ESA, the on-site building was constructed prior to 1902 and was used historically as the Metropolitan Street Railway Company Third Avenue Division Power Station, the Third Avenue Railway Company car house and repair shop, and after 1951, a Metropolitan Opera Association warehouse. The surrounding area was historically occupied by residential and commercial buildings and auto-related properties, some with gasoline USTs. A garage and auto repair shop with two 550-gallon gasoline USTs and one 825-gallon gasoline UST was east-adjacent to the Site between approximately 1912 and 1989. The property south of the Site across West 129th Street was used as a railway company car house between approximately 1902 and 1912, and was subsequently used as a bus garage and repair shop. According to Sanborn maps and regulatory databases, both this bus garage and a second garage, located southeast of the site across West 129th Street since approximately 1951, contained several petroleum USTs. The most recent Site inspection (in October 2014) identified the east-adjacent property as an auto repair shop, and noted that the two garages south of the Site across West 129th Street remain in operation.

2.2 Previous Investigations

AKRF, Inc. (AKRF) conducted a Phase I Environmental Site Assessment (ESA) of the Site in November 2007, and a Subsurface (Phase II) Investigation) in March 2008, and prepared a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) in May 2008. A geotechnical study was conducted at the Site by Heller and Johnsen in December 2012. AKRF subsequently prepared a Phase I ESA update in June 2014. The Site underwent City Environmental Quality Review (CEQR) in 2008-2009 for the proposed construction of a new residential building. As part of the CEQR process, the May 2008 RAP and CHASP were reviewed and approved by the NYC Department of Environmental Protection (NYCDEP), and the Site was assigned a Restrictive Declaration in April 2008 to ensure that remedial requirements were carried out in accordance with the RAP and CHASP. Since the preparation of the May 2008 NYCDEP-approved RAP and CHASP, management of Restrictive Declaration sites was transferred from the NYCDEP to the NYC Mayor's Office of Environmental Remediation (OER).

The Phase I ESAs identified Recognized Environmental Conditions (RECs) pertaining to past uses of the Site as the Metropolitan Street Railway Company Third Avenue Division Power

Station, and the Third Avenue Railway Company car house and repair shop; historical fuel oil use at the Site or at the west-adjacent warehouse; and past and present uses of the surrounding area, including garages and rail car/bus/auto repair, petroleum storage, reported spills, and a hazardous waste generator listing involving chlorinated solvents for the east-adjacent auto repair shop / vacant warehouse). The 2007 Phase I ESA noted floor drains that were suspect drywells; however, subsequent inspections indicated that these drains are connected to the sewer system. The findings of the 2008 Phase II investigation are discussed with the 2014 findings in Section 5.0.

The 2012 geotechnical study advanced 8 borings to approximately 42 to 70 feet below the building's floor. Two monitoring wells were installed to determine the groundwater elevation (since the installation logs indicate that these wells are screened below the top of the water table, no samples were collected from these wells as part of the RI). The geotechnical report indicated that the Site was underlain by a 5 to 10-foot layer of fill materials (sand, gravel, brick, concrete, and/or silt) above a layer of apparent native soil (sand, gravel, and silt). Several borings encountered concrete or hard drilling (possibly due to concrete) approximately 5 to 10 feet below grade, which was attributed to historical rail car repair pits. Weathered bedrock was encountered approximately 35 to 61 feet below grade, and competent bedrock was encountered approximately 36 to 66 feet below grade, sloping down toward the south. Groundwater was encountered approximately 24.3 to 25 feet below grade. No evidence of contamination was noted in the boring logs.

2.3 Site Inspection

On November 5, 2007 and May 30, 2014, AKRF staff conducted a reconnaissance of the Site as part of Phase I ESAs. At that time, the Site was similar to current uses.

2.4 Areas of Concern

The AOCs identified for this Site include:

1. Historical uses of the Site as a railway power station and a railway car house and repair shop.
2. Urban fill materials beneath the Site.
3. NYCDOB records indicating historical fuel use at the Site address (i.e., potentially on-site or in the off-site Metropolitan Opera warehouse, which was

historically part of the same building as the Site). AKRF's Phase I ESAs did not identify any petroleum storage tanks or spills reported for the Site, and no evidence of a petroleum storage tank (i.e., fill ports, vent pipes, etc.) was noted.

4. On-site active-status NYSDEC Spill No. 1407581.
5. Potential for subsurface contamination due to past and present uses in the surrounding area (i.e., garages and rail car/bus/auto repair, petroleum storage, reported spills, and a hazardous waste generator listing involving chlorinated solvents for the east-adjacent auto repair shop/vacant warehouse).

The Phase I ESA Reports are included in Appendix A of this report.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Michelle Lapin, P.E.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

On behalf of Inner City Contacting, LLC, AKRF, Inc. performed the following scope of work:

1. Conducted Site inspections to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Installed 9 soil borings across the entire project Site, and collected 16 soil samples (one to two from each boring) for chemical analysis to evaluate soil quality;
3. Collected four groundwater samples from temporary wells installed the soil borings for chemical analysis to evaluate groundwater quality; and
4. Installed five soil vapor probes around Site perimeter and collected five samples for chemical analysis.

4.1 Borings and Monitoring Wells

Drilling and Soil Logging

The 2008 Phase II investigation was conducted in accordance with a NYCDEP-approved Work Plan (AKRF, February 2008). The additional sampling conducted in 2014 was in accordance with the sampling frequency required by OER for a site of this size.

On February 29, 2008, Zebra Environmental Corporation of Lynbrook, New York (Zebra) advanced five borings at the Site. The 2008 borings were advanced with a Geoprobe[®] direct push probe (DPP) unit to depths ranging from 4.5 to 14 feet below grade (to refusal). On October 7 and 8, 2014, Zebra advanced four borings at the Site. The 2014 borings were advanced with a Geoprobe[®] DPP unit to 15 to 35 feet below grade (i.e., below the water table).

The boring locations are shown on Figure 2. Soil cores were collected in five-foot long, two-inch diameter, macrocore piston rod samplers fitted with acetate liners. Each core was split lengthwise and logged by AKRF field personnel. Logging consisted of: describing the soil according to the modified Burmister Classification System; describing any evidence of contamination (e.g., staining, sheens, odors); and screening the soil for organic vapors using a photoionization detector (PID) at one-foot intervals. The PID was calibrated at the start of each work day using isobutylene gas at a concentration of 10 parts per million (ppm) in accordance with the manufacturer's instructions.

Due to low soil recovery and/or shallow refusal, one soil sample was collected from 2008 borings SB-1 and SB-3. Two soil samples were collected from the remaining borings in accordance with the Work Plan. The first sample was from the shallowest two- to three-foot interval that could be sampled (which ranged from the 0-2' interval to the 8-10' interval due to thick layers of concrete or gravel in some borings). The second sample was from: the bottom two-foot interval of the boring, if refusal was encountered above the proposed depth of excavation; the two-foot interval below the proposed depth of excavation; or the two-foot interval exhibiting the greatest evidence of contamination (e.g., odors, staining, and/or elevated PID readings). Of the sixteen soil samples collected, eleven were collected within the proposed excavation interval (ranging from 0-2 feet below grade to 8-10 feet below grade), three were collected approximately 12 to 14 feet below grade (at or one foot below the proposed depth of excavation), and the remaining two samples were collected approximately 26 to 28 feet below grade (due to elevated PID readings).

Evidence of petroleum contamination (odors, staining, and elevated PID readings) was noted in the 10- to 15-foot interval of 2008 boring SB-2 (maximum PID reading of 936 ppm) and the 3- to 15-foot interval of 2014 boring SB-2 (maximum PID reading of 317 ppm). A slight petroleum-like odor and PID readings up to 157 ppm were noted in the 5- to 10-foot interval of 2008 boring SB-1. Slightly elevated PID readings (in the 20 ppm range), but no other evidence of contamination, were noted in the 25- to 30-foot interval of borings SB-3 and SB-4 (i.e., within the water table). No evidence of contamination was noted in the other borings.

Samples designated for laboratory analysis were placed into laboratory-supplied containers and chilled coolers, and submitted via courier to Alpha Analytical Laboratories (Alpha) of Westborough, Massachusetts (MA), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) metals, polychlorinated biphenyls (PCBs) by EPA Method 8082, and pesticides by EPA Method 8081. In addition, for quality/assurance/quality control (QA/QC) purposes, a trip blank was sent with the collected soil samples for laboratory analysis but was analyzed for VOCs only.

Boring logs prepared by an environmental engineer are attached in Appendices B and C. A map showing the location of the soil borings is shown on Figure 2.

Groundwater Monitoring Well Construction

Groundwater was encountered in only one 2008 boring, SB-2, at approximately 13 feet below grade. A temporary well point was installed in this boring. Since refusal was met in the boring at 14 feet below grade, a temporary one-inch PVC well was installed with five feet of screen at a depth of 9 to 14 feet below grade. No groundwater was recovered from this boring due to the shallow depth of the well and/or poor recovery time.

Groundwater was encountered in 2014 boring SB-2 (located near the 2008 SB-2 location in the southwestern corner of the Site) at approximately 10.5 feet below grade, and in the remaining 2014 borings at approximately 23.7 to 27 feet below grade. Thus, a possible perched water table exists in the southwestern corner of the Site. Temporary one-inch PVC wells were installed with five feet of screen across the water table in all 2014 borings.

Prior to sampling each well, approximately three well volumes were purged using a peristaltic pump to remove sediments from the water column and establish a connection with the aquifer prior to sampling. Samples were then collected with the peristaltic pump into laboratory-supplied glassware, placed into laboratory-supplied containers and chilled coolers, and submitted to Alpha via courier. The samples were analyzed for VOCs by EPA Method 8260, SVOC by EPA Method 8270, pesticides by EPA Method 8081, PCBs by EPA Method 8082, and Total and Dissolved TAL Metals.

Water collected from 2014 boring SB-2 was dark-colored with a petroleum-like odor; it was unclear whether petroleum was mixed with the water. No evidence of contamination was noted in other groundwater samples.

Temporary monitoring well locations are shown in Figure 2. Installation logs are included in Appendix B.

Survey

Each sampling location was accurately measured in the field to fixed benchmarks (e.g., property lines/building walls).

Water Level Measurement

Where groundwater was encountered, water levels were measured using a Solinst water level indicator.

Soil Vapor Sampling

Five soil vapor samples were collected in 2014. The soil vapor probes were installed using a Geoprobe® track-driven unit. At each location, a monitoring point (consisting of tubing connected to an expendable drive point) was installed to approximately 12-13 feet (at the proposed foundation depth). All soil vapor points were below the depths where buried concrete was noted in boring logs for the nearest geotechnical borings (i.e., no concrete potentially impeding airflow was known to be present beneath the sampling points). A six-inch stainless steel screen implant with connected Teflon tubing was installed through the Geoprobe rods and threaded into the drive point. The sampling tubing extended from the end of the screen to above grade. The tubing was then retracted approximately 12 inches to create a void, the push probe rods were removed, and the boring was backfilled with clean silica sand to 1 foot above the screen. Hydrated bentonite was used to fill the remaining void around the sampling tubing to ground surface. The sampling locations, shown on Figure 2, were selected to be representative of overall Site conditions.

Samples were collected in six-liter Summa canisters which had been certified clean by the laboratory. The samples were submitted via courier to Alpha Analytical of Mansfield, MA, a NYSDOH ELAP-certified laboratory, and analyzed for VOCs using USEPA Method TO-15. The flow rate of both purging and sampling did not exceed 0.2 liters per minute (L/min). Sampling at all of the probe points occurred for two hours.

Sample log sheets were maintained summarizing sample identification, date and time of sample collection, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples were collected, and chain of custody protocols.

As part of the vapor sampling, a tracer gas was used in accordance with NYSDOH protocols to serve as QA/QC for verifying integrity of the soil vapor probe seal. Helium was used as the tracer gas and a box was used to keep it in contact with the probe during testing. A portable monitoring device was used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results showed a significant presence of the tracer, the probe seals would have been adjusted to prevent infiltration. Helium was not detected in any of the points, verifying an adequate seal. A PID reading of approximately 5 ppm was detected in sampling point SV-2 in the southwestern corner of the Site (where petroleum-contaminated soil and groundwater were

observed). Slightly elevated PID readings of 0.467 to 1.289 ppm, but no other evidence of contamination, were detected in the remaining sampling points. Soil vapor sampling logs are included in Appendix C.

4.2 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Sixteen soil samples were collected for chemical analysis during the 2008 and 2014 RIs from nine borings advanced with a Geoprobe[®] rig, with dedicated acetate liners used for each soil core. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 1-4. Figure 2 shows the location of samples collected in this investigation. Laboratories and analytical methods are listed below.

Groundwater Sampling

Four groundwater samples were collected for chemical analysis during this 2014 RI. Dedicated LDPE tubing was used for sampling each of the four temporary wells installed in the 2014 borings. Groundwater sample collection data is reported in Tables 5 through 8. Sampling logs with information on sampling the temporary wells are included in Appendix B. Figure 2 shows the location of groundwater samples. Laboratories and analytical methods are listed below.

Soil Vapor Sampling

Five soil vapor probes were installed and five soil vapor samples were collected for chemical analysis in 2014 during this RI using dedicated plastic tubing. Soil vapor sampling locations are shown in Figure 2. Soil vapor sample collection data is reported in Table 9. Soil vapor sampling

logs are included in Appendix C. Methodologies used for soil vapor assessment conform to the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Michelle Lapin of AKRF
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Alpha Analytical Laboratories of Westborough, MA and Alpha Analytical Laboratories of Mansfield, MA
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Groundwater analytical methods: <ul style="list-style-type: none"> • Total and Dissolved TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by EPA Method TO-15.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1-4 (soil), 5-8 (groundwater) and 9 (soil vapor). Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Based on a 2005 survey, the Site is at an elevation of approximately 36.4 feet above the Manhattan Borough Datum (MBD), which is the elevation of south-adjacent West 129th Street. Regional surface topography slopes down to the southwest. The north-adjacent West 130th Street is at an elevation of approximately 60.8 to 53.9 feet MBD. The RI and previous studies indicated that the Site is underlain by approximately 5 to 12 feet of fill (sand, gravel, silt, brick, concrete, ash and glass) above a layer of apparent native soil (sand, gravel, and silt). The 2012 geotechnical study identified apparent concrete layers approximately 5 to 10 feet below the building floor, possibly associated with historical rail car repair pits. Weathered bedrock was encountered approximately 35 to 61 feet below the building floor, and competent bedrock was encountered approximately 36 to 66 feet below the building floor, sloping down toward the south.

Hydrogeology

Groundwater was generally encountered approximately 23.7 to 27 feet below the building floor. The 2008 and 2014 RI borings in the southwestern corner of the Site identified apparent perched groundwater approximately 10.5 to 13 feet below the building floor. Based on USGS mapping, groundwater is expected to flow in a southwesterly direction toward the Hudson River, approximately 0.45 mile away. However, actual water table depth and groundwater flow direction can be affected by many factors including subsurface openings or obstructions such as basements, underground utilities, bedrock geology, the A/B/C/D Line subway tunnels approximately 1,000 feet to the east, and other factors beyond the scope of this assessment. Groundwater in Manhattan is not used as a source of potable water.

5.2 Soil Chemistry

Sixteen soil samples were collected for laboratory analysis. Results of the analyses were compared to NYSDEC 6 NYCRR Part 375 Remedial Program Soil Cleanup Objectives for Unrestricted Use (USCOs) and Restricted - Residential Use (RRSCOs), developed for multi-family residential uses and active recreational uses with reasonable potential for soil contact. It should be noted that the SCOs were developed assuming long-term exposure to surficial soil, a scenario which does not currently occur and would not occur with the proposed project (any residual soil would be capped with building foundations). Soil descriptions, observations, and

PID readings were recorded in the soil boring logs provided in Appendices B and C. Laboratory analytical data sheets are included in Appendix E.

VOCs

Elevated concentrations of primarily petroleum-related VOCs were detected in the deeper samples collected from 2008 boring SB-2 and 2014 boring WC-2, both advanced in the southwestern corner of the Site [2008 sample SB-2 (12-14') and 2014 sample WC-2 (12-14')]. These included: 1,2,4-trimethylbenzene (max. concentration of 87 ppm, above its USCO of 3.6 ppm and its RRSCO of 52 ppm); 1,3,5-trimethylbenzene (max. concentration of 33 ppm, above its USCO of 3.6 ppm, but below its RRSCO of 52 ppm); naphthalene (max. concentration of 44 ppm, above its USCO of 12 ppm but below its RRSCO of 100 ppm); n-propylbenzene (max. concentration of 11 ppm, above its USCO of 3.9 ppm but below its RRSCO of 100 ppm); and total xylenes (max. concentration of 41.6 ppm, above its USCO of 0.26 ppm but below its RRSCO of 100 ppm). VOC concentrations were higher in the 2008 sample, although it was not clear whether this is representative of attenuation with time or sample variability. Lower levels of petroleum-related VOCs (below both USCOs and RRSCOs) were detected in shallow samples from the 2008 sample SB-2 (0-2'), and 2014 sample WC-2 (3-5').

Acetone (a solvent and common component of fill materials, but also a common laboratory artifact) was detected in both SB-2 (12-14') and WC-2 (12-14') at concentrations of approximately 1.6 ppm and 6.1 ppm, respectively, above its USCO of 0.05 ppm but well below its RRSCO of 100 ppm. Methylene chloride (a solvent and a common laboratory artifact) was detected in WC-2 (12-14') at a concentration of approximately 2.7 ppm, above its USCO of 0.05 ppm but well below its RRSCO of 100 ppm.

No other VOCs were detected in exceedance of USCOs or RRSCOs in the soil samples. Results of the VOC analysis are presented in Table 1. Due to a scheduling issue, one 2014 soil sample, WC-2 (3-5'), was processed at the laboratory approximately 2 hours beyond the method-specified 48-hour holding time; other samples were processed within their respective holding times.

The 2008 sampling identified evidence of contamination at, but not above, the soil-water interface. The contamination was thus attributed to migration from an off-site source (several spills have been reported in the vicinity of the Site), and no spill was reported. Based on 2014

observations of contamination above the soil-water interface and laboratory analytical results, Spill No. 1407581 has been reported to NYSDEC.

SVOCs

Elevated SVOC concentrations were detected in 2008 sample SB-3 (0-2') and 2014 sample WC-2 (12-14'), including: benzo(a)anthracene (max. concentration of 26 ppm, above its USCO and RRSCO of 1 ppm); benzo(a)pyrene (max. concentration of 24 ppm, above its USCO and RRSCO of 1 ppm); benzo(b)fluoranthene (max. concentration of 31 ppm, above its USCO and RRSCO of 1 ppm); benzo(k)fluoranthene (max. concentration of 11 ppm, above its USCO of 0.8 ppm and RRSCO of 3.9 ppm); chrysene (max. concentration of 25 ppm, above its USCO of 1 ppm and RRSCO of 3.9 ppm); dibenzo(a,h)anthracene (max. concentration of 3.3 ppm, above its USCO and RRSCO of 3.3 ppm); dibenzofuran (max. concentration of 7.9 ppm, above its USCO of 7 ppm, but below its RRSCO of 59 ppm); and indeno (1,2,3-cd)pyrene (max. concentration of 16 ppm, above its USCO and RRSCO of 0.5 ppm). Concentrations of SVOCs in these two samples were generally similar. No other SVOCs were detected exceeding USCOs or RRSCOs in the soil samples analyzed. Results of the SVOC analysis are presented in Table 2. The SVOCs detected at elevated concentrations may be attributable to some combination of the petroleum spill in the southwestern corner of the Site and urban fill materials beneath the Site.

Metals

Nine metals (barium, chromium, copper, lead, manganese, mercury, nickel, silver, and zinc) exceeded their respective USCOs in one to six samples each. Barium (max. concentration of 1,800 ppm) also exceeded its RRSCO of 400 ppm in one sample. Lead (max. concentration of 1,400 ppm) exceeded its RRSCO of 400 ppm in two samples. Manganese (max. concentration of 34,000 ppm) exceeded its RRSCO of 2,000 ppm in one sample. Mercury (max. concentration of 0.97 ppm) exceeded its RRSCO of 0.81 ppm in one sample.

Based on their nature and distribution, the detected concentrations of metals in the samples are primarily either naturally occurring or attributable to urban fill. However, significantly higher concentrations of several metals including barium, manganese, silver, chromium, cobalt, nickel, and thallium were detected in 2014 sample WC-3 (26-28') compared to the other soil samples, suggesting a potential release at this location (e.g., from a leaking drain historically used for chemical disposal). Analytical results for metals are presented in Table 3.

Pesticides and PCBs

No pesticides or PCB were detected in the soil samples analyzed. Analytical results for PCBs and pesticides in soil are presented in Table 4.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 1-4. Figure 3 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 USCOs.

5.3 Groundwater Chemistry

Four groundwater samples were collected for laboratory analysis in 2014. Groundwater sample analytical results were compared to NYSDEC Class GA Ambient Water Quality Standards (drinking water standards) for comparison purposes, although groundwater is not used as a source of potable water in Manhattan.

VOCs

Elevated concentrations of petroleum-related VOCs were identified in sample GW-2 from the southwestern corner of the Site, with 1,2,4,5-tetramethylbenzene (340 ppb), 1,2,4-trimethylbenzene (1,600 ppb), 1,3,5-trimethylbenzene (410 ppb), ethylbenzene (300 ppb), isopropylbenzene (120 ppb), n-butylbenzene (73 ppb), n-propylbenzene (160 ppb), p/m-xylene (800 ppb), o-xylene (59 ppb), and p-isopropyltoluene (88 ppb) exceeding their Class GA standards of 5 ppb. Naphthalene was detected at 860 ppb, exceeding its Class GA standard of 10 ppb. These VOCs were not detected in the other groundwater samples analyzed.

VOCs associated with chlorinated solvents were detected in samples GW-1, GW-3, and GW-4. The detected chlorinated VOCs included: 1,2-dichloroethene (max. concentration of 20 ppb, no Class GA standard assigned); cis-1,2-dichloroethene (max. concentration of 20 ppb, exceeding the Class GA standard of 5 ppb in one sample); and tetrachloroethene (max. concentration of 11 ppb, exceeding the Class GA standard of 5 ppb in one sample). The highest concentrations were detected in sample GW-4 in the northeastern corner of the Site. These VOCs were not detected in sample GW-2, but may have been present (potentially above Class GA standards) in this sample, which required a dilution by a factor of 25 due to high target VOC levels.

The detected concentrations of petroleum-related VOCs are likely attributable to a release in the southwestern corner of the Site. The detected chlorinated VOCs were not identified in the soil

samples, and are likely attributable to an off-site source. As previously noted, a spill was reported to NYSDEC based on the field observations and analytical results. Analytical results for VOCs are summarized in Table 5.

SVOCs

SVOCs were detected in all four groundwater samples, with seven SVOCs exceeding Class GA standards in samples GW-1, GW-2 and/or GW-3. These included: benzo(a)anthracene [max. concentration of 0.24 parts per billion (ppb), above its Class GA standard of 0.002 ppb]; benzo(a)pyrene (max. concentration of 0.27 ppb, above its Class GA standard of “non-detectable”); benzo(b)fluoranthene (max. concentration of 0.23 ppb, above its Class GA standard of 0.002 ppb); benzo(k)fluoranthene (max. concentration of 0.1 ppb, above its Class GA standard of 0.002 ppb); chrysene (max. concentration of 0.23 ppb, above its Class GA standard of 0.002 ppb); indeno(1,2,3-cd)pyrene (max. concentration of approximately 0.09 ppb, above its Class GA standard of 0.002 ppb); and naphthalene (max. concentration of 300 ppb, above its Class GA standard of 10 ppb). With the exception of naphthalene, which is more commonly associated with fuel oil and was detected above its Class GA standard only in sample GW-2 from the southwestern corner of the Site, these SVOCs are common components of urban fill.

The detected SVOC concentrations were likely attributable to some combination of petroleum contamination in the southwestern corner of the Site and fill particles entrained in the samples. Analytical results for SVOCs are presented in Table 6.

Metals

Twenty-three metals were detected in the unfiltered groundwater samples (total metals analysis), 20 of which were also detected in the filtered samples (dissolved metals analysis). Thirteen metals were detected by total metal analysis at concentrations above Class GA standards: arsenic, barium, beryllium, cadmium, chromium, copper, iron, lead, magnesium, manganese, nickel, selenium, and sodium. Concentrations in the dissolved metal samples were lower, with only four metals (antimony, iron, manganese, and sodium) exceeding Class GA standards.

The detected metals, including those at concentrations above the Class GA standards, are typical of regional groundwater quality in Manhattan and are not indicative of an on-site release or spill. The detected metal concentrations were likely attributable to fill particles entrained in the samples and/or natural sources. Analytical results for metals are presented in Table 7.

PCBs and Pesticides

No PCBs or pesticides were detected in the groundwater samples. Analytical results for PCBs and pesticides are presented in Table 8.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 5 through 8. Exceedences of applicable groundwater standards are shown. Figure 4 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

In the absence of soil vapor standards or guidelines, concentrations of VOCs detected in the soil gas samples were conservatively compared to indoor air criteria published in the 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, specifically to NYSDOH Indoor Air Guideline Values (AGVs) and to background levels of VOCs in indoor air presented in Appendix C of the Vapor Intrusion Guidance document, including: USEPA Building Assessment and Survey Evaluation (BASE) 90th percentile indoor air values; Upper Fence Limit indoor air values from “Table C-1, NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes;” and 95th Percentile Indoor Air Values from “Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air.”

Laboratory analysis identified VOCs potentially associated with petroleum and solvents, in many cases at concentrations above the background indoor air values. VOCs typically associated with petroleum (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, 4-ethyltoluene, benzene, ethylbenzene, heptane, n-hexane, xylenes, and toluene), where detected, were present at concentrations ranging from 3.76 to 3,640 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). VOCs typically associated with solvents (1,3-butadiene, 2-butanone, carbon disulfide, chloroform, cis-1,2-dichloroethene, cyclohexane, ethyl alcohol, isopropyl alcohol, styrene, tertiary butyl alcohol, tetrachloroethene, tetrahydrofuran, trichloroethene, and vinyl chloride), where detected, were present at concentrations ranging from 1.37 to 967 $\mu\text{g}/\text{m}^3$. Chloromethane (R-40), dichlorodifluoromethane and trichlorofluoromethane, commonly associated with refrigerants, were detected in one to three samples each at concentrations ranging from 1.06 to 4.52 $\mu\text{g}/\text{m}^3$. Acetone, which may be associated with solvents or fill materials and is also a

common laboratory contaminant, was detected in four samples at concentrations ranging from 14.9 to 143 $\mu\text{g}/\text{m}^3$. Methylene chloride (a solvent and common laboratory contaminant) was detected in one sample at 3.26 $\mu\text{g}/\text{m}^3$. No VOCs were detected in exceedance of NYSDOH AGVs. The detected VOCs were likely attributable to some combination of petroleum contamination in the southwestern corner of the Site, fill materials, and/or off-site sources.

The Vapor Intrusion Guidance Document provides “decision matrices” for four VOCs: carbon tetrachloride, tetrachloroethene, 1,1,1-trichloroethane and trichloroethene. Carbon tetrachloride and 1,1,1-trichloroethane were not detected in the soil vapor samples. Tetrachloroethene was detected in two samples, with concentrations of 1.76 and 16.3 $\mu\text{g}/\text{m}^3$. Trichloroethene was detected in one sample at a concentration of 3.47 $\mu\text{g}/\text{m}^3$. Depending on the corresponding indoor air concentrations, the decision matrices recommend “no further action” or “reasonable and practical actions to identify source(s) and reduce exposures.”

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary of data for chemical analyses performed on soil vapor samples is included in Table 9. Figure 5 shows the sample locations and posts the values for soil vapor samples with detected concentrations exceeding indoor air background values used for comparison and/or the NYSDOH AGVs.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this Site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this Site.

6.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) conducted a Remedial Investigation (RI) at the 487 West 129th Street site in Manhattan (the “Site”) to determine whether current or former on- or off-site activities have adversely affected the Site. The investigation included the advancement of 9 borings in 2008 and 2014 with the collection of 16 soil samples and 4 groundwater samples for laboratory analysis, and collection of 5 soil vapor samples for laboratory analysis.

The RI and a prior geotechnical investigation encountered approximately 5 to 12 feet of fill (sand, gravel, silt, brick, concrete, ash and glass) above a layer of apparent native soil (sand, gravel, and silt). A 2012 geotechnical study identified apparent concrete layers approximately 5 to 10 feet below the building floor, possibly associated with historical rail car repair pits. Weathered bedrock was encountered approximately 35 to 61 feet below the building floor, and competent bedrock was encountered approximately 36 to 66 feet below the building floor, sloping down toward the south. Groundwater was generally encountered approximately 23.7 to 27 feet below the building floor. The 2008 and 2014 RI borings in the southwestern corner of the Site identified apparent perched groundwater approximately 10.5 to 13 feet below the building floor.

Evidence of petroleum contamination (odors, staining, and elevated PID readings) was noted in the 10- to 15-foot interval of 2008 boring SB-2 (maximum PID reading of 936 ppm) and the 3- to 15-foot interval of 2014 boring SB-2 (maximum PID reading of 317 ppm), both of which were advanced in the southwestern corner of the Site. A slight petroleum-like odor and PID readings up to 157 ppm were noted in the 5- to 10-foot interval of 2008 boring SB-1. Slightly elevated PID readings (in the 20 ppm range), but no other evidence of contamination, were noted in the 25- to 30-foot interval of borings SB-3 and SB-4 (i.e., within the water table). No evidence of contamination was noted in the other borings.

The soil and groundwater samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) Metals (both total and dissolved for groundwater), pesticides by EPA Method 8081, and polychlorinated biphenyls (PCBs) by EPA Method 8082. The soil gas samples were analyzed for VOCs by EPA Method TO-15.

Soil sample analytical results were compared to 6 NYCRR Part 375 Soil Cleanup Objectives for Unrestricted Use (USCOs) and Part 375 Soil Cleanup Objectives for Restricted – Residential

Use (RRSCOs). The USCOs assume long-term exposure to soils by both human and ecological receptors, which does not currently occur and would not occur with the proposed project. The RRSCOs were developed for multifamily residences with some potential for soil contact; again, an overly-conservative scenario for the proposed project contemplated.

Groundwater sample analytical results were compared to NYSDEC Class GA Ambient Water Quality Standards (drinking water standards) for comparison purposes, although groundwater is not used as a source of potable water in Manhattan.

The results of the soil vapor samples were (conservatively) compared to indoor air criteria in the 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, specifically NYSDOH Air Guideline Values (AGVs) and to background levels of VOCs from studies of indoor air presented in Appendix C of the Guidance document.

A summary of the analytical results is as follows:

- Elevated concentrations of primarily petroleum-related VOCs were detected in soil samples collected from the 12- to 14-foot interval of 2008 boring SB-2 and 2014 boring SB-2, both advanced in the southwestern corner of the Site, with several VOCs exceeding their USCOs and/or RRSCOs. VOC concentrations were higher in the 2008 sample, although it was not clear whether this is representative of attenuation with time or sample variability. Lower levels of petroleum-related VOCs (below both USCOs and RRSCOs) were detected in shallow soil from these borings. Additional VOCs detected in Site soil included: acetone (a solvent and common component of fill materials, but also a common laboratory artifact), detected in two soil samples above its USCO, but well below its RRSCO; and methylene chloride (a solvent and a common laboratory artifact), detected in one soil sample above its USCO, but well below its RRSCO.
- Elevated SVOC concentrations were detected in soil samples from the 12- to 14-foot interval of 2008 boring SB-2 and 2014 boring SB-2, with several SVOCs exceeding USCOs and/or RRSCOs. Concentrations of SVOCs in these two samples were generally similar. No other SVOCs were detected exceeding USCOs or RRSCOs in the soil samples analyzed.
- Nine metals (barium, chromium, copper, lead, manganese, mercury, nickel, silver, and zinc) exceeded their respective USCOs in one to six samples each. Barium, lead, manganese, and mercury also exceeded RRSCOs in one to two samples each.

- Elevated concentrations of petroleum-related VOCs were identified in the 2014 groundwater sample GW-2 from the southwestern corner of the Site, with several of these VOCs exceeding Class GA standards. These VOCs were not detected in the other groundwater samples analyzed.
- VOCs associated with chlorinated solvents were detected in the remaining three groundwater samples, and may also be present in GW-2, which had elevated detection limits due to a dilution required by concentrations of petroleum-related VOCs. The detected chlorinated VOCs included: 1,2-dichloroethene, cis-1,2-dichloroethene, and tetrachloroethene; the latter two exceeded Class GA standards. The highest concentrations were detected in sample GW-4 in the northeastern corner of the Site.
- SVOCs were detected in all four groundwater samples, with certain SVOCs exceeding Class GA standards in three samples. With the exception of naphthalene, which is more commonly associated with fuel oil and was detected above its Class GA standard only in sample GW-2, the detected SVOCs were common components of urban fill.
- No pesticides or PCB were detected in the soil or groundwater samples analyzed.
- Metals were detected in the unfiltered and filtered groundwater samples. Concentrations were generally higher in the unfiltered samples, with 13 metals exceeding Class GA standards in these samples, and only 4 metals exceeding Class GA standards in the filtered samples.

A variety of VOCs were detected in the soil vapor samples. VOCs typically associated with petroleum (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, 4-ethyltoluene, benzene, ethylbenzene, heptane, n-hexane, xylenes, and toluene), where detected, were present at concentrations ranging from 3.76 to 3,640 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). VOCs typically associated with solvents (1,3-butadiene, 2-butanone, carbon disulfide, chloroform, cis-1,2-dichloroethene, cyclohexane, ethyl alcohol, isopropyl alcohol, styrene, tertiary butyl alcohol, tetrachloroethene, tetrahydrofuran, trichloroethene, and vinyl chloride), where detected, were present at concentrations ranging from 1.37 to 967 $\mu\text{g}/\text{m}^3$. Chloromethane (R-40), dichlorodifluoromethane and trichlorofluoromethane, commonly associated with refrigerants, were detected in one to three samples each at concentrations ranging from 1.06 to 4.52 $\mu\text{g}/\text{m}^3$. Acetone was detected in four samples at concentrations ranging from 14.9 to 143 $\mu\text{g}/\text{m}^3$. Methylene chloride was detected in one sample at 3.26

$\mu\text{g}/\text{m}^3$. No VOCs were detected in exceedance of NYSDOH AGVs. The detected concentrations of petroleum-related VOCs and SVOCs in soil and groundwater may be attributable to some combination of petroleum contamination in the southwestern corner of the Site and urban fill materials beneath the Site. The 2008 sampling identified evidence of contamination at, but not above, the soil-water interface. The contamination was thus attributed to migration from an off-site source (several spills have been reported in the vicinity of the Site), and no spill was reported. Based on 2014 observations of contamination above the soil-water interface and laboratory analytical results, Spill No. 1407581 has been reported to NYSDEC.

The chlorinated VOCs detected in groundwater and soil vapor were not identified in the soil samples, and were likely attributable to an off-site source.

The VOCs detected in soil vapor were likely attributable to some combination of petroleum contamination in the southwestern corner of the Site, fill materials, and/or off-site sources.

Based on their nature and distribution, the detected concentrations of metals in soil samples appeared to be primarily naturally occurring or attributable to urban fill. However, significantly higher concentrations of several metals including barium, manganese, silver, chromium, cobalt, nickel, and thallium were detected in 2014 sample WC-3 (26-28') compared to the other soil samples, suggesting a potential release at this location (e.g., from a leaking drain historically used for chemical disposal). Metal concentrations detected in the groundwater samples are typical of regional groundwater quality in Manhattan, and are likely attributable to fill particles entrained in the samples and/or natural sources, rather than a release.

6.1 Recommendations

The proposed project would entail excavation for new building construction. Based on the findings of the Phase II investigation, recommendations are:

- The Phase II identified a petroleum release in the southwestern corner of the Site, urban fill materials containing elevated concentrations of metals, and somewhat elevated concentrations of VOCs in soil gas. To address the potential for encountering known or unexpected contamination during Site redevelopment, and to reduce the potential for vapor intrusion following the redevelopment, a Remedial Action Plan (RAP) and associated Construction Health and Safety Plan (CHASP) should be prepared for implementation during proposed construction and submitted to the OER for review and approval. The RAP should

address requirements for items such as: soil stockpiling, soil disposal and transportation; dust control; contingency measures should petroleum storage tanks be unexpectedly encountered; and vapor control measures such as a vapor barrier beneath new foundation slabs. The CHASP should include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures.

- Soil and fill materials excavated as part of the proposed project should be properly handled and managed in accordance with applicable regulations. As noted in Section 8.0, soil intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the Site for off-site disposal must be in accordance with federal, state and local regulatory requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- On-site Spill No. 1407581 should be remediated to the satisfaction of NYSDEC. If any USTs are encountered during excavation, they should be properly closed and removed, along with any contaminated soil. The closure should be performed in accordance with the applicable regulations, including NYSDEC tank registration regulations.
- If dewatering is necessary for the proposed project, it should be conducted in accordance with a New York City Department of Environmental Protection (NYCDEP) sewer discharge permit. Groundwater testing, and possibly pre-treatment (dependent upon the testing results), may be necessary to comply with NYCDEP requirements for obtaining a sewer discharge permit.

7.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report may contain conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the enclosed recommendations to be reevaluated or modified.

Chemical analyses may have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the Site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the Site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This report is

subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for the use solely by Inner City Contracting LLC. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

8.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Conclusions, Recommendations, and Limitations Sections (Sections 6.0 and 7.0), the issue of appropriate management of off-site disposal of soil warrants careful consideration. Any material being disposed of off-site is a regulated waste, and disposal must be in accordance with:

- Requirements of the specific receiving facility;
- Requirements of any agencies overseeing the cleanup/excavation; and
- Federal and state requirements (sometimes in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other ‘clearly contaminated’ materials), the requirements are usually fairly well defined. It is in the situation where contamination is not readily apparent (e.g., so called “historic or urban fill” or “construction and demolition debris” or material that may have been formerly identified as “clean fill”) that presents the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most of the excavated material is considered “contaminated” for purposes of waste disposal. Concentrations of the various contaminants in historic fill can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than outlined in this investigation. Portions of this material could be classified as hazardous waste.

It is important that the intended disposal facility (or facilities) be identified in advance of off-site disposal. Agency approval is sometimes required for disposal, and the facility will frequently require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and sometimes numerous other parameters (related to size, percentage of liquids, presence of odors, etc.) for acceptance at the facility. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these reasons, we recommend that professional advice be sought prior to preparing bid documents and contracts incorporating soil disposal.

Re: Phase I Environmental Site Assessment
495 West 129th Street, Manhattan, NY
AKRF Project No. 10825

Dear Mr. Faust:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced site. This report includes the findings of a site inspection, an evaluation of available historical information, the interpretation of selected federal and state environmental databases, and a review of selected New York City Buildings Department records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05 unless noted otherwise in Sections 9.0, 10.0, and 11.0.

We appreciate the opportunity to provide you with our services. If you have any questions or comments regarding the enclosed report, please do not hesitate to contact us.

Sincerely,

AKRF, Inc.

Axel Schwendt P.G.
Geologist

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Inner City Contracting, LLC to perform an Environmental Site Assessment of 495 West 129th Street in Manhattan, New York. At the time of AKRF's site visit, the study site comprised the eastern portion of a warehouse building formerly used by the Metropolitan Opera House to store stage sets. The study site portion of this warehouse building was vacant and the western portion of the warehouse building was owned by the Metropolitan Opera House and is currently used to store stage sets. The study site was bound to the north by West 130th Street, to the south by West 129th Street, to the east by warehouses and a construction site, and to the west by the aforementioned western portion of the subject warehouse building used by the Metropolitan Opera House. The surrounding areas were primarily commercial and residential properties with some light industrial facilities.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage or usage of neighboring properties. This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice. Any exceptions to, or deletions from, this practice are described in Sections 9.0, 10.0 and 11.0 of this report. This assessment revealed evidence of the following recognized environmental conditions in connection with the site:

- Two small manways and several floor drains were noted on the floor of the study site. No connecting pipes could be seen. The floor drains may be connected to the municipal sewer system; however, they may be drywells. Small, empty containers of oil lube were noted inside the building and some oil staining was noted on the concrete floor of the building; however, no significant staining was noted near the floor drain structures. Historic releases into the drainage structures may have affected the study site.
- Sanborn maps indicated that the study site has been identified as the Metropolitan Street Railway Company Third Avenue Division Power Station and the Third Avenue Railway Company Car House and Repair Shop. Past on-site activities associated with these uses may have affected the study site.
- The project site is likely underlain by historic urban fill material, which is a recognized environmental concern.
- According to historic Sanborn maps and on-line information from the Department of Buildings, the building on the subject property was constructed in 1900, at which time many ACMs were utilized. Suspect ACMs observed during the site visit included roofing materials. Additional suspect ACMs may be present in hidden locations.
- Based on the age of the study site building, lead-based paint may be present. Painted surfaces of the study site were observed to be in poor condition.
- The on-site building was illuminated by fluorescent lighting. Based on the age of the study site building, suspect PCB- and mercury-containing fluorescent lights, switches, and other electrical equipment, may be present. No leaks or stains were noted around lighting fixtures and switches, which do not currently present a potential hazard to human health.
- The 1949 Certificate of Occupancy for the subject property indicated that the 495 West 129th Street building was a warehouse that had a boiler room in the cellar. AKRF did not observe a cellar at the subject property portion of the warehouse building; however, a cellar may have been present in the western portion of the warehouse building currently occupied by the Metropolitan Opera House. The

site is currently connected to natural gas service. A petroleum storage tank may have been associated with this boiler in the past. However, this Phase I ESA did not identify any petroleum storage tanks or spills reported for the study site building and no evidence of a petroleum storage tank (i.e., fill ports, vent pipes, etc.) was noted. Nonetheless, potential unreported releases from the suspected petroleum use at the boiler room in the west-adjacent portion of the building may have affected subsurface conditions at the study site.

- One 825-gallon underground gasoline tank and two 550-gallon underground gasoline tanks, noted on the 1912 through 2006 Sanborn maps, were located at the east-adjacent sites. Potential releases from these tanks may have affected the study site. No tanks were registered for the study site and no spills were reported for the study site or adjacent sites.
- Historical land use maps and the regulatory database search indicated that the study site and surrounding neighborhood has a history of manufacturing and industrial use. Reported and unreported releases from surrounding properties may have affected local groundwater quality.

Based on the results of this assessment, the following recommendations are noted:

- Based on the current use of the study site, no recommendations for further study or remediation are warranted for the study site at this time. Nonetheless, should development of the subject site be conducted in the future that involves subsurface disturbance of on-site soil, a subsurface (Phase II) investigation should be conducted prior to such activities to insure that construction activities are conducted in accordance with all applicable regulations and that the excavated materials are disposed of in accordance with all applicable regulations. The investigation should also be conducted to insure that proper measures are taken to prevent the community and construction workers from being affected by potential subsurface contaminants exposed during construction activities.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACMs, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all state and federal regulations.
- Renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 – Lead Exposure in Construction). Areas containing suspected lead-based paint should be maintained in good condition.
- Unless there is labeling or test data which indicates that the on-site fluorescent light fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Inner City Contracting, LLC to perform a Phase I Environmental Site Assessment of a site located at 495 West 129th Street in Manhattan, New York. At the time of AKRF's site visit, the subject property comprised the eastern portion of a warehouse building formerly used by the Metropolitan Opera House to store stage sets. The study site portion of this warehouse building was vacant and the western portion of the warehouse building was owned by the Metropolitan Opera House and used to store stage sets. The subject site was bound to the north by West 130th Street, to the south by West 129th Street, to the east by warehouses and a construction site, and to the west by the aforementioned western portion of the subject warehouse building used by the Metropolitan Opera House. The surrounding areas were primarily commercial and residential properties with some light industrial facilities.

The scope of services for this assessment included the following:

- Visual observations of the study site and surrounding property were made to identify potential sources or indications of chemical contamination. The potential sources of contamination included, but were not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), objects that could contain polychlorinated biphenyls (PCBs), and areas where hazardous materials were used, stored, treated, generated and/or disposed. Indications of chemical contamination include stained surfaces and chemical odors. In addition, readily-observable portions of the properties immediately adjacent to the study site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.
- Published geological and groundwater information was obtained from available sources to determine the possibility of contamination from off-site sources.
- A review of radon concentrations in New York County was conducted to determine whether radon levels in the general area comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use atlases for the site and adjacent properties were reviewed to evaluate previous land use.
- The following federal regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and the Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program facilities; Voluntary Cleanup Program facilities; and Brownfield Cleanup Program (BCP) facilities.

- A review of available New York City Fire Department records and New York City Buildings Department records was conducted to obtain any information pertinent to the assessment of the environmental condition of the subject property. Specifically, records regarding past and present on-site fuel oil tanks and historical uses were requested and reviewed.

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the site and adjacent areas was performed on November 5, 2007 by Axel Schwendt and Jacob Shirmer of AKRF. Mr. John Schroeder of Inner City Contracting, LLC accompanied AKRF personnel through the site and answered pertinent questions. At the time of the inspection, the weather was sunny and approximately 60 °F and the visibility good. Some areas were illuminated by natural and/or artificial light; non-illuminated areas were accessed by flashlight. The site was inspected for the presence of stained surfaces and soil, stressed vegetation, storage tanks, drums, leaking pipes, transformers, and any other evidence of hazardous material usage and storage on-site. A site plan is provided as Figure 2. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The study site was located at 495 West 129th Street and comprised the eastern portion of a single-story warehouse structure, which was vacant at the time of AKRF's site visit. The western portion of the warehouse was owned and operated by the Metropolitan Opera House. According to Mr. Schroeder, the subject site was formerly part of the west-adjacent Metropolitan Opera House and was used to store stage sets. A demising wall was constructed to separate the two portions of the building in early 2006. The study site portion of the warehouse comprised an approximately 19,500-square foot area with a high ceiling and a mezzanine level along the entire eastern length of the building. No landscaped areas were present and there was no basement or cellar in the building. The building was constructed of brick and steel with a concrete floor. A concrete block wall on the western side of the site separated the project area from the western side of the warehouse. According to Mr. Schroeder, the west-adjacent portion of the building was owned and operated by the Metropolitan Opera House to store stage sets.

A closet, bathroom, locker room, and utility room were located in the southeastern corner of the subject site. One heating, ventilation, and air conditioning (HVAC) unit was noted in the utility room. A stairwell adjacent to the utility room led to a second story office and the open mezzanine level that ran along the eastern edge of the building. Painted surfaces in these areas were noted to be in poor condition and crumbling. A small manway was located towards the northern end of the building, which was unable to be opened. Floor drains were noted throughout the building. No connecting pipes could be seen inside the drains. The drains may be connected to the municipal sewer system; however, they may be connected to drywells. Minor oil staining was noted throughout the concrete floor of the building; however, no significant staining was noted near the floor drain structures.

Mr. Schroeder indicated that the study site was heated solely by a single HVAC unit located in the utility room. Minor amounts of refuse were present throughout the building, including a few small, empty containers of oils and solvents. No leaks or spills were noted around these containers.

2.2 Topography and Hydrogeology

The surface topography slopes down to the southwest. Based on reports compiled by the U.S. Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately

50 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level).

U.S. Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 50 feet below ground surface. Based on local topography, groundwater most likely flows in a southwesterly direction toward the Hudson River, located approximately ½-mile from study site. However, actual groundwater depth and flow direction at the site can be affected by many factors including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, subway tunnels, underground parking garages, and other factors beyond the scope of this study.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

No evidence was observed during the site visit that would indicate past or present underground storage tanks (USTs) being located at the study site. A review of the State regulatory records did not cite any USTs for the study site. Computerized New York City Fire Department records did not list any past or present, motor vehicle fuel or underground heating oil tanks for the study site. A review of Manhattan Buildings Department Block and Lot files did not note any documents relating to USTs on the study site.

Off-site underground storage tanks are discussed in Section 6.0.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as concrete foundations, containment walls, pedestals, or steel support structures, was observed during the site visit to indicate that aboveground storage tanks (ASTs) were located on-site either at the time of the inspection or in the past. A review of the State regulatory records did not cite any aboveground storage tanks (ASTs) for the study site; computerized New York City Fire Department records did not list any past or present motor vehicle fuel or heating oil tanks for the subject property; and a review of Manhattan Buildings Department Block and Lot files did not note any documents relating to ASTs on the study site.

Off-site aboveground storage tanks are discussed in Section 6.0.

2.4 Polychlorinated Biphenyls (PCBs)

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used for their cooling properties in electrical equipment such as transformers, capacitors, switches and voltage regulators. Based on the age of the building, fluorescent lights and equipment in electrical panels observed at the subject site may include PCB-containing components. No leaks or stains were noted around lighting fixtures and electrical panels, and they do not currently present a potential hazard to human health.

Unless there is labeling or test data which indicates on-site electrical equipment does not contain PCBs, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

2.5 Lead-Based Paint

The use of lead-based paint in New York City residential buildings was banned in 1960. Nationally, its residential use was banned by the Consumer Products Safety Commission in 1977.

The use of lead-based paint in commercial structures was severely restricted by the Consumer Products Safety Commission in 1977. Lead-based paint is potentially hazardous when in a deteriorating condition (i.e. chipped, broken, crumbling, pulverized); lead is potentially harmful to humans, particularly children, if ingested, inhaled or otherwise absorbed.

According to tax information provided by Toxics targeting, Inc., the building on the subject property was constructed in 1900, therefore, lead-based paint may be present. Painted surfaces were observed to be in poor and crumbling condition. Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison (Con Ed) provided electricity to the study site and surrounding area. The study site was connected to New York City municipal water and sewer systems. Mr. John Schroeder indicated that the subject building was heated solely by one HVAC system located in the utility room.

A small manway was located in the floor of the warehouse, which was unable to be accessed. Floor drains were noted inside the subject building. No connecting pipes could be seen. The drains may be connected to the municipal sewer system; however, they may be drywells. No significant staining was noted near the floor drains.

2.7 Waste Management and Chemical Handling

The subject property was vacant at the time of the site visit, therefore, no wastes or chemicals were observed being used at the site. Small amounts of general refuse were observed around the subject property. A few small empty containers of oils and solvents were observed at the site, suggesting that minor mechanical maintenance activities had occurred, however, no spills or leaks were observed around these containers. No other wastes were observed being generated at the study site.

2.8 Radon

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products which include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.

According to data compiled by the Bureau of Radiation Protection, a division of the New York State Department of Health, the average basement radon concentration in Manhattan is 2.0 picocuries/liter. The US EPA recommended action level is 4.0 picocuries/liter. It is unlikely for radon to pose a significant environmental concern to the site.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos, a known human carcinogen, is a generic name assigned to a group of naturally occurring minerals exhibiting high tensile strength and possessing excellent fire resistance and insulating properties.

These minerals include chrysotile, amosite, crocidolite, actinolite, tremolite and anthophyllite. Asbestos is commonly found as a component of building materials including: Thermal System Insulation (TSI), spray-applied fireproofing, spray- or trowel-applied surfacing materials, vinyl asbestos floor tiles and sheeting, plaster, sheetrock, ceiling tiles, fire door fill, roofing materials, thermal gaskets, mastics, and a range of other products.

Building materials containing greater than one percent asbestos are considered to be asbestos-containing materials (ACMs). ACMs are classified as friable or non-friable. Friable ACMs are those which can be crumbled, pulverized, or reduced to powder when dry by hand or other mechanical pressure. Friable ACMs, such as thermal system insulation and spray-applied fireproofing, are generally associated with a higher risk of releasing potentially hazardous fibers than non-friable ACMs, such as vinyl floor tiles and built-up roofing materials.

According to historic Sanborn maps reviewed as part of this Phase I ESA, buildings on the subject property were constructed in 1900, at which time many ACMs were utilized. Suspect ACMs observed during the site visit included roofing materials. Additional suspect ACMs may be present in hidden locations. No testing for asbestos was conducted as part of this assessment.

Sampling and analysis of all suspect ACMs should be performed prior to any disturbance. Identified ACMs should be removed by a licensed asbestos abatement contractor prior to building demolition or renovation.

4.0 ADJACENT LAND USE

The study site was bound to the north by West 130th Street, to the south by West 129th Street, to the east by warehouses and a construction site, and to the west by the western portion of the subject warehouse building used by the Metropolitan Opera House. The study site was surrounded by residential and commercial properties.

5.0 USER PROVIDED INFORMATION

5.1 Title Records

No information supplied by user.

5.2 Environmental Liens or Activity and use limitations

No information supplied by user.

5.3 Specialized knowledge

No information supplied by user.

5.4 Commonly known or recently ascertainable information

No information supplied by user.

5.5 Valuation Reduction for Environmental Issues

No information was obtained regarding any valuation reduction due to environmental issues.

5.6 Owner, property manager, and occupant information

The client is the owner and property manager of the subject site.

5.7 Reason for performing Phase I

The property is being evaluated for rezoning.

6.0 SITE HISTORY AND RECORDS REVIEW

6.1 Prior Ownership and Usage

6.1.1 Historical Land Use Maps

Historical insurance maps were reviewed for indications of industrial usage or other evidence suggesting the use or disposal of hazardous materials on or adjacent to the subject property. Specifically, Sanborn Fire Insurance Maps from 1893, 1902, 1909, 1912, 1951, 1969, 1976, 1989, and 2006 were reviewed.

1893

Sanborn coverage was not available for the study site in 1893; however, the north and northeast of the study site were shown on this map. The Convent of the Sacred Heart comprised a large campus located approximately 200 feet north-northeast of the study site. A coal storage facility was located at the northern end of the Convent. A contractor's yard and hospital was located approximately 300 feet north of the study site on the corner of West 131st Street and Amsterdam Avenue. A coal yard was located approximately 400 feet northwest of the study site on West 130th Street. A factory labeled "Smith and Kaufman Silk Ribbon" was located approximately 600 feet north-northwest of the study site on West 132nd Street. The remainder of the surrounding area was developed primarily with two to five-story dwellings and commercial buildings.

1902

The study site was identified as a one-story building labeled the Metropolitan Street Railway Company, Third Avenue Division, Power Station. Two to five-story dwellings and commercial buildings were located west-adjacent to the study site building, and vacant lots and a single-story dwelling were east-adjacent to the study site building. The Metropolitan Street Railway Company Car House and a wagon yard were located southwest of the study site across West 129th Street. The Manhattan Brewery, an iron works shop and a blacksmith were located approximately 500 feet south of the study site.

The remainder of the surrounding area was developed primarily with two to five-story dwellings and commercial buildings. No other significant changes were noted.

1909

Sanborn coverage was not available for the study site in 1909; however, properties north and northwest of the study site were included on the map. A Chinese Laundry was located approximately 700 feet northwest of the study site at the corner of West 131st Street and Old Broadway. A coal yard was present approximately 800 feet northeast of the study site. The remainder of the surrounding area was primarily residential and commercial in nature.

1912

The study site comprised a one-story building labeled the Third Avenue Railway Company Car House and Repair Shop. Two to five-story dwellings and commercial

buildings were located west-adjacent to the study site. A garage and repair shop was located at the east-adjacent property that contained two 550-gallon underground gasoline tanks and one 825-gallon underground gasoline tank.

The Metropolitan Street Railway Company Car House located south across West 129th Street on the 1909 map, was labeled the Third Avenue Railway Company Car House. The Bernaeimer and Schwartz Pilsner Brewing Company, which included an ice house and ice plant, were located approximately 200 feet southeast of the study site across West 129th Street. A Chinese laundry was located approximately 500 feet west of the subject property on Old Broadway. A garage with one 250-gallon gasoline tank was located approximately 700 feet west of the subject property, between West 129th and West 130th Streets.

The remainder of the surrounding area was developed primarily with two to six-story dwellings and commercial buildings, with some manufacturing and light industrial facilities throughout. No other significant changes were noted on the subject site or surrounding properties.

1951

The study site building was labeled the Metropolitan Opera Association Warehouse. One 825-gallon underground gasoline tank and one 550-gallon underground gasoline tank were shown at the east-adjacent garage property; one of the 550-gallon gasoline tanks noted on the 1912 map was no longer shown. A Chinese Laundry was located approximately 150 feet east of the study site, north of the garage near the intersection of West 129th Street and Convent Avenue.

The property located south of the study site across West 129th Street, previously labeled the Third Avenue Railway Company Car House, was labeled the Third Avenue Transit System Bus Garage. A repair shop was located in the southeastern corner of this site. Another garage was located approximately 200 feet southeast of the study site across West 129th Street and contained four 550-gallon buried gasoline tanks.

Two garage and repairs shops with gasoline tanks were located approximately 500 to 700 feet north-northwest of the study site. Three gasoline stations with a several gasoline tanks were noted on properties located approximately 800 to 1,000 feet west of the study site. A building labeled the Uncle Sam Chemical Manufacturing Company, located approximately 1,000 feet north-northwest of the subject property near the intersection of West 131st Street and Old Broadway, had two 550-gallon tanks on-site.

The remainder of the surrounding area was developed with two- to six-story dwellings, commercial buildings, and various manufacturing and light industrial facilities including, garages, automotive-related facilities, hospitals, and warehouses. No other significant changes were noted on the subject or surrounding properties.

1969

Sanborn coverage was not available for the subject property in 1969; however properties to the north of the study site were shown on the map. The The College of the City of New York, formerly the Convent of the Sacred Heart, was located approximately 200 feet north-northeast of the study site. A coal storage facility was located at the northern end of the college. A paint shop was located approximately two blocks north of the study site on Amsterdam Avenue between West 131st and West 133rd Streets. A laundry

facility and a boiler room were mapped at the New York City Housing Authority Manhattanville Houses, located approximately 500 to 800 feet northwest of the study site.

The remainders of the areas denoted on the available maps were developed primarily with two- to six-story dwellings and commercial buildings. No other significant changes were noted at surrounding properties.

1976

No changes were noted at the study site from the 1951 map. One 825-gallon underground gasoline tank and one 550-gallon underground gasoline tank, were located on the east-adjacent property, as shown on the 1951 map.

The Third Avenue Transit System Bus Garage, located south of the subject property across West 129th Street, was labeled the Manhattan and Bronx Surface Transit Operating Authority Bus Garage. Two repair shops were located in the southern areas of this facility. The garage located approximately 200 feet southeast of the study site on the 1951 map contained four 550-gallon buried gasoline tanks. The Chinese Laundry noted on the 1951 map, located approximately 150 feet east of the subject property, was no longer present.

The remainder of the surrounding area was primarily residential and commercial in nature. No other significant changes were noted on the subject or surrounding properties.

1989

No changes were noted on the study site from the 1976 map. The east-adjacent garage property, as noted in previous maps, contained one 825-gallon underground gasoline tank and one 550-gallon underground gasoline tank. The Manhattan and Bronx Surface Transit Operating Authority Bus Garage, located south across West 129th Street, was present as in earlier maps. The remainder of the surrounding area was primarily residential and commercial in nature.

2006

The subject property was labeled the Metropolitan Opera House Storage. The properties east- and west-adjacent to the study site consisted of dwellings and commercial buildings. The Manhattan and Bronx Surface Transit Operating Authority Bus Garage, previously located south of the study site across West 129th Street, was labeled the Surface Transportation Corporation Garage and Locker Rooms. A Verizon garage was located east-adjacent to this site.

The 825-gallon underground gasoline tank and 550-gallon underground gasoline tank noted on the 1912 through 1989 maps on the east-adjacent property were no longer shown. The four 550-gallon buried gasoline tanks noted on earlier maps approximately 200 feet southeast of the study site were no longer shown. The remainder of the surrounding area was residential and commercial in nature.

To summarize, the Sanborn maps indicated that the subject property has been identified as the Metropolitan Street Railway Company Third Avenue Division Power Station, the Third Avenue Railway Company Car House and Repair Shop and the Metropolitan Opera Association Warehouse. On-site activities associated with these site uses may have affected subsurface conditions at the study site.

Several underground gasoline tanks were noted on the east-adjacent property on the maps from 1912 through 2006. Several gasoline tanks were noted on the maps from 1912 through 2006 on properties to the north, south, and west of the subject property. The surrounding properties were historically residential, commercial, manufacturing and light industrial properties, including some laundry facilities.

6.1.2 Historical Aerial Photographs

Complete and thorough coverage was available for the subject property utilizing historical land-use maps. The maps included detailed information such as dates of construction, building occupants or a vacant status, and use and/or zoning use of structures on the site and surrounding area. Aerial photographs would, most likely, not provide additional, unique information that is pertinent to the environmental condition of the property. As such, aerial photographs were not reviewed for the project site.

6.1.3 Property Tax Files and Zoning Records

The tax parcel comprising the subject site is zoned M1-1 (*light manufacturing located adjacent to low density residential district*). The building class is E1 (*fireproof warehouse*). The tax information provided by Toxics Targeting, Inc. indicated that the on-site building was constructed in 1900.

6.1.4 Building Department Record

Records maintained by the New York City Fire and Buildings Departments were investigated to determine the potential presence of hazardous materials and are discussed under Section 6.2.3. Information provided by the New York City Buildings Department on-line Buildings Information System included two Certificate of Occupancies for the subject property, 495 West 129th Street (Tax Block 1969, Lot 6).

The 1921 Certificate of Occupancy indicated that the building was a garage. The 1949 Certificate of Occupancy indicated that the building was a warehouse that had a boiler room in the cellar. AKRF did not observe a cellar at the study site portion of the warehouse building; however, a cellar may have been present in the western portion of the warehouse building. A petroleum storage tank may have been associated with this boiler. No information regarding storage tanks or other pertinent environmental information was included on the Certificates of Occupancy.

6.2 Regulatory Review

Toxics Targeting, Inc. of Ithaca, New York, was contracted to obtain information regarding the regulatory status of the property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage, treatment and/or disposal of hazardous material and chemicals, or releases of such materials which may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the Toxics Targeting, Inc. report are included in Appendix C.

6.2.1 Federal

The federal records reviewed included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory

System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

No NPL sites were identified within a one-mile radius of the study site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites which the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

No CERCLIS sites were identified within a ½-mile radius of the study site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on reported releases of petroleum and other potentially hazardous substances.

The subject property was not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site.

One TRIS site was identified within a ¼-mile radius of the study site. Amsterdam Bus Depot, located at 1381 Amsterdam Avenue approximately 250 feet south-southwest of the study site, was listed for the transfer of 9,500 pounds of ethylene glycol in 1997 to waste broker-recycling. The listing, based on its location and distance, is not expected to have affected the study site.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This federal- and state-maintained database contains a listing of sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a 1/8-mile radius of the study site.

United States Environmental Protection Agency Civil Enforcement Docket

This database is the USEPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a 1/8-mile radius of the study site.

Air Discharge Facilities Index (ADF)

This listing of sites tracked by the US EPA AIRS Database includes address information on each facility and the source of its associated air emissions.

One Air Discharge Facility was identified within a 1/8-mile radius of the study site. Amsterdam Bus Depot, located approximately 250 feet south-southwest of the study site at 1381 Amsterdam Avenue, was listed for nitrogen dioxide emissions above the applicable major source thresholds. The site was listed as being in compliance with the issued permits. The listing, based on the information provided, is not expected to have affected the study site.

6.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program; Voluntary Cleanup Program; and Brownfield Cleanup Program (BCP).

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

No spills were reported for the subject property. Two hundred and five (205) spills were reported within a 1/2-mile radius of the subject site, 163 of which have had their spill numbers closed by the NYSDEC and are documented as "cleanup meets standard," indicating that the NYSDEC does not consider these sites to be continued threats to human health or the environment.

The two closest spills include:

- A pavement area, located approximately 120 feet north-northeast of the study site at West 130th Street between Convent Avenue and Amsterdam Avenue, was listed for a 5-gallon plastic container of waste oil that was reported as leaking

onto the street. The spill was reported on October 10, 2005 and closed November 28, 2005.

- Amsterdam Bus Depot, located on the south-adjacent block at 1381 Amsterdam Avenue, was listed for eight closed status petroleum spills. One spill was reported for a tank test failure in January 1992. Additionally, approximately 400 gallons of petroleum and antifreeze were reportedly released at the site during maintenance and other on-site activities between 1992 and 2002. Details of all listed spills are included in Appendix C.

Based on the details of reported spills in the surrounding area, local groundwater quality may have been affected. Details of all listed spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

One RCRA TSD facility was identified within a ½-mile radius of the study site. Ashland Chemical Corporation, located approximately 1,450 feet northwest of the study site at 609 West 131st Street, was listed as a TSD facility that was historically listed as a Large-Quantity hazardous waste Generator. Two US EPA RCRA Violations were reported but have since been returned to compliance. No other information was available. Ashland Chemical Corporation lies in a presumed downgradient groundwater flow direction from the site and is not expected to have affected soil or groundwater beneath the study site. This site was also listed as a CORRACTS facility.

Twelve (12) RCRA Generators/Transporters were reported within a ¼-mile radius of the subject site.

Based on the number of RCRA sites listed in the surrounding area, known and potential releases from those sites may have affected local groundwater quality.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS facility was listed within a ¼-mile radius of the study site. Amsterdam Bus Depot, located at 1381 Amsterdam Avenue, south of the study site across West 129th Street, was listed for four aboveground storage tanks containing ethylene glycol; one 500-gallon tank is currently listed as in service. Eight closed status spills were reported for this site, though none of the reported spills were for a release of glycol. Materials spilled were antifreeze, diesel, No. 2 fuel oil, hydraulic oil, lube oil, and waste oil. Based on its proximity to the study site and the information provided in the database, this site may have affected groundwater beneath the study site.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No Solid Waste Facilities were identified within a ½-mile radius of the study site.

Petroleum Bulk Storage (PBS) Database

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

Twenty two (22) PBS sites were identified within a ¼-mile radius of the study site. The study site was not listed on the PBS database. Details of the facilities on the study block are listed in Table 1.

Table 1
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Approximate Distance/Direction from Study Site
1405 Amsterdam Avenue	3,000 AST	#2 Fuel Oil	In Service	135 feet west
48 Convent Avenue	5,000 AST	#2 Fuel Oil	In Service	210 feet east-southeast

Note: AST - Above ground storage tank

Both of the PBS sites listed in Table 1 do not have closed spill numbers, are not located in a presumed upgradient groundwater flow direction, and are not expected to have affected the study site based on distance and/or information provided in the database.

The Amsterdam Bus Depot, located at 1381 Amsterdam Avenue, on the south-adjacent block, was listed for 18 petroleum storage tanks ranging in size from 400 gallons to 15,000 gallons. In addition, this site was listed for eight closed status petroleum spills.

Details of the 22 PBS facilities located within a ¼-mile radius of the study site are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

One State Inactive Hazardous Waste Disposal Site was reported within a one-mile radius of the study site. Based on its distance and location, this site is not expected to have affected the study site.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment, but that cannot be remediated using monies from the Hazardous Waste Remediation Fund.

No SHSWDSs were identified within a one-mile radius of the study site.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

There were no Major Oil Storage Facilities reported within a 1/8-mile radius of the study site.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding, through the Clean Water/Clean Air Bond Act of 1996, to reimburse costs for site investigation and remediation. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Environmental Restoration Programs were identified within a 1/2-mile radius of the study site.

Voluntary Cleanup Program

In contrast to the Environmental Restoration Program, the Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of generally privately-owned sites. It allows volunteers to obtain NYSDEC liability releases following cleanup. New sites are no longer accepted into this program (see the Brownfield Cleanup Program, below) though existing sites may continue to be addressed. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

One Voluntary Cleanup Program sites was identified within a 1/2-mile radius of the study site. Consolidated Edison-West 132nd Street Station, located approximately 1,700 feet to the northwest of the study site at 12th Avenue between West 131st and West 133rd Streets, was listed as a Voluntary Cleanup Program. The site is the location of two former gas holders, the last of which was closed in 1962. Based on the distance and direction of this site, this is unlikely to have affected the study site.

Brownfield Cleanup Program

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Brownfield Cleanup Program sites were identified within 1/2-mile of the study site.

6.2.3 Local

The local records reviewed included the New York City Fire Department tank records and the Buildings Department on-line Buildings Information system. These records typically include fuel oil, gasoline and waste oil tank installation applications and permits, and records of prior uses.

Fire Department

The database search provided by Toxics Targeting, Inc. indicated that there are no Fire Department records for the study site.

Buildings Department

Records maintained by the New York City Buildings Department were investigated to determine the potential presence of hazardous materials. Information provided by the New York City Buildings Department on-line Buildings Information System included two Certificate of Occupancies for the subject property 495 West 129th Street (Tax Block 1969, Lot 6).

The 1921 Certificate of Occupancy indicated that the building was a garage. The 1949 Certificate of Occupancy indicated that the building was a warehouse that had a boiler room in the cellar. AKRF did not observe a cellar at the study site portion of the warehouse building; however, a cellar may be present in the western portion of the warehouse building. A petroleum storage tank may have been associated with this boiler. However, the site is currently connected to natural gas service, no tanks were registered for the study site, and AKRF did not observe any evidence of tanks. No information regarding storage tanks or other pertinent environmental information was included on the Certificates of Occupancy.

6.2.4 Additional Environmental Record Sources

Information about potential off-site impacts and recognized environmental conditions on-site was available from regulatory databases, site tank closure records, the site visit and on-site interviews. Given that it is unlikely that further significant information exists in additional environmental record sources, and given that it is unlikely that it would change the findings of this Phase I assessment, no additional sources were reviewed.

7.0 INTERVIEWS

7.1 Interview with owner and site managers

The site manager, John Schroeder, provided the following information about the study site:

- The building was previously owned by the Metropolitan Opera to store stage sets.
- Inner City Contracting, LLC purchased the building in 2005, which has been vacant since that time.

7.2 Interview with occupants

There were no occupants of the study site.

7.3 Interview with local government officials

Federal, state and local regulatory databases were consulted for identifying recognized environmental conditions (RECs) on the property due to on-site or off-site conditions. Given that it is unlikely that further significant information would be available from local government officials, and given that it is unlikely that such information would materially change the findings of this Phase I assessment, local government officials were not interviewed.

8.0 PREVIOUS STUDIES

Phase I Environmental Site Assessment. 495 West 129th Street, New York, New York, by Warren & Panzer Engineers, P.C., May 2005

A Phase I Environmental Site Assessment was conducted by Warren & Panzer Engineers, P.C., for the 495 West 129th Street site in Manhattan, New York in May 2005. The report identified environmental conditions at the study site including lead-based paint, PCBs, and mercury containing equipment. No oil storage tanks were identified with the site. Recommendations made in the report indicated that lead-based painted surfaces and PCB- and mercury-containing materials should be managed in accordance with applicable regulations.

9.0 LIMITATIONS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05. The following limitations should be noted:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- A limited visual inspection for asbestos was performed in readily accessible areas only. No samples were collected as part of this assessment.

10.0 DEVIATIONS

The User did not request any deviations from the ASTM Standard.

11.0 DATA GAPS

Section 3.3.20 of ASTM Standard E 1527-05 defines a data gap as the inability to obtain information required by the ASTM Standard despite good faith efforts to obtain applicable data. Data gaps may result from incompleteness in any of the activities required by the by the ASTM Standard. The following data gaps occurred in connection with this report:

Table 2
Data Gaps Identified

Data Gap	Explanation	Relevance of Gap
Project site Area History	The Project site area history was not conducted in five-year intervals	This data gap is not likely to alter the conclusions of the report

Project site Area History	The Project site area history was not conducted to prior to site development	This data gap is not likely to alter the conclusions of the report
Interview with former Owner or Operator	AKRF did not contact the former site owner or operator	This data gap is not likely to alter the conclusions of the report
Interview with Owner or Operator of site abutters	AKRF did not locate the owners or operators of the abutting properties	This data gap is not likely to alter the conclusions of the report
Interview with former Owner or Operator of site abutters	AKRF did not locate the former owners or operators of the abutting properties	This data gap is not likely to alter the conclusions of the report

12.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice. Any exceptions to, or deletions from, this practice are described in Sections 9.0, 10.0, and 11.0 of this report.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage and usage of neighboring properties. This assessment revealed evidence of the following recognized environmental conditions in connection with the site:

- Two small manways and several floor drains were noted on the floor of the study site. No connecting pipes could be seen. The floor drains may be connected to the municipal sewer system; however, they may be drywells. Small, empty containers of oil lube were noted inside the building and some oil staining was noted on the concrete floor of the building; however, no significant staining was noted near the floor drain structures. Historic releases into the drainage structures may have affected the study site.
- Sanborn maps indicated that the study site has been identified as the Metropolitan Street Railway Company Third Avenue Division Power Station and the Third Avenue Railway Company Car House and Repair Shop. Past on-site activities associated with these uses may have affected the study site.
- The project site is likely underlain by historic urban fill material, which is a recognized environmental concern.
- According to historic Sanborn maps and on-line information from the Department of Buildings, the building on the subject property was constructed in 1900, at which time many ACMs were utilized. Suspect ACMs observed during the site visit included roofing materials. Additional suspect ACMs may be present in hidden locations.
- Based on the age of the study site building, lead-based paint may be present. Painted surfaces of the study site were observed to be in poor condition.
- The on-site building was illuminated by fluorescent lighting. Based on the age of the study site building, suspect PCB- and mercury-containing fluorescent lights, switches, and other electrical equipment, may be present. No leaks or stains were noted around lighting fixtures and switches, which do not currently present a potential hazard to human health.
- The 1949 Certificate of Occupancy for the subject property indicated that the 495 West 129th Street building was a warehouse that had a boiler room in the cellar. AKRF did not observe a cellar at the subject property portion of the warehouse building; however, a cellar may have been present in the western portion of the warehouse building currently occupied by the Metropolitan Opera House. The site is currently connected to natural gas service. A petroleum storage tank may have been associated with this boiler in the past. However, this Phase I ESA did not identify any petroleum storage tanks or spills reported for the study site building and no evidence of a petroleum storage tank (i.e., fill ports, vent pipes, etc.) was noted. Nonetheless, potential unreported releases from the suspected petroleum use at the boiler room in the west-adjacent portion of the building may have affected subsurface conditions at the study site.

- One 825-gallon underground gasoline tank and two 550-gallon underground gasoline tanks, noted on the 1912 through 2006 Sanborn maps, were located at the east-adjacent sites. Potential releases from these tanks may have affected the study site. No tanks were registered for the study site and no spills were reported for the study site or adjacent sites.
- Historical land use maps and the regulatory database search indicated that the study site and surrounding neighborhood has a history of manufacturing and industrial use. Reported and unreported releases from surrounding properties may have affected local groundwater quality.

Based on the results of this assessment, the following recommendations are noted:

- Based on the current use of the study site, no recommendations for further study or remediation are warranted for the study site at this time. Nonetheless, should development of the subject site be conducted in the future that involves subsurface disturbance of on-site soil, a subsurface (Phase II) investigation should be conducted prior to such activities to insure that construction activities are conducted in accordance with all applicable regulations and that the excavated materials are disposed of in accordance with all applicable regulations. The investigation should also be conducted to insure that proper measures are taken to prevent the community and construction workers from being affected by potential subsurface contaminants exposed during construction activities.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACMs, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all state and federal regulations.
- Renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 – Lead Exposure in Construction). Areas containing suspected lead-based paint should be maintained in good condition.
- Unless there is labeling or test data which indicates that the on-site fluorescent light fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

13.0 SIGNATURE PAGE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Axel E. Schwendt P.G.
Technical Director

14.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with ASTM Standard E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice. It is intended for use as a supplement to the property appraisal, and is only to be used as a guide in determining the possible presence or absence of hazardous materials on the subject property at the time of the inspection. This assessment is based upon the review of readily available records relating to previous use of both the project site and the surrounding area, as well as a visual inspection of the current condition of the property. Environmental characteristics at this site and surrounding sites may be subject to change in the future.

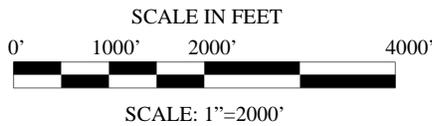

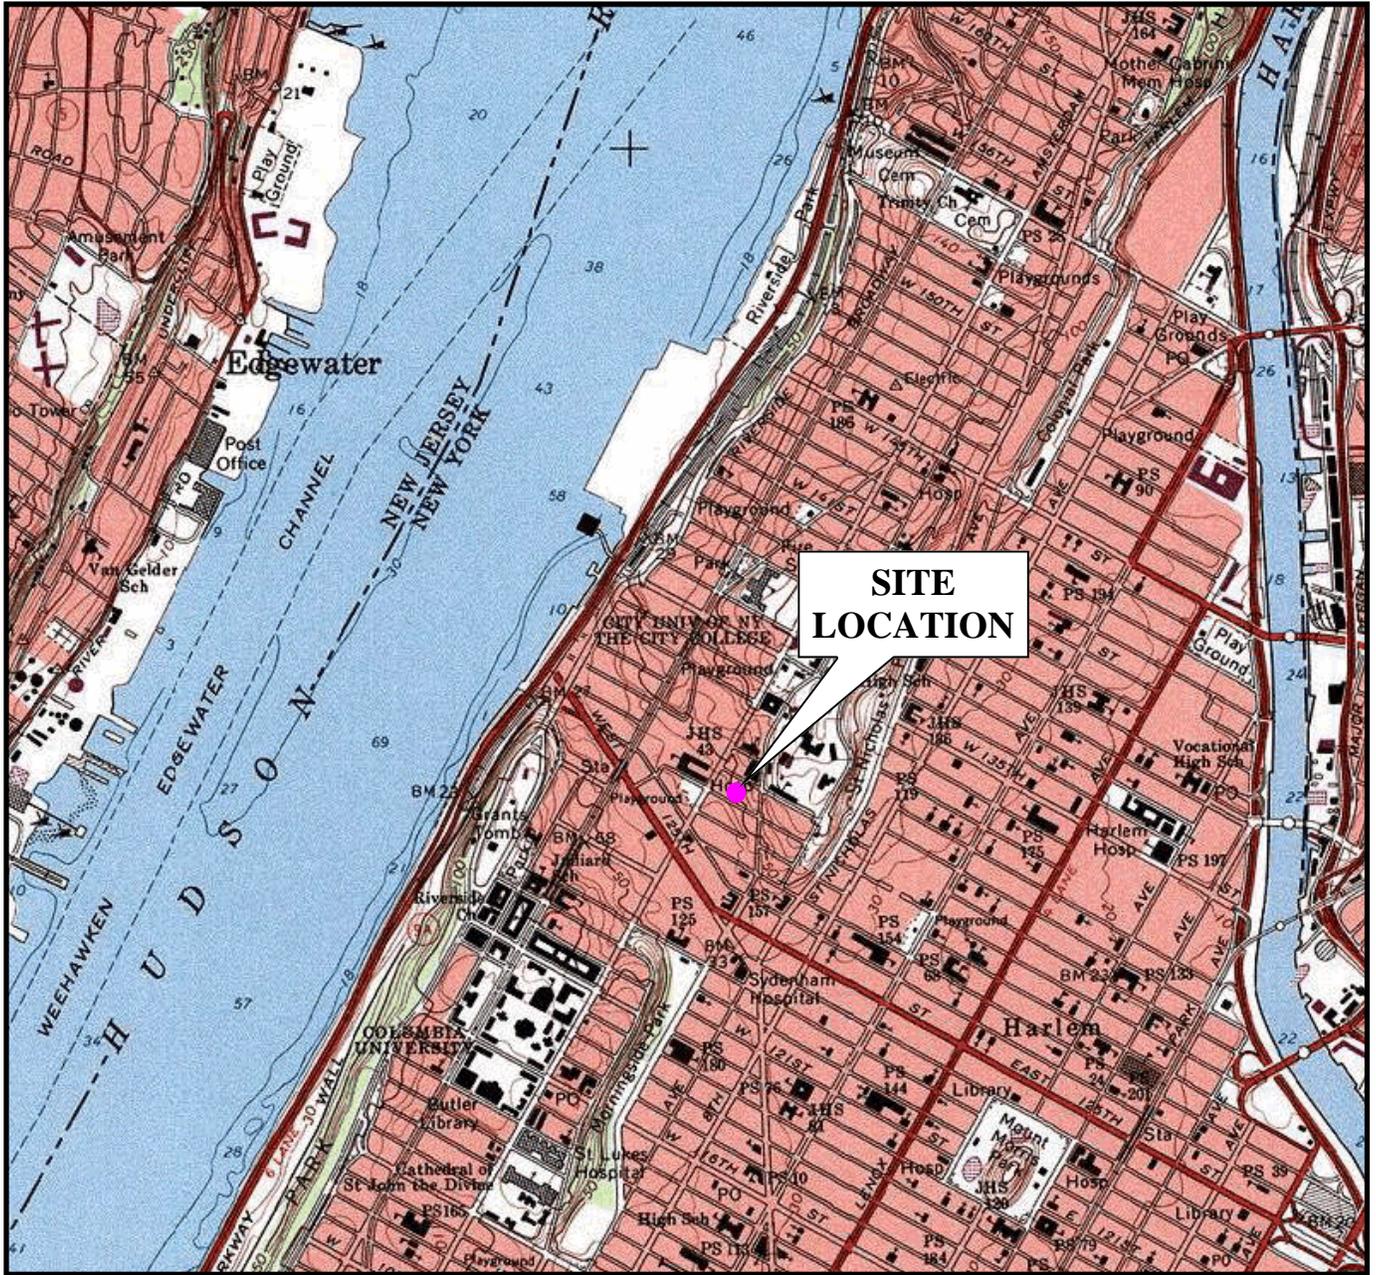

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the site and its surrounding area. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Inner City Contracting, LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or negligent or willful acts or omissions.

APPENDIX C
REGULATORY RECORDS REVIEW

Toxics Targeting Environmental Report

**487 West 129th Street
New York, NY 10027**

November 01, 2007

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FOUR FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

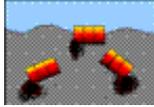

Search Radius

One-Mile

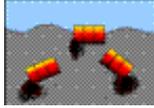

1) **National Priority List for Federal Superfund Cleanup**: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

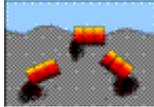

2) **Delisted National Priority List Sites**: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) **New York Inactive Hazardous Waste Disposal Site Registry**: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

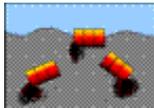

4) **New York Inactive Hazardous Waste Disposal Site Registry Qualifying**: a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

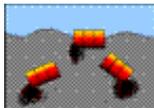

5) **RCRA Corrective Action Activity (CORRACTS)**: waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile

6) **CERCLIS** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) **CERCLIS NFRAP**: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) **New York State Brownfield Cleanup Sites**: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) **New York Solid Waste Facilities Registry**: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) **New York City 1934 Solid Waste Sites**: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) **New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities**: sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- **RCRA violations**: waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile

12) **Toxic Spills: active and inactive or closed** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

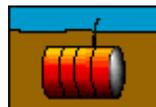

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

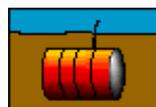

13) **New York State Major Oil Storage Facilities:** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

14) **New York State Petroleum Bulk Storage Facilities:** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) **New York City Fire Dept Tank Data:** tank data from 1997.

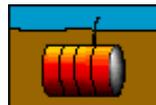

Eighth-Mile

16) **New York and Federal Hazardous Waste Generators and Transporters:** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- **RCRA violations:** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

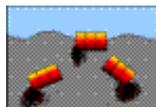

17) **New York Chemical Bulk Storage Facilities:** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) **Historic New York City Utility Sites (1890's to 1940's):** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) **New York Hazardous Substance Disposal Site Draft Study:** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) **Federal Toxic Release Inventory Facilities:** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) **Federal Air Discharges:** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.**
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**
- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code (This information does not appear in the headings for Inactive Hazardous Waste Disposal Sites).
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers;
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites
(A complete description of the codes follows the profiles section).

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced)

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

Inactive Hazardous Waste Disposal Site Classifications:

- 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
- 2 -- Significant threat to the public health or environment -- action required;
- 3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
- 4 -- Site properly closed --requires continued management;
- 5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
- 2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law.

D₁, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed)

Operator Type: Corporate or Commercial

NAME: Inner City Redevelopment Corporation
 ADDRESS: 23050 Fifth Avenue
 New York, NY 10037

SITE DESCRIPTION:

The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in Manhattan. The entire site is occupied by a building comprised of three connected sections. The site is at an elevation of about 10 feet or less above mean sea level. Surrounding the Site are multi-story residential buildings on the west, south and southeast; the Harlem River Drive and the Harlem River on the east, and the 369th Regiment Armory to the north.

From 1970 to 1994 the Site was occupied by an industrial laundry with a dry cleaning operation utilizing tetrachloroethylene (PCE) as a cleaning solvent. A portion of the building was renovated for use as a public school, but such use was discontinued.

Soil Vapor Extraction system (SVE) was installed as part of the Interim Remedial Measures (IRM) to remove PCE. The SVE has been operated continuously since 1997, and was renovated in 2002. April 2005, the SVE has was shut off to evaluate the performance of the remedy, during one of the indoor air quality monitoring TCE concentration was found to be above the DOH guidance value (5 microgram per cubic meter) The SVE system was re-activated on December 18, 2006. Remedial Investigation to delineate the full extent of contamination are underway.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN
BENZO(A)PYRENE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

From 1970 to 1994 the Site was occupied by an industrial laundry with a dry cleaning operation utilizing tetrachloroethylene (PCE) as a cleaning solvent. Soils beneath the Site, and on-site and off-site groundwater are contaminated with PCE. Additional investigation is necessary to fully delineate the contamination.

Exceedances of NYSDOH indoor air guidance value for TCE and PCE in the former boiler room in the basement which is below Room 112.

ASSESSMENT OF HEALTH PROBLEMS:

During renovations to the building in 1996-1997, several rounds of indoor air testing were conducted and on one occasion the data indicated the presence of tetrachloroethene (PCE) above the NYSDOH residential indoor air guideline of 15 parts per billion (ppb). Interim remedial measures initiated during 1997 to address the source of the contamination included the installation and operation of a shallow soil vapor extraction system. These measures have generally resulted in reducing the levels of tetrachloroethene in indoor air to levels below the 15 ppb guideline. Indoor air sampling conducted in April 2002 only detected trace concentrations of PCE. Exposure to contaminated groundwater is unlikely as public drinking water is supplied to the entire community. Exposure to contaminated soils is unlikely as the affected areas are covered by buildings or pavement.

The New York State Department of Environmental Conservation has not publicly updated the following fields since 2003:

ANALYTICAL DATA AVAILABLE FOR:	Air-X	Surface Water-	Groundwater-X	Soil-X	Sediment-

SITE DESCRIPTION:

The site is located on portions of two blocks bounded by West 131st Street, West 133rd Street, Broadway, and 12th Avenue in upper Manhattan. The surrounding area is highly urbanized. The site is the location of two former gas holders, the last of which was closed in 1962.

The Site Characterization work plan has been approved, and the field work will be completed once access issues with an adjacent bus garage are resolved.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

A Site Characterization is currently planned for 2006.

ASSESSMENT OF HEALTH PROBLEMS:

NYSDOH has insufficient information to fully evaluate the potential for human exposures.

NYS DEC Manifested Waste Summary:
Waste Codes, Waste Units, and Transaction Types are only shown for the most recent reported data.

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR
NONE	No hazardous waste activity reported by NYS up to 7/6/2006.				

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"
 On 6/18/01 Spill responder De Meo received a report from NYFD regarding fuel oil leaking into a HPD owned apartment building, located at 411 West 128th Street in Manhattan (spill #0102976). The oil from an unknown source was coming out of drains and small open excavations in the basement of the above mentioned property. Additionally, in the courtyard behind the property oil

was observed leaching through a 20 ft. high retaining wall. A canvas of the area revealed a leaking 5,000 gallon tank at 412 West 129th Street. The above tank was leaking the fuel oil into an open excavation (3 ft x 3ft x 3ft). The building owner was instructed to empty contents of tank and address the impacts to building on W128th. Eastmond Tank cleaners was retained to pump oil and perform cleanup. DLE was notified and responded to scene. Several summons were issued for existing violations. A complete subsurface investigation will be performed.

6/14/05 Heitzman - Requested additional information from DLA concerning responsible party, summons, violations & subsurface investigation.

10/20/05 Heitzman - No response received from DLA. Documentation requested from property owner.

4/12/06 - No response received from property owner.

NEXT STEP: Perform site inspection to determine whether cleanup was complete. Obtain documentation from property owner and/or Regional DLA if available.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
 This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.

FREE PRODUCT ENCOUNTERED ON SHALLOW WATER TABLE & BEDROCK ENCOUNTERED. TYREE DOING CLEANUP. MONITORING AND USING PASSIVEL BAILERS TO RETRIEVE PRODUCT.

Reassigned from Mulqueen to Sigona on 10/30/00.

Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.

07/22/05 - July 22, 2005 Semi-Annual Monitoring Report submitted to DEC revealed groundwater total BTEX at 442 ppb and MtBE at 301 ppb in MW-3 on the site. By Perez.

07/27/05 - Perez spoke with Shawn Healey (Tyree's PM, 631-249-3847 Ext. 236) to determine the status of the site. Tyree acknowledges that they are the responsible party for this site and they are undertaking investigatory activities and monitoring the site on a quarterly basis. By Perez.

11/10/05: Project assigned to Sarah Andersen. Reconfirmed that Tyree is the responsible party with Shawn Healey. Changed potential spiller information in UIS database.

2/28/06: Called Shawn Healey to followup on status of MW installation and overdue quarterly report.

3/13/06: Spoke with Shawn Healey, he will send me the latest report.

3/15/06: Received quarterly report dated March 13, 2006. Samples collected on 2/1/06. Only two wells onsite. Max BTEX 282ppb (W-3) and max MTBE 107 ppb (W-3). Depth to water 6 ft. Concentrations appear to be naturally attenuating.

8/21/06: Left a voice message for Shawn Healey to followup on status of overdue quarterly report.

8/31/06: Refer to spill 8709144 adjacent to this site. An odor was present in the sump. The sump will be sampled.

9/5/06: Left voice message with Shawn Healey regarding overdue update report.

9/14/06: Spoke to Shawn Healey, he will submit reports via email. Sensitive receptor survey required for this site.

10/6/06: Spoke to Shawn Healey. A report was submitted by email, but was not received. He will Fedex the report.

10/11/06: Reviewed update report. Wells sampled on 8/14/06. Max BTEX 338 ppb in MW3, max MTBE 26 ppb in W-3.

2/13/07: Spoke to Shawn Healey. He will check on the status of the most recent sampling event, and update report.

2/22/07: Received update report. Wells sampled on 2/13/07. Max BTEX 352 ppb (W-3), max MTBE 31 ppb (W-3). Continue monitoring.

Caller Remarks:

mark tibbe of region 2 was notified - of the tightness test failure - this is at a bus depot - primary discharge line from deisel tank failed - secondary line from deisel tank did pass

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"
 After discussions with various NYCT personnel, it was discovered that product was found on the floor of the filter room back in January of 2002. The discharge (dispenser) lines, primary and secondary, were tested. The primary discharge line for tanks 3 & 4 failed testing on January 28, 2002 but the secondary passed. Tanks 3 & 4 were taken out of service and locked and tagged out until repairs could be made.

DEC was not notified by NYCT at this time because they determined that there was not leak to the environment, therefore, there was no spill. This decision was based on an earlier situation at Stengel Depot where testing of a primary tank failed but the secondary held. NYCT was given a summons for non-notification but the ticket was dismissed.

The tank tester did not notify because he was directed not to by NYCT.

In this situation, the secondary discharges to a filter room that may not be meet the requirements for secodary containment considering the room has drains in it. When this was pointed out to NYCT, they changed their reason to Diminus Spill Reporting

Policy.

I performed a site visit on March 13, 2002 during the new round of testing. Product was still dripping from the secondary into the filter room. Therefore, the criteria for diminus spill reporting was not met (cleaned up in two hours and the room has drains in it which means the spill was not contained).

After discussion with several NYCT personnel and the tank tester (Franklin), it was determined that someone had put tanks 3 & 4 back into sevice even though they were locked and tagged out. Unfortunately, they did not open the valve that allows the product to flow through the filters and into the system. Also, the valve on the secondary line, which allows produc that leaks from the primary to enter the filter room, was left closed. This built up pressure in the secondary from the product that was leaking from the primary. Eventually, the secondary ruptured causing a several thousand gallon leak to the groundwater.

NYCT had been noticing an increase in product in the vault and surrounding wells from a previous leak from this system (see 0105323). This new leak explained the increase.

After the initial failure in January 2002, tanks 3 & 4 were not properly temporarily taken out of service as required by PBS regulations. If the tank had been emptied, the subsequent relase could not have happened. If DEC had been notified, we would have required that the tanks be emptied until such time that repairs could be made.

see also 0111763, 0111911, 0203317, 0204060.

leaking underground storage tank - 2 tanks / ea 10,000 gal - school is working to clean up spill

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"
Also see spill No. 8906780.

5/30/2006 - 10:00 AM - Contacted Joel Landes of Langan Engineering regarding the progress on soil cleanup at P.S. 192. Langan Engineering was asked to evaluate the existing system before cleanup took place to ensure long term efficiency. The company is in the process of redesigning the system. Once this is complete, cleanup will proceed as planned to remove all contaminated soil and initiate construction of the redesigned system. Submitted by Johnathan Antonizio, NYSDEC - Albany, 5/30/2006.

02/01/07: Re-assigned to chanda.

4/12/07: Kartik Chnada of DEC reviews all documents regarding this spill case. On 4/12/07, Chanda sent a letter to James Marlo, Manager Fuel Division, NYC Board of Education, requiring that the following information be submitted to DEC for review by MAY 11, 2007:

1. An explanation of the cause of the tank system failure;
2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank;
3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system;
4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation.

4/23/07: Chanda received a letter from James Merlo, Manager Fuel division, NYC Department of Education. He stated that USTs were closed and removed in 2/1/04 by the NYC School Construction Authority (NYCSCA); please contact the NYCSCA for further information regarding this matter.

4/26/07: Chanda sent a letter to Ms. lee Guterman, Manager, IEH Division, NYCSCA, requiring that a Tank Closure Assessment Report be submitted to DEC for review by June 15, 2007.

6/18/07: Chanda received a Summary Status Report from NYC School Construction Authority, prepared by LANGAN Engineering & Environmental services dated June 15, 2007.

CRACK IN FILL LINE: SPILL IS CONTAINED IN PIT: CLEAN UP CREW ENROUTE TO CLEAN UP:

DEC Investigator Remarks:

11/28/06 - Raphael Ketani. I made a site visit at the request of Rene Lewis, Field Supervisor, at A. L. Eastmond & Son, Inc., 1200 Oakpoint Avenue, Bronx, NY, 10474, (718) 378-3000. The building is an apartment building on the hill just to the west of Morningside Park (west 121 Street). The PBS case #2-606468 shows an in service 10,000 gal. tank with #6 oil.

Vapor readings with the PID were: 65 ppb in the lobby; definite but not strong odors in the elevator; 2170 ppb at the floor of the boiler room with only slight odors; and 12.1 ppm in the tank room. The building's boiler room had a painted floor with no cracks. There was a little oil on the surface of the water in the sump, but I was told by the superintendent, Joe Gilcrest (347) 219-3705, that the sump pump had been removed years ago.

The 10,000 gal. tank had held #6 oil, but Mr. Lewis told me that it was empty. He said his crew had been inside and they saw that the tank had been lined in the past. However, he said, it was now leaking again. He said that the tank will have to be replaced. I went inside the tank room and saw that oil had been pouring out of the hole in the wall through which the fill pipe passes. Some oil had been absorbed with Speedi Dri, but some had made it to the sump from under the wall separating the tank room from the boiler room. With the fiberglass insulation littering the ground, the absorbent material on the floor, and the oil covering parts of the floor, it was impossible to see whether the tank room floor had cracks. However, the tank was partially buried in

the ground. I took 7 pictures inside the tank room and outside the building. I told Mr. Lewis and Mr. Gilcrest that digging will have to take place to remove all of the contaminated soil, that the soil surrounding the fill pipe will also have to be removed, and the oil in the sump will have to be collected. I told them I will send a letter to this effect to the owners of the building, John Bruff, Director of Facilities, Teachers College, 525 West 120 Street, Box 162, NY, 10027 (212) 678-3011 and to A. L. Eastmond.

11/29/06 - Raphael Ketani. I sent a CSL letter to Mr. Bruff.

1/30/07 - Raphael Ketani. I received a FAXed letter from Janice Robinson of Teachers College of Columbia University on 1/29/07 and the letter with an original signature today. The letter stated that RND Services had been hired to remove the tank, cleanup the site, and dispose of all contaminated soil and water. The letter went on to say that a report will be submitted describing the cleanup and any soil removal. Ms. Robinson's phone number is (212) 678-3732.

I looked up the PBS registration #2-606468 and found that the 10,000 gal. tank was still listed as in-service.

1/31/07 - Raphael Ketani. Ms. Robinson called back to say that she had her worker send in the PBS change form today.

2/13/07 - Raphael Ketani. I spoke to Bob Heyman of R&D Services (845) 348-6355. He told me that R&D will do the investigation and cleanup for the tank. I told him to also check the fill line and port as I saw staining on the wall below the pipe. He said he will do a pressure test of the pipe and port.

5/2/07 - Raphael Ketani. Today I received a progress report letter dated 4/30/07 from Robert Hayman of RND Services, Inc (845) 348-6355.

Mr. Hayman also told me that they had removed the tank, cleaned up everything and removed the concrete floor. When they removed the floor, water started coming in at the rate of 2 gals./min. It turned out that the water was coming from a broken pipe on the south side of the vault and contained roof drainage water and sewer water. They removed 30,000 to 40,000 gals. of combined water with a little bit of oil. He said that the tank had been resting on bedrock and so they removed a little contaminated bedrock. They also tried to do a pressure test on the fill box and the fill pipe, but it collapsed. They will breakup the sidewalk to remove any contaminated soil and replace the pipe. Mr. Hayman said that they are putting together a report for DEC. He added that the building owners have been very cooperative and have hired their own engineer to design a new vault for the tank and the piping system.

DEC Investigator Remarks:

3/14/03 REASSIGNED FROM TIBBE TO VOUGHT.

12/5/03-Vought-See also closed Spill #0200338 at same location.

1/8/04 Reassigned from Vought to K Foley.

2/25/04 File review(KMF):

13X550gal gasoline, 1X550gal waste oil, 1X550gal fuel oil USTs documented as closed in closure report submitted by National Environmental 12/10/96. A total of six samples were taken in three excavations and tested for VOC/SVOCs. All samples were composites and returned below STARs guidelines. VOCs were non detect. SVOCs had minor hits. Compositing VOC samples is unacceptable and soil borings should be completed. No groundwater samples were taken.

9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. B. Beck proposes to do three Geoprobe borings, one in each source area. Report to be submitted by 1/8/05.

2/9/05 Received Groundwater Sampling and Investigation Report prepared by National Environmental. Three Georpobes were drilled adjacent to the suspected source area in the vicinity of the existing USTs. Soil samples were collected from 10-14'bgs, the elevation of the bottom of the existing tanks. All samples were stained and exhibited odor. Soil concentrations were very high for VOCs in all three borings. Groundwater was encountered at 28'bgs and is suspected to flow toward the Hudson River, south and west. Total BTEX in GW ranged from 15758ppb(B-2) to 142952ppb(B-1). MTBE in GW ranged from ND(B-2, B-3) to 3169ppb(B-1). Bedrock is anticipated at 50-60'bgs.

National proposing five permanent monitoring wells, two upgradient and three downgradient. Proposing sampling only for VOCs since naphthalene was the only SVOC detected above TAGM RSCOs and GWQS.

2/9/05 Issued letter approving five well locations and requiring two additional borings within the waste oil and heating oil tank areas(as previously agreed upon during 9/29/04 meeting). Also requesting fill port locations and additional sampling location if appropriate. Summary report due 5/15/05.

2/2/06: Case reassigned to Andersen. Sent Bruce Beck an email asking for update on work required in 2/9/06 letter and status of

overdue report.

2/3/06: Sent letter to Cary Wolf asking for update on work required in 2/9/06 letter and status of overdue report.

3/13/06: Received letter from Bruce Beck stating that they are currently soliciting quotes for drilling.

5/19/06: Consent order meeting with Wolf scheduled for June 2 at 11am.

6/8/06: Meeting with NYSDEC, Barry Cohen (Wolf's attorney's) and Bruce Beck (Wolf's consultant) regarding the consent order. Barry Cohen noted that this site was condemned by the city to build a medical center for Columbia University.

7/10/06: Emailed Bruce Beck to set up a meeting to discuss deliverables required for consent order.

8/2/06: Meeting on 7/25/06 to discuss deliverables with Bruce Beck. This site is currently owned by Columbia University.

11/28/06: Site taken out of Wolf Consent Order. Remediation will be handled by Columbia University.

12/11/06: Left voice message with Barry Cohen to get contact at Columbia University.

12/18/06: Emailed Barry Cohen to get contact information for Columbia University.

1/2/07: Sent stipulation agreement to Columbia University, due back 2/2/07.

2/1/07: Received call from Russell Salman (312-902-5390). A workplan for redevelopment will be submitted today. Stipulation agreement will be discussed following approval of the workplan.

2/1/07: Spoke to Richard Leland of Kramer & Levin (office 212 715 8087, cell 917 539 0000, email rleland@kramerlevin.com). He is the new attorney for Columbia University. He requested to have a meeting next week to discuss this site.

2/6/07: Meeting scheduled with Toni Finger (212-715-9239) and Richard Leland of Kramer & Levin on 2/13/07 at 10am.

2/13/07: Met with Toni Finger of Kramer and Levin, and Arnold Fleming of Fleming Lee Shue, both representing Columbia. The Department will issue another stip to Columbia University for remediation of this site.

3/5/07: Issued another stip.

3/14/07: Received and approved alterations to the Corrective Action Plan to account for receipt and review of a FOIA request.

3/29/07: A one week extension was granted to sign the stipulation agreement.

4/17/07: Received executed stip. Effective date 4/16/07.

5/2/07: Left voice message for Arnold Fleming to discuss plan for this site.

5/11/07: Followed up on the FOIL request - it hasn't been processed yet.

5/16/07: Spoke to Army Fleming. The FOIL request was received, an investigation will be scheduled.

6/14/07: Spoke to Toni Finger and consultant. Existing wells are dry and may be tank wells. Geoprobe work may be done. Extension through 7/16/07.

7/11/07: Approved workplan for installation of 8 soil borings. Deadline extended to 7/30/07.

COMING OUT OF WALL IN BACK OF 419 W 129TH ST POOLING IN BETWEEN BLDGS - FDNY WAS AT SCENE ON 3/2/94 DEP NOTIFIED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "AUSTIN"
 Spill site is reassigned from Zhitomirsky to Austin. Updated by Rashid Ahmed on 04/29/2004.

6/13/05 Heitzman - There are several spills that possibly relate to this:

9401941, 2/20/94, 412 W 129th - spill into courtyard and storm drain, 100 gallons
 9400780, 4/17/94, Convent Ave & 128th - tank overflow, "oil all over"
 9401006, 4/17/94, 419 W 128th - call to request removal of drums from cleanup
 9401906, 5/9/94, 419 W 128th - oil leak on the ground that comes up when it rains
 9402093, 5/12/94, 419 W 128th - Oil spilled into courtyard at back of building
 These have all been closed out.

NEXT STEP: Perform site inspection to determine whether cleanup was complete.

Caller Remarks:

This is a 3rd party spill the name and address are unknown of the spiller. The spill was discovered during excavation of the property

CON ED# 148680 . No to the five questions

DEC Investigator Remarks:

E2MIS 148680

Entered by Meyer

Third Party Spill reported by Supervisor Mandara to the Gas ERC. While a gas construction crew was excavating Gayle # 19724 found an unknown amount of fuel oil in the soil. EH&S McCallion was notified and he contacted the ERC to assist in making the E2mis report. The excavated soil will be placed on plastic and

covered with plastic. There is a fuel oil fill nearby for the oil fired house heating/hot water unit. The spill does not appear to have entered sewers or waterways and there was no smoke or fire. EH&S McCallion will follow up on this job and this report.

Logger Chris McCallion (86578) 12-JUN-2003 12:00 - I talked to Abraham Rodriguez of the DEC to discuss how his agency is handling this third party spill. He said he will have to send someone out to investigate the spill. I told him that Con Ed placed the excavated fill back where it came from. I am going to enter a stop time, but will have to wait for a resolved time since this spill has an open DEC number (03-02575).

Logger Chris McCallion (86578) 25-JUN-2003 - Changed Opn Status to "-CLODE" for DEC closure.

Caller Remarks:

345,000 VAULT IN TH CITY. ONE OF THE TANKS IS SHWING A DISCREPANCY OF 5,100 GALLONS. BRING I VESTIGATED. NON PCB. ONE VENDER IS CHECKING THE WATERWAYS BUT THEY DO NOT THINK THAT THEY ARE AFFECTED. NRC # 786142. CON ED # 162699.

DEC Investigator Remarks:

3/8/06: Met at site with Mike Pillig, Con Ed S&TO. There are 3 separate excavations surrounding 2 manholes. Excavations 1 and 2 (two northern-most holes) are down to weathered bedrock, and down to cobbles in excavation 3. All samples in exc. 3 are below 10,000 ppm TPH except for 2 sample locations (11,000 ppm and 10,600 ppm). No additional soil can be removed due to the presence of rock and proximity to overhead support columns. Excavations 1 and 2 both have several very high TPH results (up to 30,700 ppm), but also can't excavate any further.

Contacted Matt Madsen of COEd's Remediation group - this spill location is part of Appendix B site 69 - to be investigated by Langan Engineering under approved work plan. They have already started the utility clearance . We agreed to have Pillig leave 2 x 8" PVC sleeves (one each in exc. 1 and 2) to allow Langan to install monitoring wells at a later date. Told Pillig to backfill excavations. (JHO)

3/9/06: e-maill from Mike Pillig:

"As we discussed, we are going to backfill all of the excavations leaving PVC pipe in the middle and north excavation to mark monitoring well locations. The site will be restored and turned over to EHS Remediation to install the monitoring wells and track the spill though to eventual closure." (JHO)

~~~~~  
e2mis no. 162699:

24-Jan-2006 - Leak declared on Feeder M52 at 13:30 hours due to tank level discrepancy of 1500 gallons at West 49th St S/S pumphouse #2. Leak rate is approximately 8 gallons per hour. Feeder M52 runs between the West 49th St S/S (637 West 49Th St,N.Y.,N.Y. 10036 and the Sprainbrook S/S. The feeder crosses the Harlem River betwween the 155Th Street and 225Th STreet Bridges. ERT notified at 13:35 hours and Ken Marines Boat was requested to patrol river crossing. Chem Lab to dispatch PFT vans to patrol run of feeder. Gas Corrossion and Transmission Ops to inspect underground structures and feeder run. Substation Ops to inspect all associated equipment.

At 15:30 PFT found in air at Broadway and 125th St. Investigation of manholes in area found fresh dielectric fluid in manhole 61734 @ Tiemann PI and Broadway. [NOTE - see spill # 0512334, JHO] At 16:40 Allstate tanker on site and beginning to pump out manhole.

At 17:25 1/24/06 a temporary clamp was installed and holding. Allstate continues to pump out and clean manhole. Manhole wall to be broken out to make permanent repairs.

Caller Remarks:

FOUND A SHEEN IN THE SOIL DURING A PHASE TWO TEST, THE SHEEN IS 8 - 10 FEET DEEP IN THE GROPUND. SOIL; SAMPLES WERE TAKEN.

DEC Investigator Remarks:

8/18/05 - Raphael Ketani. I spoke to the consultant today, Mr. Tarak Khouri. He told me that they are doing borings in the basement of an intact building. The last boring will be on 8/19. The building is at Columbia University, though he didn't specify that Columbia owned the building. They are boring to 20ft. A sheen was seen in the moist soil, but there are no USTs or ASTs in the basement. A phase 1 investigation revealed that this was a former Con Ed mfg site. Soil samples were sent to Spectrum Analytical, a DOH certified lab, for full soil analysis. The soils have a petroleum odor (high PID readings). After the investigation, the building will be demolished and all soils will be shipped via a hazardous waste transporter. The soil will be excavated down to 15 feet. A soil analytical report will be sent to Jeff Vought of the Spills unit.

8/19/05 - Raphael Ketani. I left a message for John Vasapollo (718) 482-0700 ext. 132 to call me back, regarding who the actual owners are and their address, on his voice mail.

4/1/06-Vought-Received message from Ilkay Cam (Langan 212-479-5410 fax 212-479-5444). Six tanks were found and removed and endpoint samples were collected. Vought called Ilkay Cam and left message to return call to DEC. Vought received call from and spoke to Cam and concrete slab under tanks. Slab and tanks were in good condition. No bottom endpoint samples were collected as concrete slab and no staining on slab. Tanks were removed because Columbia is going to install a new elevator shaft. During excavation for shaft, tanks were discovered. Tanks were 550-gallon gasoline USTs. PBS registration was submitted and five endpoint samples were collected. No VOC exceedences in samples and SVOC exceedences in PAHs. Excavation difficult to extend due to existence of piers. One fill line coming from street and fill line was filled with concrete. DEC will receive complete report. RP address will be sent in and Langan and site contact is:

John Vassapollo soil contamination letter will be sent with additional requirements of: 1)endpoint soil sampling 2)delineation of soil and groundwater contamination. Vought received email from 615 W 131st Street

c/o First Pioneer Properties, Inc.  
 34-09 Queens Boulevard  
 Long Island City, NY 11101.

4/4/06-Vought-Sent soil contamination letter with above requirements.

05/15/06-Vought-Received call from John Vassapollo (718-482-0700x132 917-838-0118) and returned call and left message to return call to DEC. Vought received call and spoke to Vassapollo and delivery of number 4 to site and tank was overfilled. Spill into boiler room. No sewers or drains affected. Spill was on concrete. Boiler room is on north side of building and tanks referred to above are on south side of building. Columbia is tenant and John is the building manager and Columbia will be handling elevator shaft remediation but Vassapollo requested CC'd on DEC correspondence.

05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin.

08/11/06-Vought-Received call from Vassapollo who requested no further action on north side of spill. (Tanks referred to above in previous comments are located on the south side of site that require further action). No further action on north side of site required by DEC Vought due to spill on concrete and no impact to subsurface. Further action on south side of site will be handled by DEC Piper via Langan Engineering.

9/13/06- DEC Piper spoke w/ Ilkay at Langan Engineers. AS per conversation, a total of seven tanks have been removed. Closure report is under review and will be submitted shortly.

10/28/05 - ATC conducted a site investigation, installed 4 wells, sampled the GW and found some contamination. They think it is from an off-site source. Will send in the report to DEC for review. - KST

11/4/05 - assigned to Jon Kolleeny for PM assignment. Sent an email to ATC requesting a hardcopy of teh report for review. - KST

11/4/05- The case is reassigned to I. Islam.

11/8/05- Today received from Koon the hard copy of the RI and Exposure assessment (combined) for the site prepared by ATC Assoc. for review.- II

12/14/05- Reviewed the above-mentioned RI and Exposure Assessment report submitted by ATC Inc. ATC argues that the contamination may be coming from an off-site source, and that the contamination does not pose an exposure hazard. Accordingly, they request closure of the spill.

The Department responds as follow: The spill case cannot be closed at this time. The high levels of soil and groundwater contamination identified beneath the basement are suggesting of an on-site source.

The Department requests the following actions:

1. Additional monitoring wells should be installed and soil and groundwater samples collected to more completely delineate the area of contamination, and better determine the groundwater flow direction.
2. Indoor air sampling should be performed in the basement, and sub-slab soil gas samples should be collected to evaluate potential vapor impacts to the site.

The RP is told by a letter with a copy to ATC Inc. to submit a work plan for additional investigation of soil and groundwater, indoor air and sub-slab soil gas sampling for Departmental review and approval. The results of these investigative activities should be summarized in a report with a remedial proposal to address site conditions.- II

07/31/06: Transferred to S.Kraszewski. - SK

10/18/06: Changed DEC Lead from "Needs Reassign" to "Stephen Kraszewski." - JK

11/09/06: Reassigned from Stephen Kraszewski to Chanda.(Chanda)

12/11/06:Kartik Chanda of DEC sent a letter to the property owner( Steven Kraus), requiring that be submuitted a site investagation work plan to DEC for approval by 01/25/2007, as required in the previous letter.

12/28/06:Chanda received a phone call from Pamela Oelerich, Ph:212-432-8545(ATC)concerning the status of the site.

01/19/07: Chanda received an e-mail from Pamela Oelerich , ATC Associated Inc., with attached the Site Investigation Work Plan.

01/23/07: Chanda reviewed the site investigation work plan, prepared by ATC Associates Inc., dated 01/19/07. On 1/23/07, Chanda approved the Investigation Work Plan, requiring that an investigation summary report must be submitted to DEC for review by March 23,2007.

3/2/07: Chanda received a letter from Pemela Oelerich , ATC Associates Inc. regarding time extension request to submit the investigation summary report.

The Department approved the extension and sent a letter to RP(Steven Kraus) and his consultant( Pamela Oelerich), requiring that an investigation summery report be submitted to the department for review by April 23, 2007.

5/8/07: Chanda received an Investigation Summary Report (ISR)prepared by ATC Associates Inc., dated May 7, 2007.

5/15/07: Chanda reviewed the Investigation Summary Report and has the following comments:

1. The soil analytical results from soil borings SB-MW-05 and SB-MW-06 showed elevated levels of VOCs. The levels of BTEX concentrations ranged from 82.22 ppm to 137.58 ppm. The soil samples exceed NYSDEC standards for Recommended Soil Cleanup Objectives for gasoline contaminated soils.
2. The groundwater (GW) analytical results showed elevated levels of VOCs for monitoring wells MW-02, MW-03, MW-04, MW-05, MW-08, and MW-09. The levels of BTEX concentrations ranged from 16.99 ppb to 444.60 ppb. The high VOC concentrations indicated that the GW had been contaminated and thus, are required to be remediated and monitored.

3. The sub-slab vapor analytical results from samples SSV-03 and SSV-04 showed elevated levels of VOCs and Toluene. The levels of toluene concentration ranged from 3,100 g/m3 to 4,500 g/m3, which are above the NYSDOH Background Levels.

4. The indoor air analytical results from samples IA-01, IA-02, IA-03 and IA-04 showed elevated levels of VOCs and Toluene. The levels of toluene concentration ranged from 4,000 g/m3 to 6,900 g/m3, which are above the NYSDOH Background Levels.

5/16/07: Kartik Chanda of DEC sent a letter to RP(Steven Kraus) and his consultant (Pamela Oelerich) ATC Associates Inc.The Department requires the followings:

1. Quarterly Groundwater Sampling.
2. One Semi-Annual Indoor Air and Sub-Slab Vapor Samplings. Additional investigation may be required by the Department upon review of these monitoring reports.

Caller Remarks:

LEAK ON FEEDER M-51 - 5000 GALS SPILLED - 300 IS ON LAND - NO CLEAN UP - CREW TRYING TO CONTAIN SPILL BY FUNNELING PRODUCT INTO ANOTHER MANHOLE - PRODUCT IS NON PCB

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

12/2/97, 18:15 hrs: Arrived on scene, met with Paul Carbone (Con Ed ERT). Also FDNY, NYCDEP on scene. Spill came out of a manhole onto street. Con Ed crews channelling oil to downhill manholes. FDNY was first on scene and kept spilled oil near manhole using sorbents and sand. No oil to sewers. MEG scheduled to arrive 19:10 hrs.

Keith Williams (DEP) checking sewers - no impacts. NYPD Captain Murolo (26th Pct) said that DOS had sanded road up to 160th Street for cars that drove through. DEP HazMat (M. Fawzy and E. Catanzarro) took sample of oil for PCBs. USCG (P.O. Fleischer adn Sanker), NYCOEM (Mike Lee) on scene.

Originally the operating pressure on the feeder was 300 - 600 psi (500 - 1000 gph). Dropped to 260 psi, then reduced to 155 psi (250 gph). Can't go lower because must keep min pressure at Sprain Brook potheads. Total volume 600 gallons from manhole.

As of 20:44 hrs, Jerry Materazzo (Con Ed Underground Transmissions) said they were going to close stop joints to reduce flow enough to put clamp on leak.

21:39: still have not plugged line - have filled 2 vac trucks, working on the third. Two more vac trucks and a frac tank are on route. Closed one stop joint north of leak, will lower pressure south of the joint as low as possible. Still can't get clamp on, will have to lower pressure more and then bleed stop joints. (CAE)

4/15/03: APPENDIX B SITE NO. 69. TRANSFERRED FROM ENGELHARDT TO O'CONNELL.

~~~~~  
e2mis no. 113-403:

ON 12/02/97 AT 1830 HRS HPFF LEAK ON FDR M51 IN MANHOLE # 61734 ON WEST BROADWAY ABOUT 100FT SOUTH OF TIEMANN PLACE ALSO KNOWN AS WEST 127TH ST. APPROX 5000 GALS WAS LOST, UNDERGROUND TRANSMISSION AND GAS OPERATIONS IS ON SITE.

FIRE DEPARTMENT NOTIFIED MAN. CONTROL CENTER AT 1635HRS ON 12/02/97, FIRST CREW RESPONDED TO MANHOLE #61734 AT 1700 HRS. APPROX 400 GALS LEAKED ONTO STREET WHEN HE ARRIVED AT SITE AND DIVERTED THE DIELECTRIC FLUID BACK INTO MANHOLE.

Intersection should be 123rd St not 127th. 16:45 TO notified of very large leak on feeder 51. Crews to check manholes PFT van to go out. 17:00 NYCFD notified Manhattan #9 of dielectric fluid on street surface on Broadway south of 125th St. Clean Harbors and MEG called for cleanup. VNR called for excavation if necessary.

NYC Dept of Sanitation spreading sand on street. Southbound Broadway closed off south of 125th Street. 17:21 feeder removed from service. Fluid being diverted into second manhole approx 50'

south of 61734. 18:30 MEG on location pumping manhole out. 19:00 MEG cannot keep up with flow of fluid. 19:15 Clean Harbors on location to assist MEG. 20:05 TO crews closed new stop joint valves in MH63639 to hold fluid back going uphill to Sprainbrook Sta. After 5 hours could not fully stop leak. Semi-stops on both sides of leak to be closed to control leak. MEG and Clean Harbors working on cleaning up street to open at least 1 lane of southbound traffic by 7AM. Pump at 49th St shutdown at 8:15

12/3/97. Leak rate slowed down - clamp to be repositioned to stop leak.

Temporary clamp installed and holding at 11:45 12/3/97. MEG to clean out manhole and custom barrel to be fabricated. Lab results 97-13945 1 ppm PCB's: MEG lab 0.624 ppm Benzene. Lab results of fluid at stop joint (10/15/97) 14 ppm benzene. 05:15 12/5/97 repair barrel installed and pressure tested. TO signed off complete. MEG removed 31,000 gallons of oil and water. Clean Harbors removed 10 tons and 15 yds of oil contaminated material from street and manhole.

Fluid loss recalculated by CSD to be 22,934 gallons.

E2MIS 113403:

ON 12/02/97 AT 1830 HRS SHIFT MANAGER J. CLARK #20420 REPORTED HPFF LEAK ON FDR M51 IN MANHOLE #61734 ON WEST BROADWAY ABOUT 100FT SOUTH OF TIEMANN PLACE ALSO KNOWN AS WEST 127ST. APPROX 5000 GALS WAS LOST, UNDERGROUND TRANSMISSION AND GAS OPERATIONS IS ON SITE. P. BYRNES #74864 AT 1845HRS ON 12/02/97.

SUPV. P. MCHUGH REPORTED THAT FIRE DEPARTMENT NOTIFIED MAN. CONTROL CENTER AT 1635HRS ON 12/02/97, FIRST CREW RESPONDED TO MANHOLE #61734 AT 1700HRS. P. MCGRATH REPORTED THAT APPROX 400 GALS LEAKED ONTO STREET WHEN HE ARRIVED AT SITE AND DIVERTED THE DIELECTRIC FLUID BACK INTO MANHOLE.

Intersection should be 123rd St not 127th. 16:45 TO notified of very large leak on feeder 51. Crews to check manholes PFT van to go out. 17:00 NYCFD notified Manhattan #9 of dielectric fluid on street surface on Broadway south of 125th St. Clean Harbors and MEG called for cleanup. VNR called for excavation if necessary. NYC Dept of Sanitation spreading sand on street. Southbound Broadway closed off south of 125th Street. 17:21 feeder removed from service. Fluid being diverted into second manhole approx 50' south of 61734. 18:30 MEG on location pumping manhole out. 19:00 MEG cannot keep up with flow of fluid.

19:15 Clean Harbors on location to assist MEG. 20:05 TO crews closed new stop joint valves in MH63639 to hold fluid back going uphill to Sprainbrook Sta. after 5 hours could not fully stop leak. Semi-stops on both sides of leak to be closed to control leak. MEG and Clean Harbors working on cleaning up street to open at least 1 lane of southbound traffic by 7AM. Pump at 49th St shutdown at 8:15 12/3/97. Leak rate slowed down - clamp to be repositioned to stop leak.

Temporary EPA # NYP 004015293 received from ERT. Temporary Clamp installed and holding at 11:45 12/3/97. MEG to clean out manhole and custom barrel to be fabricated. 3-11 shift 12/3/97 repair barrel material being gathered. 11-7 shift 12/4/97 barrel fabricated. Lab results 97-13945 1 ppm PCB's : MEG lab .624 ppm Benzene. Lab results of fluid at stop joint (10/15/97) 14 ppm benzene. 11:00 12/4/97 barrel installed and welding started. 05:15 12/5/97 repair barrel installed and pressure tested. TO signed off complete. MEG removed 31,000 gallons of oil and water. Clean Harbors removed 10 tons and 15 yds of oil contaminated material from street and manhole.

V.Schaefer #78367. Restoration procedure to be followed to return feeder to service. As per CSD total fluid loss was 23,934 gallons. Fluid loss recalculated by CSD to be 22,934 gallons.

 FOUND CONTAMINATED SOIL

DEC Investigator Remarks:

Sangesland spoke to Jack Caslatte (attorney for owner).
 Building is an apartment building which is being renovated. There is an existing 20,000 gal UST buried in a courtyard of the building.
 The building will convert to gas heat in June/July 2007 and this large tank will be removed. 4 Borings were taken around the tank and one sample came back with some elevated PAH compounds while another sample came back with an elevated Benzo(a)Pyrene level.
 The owner will hire Soil Mechanics Environmental to pull the tank and deal with the contaminated soil/area under the tank.

stain of unk oil on a metal plate clean up pending remediation program coned#143504

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

Con Ed e2mis #143504

3/23/07: Con Ed Chad Pfeiffer submitted results of samples collected following remedial excavation. Results are in eDocs. Sent e-mail to Pfeiffer:

"As per our telephone conversation, I am concerned that a number of these composited samples have relatively high TPH values. This leads me to conclude that at least one of the grab samples that comprised the composite would exceed the cleanup goal of 10,000 ppm. As such, we agreed that you would have the contractor remove some additional bluestone/soil and re-sample utilizing grab samples.

The locations to be re-excavated are:

1. Area R2-NE

- 2. Area R2-E
- 3. Area R2-sw
- 4. Area R4-NW
- 5. Area R4-W
- 6. Area R4-SW

For sampling (TPH only, in this case) we should use the following guidelines:

For a narrow excavation (i.e., less than 5 feet wide), collect one grab sample per 10 linear feet of excavation and one from each end. For example, for a 10 foot long excavation, you would collect 3 samples total (one from each end, and one from the center of the excavation). If the trench is wider, collect same linear distance , but one from each side of the excavation." (JHO)

3/30/07 - second round of samples collected - still have high TPH (actually higher than shallow soils). Requested additional excavation. Con Ed (Chad Pfeiffer) indicated that additional excavation may not be possible due to undermining of unit. Will meet at site to discuss options. (JHO)

5/3/07: Inspected location with Con Ed (Chad Pfeiffer and Vic Faster) - they will conduct additional sampling along west side of unit to delineate extent of remaining contaminated soil. See eDocs for analytical results and site photos.(JHO)

D. WATTS ALTERNATE # 212-864-1597 FIRE DEPT WAS REQUESTING INSPECTOR TO INVESTIGATE SPILL: SOME KIND OF OIL CALLER LIVES IN APARTMENT # 7 (WATTS)

DEC Investigator Remarks:

07/12/06-Hiralkumar Patel. received during off hours duty on 07/11/06. visited site. spoke with Jeraldo Merejildo (646-879-7799), super of building. property has 5000 gal #6 oil AST. tank is in contact of concrete. as per super, during last oil delivery they had overfill and oil spilled at vent pipe, about a month ago. and little oil came out from top of tank in tank room. they cleaned both oil spills immediately, but left speedy dry at location. when i reached on site, Ms. Watts was not at home. vent pipe is right under Ms. Watts living room window about 2-3 ft below. probably what ever oil soaked in speedy dry, under vent pipe, is getting vaporized due to heat and getting into Ms. Watts apartment. asked super to clean immediately area under vent pipe and clean inside tank room also. asked Ms. Watts to close windows for couple of days. no oil observed or odor in tank room as well as at vent pipe

observed oil stains in tank room as well as in boiler room. little oil on top of water in sump. asked super to clean all stains and sump. mat Andrew Kelly (718-595-4761) from DEP at site. he also observed oil in sump.

Managing agent:
Pan Paragon
95 Delancey Street
Manhattan, NY 10002

FAX (212) 353-0564

PBS # 2-195790
PBS registration has expired on 7/7/02.

spoke with Ms. Paragon. they bought this property two years ago.

sent out CSL with tank registration and tank test requirements to Ms. Paragon. faxed to Ms. Paragon.

08/07/06-Hiralkumar Patel. received message from Ms. Watts (212-864-1597). she still receive odor in her apartment.

08/10/06-Hiralkumar Patel. left message for Ms. Paragon. spoke with super at building. he has clean area under vent pipe and painted it. asked him to check Ms. Watts apartment for any odor.

08/16/06-Hiralkumar Patel. left message for Ms. Watts. spoke with Ms. Paragon. she has received letter from the department and is working on it. visited site. found no odor anywhere in building. Ms. Watt was not at home so couldn't check in her apartment.

11/24/06-Hiralkumar Patel. spoke with Ms. Paragon. she found tank registration certificate and will fax it. she hasn't hired anybody for tank test. asked Ms. Paragon to send tank test result by Dec. 15, 2006.

12/16/06-Hiralkumar Patel. spoke with Ms. Paragon. asked her to send tank test result. as per her, they have mailed tank registration/renewal form to the Department. Ms. Paragon will fax tank test result.

12/18/06-Hiralkumar Patel. spoke with Ms. Paragon. she will fax tank test result today.

12/19/06-Hiralkumar Patel. spoke with Ms. Paragon. she told that she has faxed tank test result twice, but i haven't received yet. asked Ms. Paragon to fax it again.

spoke with Ms. Paragon again. she told that she has faxed that result. i haven't received it yet. asked Ms. Paragon to mail tank test result.

01/02/07-Hiralkumar Patel. spoke with Ms. Paragon. she mailed tank test result on 12/28/06. checked PBS record. no update in PBS. it still shows registration expired. left message for Ms. Paragon.

01/09/07-Hiralkumar Patel. left message for Ms. Paragon.

01/12/07-Hiralkumar Patel. left message for Ms. Paragon.

spoke with DEC Jacob. he asked to refer case to PBS unit as it is violation having unregistered tank at site. sent email to Jacob with property manager's contact info.

500 gallons of unk oil in 2 gallons of water in a manhole 15' north of St Clairs Place ConEd ref #203955. No to the 5 questions.

DEC Investigator Remarks:

203955. see edocs.

ConEd reports product tests as No.6 FO. May be related to 0611095.

2/21/07: site visit conducted with Sarah Carlson (DEC Pet. Rem.) and Anthony Drumblings (Con Ed Man EH&S). Oil was found in 2 manholes, both located downgradient of Columbia University spill (see spill no. 0212031). Oil may be residual from spill reported in 2002. Conduits connect these manholes to 2 vaults/manholes up the hill next to the fill line for CU's tanks. The fill line was found to be leaking, and was excavated and repaired. TRC (consultant for CU) installed ORC injection field for remediation. S. Carlson to follow up with CU, TRC. (JHO)

CN16 CN12 CN8 CN4 X C0 CS4 CS8 CS12 CS16

----- M51

WN16 WN12 WN8 WN4 W0 WS4 WS8 WS12 WS16

_____ westwall

Samples are to be taken at 4 foot interval, along the bottom of the trench (location "C"); along the East Wall (location "E") and along the West Wall (location "W"). The "wall" samples are to be taken 3 to 6 inches off the bottom of the excavation. Each

location will we analyzed for TCLP benzene (at locations EO, CO and WO) and dielectric fluid by method 8100." (JHO)

~~~~~  
e2mis no. 123-721:

19-MAR-1999 @ 09:30 HP FEEDER M52 - FLOW METER DISCREPANCY OF 329 GALLONS AT WEST 49TH ST S/S PUMPHOUSE #2 INDICATE A SUSPECTED LEAK AT A RATE OF 13 GALLONS PER HOURS (NOTE LEAK RATE VERIFIED BY U.S.I.) LEAK COMMITTEE CONVENE PFT VANS DISPATCHED. GAS CORROSION AND UT TO PATROL RUN OF FEEDER. SSO CHECKING W49TH St TUNNEL AND PURS & POTHEADS AT W49TH S/S AND SPRAINBROOK S/S. ERT ADVISED TO REQUEST BOAT TO PATROL RIVER CROSSING BETWEEN FORDHAM RIVER BRIDGE AND 225TH STREET BRIDGE.

PFT crews sent back out. Manholes not to be checked since they were all checked 2 days ago (see E2MIS 123628). Barholes being checked from 125th St South to 115th St. High PFT areas found S/O 123rd St. Excavation started 20 feet south of 123rd St. Leak found at 00:45 3/20/99. Wood support block found in contact with bottom of 10 inch feeder pipe. Temp clamp installed at 02:00 3/20/99 leak stopped. Excavation continues for barrel installation. Temp EPA Id # NYP004032876 received from ERT for CTW disposal. 200 style barrel installation started at 11:30. Installation completed, pressure tested and 3rd party weld inspection completed at 21:00. Chem lab reports 99-02863 5.0 ppm PCBs.

Clean Harbors removed 20 cubic yards of material from leak site. CSD reports 649 gallons lost during this leak. On 3/22/99 Joe Floryshak visited leak site and spoke to Jane O'Connell (NYSDEC). Since there was rock directly under the feeder pipes there was no need for further excavation. Chem Lab took samples of soil in excavation and site was backfilled on 3/22/99. Chem Lab reports 99-02908 <1 ppb TCLP benzene in soil and 99-02894 22 ppm benzene in oil.

Caller Remarks:

Caller reports spill on the south west corner. This is a third party spill. ConEd cleaned up the spill. It was completed at 1400. No to the five questions. #156650.

DEC Investigator Remarks:

On 12/18 @ 14:10 Tegnazian # 72274 of CM informed me that while at S/W/C W122 St & Manhattan Av in an Open Trench that they were Fixing a gas main they noticed approx (1) gallon of motor oil and a filter in the trench. To their knowledge no sewer/waterway was affected, no private property was affected, no fire/smoke was involved. The source is a third party spill and the cause is unknown. The spill was in the soil excavation. The affected area was dug up and double bagged. (10) bags were filed. The cleanup was started at 13:45 and completed at 14:00 HRS on 12/18/2004. Transportation has been called and will respond to the location after 16:00 on 12/18/2004.

CON ED 146512. CLEAN UP IN PROGRESS. 1 GAL MIXED WITH 400 GAL OF WATER.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
E2MIS 146512

R . Allen # 10800 of manhattan fod reported to J.Moran 01182 that 05:15 hrs at the location of M57772 @ n/w/c W 135 St & 12 Ave working on feeder 2m28 found approx 1 gal of unknown substance with 400 gallons of water. The source and the cause are unknown.

There was no fire or smoke involved. There were no injuries related to the spill. Weather conditions did not contribute to the hazard of the spill. There is no evidence of release to sewer or waterways. There is standing water but no visual movement. Spill tag # 33499 was installed. Two liquid samples were taken one for PCB and one for oil I.D. on a priority E basis. Chain of custody form # BB06962 was used. The spill is contained.

Account# f3243 is being used. Cleanup pending Chem. Lab results since it is an unknown substance.

C.I.G A.Morris #85791 notified @ 07:02

Caller Remarks:

A TRANSMISSION LINE IS LEAKING AT THE RATE OF 15 GALLONS OER HOUR SOMEWHERE BETWEEN TUCKAHO RD IN YONKERS AND MANHATTEN - LEAK HAS NOT BEEN FOUND YET

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

2/13/97: John Hegerty - believed to be in area of 135th St in Manhattan based on tracer searching.

2/19/97: John Hegerty - still looking. Tracer was unsuccessful. Now on 3rd freeze. Loss of 1000 to 1200 gallons so far.

2/20/97: J. Hegerty - Con Ed said leaked at 15 gph for 3 days, then down to 10 gph (3 x 24 x 15) + (5.25 x 24 x 10) = 2340 gallons estimate. John said he would do inventory today to confirm estimate.

2/20/97, 1530 hrs: Ed Kalinowski - in charge of corrosion group. Inspecting pipe north of leak. Jerry Matterazzo - in charge of pipe repair and oil removal. MEG on scene - vac truck, supply truck. Jerry M. said only a sheen of oil in adjacent manhole. Dirt in excavation looks fairly dry. Sal from MEG (supervising MEG workers). About 20 yards of soil/debris removed from 2 excavations and debris from manhole. Excavation around leak is ~9' x 7' x 8-10' deep.

Corrosion team was inspecting pipe north of leak. Inspector said it was in bad shape and a "future leak". Ed K. said that portion of the pipe would be repaired with a barrel. Acc'd to Ed K., leak occurred where corrosion resistant coating was lifting from the pipe and water got underneath. Pipe runs adjacent to elevated train.

11/17/04: APPENDIX B SITE 69.

---

**Caller Remarks:**

REPORTED TO THE FDNY AS A 200 GALLON PLUS HEATING OIL SPILL AT THE ABOVE LOCATION - CALLER STILL ENROUTE TO THE SCENE

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER"

Mike Mulqueen called from this location.

Jeff responded immediately, by visiting the location.

Dispatcher # 280 (NYFD), called for spill #. E.R.

This spill was called in again by Al Eastman Tank Cleaners.

Spill # 0300342 E.R.

4/24/2003-Vought-Site summary by Vought:

4/10/2003-Vought-Site visit by Vought. FDNY on-scene. Spill caused by Leak in flange, non-working high level alarm and

malfunction of petrometer resulting in overfill of tank. Tank manway bolts missing from tank resulting in filling of manway.

Upon FDNY arrival tank manway filled with oil and rising bubbles indicating loss of oil to subsurface (FDNY approximates that 700 gallons lost to subsurface). In addition to loss of fuel through manway, spill also overflowed out of manway and ran down lawn

and seeped through basement wall into Marshak Science Building. Delivery performed by Empire State Fuel Oil. No spill occurred out of vent pipe. Spill occurred to Tank #1. Delivery ordered by DASNY. Interagency meeting held by Vought. NYSDEC requires

1) Monitoring of basement wall for product seepage and recovery

2) Excavation of all impacted soil including endpoint samples, powerwashing of sidewalk, tank repair (high level alarm, petrometer and manway bolts) and borings around tank.

3) Tightness testing of tanks.

4/14/2003-Vought-Received e-mail from Rolando Arco (PSI, Inc. 212-889-0294) stating that scope of work being put together and requesting a call to Jane Weber (PSI-917-602-4246). Vought also received attached document from Bruce Suffern stating sidewalks

were powerwashed, soil excavation was started to a depth of 12' below grade (approximately 20 cubic yards of soil were removed), and cleanup of basement seepage area. Endpoint samples collected by PSI who will also oversee remediation.

4/18/2003-Vought-Received email from Rolando Arco stating that initial delineation will take place on 4/21 followed by submission of laboratory results and work description to NYSDEC.

4/23/2003-Vought-Received document from Bruce Suffern stating that 23 soil borings were performed in vicinity of UST's. Site plan and analyticals will be sent to NYSDEC.

4/24/2003-Vought-Called Rolando Arco and left message that Vought will call Weber. Vought called Weber and no endpoint samples taken from excavation. Approximately 13 borings performed with 23 soil samples. More borings will be performed on 4/28 to

delineate tanks and lawn contamination. Very minor amount of contamination seeping into basement. Jane Weber will send report by 5/18. Tank #1 still being used despite lack of tightness test. Vought called Thomas Zakarian to affirm requirement of

tightness test and that Tank should not be used until test is performed. Zakarian agreed to have the tank tested immediately.

4/28/2003-Vought-Site visit by Vought on 4/28/2003. Three excavations performed and sealed with plastic 1)soil adjacent to curb excavated to depth of 2' 2)soil adjacent to wheelchair ramp excavated to depth of 4' 3)lawn excavated to depth of 2'. Twenty

three soil borings will be performed by PSI and results will be sent to NYSDEC. Bedrock depth ranging from 16' below grade adjacent to basement to 4' below grade adjacent to curb.

9/16/2003-Vought-NYSDEC requires: 1)Tank testing of Tank #1 2)Results of subsurface investigation 3)Removal of contaminated soil between tanks and building 4)repair of tanks including manway, high level alarm and petrometer. Letter sent to CCNY with the above requirements. Vought called Esther Hundley (212-541-0430) and left message to return call with address for letter.

1/7/04-Vought-Spill transferred from Vought to Austin.

01/27/04 - Sawyer - Spill transferred from Austin to Sawyer.

12/16/05- DEC Piper placed call into rolando at PSI to get update/info.

1/4/06- DEC Piper spoke w/ Tarek at Langan Eng. regarding open spill. Though an investigation was performed, and #2 fuel oil was encountered, and oil was seeping into the basement of the MARshak bld, no remedial measures were taken. Piper placed call into Ester Hundley at CCNY requesting call back. DEC Piper received call form Esther regarding site. She will provide letter regarding status, activities at the Marsack Bldg.

5/8/06-Piper placed call into Ester Hundley at CCNY requesting call back.

5/10/06- DEC Piper placed call into Howard Apsan 212 794 5555- Director of Env Health and Safety, CUNY. Left message requesting callback and info.

4/30/07- DECP iper left message for Brian Newman w. Mgmt co.

Caller Remarks:

e2MIS # 156212.

DEC Investigator Remarks:

11-11-04 @ 06:20 A Figuereo #84445 reports that while working on feeder 2m23 in m44896, located @ sec w 128 St & 7 Ave, he discovered 1/2 gallon of dielectric fluid that had leaked from a 3w1w joint on the feeder he was working on and also discovered 1/2 gallon of unknown oil coming from a duct on the south wall of the structure. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. The source of one leak is a joint and the other is possibly the cable. Spill is on concrete. No private property affected. Environmental yellow tag 41246 was applied. As per conduit plate 53-g-1 there is a sewer connection to this structure. Three samples were taken by A Figuereo #84445 from the spills, 1 for pcb from the joint and 1 for id and pcb from the duct. Chain of custody # dd20572. Sample priority "e". D-fault sign 01378 was placed in the structure due to the possibility that the leak from the duct is coming from cable. Cleanup is pending safe access. CIG P Didonato # 01669 notified bt R Pagano @ 06:32...J Moran #01182

**THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE SEARCH RADIUS FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.**

Caller Remarks:

tank ruptured caused about 1500 gallons to spill.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"  
 cont. soil ltr sent to:

Arthur Weigold

West 134th St Realty Corp

1220 Lexington Ave - Suite 2E

New York, NY 10029

1/28/05 TJD

Initial cleanup by ABC tank cleaners. Tank overfill. 2000 gallons AST had a loose patch on tank top causing discharge to basement floor during delivery. Basement excavated to bedrock. Site inspected no additional soil excavation possible. Permission to backfill given verbally to building manager (sean). Disposal manifest for 15 yds of contaminated soils were submitted. No further action required. Spill closed.

Caller Remarks:

Tank was leaking releasing 5 gal of material onto the dirt floor. Petro will be stopping the leak. Unknown who is doing the clean up.

DEC Investigator Remarks:

Sangesland called Petro requesting further details - Rep will call back

This spill needs follow-up  
 10.28.05 Sharif- I called James Young who was not available at that time.Left messege for him to call back about the clean up of the spill.  
 03/01/06 Sharif Rahman- I spoke with Madeline Reese,(212)828-8573 and she would relay the department's concern to James Young.

03/27/06 Sharif Rahman- Clean up letter went to James Young  
355 W 123rd Street, Apt#1A  
New York, NY 10027

05/11/06 Sharif Rahman- I called Petro ,516-686-2030 and spoke with Keanny @ ext.3324. He informed me the customer's account is not active now and the customer did not respond to fix the tank problem. So, they suspended the delivery due to unsafe condition of the tank.

08/07/06 Rahman- Tried to inspect the baement tank room, but could not get access as no body was found in the house. It looked like the house is now abandoned and no body lives there.Certified mail letter dated May 11' 06 returned undelivered.

Caller Remarks:

2,500-gal gasoline tank removed in mid-1990s, dispenser suspected to have leaked. Spill was not reported at the time.

DEC Investigator Remarks:

Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter issued 9/5/97. - J. Kolleeny

Caller Remarks:

CALLER WAS EMPLOYED TO DO SOIL SAMPLES AND TEST FROM AN ABANDONED  
 TANK USING METHOD 82-70 -- CANTAMINATED SOIL FOUND -- MIKE  
 MULQUENE HAS ALREADY TALKED TO CALLER ABOUT THIS CONDITION

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"  
 7/29/99 Bob Abramo (718-624-7490)- Abra Consulting -called - He has just been hired by the owner to close out this spill. He has a copy of soil boring work & test results for borings done around the abandoned 3,000 gal fuel oil storage tank buried in rear of

shoe store.

Sangesland asked Mr. Obrano to send a copy of these test results along with a 1-2 page description of "Proposed Plan Of Action" for work to be done to clean up the site. Some sort of Bio may be called for since the tank can not be moved.

8/26/99 - Sangesland read the report forwarded by Mr. Abramo and agreed with Mr. Abramo's plan to install 1 or 2 wells in the area around the abandoned tank in the sidewalk. Sangesland said if the depth to ground water was too much (50+ ft) then it would not be representative of the tank (problems could be from further away)..... Problem still remains what to do about the confirmed contamination.

2/11/2000 - Mr. Abramo called to say one well was installed to 27' Sample tested to 8021 and 8270 All results were below limits except (enbyutel benzene 52 ppm). There still is contamination of soil between tank and building. Sangesland asked Mr. Abramo to propose some type of remediation (Bio?) on the trapped soil contamination.

Mr. Abramo proposed ORC. Sangesland said no. DEC requires some type of biological "bugs" which will be injected into the soil to work on the problem above the groundwater line.

5/2/2000 - Mr. Abramo said "Bio Rem" Rep suggests 4 geoprobe type injection wells around the tank along with 1,000 gal of Biorem. Sangesland said to go ahead, leave the site until Sept 1st and then retest the monitoring well. Hopefully it will be clean and can be closed out.

9/25/2000 - Mr. Ed Correll (Soil Mechanics 516-221-7500) was hired by the owner do what it takes to close out the case. Mr. Correll was told of the DEC history on the site. Sangesland asked Mr. Correll to do the following:

- 1) Get specific details on what type of "Bio" work was done in July 2000 (DEC has no records).
- 2) After a "couple" of months, retest the existing well and conduct another geoprobe between the tank and the building to check the condition.
- 3) Prepare a report that either shows the site is clean or "Justifies" why the existing contamination is not a problem Contamination is contained, encapsulated and would undermine the building if it were removed.

If a report is submitted, DEC will review it and determine if additional work is needed.

12/13/2000 - Thomas McCurdy of The Breakthrough Group (856-810-3402) submitted a closure request letter. It states that at some point (approx 8/2000) an application of Bio-Rem was made at two points between the tank and the building. On 10/24/2000 MW-1 was sampled and found non-detect for all contaminants within 8270 & 8021. MTBE = 1 ppb

1/2/2001 - Spill has been closed

Caller Remarks:

TANK TEST PERFORMED WITH GROSS FAILURE AND NO SIGN OF LEAKAGE.  
IN THE ULLAGE PORTION.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD"  
12/03/2001. YK talked to Tony Cagiano (LiRo) @ (516) 938LiRo. LiRo performed test under DDC heating oil contract. Will investigate and remediate site if necessary. Upon completion a report will be issued.

11/05/03. J. Krimgold spoke to Tony Cagiano (LiRo). The tank in

question is an AST incased in concrete. Tank was removed and replaced with a new one. No contamination was found during tank

removal. Mr. Cagiano will send a letter to support this conversation next week.

11/12/03. J. Krimgold received a letter from LiRo stating that no evidence of oil spilled was found during removal of the old AST tank. Also a copy of a tightness test report indicating that a "leak" was found in the ullage portion of the tank was attached. New AST was installed. NFA.

Caller Remarks:

TANK FAILED THE TEST'

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIPPLE/DO"

1/17/03 TJD

Demeo contact Bernie at NYC Tank Testing for additional information regarding tank size and building contact information. Location is unregistered with PBS. NYC Tank Testing was retained for test by Alba Combustion (718 931 1700). Tank is reportably a concrete wrapped 1,080 gallon.

According to NYC Tank Testing a cut manway on top of tank is likely cause of tank test failure. No reported petroleum release at location. At time of test failure 39 inches of product remain in tank. Product has not been removed. NYC Tank Testing has not been authorized to do any additional work.

Rose Marie from Alba Combustion was contacted to obtain owner information and confirm tank size. Information not available at time of inquiry. Alba will call DEC with requested information ASAP.

Alba Combustion called back with contact as follows:

Juan Ortiz - Building Super (917)412-5688

Mercedes Gonzalez - President of Tenants Association(212)662-3373

Juan contacted and stated tank has been leaking for several months. He cleans up the oil leaking from tank enclosure on a daily basis. No plan in place to empty or repair tank.

Mercedes contacted who confirmed situation is an ongoing problem. Location is a HPD building. Mercedes provided following contact for HPD: Ms. Sumada Mena (212) 863-7313

Ms. Mena contacted, she was aware of situatioun at building and confirmed HPD retained NYC Tank Testing to test tank. Demeo directed Ms. Mena to empty tank as leak has existed for months and has not been repaired. Ms. Mena stated she was building coordinator and not the appropriate contact. Demeo was provided contact information for Willie Keskenen from Technical Services Group (212)863-7307. Demeo left message for Willie Keskinen.

Mr. Keskinen Director of TIL/Tech Group from HPD has stated a contractor will be at building today to empty tank and install temporary tank. Address for HPD is 100 Gold Street, NY NY 10038.

Tank Test letter not sent as tank is to be taken out of service for repairs and/or replacement.

Tipple to perform site visit and assess situation.

1/17/2003 TIPPLE VISITED SITE, Spoke with the building super Jaun Ortiz the oil had been cleaned daily since the leak began months ago. The stain on the floor indicates that the oil had never gotten close to the sump area and the floor surrounding the vaulted area is sound. There is a staining on the wall adjacent to the vault indicating the high probability of a leaking fill/vent line in addition to a tank problem.

Building super will call and leave message once the tank is emptied and a temporary tank installed.

05/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.

Talked to Ms. Mena on phone (212)863-7313 she said, They have changed the tank three years ago. New york city owned this building. -QA

Address:

HPD/TIL

100 Gold Street

Room 7 T - 1

NY NY 10038

06/21/06: Called to Willy Keskinen, Deputy Director, HPD. Talked to Ms. Shirley (secretary) regarding information of spill. She said she will convey to Mr. Willy and he will call me back at the earliest. -QA

07/19/06: Called Ms. Sumada Mena and left message to call me back. -QA

07/20/06: Ms. Losario Vera (212)863-5199 called me and said she is trying to get the information regarding spill as soon as she will get she will send it to me. -QA

09/11/06: Called Mr.Willy Keskinen He was not available. Left message at (212)863-7307 Extn. 8893 to call me back regarding spill. -QA

10/12/06: Mr. Berney (718)731-7011 called me and he said he will do more researches and then he will call me back. -QA

10/18/06: Mr. Willie Keskinen, Deputy Director, TIL/Tech (Department of Housing Preservation and Development) sent me a closing confirmation letter to close the spill. According to his letter they hired S.J. Fuel company for clean up work. The purpose of installing a new oil tank was that the existing tank had a minor leak on the tank itself. No oil was spilled on the floor. The existing oil tank was old and replaced with a new tank. Also the basement has a new cement floor in and around the new tank, and shows no sign of oil spillage. Based on these information DEC staff closed the spill. -QA

## Caller Remarks:

tank test failure

-----  
DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "BREEN"  
1/12/2004 spill transferred from Sangesland to Breen

12/21/05 - Mr. Steve Arthur of TDX Construction called and will provide a spill closure petition report shortly. Transferred from George Breen to Koon. - KST

05/016/06: This spill is transferred from Mr. Koon Tang to Q. Abidi.  
Contacted to Ms. Lucy Monell (212)283-9218, she said that she is living temporary there. Left message for Mr. Alfonso Polanco at (212)863-7374 and talked to Mr. Luna (212)863-7385 he will try to get information about the spill and e-mail me. -QA

5/17/06 - mr. Steve Arthur of HPD called and said that he has additional data and a report for this spill. He will drop off the report today. - KST

06/07/06: Called to Mr. Alfonso Polanco, left message to call me back regarding spill. -QA

06/12/06: This spill case transferred from Q. Abidi to J. Kolleeny. Reviewed Request for Spill Closure submitted by TDX on 5/16/06 on behalf of NYCDDC. Tightness test results indicate leak was in ullage (dry) portion of tank. No signs of product leakage or spillage were observed at the time of the test. The tank, reportedly an AST in the building basement, was taken out of service, purged, cleaned and removed by Gemstar in February 2003, and replaced with a new 2,000-gallon AST. Spoke with Winston Deans of TDX on 6/12/06, who said that according to Carmello Saia of Gemstar, no signs of contamination or spillage were observed when the old tank was removed. The new tank has been incorrectly registered as containing unleaded gasoline (PBS form incorrectly filled out - see PBS #2-470740). Based on the information provided, it appears that this spill has not caused an adverse environmental impact, therefore, the spill case is closed. - J. Kolleeny

 New York, NY 10027

Att: Matthew Gentile

02/06/06. Mail of TTF letter is not delivered. I faxed the TTF letter to Matthew 212 866-8626.  
 and talked to him 212-865-3631. He will fax the documents soon.

02/07/06. Feroze. Mr. Matthew submitted the documents that ADVANCED TANK SERVICES CO. fixed the problem and test tank on  
 08/11/03. The tank test was passed. He also informed that they don't have any problem now. The spill is closed.

DEC Investigator Remarks:

9/25/03 TIPPLE SENT REQUEST FOR DOCUMENTATION

5/5/05 MT///Report submitted did not address the Leaking tank.

8/22/2005 Sangesland spoke to Steve Arthur with TDX Construction (718-472-0577). TDX was hired by HPD to complete the work at this site. Mr. Arthur said the old tank at this site failed it's pressure test because of an air leak around the manway. The tank was aboveground in the basement with a cement wrap around it (not underground like the PBS says). In March 2002 the old tank and piping was removed from the site and no contamination was found. A new tank was installed with all new piping and an overfill prevention system. -- Spill Closed

12/30/05 - A letter was sent to the property owner requesting all available information regarding steps taken to address the

spill case (J. Moras).

1/11/06 - I received a call from Steve Arthur (TDX Construction) yesterday; at that point I realized the spill had been closed out in August by Region 2 staff. Mr. Arthur requested an NFA letter, which was sent out today (J. Moras).

Caller Remarks:

BROKEN GAUGE - NO PRODUCT IN TANK AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"

6/8/05 - Site transferred to TLGibbons in Central Office

8/5/05 - Called Phil Fazin, Crown Leak Detection, 516-939-2959, who reported tank test failure on 2/15/01. He said the job was referred to Petroleum Tank Cleaners, Inc. (PTC), 718-624-4842, for repairs. Spoke to Diana at PTC and she said had the files on this spill and faxed them to me. On 2/8/01, PTC dug soil to tank and replaced vent line and fill line, plugging old fill line and cementing old fill box. On 2/20/01, PTC performed a tank test which failed. On 3/6/01, PTC removed tank assembly and replaced, retested tank and it passed. I asked about whether any contaminated soil had been identified. She said that no contaminated soil was found. Close spill

**Caller Remarks:**

tank test failed.dont supect any release.repairs will be made

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER"  
9/24/04 Sangesland spoke to "Ester" at the facilites office.

Property is part of CCNY Campus.

According to her notes, one tank failed because of a leaking gasket on the manway. The other tank failed because of air bubbles in the "drop tube".

Repair work is being done and the school has rescheduled another tank test for 9/30/04.

01/03/05 - Sawyer - Talked to Ester at CCNY Campus and she will find documentation on what was done to repair the tanks.

09/13/05- Jacob-During repairs which was done on October 28, 2004, stained soil that exhibited an organic odor was encountered under the concrete slab on and around UST#2.Langan collected four endpoint soil samples. The analytical results from the endpoint soil sampling are presented on table 1 & 2 on appendix E on closure report, dated July 6,2005.

Caller Remarks:

THERE IS CONTAMINATED SOIL. CLEAN UP IS IN PROCESS.

DEC Investigator Remarks:

07/13/06 Rahman- Ronaldo Arco of PSI @212.889.0294 called DEC, they have taken out 35,000 gallon tank. The tank was sitting on concrete slab and three of the side walls are building structural and other side is bed rock. They will send DEC the pictures.

08/09/06 Rahman- Inspected the site with DEC Veronica Zhune on 08/07/06 morning.PSI completed the removal of one 35000 gallon UST at the site.The tank location is on top the hilly area compared to the surrounding area.The sidewalls and bottom of the excavation were either bedrock or concrete, and no visible sheen was observed on the water.A total of 786 tons of contaminated soil were excavated and disposed.PSI excavated all soils between the former tank location and the Y building to an approx. depth of 20 ft below grade. VOCs were not detected in soils. SVOCs were detected. Detected compounds are PAHs,PSI recommended, a subject of SVOCs typically found in historic urban areas such as Manhattan.No VOCs or SVOCs were detected in the July 21st water sample. There was no visual evidence of any sheen on the water on or after July 21,2006. Based on the site inspection,work performed to remove contamination and analytical data, NFA is required.

Caller Remarks:

ODORS EMINATING FROM SUMP IN BASEMENT, TANK TESTS ORDERED BY FIRE DEPT.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL"  
 12/2/2003 transferred from Sangesland to Rommel

3/17/05-Vought-Spill transferred from Rommel to Vought.

9/26/05-Obligado-Spill transferred from Vought to Obligado

8/31/06 - Obligado - Phone message from Joey Peck at Amerco inquiring as to this spill number. I reviewed a Closure Report for this site from 1994. According to the report, the tanks were abandoned in place with concrete slurry. 4 soil borings were advanced adjacent to the USTs, one in the vent pipe area, and one in the fill port. Only minor PAH exceedences. Called Joey Peck and told him to submit a Closure Petition including a investigation into the basement sumps with a PID to ensure no more odors emanating from sumps.

9/25/06 - Obligado - Review letter report from ERM documenting vapor investigation. No existiting basement or crawl space and the property. Found a former sump that has been filled with concrete. No vapors were detected in building or around former sump. Discuss with Joe Sun. This spill is closed due to tanks have been removed in 1994, with no VOC impacts in endpoint samples, and no more vapor issues, and due to historic nature of spill.

POSSIBLE FEEDER LEAK. UNKNOWN AMOUNT OF FLUID MIXED WITH WATER - APPRX 2000 GAL TOGETHER

162703.000

DEC Investigator Remarks:

162703. Also see 0512307.

Jan 24, 2006. @ 20:15 L. Crilley #15214, from Transmission Operations, discovered 2000 gallons of oil mixed with 1000 gallons of water in MH-61734S. As he was doing an inspection. The oil came from an adjacent structure. All State was on location cleaning the adjacent structure, at the time the oil was discovered. All State will be cleaning MH-61734S also. Feeder M52. 345KV. No smoke/fire involved. No sewer/waterways affected. No injuries related to the spill. Weather conditions did not contribute to the spill. Substance; dielectric fluid. Cause; unknown. Source; adjacent structure. No private property affected. No environmental tag will be hung, as per Crilley. No standing water. No sewer connection. No visual water movement. The oil/water has already been removed by All State. Clean-up is in progress. Logger: T. Haynes 82326

Caller Remarks:

i gallon of unknown oil spilled onto 75 gallons of water in a manhole. Unable to be cleaned up because of parking restrictions.  
 e2MIS # 156332.

DEC Investigator Remarks:

Richard Hudak 42514 found approx. one gallon unknown oil on top of approx. 75 gallons of water. There is no oil filled equipment in the structure. There is standing water but no visual movement. Unable to see sump, there is no sewer connection and no substantial cracks. Spill tag #41934 installed. There is no evidence of release to sewer or waterway. Two liquid samples taken for PCB and Oil Id.

Lab Sequence Number: 04-09682-001 @ 17:13 Date Approved: 11/22/2004 PCBs < 1 ppm

12/19 @ 15:05

The Final cleanup has been completed today at 14:30 hours. No solid waste was removed. All liquids were removed by the Vactor truck. The structure was double-washed with "SLIX". The Environmental tag # 41934 was removed. There was no visible sign of the source of the spill.

Caller Remarks:

FEEDER IS LEAKING: NOT SURE WHERE THE LEAK IS: CREW IS SEARCHING FOR IT: HASNT BEEN CLEANED UP YET:

\*\* SPILL WAS LOCATED ON BROADEAY & WEST 132ND STREET CONTAINED TO MANHOLE APX. 1100 GALLONS OF FEEDER OIL: CALLED BACK AGAIN AND IT IS CONTAINED TO A DIRT EXCAVATION:

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
6/22/04: met on site with Frank Nickolauk (S&TO). Leak was located outside W. 132nd St. PURS on 5" recirculating line. Clamp installed. Crew is removing coating to measure for permanent barrel. Once welding is complete, soil remediation will begin. (JHO)

6/24/04: Spoke with Frank Nickolauk - excavation is approx. 24' long by 9' wide. Sampling scheme set up as follows:

- 4 samples from floor equally spaced
- 4 samples from sidewalls approx. 1' off floor
- 1 sample from each end wall approx. 1' off floor

All will be analyzed for TPH via EPA modified 8100, and for total benzene. (JHO)

7/8/04: initial sample results received. TPH values high (16,000 to 40,000 ppm) on floor, northw all and east wall. Requested additional excavation and sampling. (JHO)

7/23/04: excavation extended north and east (new dimensions 36' long x 10' wide x 8' deep). Sample results indicate continued elevated TPH (11,000 to 17,000 ppm) on floor of excavation only. Requested additional 1 foot depth be removed, resampled. (JHO)

8/2/04: Additional soil removed, sample results indicate still have some limited areas of elevated TPH immediately below leak location. Met on-site with Leon Paretsky and Larry Crilley (S&TO). Excavation below barrel is down to 9' 6". Floor is boulders/bedrock (no more soil to be removed). According to Crilley, rainwater over last weekend accumulated in trench and no sheen was observed. Cannot excavate any deeper. OK to backfill. Close out. (JHO)

~~~~~

e2mis no. 153976:

P Abel #10966 reports that the leak detection alarm on feeder m52 in w 49 st sub station detected a leak on the feeder. Abel stated that the differanc in oil from the sister feeder was 109 gallons and leaking at a rate of 63 gallons per hour.

e2mis no. 153980:

THIS IS A CONTINUATION OF INCIDENT E2MIS 153976 (LEAK DETECTION ALARM ON FDR 52 WEST 49TH ST SUBSTATION).

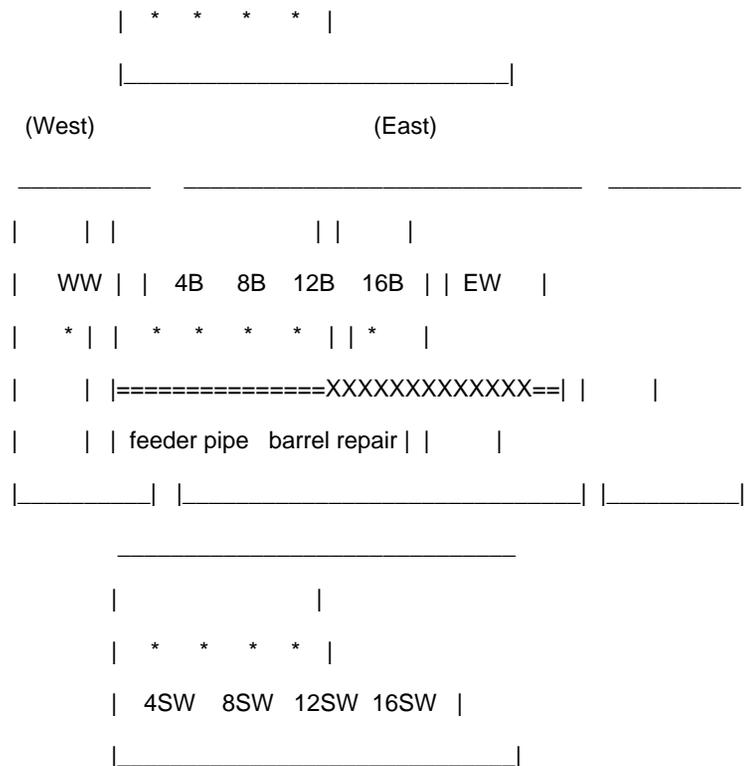

5 crews from TO and CGO checking manholes. At 23:28 PFT was picked up in air by 132nd St Cooling Plant. CP was inspected again and no leak was found. Barholes were placed along 132nd St between CP and Broadway. At 03:00 6/22/04 feeder was placed on reduced pressure. At 05:00 signal was pinpointed to between 2 barholes and excavation was started approx 300' w/o Broadway on 132nd St. At approx 06:45 dielectric fluid was found in excavation. Excavation continues to uncover leak. At 07:00 CSD reports that leak rate was greatly reduced when 132nd St CP was shut down. Excavation continues and temp clamp installed at 08:00 but not holding 100%. CTW removal continues to find good pipe for welding.

Additional dielectric fluid is being removed from excavation; bucket is under clamp to collect dielectric fluid seeping from temporary clamp. Per conversation with John Hegarty, Manager, Manhatten Substation, preliminary estimate of amount of dielectric fluid released is about 1100 gals.

Clean Ventures removed 25 yd of material under CVCC052043 on 6/23/04 and 206.5 gallons of liquid under CVCC052042 on 6/22/04.

On 6/22/04 Clean Ventures removed 25 yards of material under CVCC052041. On 6/24/04 Clean Ventures removed an additional 25 cubic yards of material under CVCC 052045.

On June 25 soil samples were taken by Jacques Whitford and analyzed for dielectric fluid via method 8100 and benzene (total and TCLP) to determine the extent of any residual contamination in the soil. The excavation was about 16 feet long, 10 feet wide and about 6 feet deep. The sample results are summarized below (Chain of Custody no DD18036, LSN No 04-0989). The samples were

On July 7 the excavation was reinspected. The excavation had been extended widthwise to about 24 feet; the plans are to remove additional soil from the bottom and extend the excavation. Resampling of the excavation will then be conducted.

3 gal unk oil on 1000 gals of water - sample taken - clean up pending lab results

con ed #139086

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
 Con Ed e2mis Notes:

8/23/01 While working in manhole, Transmission Operations discovered 3gal unknown oil on 1000gal water. Source of the spill and cause of the spill are unknown. It spilled onto concrete manhole floor.

Spill was reclassified from a 24hr spill to a "Spill-Oil(unknown type)" due to lack of manpower.

Sample returned <1ppm PCB. S&D Environmental removed all visible traces of oil and washed stained areas. Cleanup was completed on 8/27/01.

Contaminated soil discovered during site assessment for tank closure.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"
Transferred from Tibbe to Vought on 9/3/03.

9/17/2003-Vought-File review by Vought:

UST Closure Report-Dec 1992-Rose, Beaton and Rose-Scott Carter-Abandonment in place of two (2000-gallon) gasoline USTs. Inspection of excavation "revealed no evidence of loss of product". Site occupied by New York Telephone. Two soil borings were performed for the purpose of "site assessment", one north of UST and one south of UST. Soil samples analyzed for BTEX showed no TAGM exceedances. Soil samples obtained from depth of 10'.

Tank Closure Report-Nov 1994-Stearns and Wheler-Summary of Dec 1992 report by Rose (see above). Groundwater present at 12' during installation of two new (2000-gallon) gasoline USTs to replace those previously abandoned.

Meeting of DEC(Tibbe) with Lexcion and Bell Atlantic results in DEC requiring additional soil borings.

Limited Subsurface Investigation Report-May 1999-Site occupied by Bell Atlantic-Report by Lexicon-Five soil borings performed in Oct 1998. Groundwater estimated to flow to the southwest. Boring depths were up to 13'. Sample analyticals from SB-3 showed up to 2480000ppb total VOCs. SB3 is downgradient from abandoned USTs. Report recommends installation of monitoring wells.

May 1999-Meeting of DEC(Tibbe) with Lexicon and Bell Atlantic results in DEC requiring four monitoring wells.

Limited Subsurface Investigation Report-May 2000-Lexicon-Installation of four monitoring wells to a depth of 17'. Groundwater flows to the east. Groundwater analyticals show up to 741ppb benzene(MW4), 3100ppb toluene(MW4), 547ppb naphthalene(MW4), 896ppb MTBE(MW3) and 4.28ppb benzene(MW1). MW3 located adjacent to former piping run. Report recommends three quarterly sampling events.

June 2000-Meeting of Verizon, DEC and Lexicon resulted in DEC requiring delineation downgradient of MW4. Monitoring well (MW5) was installed to a depth of 17'in Nov 2000 due to basement renovation. Lexicon requests no further action due to "decrease in VOC concentrations by two orders of magnitude". Groundwater flow to the east. Groundwater analyticals of MW5 showed non-detect. Groundwater samples from other wells showed up to 93ppb benzene(MW4), 19.1ppb benzene(MW1), 136ppb MTBE(MW5) and 22.3ppb MTBE(MW3).

Groundwater Monitoring Reports-Nov 2000 thru Nov 2001-Lexicon-Reports sent on behalf of Verizon. OPR injection plan implemented in April 2001 injecting 270lbs of ORC at 16 locations. Post ORC injection groundwater samples showed up to 136ppb benzene(MW4), 31.2ppb MTBE(MW3), 134ppb MTBE(MW2), and 13.87ppb benzene(MW1). Aug 2001 samples show up to 124ppb benzene(MW4), 26.2ppb MTBE(MW3), 298ppb MTBE(MW2) and 10.9J(MW1).

Update Reports-Envirotrac-Jeff Bohlen (631-471-1500)-Sept 2001 thru March 2003-March 2002 report shows groundwater flow direction is to the northwest is sampled on a quarterly basis. Five monitoring wells on-site. A second ORC application took place on 5/16/02 of 300lb at ten locations. June 2002 report shows groundwater flow to the northeast. September 2002 report shows groundwater flow to the east-southeast. Dec 2002 report shows groundwater flow to the east-southeast. March 2003 report shows groundwater flow to the north-northeast. Groundwater analyticals from March 2003 show 21ppb benzene(MW4), 670ppb toluene(MW4), 2260ppb xylene(MW4), 71ppb MTBE(MW4), 14ppb MTBE(MW2).

9/17/2003-Vought spoke with DEC Rommel and DEC requires delineation up and downgradient of most contaminated well (MW4). If analyticals from borings pass TAGM then closure will be granted upon sensitive receptor survey. If analyticals indicate contamination a more aggressive remediation technique will be required. Vought sent letter with above requirements to Envirotrac (Jeff Bolan-516-807-8983) and Verizon. Vought called Bohlen to explain requirements. Vought called Kung to explain requirements and for fax #.

9/18/2003-Vought-received call from Jerome Kung (F)212-687-3457 cell-646-483-6554. Vought called Kung to explain requirements.

9/26/2003-Vought-Received call from Jerome Kung-Borings will be performed on 10/1/03.

10/1/03-Vought-performed site visit. Borings unable to be performed due to contractors blocking access driveway.

11/6/2003-Sun-File Review by Joe Sun-

Update Reports-Envirotrac-Jeff Bohlen (631-471-1500)-April 2003

thru October 2003-June 2003 report shows groundwater flow

direction is to the northwest and was sampled on a quarterly basis. Seven (7) monitoring wells on-site. Ground water samples were collected from existing on-site monitoring wells MW-1 thru MW-5 on 9/17/2003. In response to a letter from the NYSDEC dated 9/18/2003, two (2) additional monitoring wells MW-6 and MW-7 were installed at the site to a depth of 16' on 10/7/2003. October 2003 report shows groundwater flow to the northeast. Ground water samples were collected from MW-6 and MW-7 on 10/7/2003. The results of the third quarter ground water monitoring event indicated a decrease in dissolved VOC concentrations in existing monitoring wells MW-1, MW-2, MW-3, MW-4 and MW-5. MTBE was detected in MW-6 and MW-7. The soil samples from immediately above the groundwater interface from both borings for MW-6 and MW-7 indicated that VOCs were not detected in either of the soil samples collected. Groundwater analyticals from October 2003 show 740ppb toluene(MW4), 120ppb Ethylbenze(MW-4), 2200ppb xylene(MW4), 110ppb MTBE(MW6), 37ppb MTBE(MW7).

11/6/2003-Sun-Based on soil and ground water sampling data of October 2003 Report, and no sensitive receptor up and downgradient of most contaminated well (MW-4), and also based on overall downward trend of chemical concentrations of compounds, and direction of DEC Remediation Supervisor (Jennifer Rommel), this Spill # 03-30031 is closed today by Joe Sun..

21-FEB-2003 @ 12:15

At the location of 603-11 W 129 St in V-3098 found approx. 300 gallons of oil and water mixed. Samples taken PCB & ID. Sewer connection not verified. No sump pump. Clean up pending tanker and crew.

Aroclor 1242 < 1.0 ppm EPA 608/8082

Aroclor 1254 < 1.0 ppm EPA 608/8082

Aroclor 1248 < 1.0 ppm EPA 608/8082

Aroclor 1260 < 1.0 ppm EPA 608/8082.....J Moran #01182

Due to system being down input was delayed

UPDATE 02/22/03 05:55 hrs.

V Mannino # 56899 operating supervisor reported to N.Muldoon # 18723 that the partial cleanup was complete. 2000 gallons of oil and water mix was removed from the vault and 210 gallons of oil was removed from the transformer. The vault was double washed with slix. Spill tag # 36385 was left in place. Final cleanup will be completed when the unit is removed. Cleanup persons can be found in the Event Involved Persons Screen.

2/23 @ 19:25

LSN # 03-01479-001 @ 18:26

Date Approved - 2/23/2003.....Date Received and sampled - 2/21/2003

Oil Identification Analysis by NYSDOH 310-13 (Hydrocarbon Scan)

MATRIX: LIQUID GRAB

LOCATION: F/O 603-11 W.129 ST

STRUCTURE: VAULT 3098 FEEDER ID: 2M29

Analysis indicates the presence of a substance similar to a dielectric fluid.

Update 4-11-03

J Liguori #14084 reports that the cleanup is complete as of 05:30. Double washed with slix and flushed. Transformer removed. Tag # 36385 removed.

DEC Investigator Remarks:

e2mis no. 154815:

1 gal of unknown substance on top of 300 gal of water. He stated substance is bright red. Clean up pending results.

Lab Seq. Number: 04-06338-001: Insufficient amount of sample extracted to perform oil identification.

Lab Sequence Number: 04-06337-001: PCBs < 1 ppm

Lab Sequence Number: 04-06337-002: Flash Point, PMCC > 140 deg F

08/16/04 15:20

G.Sullivan#82558 notified the control center on 08/16/04 at 15:07hrs. that the cleanup in M27844 was completed. This was a final cleanup. There were no solids removed and no drums or barrels used in the cleanup of M27844. There was 2100 gallons of liquids removed via tanker from M82558. The method of wash was double washed with slix. The environmental tag #18715 was removed from M27844. The source and cause of the spill is still unknown at this time. The cleanup was completed on 08/16/04 at 13:00hrs. G.Sullivan#82558 notified the control center that after the cleanup was completed, the reddish water started to enter M27844 again. S.Martis#86576 of ERT was notified and said he was going to investigate. S.Martis#86576 notified the control center 14:50hrs. to say that it was O.K. to close out the E2MIS report. S.Martis#86576 also notified the control center that there is a sink hole next to M27844 and in the sink hole there are some purplish or hot pink rocks that when water passes by them could be the cause of the reddish fluid in M27844.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

APPENDIX B SITE 69

SPILL ORIGINALLY SENT TO R3. IT IS IN R2. BOB CORCORAN 12/27/2000.

12/13/00 Con Ed monitor (Okwuoha) and regional staff Mark Tibbe responded off hours to 70gal/hr dielectric fluid leak at Broadway and LaSalle. Spill came from leaking feeder that runs from W 49th St Substation to a substation in Yonkers. Cleanup and repair were in progress upon arrival. Con Ed said oil samples had been taken and soil samples will be taken after cleanup is completed.

12/15/00 Okwuoha Notes: Spoke with John Monahan. Spill location covered with steel plates, however Con Ed dug up soil 30m south of spill spot in order to remove the asbestos coating and put on a new hand wrapped coating. Instructed John that sample results must be faxed over before backfilling can be authorized.

2/6/01 Met with J. Tranchina and Chem Lab at 123rd St and Broadway. Will take samples for TPH. (KMF)

7/2/04 Spill submitted for closure. TPH concentrations OK for closure. (JHO)

~~~~~  
Con Ed e2mis #134737:

12/13/00 0855hrs USI Leak detection indicates a leak of 70gal/hr on fdr M52. Gas Corrosion dispatched to patrol run of feeder and inspect manholes. Two PFT vans dispatched to patrol feeder. Substation Operations to inspect all associated equipment. Feeder M52 runs between the W 49th St and Sprainbrook Substations. S&D to patrol river crossing.

TO sent 2 crews to check Manhattan and 2 crews to check Bronx and Westchester. Both PFT vans out running feeder. Feeder removed from service at 09:48. At 1300 barhole crew requested to sample from 125th to LaSalle PI. At 1600 Clean Harbors notified to respond and stand by. Excavation started 120' s/o LaSalle PI. At 23:30 12/13/00 temp clamp installed. Custom barrel fabricated and installed 23:00 12/14/00. ETI performed 3rd party weld inspection. Feeder returned to service at 05:13 12/15/00. Other damaged sections of pipe found and repairs to be done to them also.

Chem Lab reported 00-11684 <1ppm PCB in fluid, 00-11685 44ppb TCLP benzene in soil and 00-11687 <1ppm PCB in soil. On 12/15/00 Clean Harbors removed 6cu yds of material. CSD reports total loss for leak is 979.5 gal. On 12/28/00 Clean Harbors removed 15cu

yrds of spill material from trench.

Samples were taken in the area of the leak location on February 6, 2001, by a representative from Jacques Whitford. Sample locations were selected by Kerry Foley from the NYSDEC, who was on site. Samples were analyzed by Ecotest Laboratories, for TPH dielectric fluid (by method 8100) and TCLP benzene (LSN 01-01279). The results are presented in the following table:

| Sample location              | TPH Conc (ppm) | TCLP Benzene (ppb) |
|------------------------------|----------------|--------------------|
| North Excavation, Bottom Mid | 6200           | <5                 |
| North Excavation, East Wall  | 3400           | <5                 |
| North Excavation, West Wall  | 3400           | <5                 |

Caller Remarks:

CLEANUP PENDING SAMPLE RESULTS-NO SEWERS OR WATERWAYS AFFECTED.

CON ED #130925

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
e2mis no. 130925:

4 gallons of oil unknown type in manhole 27807. Records show sewer connection, also have open ends of primary cable in manhole #27807 leaking a few drops of dielectric fluid. Spill is distribution dielectric fluid from a 3c primary cable open end. No sample is required cleanup will be treated at 50-499 ppm PCB.

Primary end now sealed by trouble shooter.

DATE AND TIME THE CLEANUP WAS COMPLETED : 04/18/00 , 20:00.

CLEANUP PROCEDURE : OIL AND WATER REMOVED VIA TANKER OVER >50PPM, SHOVEL LEAD CONTAMINATED OILY MUD AND SOLID HAZARDOUS WASTE IN 55 GALLON DRUM'S , FLUSH OPERATIONS USED A HIGH PRESSURE HOSE TO TRIPLE WASHED THE FLOOR AND WALLS WITH BIO-GENESIS SOLUTION (SLIX) , MANHOLE WAS THEN RINSED BY FLUSH TRUCK.

Caller Remarks:

Found in sump. investigating.

DEC Investigator Remarks:

03/09/05: As per an e-mail from NYCT on 3/7/05, "As per our conversation the following is a brief explanation of why the anti-freeze sump had product in it. The vendor was delivering Anti-Freeze and after the delivery an alarm sounded for the sump. After inspecting the cause of this, I found that the OPW overflow prevention valve clapper was broken in the closed position, this prevented the product from entering the tank. The pressure from the beginning of filling blew the loose cap from the top of the stick / fill riser causing the product to fill the sump. The product in the sump dropped and became even with the stick / fill riser because the small drain on the clapper for the overflow let the anti-freeze drop to a level at the top of the stick riser. This stick / fill riser has a dual purpose, one for sticking the tank and the other to house the OPW overflow device. A new OPW overflow device was installed and is operational. This tank was not "overfilled", it was a defect in the OPW overflow prevention valve."

Caller Remarks:

Material was found in a discharge sump. All material is contained to the sump. Location is between Broadway and Riverside Dr. Cause is under investigation and the tank is out of service. The contractor on site is doing the clean up.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE"

06-30-05: 10 gallons of diesel discovered in the discharge sump of tank #5. A contractor was up grading the piping system. Product leaked from the line when the piping was disconnected. Product removed from sump. After piping upgrade was complete, all of the tanks, piping and sumps were tested prior to putting them back in service. They all passed.

Caller Remarks:

Material was found in a fill and discharge sump for tank #2. Looks like sloppy filling of product into tank. Being investigated and process of cleanup is happening as we speak The "sump" is made of fiberglass.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE"  
Oil film in sump, most likely from piping work that had recently been performed. Water was entering the sump through the secondary vent piping, which is outside the building and not sealed. Tank currently out of service while being converted to a waste oil tank. Secondary will be corrected during the conversion process.

Caller Remarks:

WHILE DELIVERING OIL A CAR RAN OVER THE HOSE CAUSING SPILL, SPILL CREW CLEANING UP AND EASTMAN ENROUTE

DEC Investigator Remarks:

Broadway & 135th St  
 During delivery a van drove over the hose and tore a hole in the hose.  
 Heated #6 oil spilled 150 ft west along curb.

Eastmond cleaned the street & sidewalk. There were 3 cars parked that could not be moved. Eastmond used a power washer to get

as much from under these cars as possible.

Castle Oil, Rob Hill, (718) 579-3410

3/1/06 - Raphael Ketani. I spoke to Mr. Hill. He said that 60% of the oil stayed at the fill port area. He said the fill port area is a mess and he is getting A.L. Eastmond & Son to come over and steam clean the area. He said that the rest of the oil ran about 8 cars down the block, but no sewers were affected.

3/2/06 - Raphael Ketani. I visited the site today. There is a black spot 8' X 15' on the sidewalk where fill ports for tanks #1 and #2 are. It was not clear how much staining was still in the street because of the slush all over and the parked cars. There was only a slight perceptible odor. Only a very thin stream of sheen was seen flowing downhill in the street. I called Mr. Hill and told him that the site needs to be cleaned much better. He said that he had called Eastmond several times to get them out to the site. Mr. Hill said that his crew will go out tomorrow to start the cleaning and then he will have Eastmond's crew power wash the sidewalk and elsewhere.

3/15/06 - Raphael Ketani. I called Mr. Hill. He said that he sent one of his crew out there after Eastmond had come out a second time to clean the sidewalk. He said that his crew member reported that the oil hasn't been cleaned up well. Mr. Hill said that he will steam clean the site this Saturday.

3/22/06 - Raphael Ketani. I spoke to Rene (718) 378-3000. He said they couldn't do the power washing last Saturday as the cars were parked against the curb. He said that this Friday they will all be gone and his crew will clean the sidewalk.

5/19/06 - Raphael Ketani. I am closing the case administratively as this was a very small spill and there was nothing in the street and no loose oil on the sidewalk when I made my inspection on 3/2/06.

## Caller Remarks:

during excavation 1 cubic yard of contaminated soil found - spill being treated as 50-499 ppm pcb and will be cleaned up per that protocol - con ed 135334

-----  
DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

2/1/01: 1 cubic yard of contaminated soil. Cause of spill is unknown. No sewers or waterways affected. No injuries. No private property affected. No smoke or fire. (MCO)

2/6/01 Met at site with John Tranchina. Directed him to collect samples for TPH df and benzene. Historical contamination related to feeder M51/52. (KMF)

4/11/03: APPENDIX B SITE NO. 69. SEE SPILL NO. 0010293 FOR ADDITIONAL INFORMATION.

~~~~~  
e2mis no. 135-334:

On February 01, 2001, P. Canty, 77613 of Transmission Operations reported while doing excavation for feeders M51 & M52 he discovered approx. 1 cu yard of contaminated soil. Clean Harbors will be called to remove the contaminated soil. No samples will be taken, treating waste as less that 50ppm, using information from prior reports in same area.

UPDATE

Per P. Canty, Engr. 77613 on February 2, 2001: Clean Harbors started cleanup and a strong odor was noticed. Cleanup was stopped and Chem Lab will be called to take samples. Cleanup will continue pending test results.

Samples were taken in the area of the contaminated soil on February 6, 2001, by a representative from Jacques Whitford. The Jacques Whitford representative noted that there were small (quarter sized) globules of petroleum floating on top of pooled water in the excavation. The contaminants were removed by oil-absorbent pads. Sample locations were selected by Kerry Foley from the NYSDEC, who was on site. Samples were analyzed by Ecotest Laboratories, for TPH dielectric fluid (by method 8100), TCLP benzene, and VOCs (LSN 01-01279). The results are presented in the following table:

Location	TPH (ppm)	Benzene (ppb)	VOC (ppm)
North end, East Wall	4400	<5	NS
South end, East Wall	4100	<5	ND
South end Bottom	1200	<5	ND
North end, West Wall	59	<5	ND
South end, West Wall	390	<5	ND
North end, Bottom	590	<5	ND

Note: The wall samples were taken about a foot off the bottom of the excavation.

Caller Remarks:

50 gal. of material on 200 gal. of water. Third Party spill just came off of 72hr. clock because of quantity. ConEd#203920 Clean up will take some time because ConEd is using a private contractor. No to the five questions.

DEC Investigator Remarks:

05/23/07 - See e-docs for Con Ed report detailing cleanup and closure.

emis no. 203920

1/5/07, 9:30 AM - spoke with Anthony Drummings, Manhattan Electric Ops EH&S. He was at location yesterday with contractor, and they pumped out all free liquid. there is still thick oil on walls. they can't complete cleanup until feeder is made safe. He expects to return tomorrow to power wash and soda balst the manhole. He stated that the material appears to be no. 6 oil even though the oil ID returned as "light fuel oil". The manhole is located in front of a warehouse - he looked for oil fill line but couldn't see any due to pallets on sidewalk. He will get me the address of the building so i can check PBS database. Also, he stated that they had recently cleaned out two service boxes in the immediate vicinity that also had fuel oil - he will check plates to see if they are connected to this manhole. (JHO)

1-8-07. see 0611137. This is a report of 500 gallons of what seems to be No.6 FO in a nearby manhole. conEd report 203955. Breen

2/21/07: site visit conducted with Sarah Carlson (DEC Pet. Rem.) nad Anthony Drummings (Con Ed Man EH&S). Oil was found in 2 manholes, both located downgradient of Columbia University spill (see spill no. 0212031). Oil may be residual from spill reported in 2002. Conduits connect these manholes to 2 vaults/manholes up the hill next to the fill line for CU's tanks. The fill line was found to be leaking, and was excavated and repaired. TRC (consultant for CU) installed ORC injection field for remediation. S. Carlson to follow up with CU, TRC. (JHO)

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

e2mis Notes:

1 quart of unknown oil and approx 50 gal water in S-47174. Sample taken for PCBs. PCB results returned 0ppm. Analysis indicates the sample is similar to lubricating oil. Oil and water removed via tanker under 50ppm. Used high pressure hose to double wash floor and walls with bio-genesis solution (slix). Service box was then rinsed by environment operations. Quantity removed from site and type of container's used: generated two plastic bags of non-hazardous waste. Transported to E 110th St Yard, Manhattan. Accumulation 189gal oil and water. KMF 4/3/01.

5 oz spilled. No to the 5 questions. Ref #163175.

DEC Investigator Remarks:

04/17/06 - See e-docs for Con Ed report detailing cleanup and closure.

04/17/06 - See e-docs for Con Ed report detailing cleanup and closure.

163175. March 03, 2006. @ 12:00 Inspector P. Boyer 09630, Contruction Management. Discovered a stain on dirt, approx. 5 oz. of dielectric fluid in MH-58711, located at E/S Manhattan Av N/O 123 St. Mr. Boyer was on location to inspect structure for new ducts. He found a cut feeder, uncapped. Mr. Boyer saw a underground crew working down the block and asked them to seal and cap the feeder, in which, they did. A red wagon runner is enroute to the location to bring Mr. Boyer a yellow tag and 2 jars. No fire/smoke involved. No sewer/waterways affected. No injuries related to the spill. Weather conditions didn't contribute to the spill. Source/cause; a uncapped feeder. Spill on: dirt. No private property affected. No standing water. No sewer connection. No cracks in structure.

March 04, 2006. On 03/03/06 about 16:00 when red wagon runner arrived on location with environmental tag and jars. Inspector, Bayer wasn't on locations. Runner didn't have a ladder with him to go down in the structure place environmental tag and to take lab samples.

Around 19:00 Flush Supv. Tracey Taylor arrived on locations with environmental tag and jars. He discovered a steel plate over the manhole. Next to the manhole is a excavation. T. Haynes 82326

Incident is taken off the 72-hour clock due to no access to structure. T. Haynes

Caller Remarks:

unk amount spilled on con ed meter and on basement floor - area has been evacuated and ventilated - no clean up

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

Talked with Chris Haas of DEP HAZMAT
10/04/99 am

Chris indicated that there was less than a pound spilled.
He "wrote " Commisioner's orders to the owner to get the clean up completed.
Chris stopped back on Monday and the clean up was completed by
Trade Winds. He also has a copy of the manifest if needed.
Third party on Con Ed equipment.
10/05/99 CAE said to copy Sam(RCRA).

A third party mercury spill found on gas metere and floor of basement of 2276 12 Ave. plastic was placed over spill and door left open to ventilate same. Dep notified at 10:15. Amount unknown at this time and company personnel will not be allowed to enter. Cig and Ert were notified that the event involved history section will not be filled out due to the unknown amount. Chris hass from Dep on location 11:30

Due to third party spill no material will be filled out. The quantity is unknown. The ERT Shah is aware that no quantity will be associated with this report and tht the material history will not be filled out.

spill is on 100gals of water - ref #148519

DEC Investigator Remarks:

E2MIS 148519

5/29 @ 15:21

At 14:59 HRS Diaz # 19010 FOD reported to me that while working on Feeder 2M35 in M-24608 he discovered approx 1 qt of an unknown oil atop 100 gallons of water. No sewer connection as per Conduit plate 51-D-3. The spill was on the Concrete structure floor. Source and the cause of the spill are unknown at this time. Two (2) samples for PCB and ID will be taken. There are no initial cleanup actions taken at this time.

5/29/03 20:59 Received lab results,

Lab Sequence Number: 03-04494-001

Insufficient amount of sample extracted to perform oil identification.

5/29/03 22:19 Received lab results,

Lab Sequence Number: 03-04495-001 TOTAL PCB 51 ppm

5/30/03 05:14 V. Centamore # 88743 Underground/cleanup supervisor called to report that the cleanup was completed at 04:15. An over 50 tanker removed 500 gallons of liquid from the structure. The structure was double washed with pinicle water base cleaner & degreaser. Supervisor V. Centamore reported that the structure was visually inspected and there were no open or unsealed cable ends. The source is unknown.

Caller Remarks:

2 PINTS OF MATERIAL ON A GALLON OF WATER. MATERIAL IS ALL CONTAINED IN A MANHOLE # 24716. SOURCE IS BELIEVED TO BE FROM AN AUTOBODY SHOP. CON ED #156621

DEC Investigator Remarks:

e2mis 156621

Sean Henihan #16850, #9, reported at 15:57 hrs. that he found approx. 2 pints of possible antifreeze and 1 gallon of water in service box SB24716 located in front 1592 Amsterdam Ave & West 138th Street. The source of the antifreeze is an Auto Body Shop adjacent to the service box and the cause is unknown. This is a possible third party spill. There was no fire involved, but there was smoke involved due to the burnouts in the structure. There was no sewer or waterway affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. No private property was affected. There is no oil filled equipment in the structure, no sewer connection, no concrete sump, no visual water movement, no sump pump and no substantial cracks. There is standing water but no movement of the water. Liquid samples will be taken on a priority "E" basis from the spill by Sean Henihan #16850 for PCB and ID for antifreeze. No initial cleanup action was taken. Cleanup is pending lab results since a vendor may have to perform the cleanup.

Update: 12/16/04 @ 17:33 hrs. Sean Henihan #16850 reported at 17:30 hrs. that he installed Environmental Spill Tag #00663 and issued Chain of Custody #AA21643 for the samples.

Dec. 17. 2004

Lab Sequence Number: 04-10489-001 MATRIX: LIQUID GRAB Antifreeze Contamination Present

Update: 2/15/05

Manhattan Environmental Desk made arrangements with Allstate PowerVac to clean this structure on 2/3/05.

>>>>INSERT 2/15/05 >>>>>>>>

Eddie Cox #18594, Operating Supervisor UG North, reported at 09:30 hrs. on 2/3/05 that this service box is in front of an autoparts store. He stated that this is the possible source of the antifreeze.

Update: 2/15/05 @ 16:29 hrs.

Eddie Cox #18594, Oper. Supervisor UG North, reported at 11:38 hrs. on 2/3/05 that the cleanup was completed. No solids were removed. Approx. 100 gallons of water and antifreeze mixed was removed by the Vactor truck from Allstate PowerVac. The structure was double washed with Citrus Clean. The cleanup was performed by Allstate PowerVac. Environmental tag #00663 was removed. The source of the spill was identified as possibly the autoparts store in front of the service box. The cleanup was completed at 10:45 hours on 2/3/05.

#6 FUEL OIL	PETROLEUM	200.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

Caller reports a spill in the basement of the apt building. Unknown cause at this time. Caller had no further information.

DEC Investigator Remarks:

12/14/05-Sharif// I responded to the site this morning after I received the call.About 200 gallons #6 oil spilled on the boiler room floor due to an unclosed valve that was kept open by the super after he had cleaned the filter on oil line to the boiler. Northeast Environmental,Joe Ostrowski,914-777-1930) has been hired to clean up the spill and do remediation if it has impacted the soil.The tank is 5000 gallons capacity UST and spill has not impacted the tank room.
03/21/06 Sharif Rahman- Joe Ostrowski no longer works for North East. I spoke with Dwayne Monaco,914-777-1930 of North East- he is looking for the files and will get back to DEC soon.
03/28/06 Sharif Rahman- Rec'd a clean up statement from North East Environmental.Documents are not sufficient to close out the case. I spoke with Mr. Costanja and asked to provide DEC subsurface investigation report in the boiler room. A letter was sent to Chestnut Holding
5676 Riverdale Avenue-Suite # 307
Bronx, NY 10471
Attn: Jerry Costanja,Fax:(718)543-8600.
04/20/06 Sharif Rahman- Rec'd invoice, bill and photographs of the cleaned site.NFA required.

CONTAMINATED SOIL CAME BACK:

DEC Investigator Remarks:

contaminated soil letter (csl) sent 1/28/2005 to Motiva

3/23/05 - reassigned to Randy Austin per today meeting. HEating oil spill only. KST

Reassigned to Ed Rossan temporarily, until decsion made about permanent reassignment. no action will be taken until that is done

2/2/06 Reassigned from Rossan to Foley. Reviewed UST closure report for one 550gal heating oil tank(2/10/05, Northeast Environmental Solutions) and followup groundwater sampling data(3/31/05, NES). Elevated SVOCs were detected in post-excavation soil samples. North wall had highest concentrations but all were above RSCOs for at least seven compounds.

Groundwater samples were collected in 1/05 from existing MWs. No impacts to groundwater were detected. Contaminated soils remain in place around the former 550gal heating oil tank located east of the on-site building.

01/31/06: See also 9904206 & 9905017. Three spills called in about leaking hydraulic lift systems. The depot had three lifts with resevoir tanks; each resevoir tank was contained in a concrete vault and each lift had a concrete pit under it. Allpiping associated with these lifts were contained in the vault or the pits. NYCT had no information about this secific spills. A site visit was performed on 07/26/05. Product, water and sediment was discovered in the pits and the vaults. NYCT was directed to clean the pits and the vaults and to determine if they were completely concrete. This work was performed in September and October of 2005. Revisited the site on 12/28/05. Pits and vaults were cleaned and the concrete appeared to be competent.

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
#2 FUEL OIL	PETROLEUM	0	GALLONS	0	GALLONS	SEWER

Caller Remarks:

DELIVERY WAS MADE TO THE WRONG TANK WITHIN THE DEPOT. POSSIBLY 1 HUNDRED GALLONS OR MORE. ENTERED THE CITY SEWER SYSTEM. DELAY IN THE SPILL REPORTING DUE TO NO CONFIRMATION OF THE SPILL UNTIL NOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"
 2/22/99 mmm:FAXED TO ECS AND SPOKE WITH PRAVIN PATEL. RAY- NYC TRANSIT CONTRACTOR ON BOARD ALLSTATE. LESS THAN 100 GLS. SOME INTO OWS, CONTRACTOR ARRIVED 2 HOURS AGO, FILLED 4k AST- OVERFILLED- PRODUCT WENT INTO CONTAINMENT AREA, ONTO FLOOR AND INTO THROUGH.

2/22/99 mmm: ON SITE AT 16:30 INTERVIEWED MIKE NELSON, MTA.

CASTLE OIL CAME TO SITE ON 2/20 WITH FULL LOAD TO DELIVER. TA LINE SUPERVISOR AT THE TIME DIRECTED CASTLE TO HOOK UP AND DELIVER TO 4,000 GALLON AERO AST. FILL PORT LOCATED NEXT TO DIESEL ASTS AND TANKS WERE LOCATED NEXT TO THE BUS WASH AREA IN THE CENTER REAR PORTION OF THE GARAGE. ACCORDING TO A COPY OF CASTLE DELIVERY TICKET # 38996 DATED 2/20/99, TRUCK #105, DRIVER JM, DELIVERED 5,557 GALLONS OF #4 FUEL OIL TO THE 4,000 GALLON AST. TA LINE SUPERVISOR THOUGHT THAT THE AST STILL HAD A CONNECTION TO A 15,000 GALLON FUEL OIL TANK IN THE BASEMENT OF THE FACILITY. THE LINE WAS DISCONNECTED WHEN A NEW FILL FOR THE 15,000 GALLON TANK WAS PUT INTO SERVICE. AS A RESULT, THE 4,000 GALLON TANK WAS OVERFILLED BY 1557 GALLONS. TA LINE SUPERVISOR CHECKED TANK IN BASEMENT AND DID NOT SEE ANY RISE IN OIL LEVEL. MTA CONTROL CENTER CONTACTED AT 14:00 HOURS ON 2/20 OF A FIVE GALLON RELEASE. TANK HAD 4" OERVHEAD FILL LINE AND 2" VENT LINE, INDICATING THAT TANK MAY HAVE BEEN PRESSURIZED WHEN OVERFILLED. SEAMS ON TANK STAINED. PRIMARY TANK HAD SIPHON CONNECTION TO SECONDARY CONTAINMENT FROM END MANWAY. SIPHON MOVED MOST OF OVERFILL INTO SECONDARY CONTAINMENT HOWEVER, OIL WAS SEEPING OUT FROM UNDER SECONDARY CONTAINMENT, WHICH MAY HAVE STARTED LEAKING DUE TO PRESSURIZATION DURING OVERFILL. SEEPAGE MADE ITS WAY INTO FLOORDRAINS BUT WAS CONTAINED WITH SORBENT SAUSAGE (PIGS). TA IN PROCESS OF DRAINING OIL FROM SECONDARY CONTAINMENT AND PRIMARY TANK AND PLACING IT INTO 15,000 GALLON TANK IN BASEMENT. ALLSTATE WILL CONTINUE CLEANUP OF DRAINAGE SYSTEM TOMORROW. MTA TOLD THAT THE TANK MUST BE TESTED AND RECERTIFIED IF THEY WISH TO

CONTINUE TO USE IT. GAUGES ON THE #4 OIL AST, AND THE 2x4,000 GALLON DIESEL TANKS ARE ALL BROKEN, AND TANKS ARE GAUGED BY USING STICK READINGS.

***** LATE NOTIFICATION AND ERRORS IN REPORTING *****

11/3/03 - AUSTIN - REASSIGNED FROM MULQUEEN TO NYCTA MONITOR (TIBBE) - END

According to NYCT, Allstate completed the cleanup. Tank was subsequently taken out of service and eventually removed on 03/2001.

Caller Remarks:

THE CALLER STATED THAT A CASING FROM AN ELEVATOR CAR TO THE GROUND IS LEAKING OIL FROM IT DUE TO A CRACK IN IT. NRC # 803852

DEC Investigator Remarks:

7/12/2006 Sangesland spoke to Michael Bullock, facilities manager at nursing home. He said New York Elevator Company was servicing the elevator and they added 65 gallons of hydraulic oil to the system. This oil was "lost" somewhere. They don't see any stains/oil, but some of the piping is below the elevator floor. Sangesland told Mr. Bullock to get the elevator company back to the building and try to get them to find the leak and where the oil went. Sangesland also gave Mr. Bullock names/numbers to several environmental cleanup companies who can find/dig out the lost oil. 10/18/06 Rahman- Eastmond pumped out the elevator pit, pressure washed it and removed 7 bags of debris out of the pit. The elevator pit is 70 ft deep. Invoice was provided for the job. NFA required.

Caller Remarks:

LEAK IN LINE CAUSED SPILL.CONTAINED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"
2/28/01 AFTER EXTENSIVE DISCUSSIONS WITH REPRESENTATIVES FROM BOTH THE CONTRACTOR, THE SCHOOL MAINTENANCE PERSONS AS WELL AS SCHOOL BOILER PERSONNEL. MR AMBROSE, THE PERSON IN CHARGE OF THE EVERYDAY BOILER FUNCTION FOR THE NYC SCHOOL SYSTEM, SAID THAT HIS PERSONNEL DID THE ACTUAL CUTTING OF THE SEVERED SUCTION LINE THAT CONSTITUTED THE HOLE IN THE TANK THE OIL SPILL FLOWED FROM. THIS SPILL WAS CAUSED BY A SERIES OF MISCOMMUNICATIONS WITHIN THE NYC SCHOOL SYSTEM. THE 7500 GAL TANK (#2) HAD NOT BEEN USED FOR APPROXIMATELY THREE YEARS, IT HAD NEVER BEEN REGISTERED AS BEING OUT OF SERVICE, OR RE-REGISTERED AS BEING PUT BACK INTO SERVICE. THE PETROMETERS FOR BOTH TANKS #1 AND #2 DO NOT FUNCTION PROPERLY.

PETROLEUM TANK CLEANERS INC. WAS HIRED BY THE BOARD OF EDUCATION TO CLEAN THE OVERFILL. THEY HAVE BEEN INSTRUCTED TO VAC UP THE PRODUCT AND POWER WASH THE TANK ROOM BEFORE THE STUDENTS RETRN THURSDAY. IF THE SMELL PERSISTS, THEY ARE TO EPOXY SEAL THE TANK ROOM.

THE SCHOOL MUST COMPLETE THE FOLLOWING:

1. CAP THE LINE, AND COMPLETE THE PLUMBING WORK

2. FIX OR REPLACE THE PETROMETERS

3. TEST THE WHISTLE

03/08/01 Spoke with Frank CARDELLO, THE LINE WAS CAPPED, THE CLEANUP AND EPOXY COATING HAS BEEN COMPLETED.

THERE IS AN ORDER FOR REPAIR OR REPLACEMENT OF THE PETROMETERS

03/27/01 SPOKE WITH FRANK CARDELLO, THE PETROMETERS HAVE BEEN REPAIRED AND THE PLUMBING WORK HAS BEEN COMPLETED

#2 FUEL OIL	PETROLEUM	200.00	GALLONS	0.00	GALLONS	SOIL

 Caller Remarks:

Caller reports driver overfilled an inground tank to an apt building. Spill was onto land and did get into the sewer system. Mystic Carriers will be doing the cleanup.

DEC Investigator Remarks:

Sharif Rahman responded to the site.

02/27/06 Sharif Rahman- On 02/26/06 Sunday I responded to the site. The oilman made delivery to the wrong tank which was almost half full. Approx. 200 gallon came out of the vent line and spreaded over the parking lot and travelled down the street. Mystic was doing the clean up. I suggested to take samples from the vent area. Sewer was impanted. NYC DEP/Sanitation(Mr. Johnson,Shiel#3134) were at the site. Mystic supervisor Michael Heydweiller,(800)635-3855 x211 was coordinating the clean up. Building super is Verny Delao,(212)865-3631,(212)222-1568.

03/16/06 Sharif Rahman- I called the building management office and spoke with Maintenance Director Mr. Matt Gengile,(212)865-3631x204,(201)726-9091. He indicated they did a pretty good clean up- he would convey DEC's concerns regarding the report to Mystic.

06/19/06 Sharif Rahman-EnviroTrac was retained to remove the oil contaminated soil from the vent area. End point samples were taken and analyzed to be clean.NFA required.

Caller Remarks:

spilled onto blue stone: clean up is in progress

DEC Investigator Remarks:

e2mis no. 156200:

On 11/9 at 20:30 Edwards # 03829 reported that while at 630 W 132 st Purs at Pre-cooler #1 on Feeder 51, he discovered a spill a burst of Dielectric fluid from a ruptured disk. Approx one gallon of dielectric hit the Bluestone. The base of the bluestone is sand. Environmental tag # 000400 was hung. No samples were take due to Generator knowledge of Non-PCB. The Bluesone is being shoveled up and a 5-gallon containment pan is being placed under the Blow-down pipe to catch any further spillage. The unit is not leaking now because the original leak was precipitated by a burst of oil buildup.

11/23/04

Operator Mike McGroarty reported to me on 11/18/2004, that this leak has been repaired and can be closed out. The rupture disc on the 51 s precoolers has been replaced. The soiled stone has been removed.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

- B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.
- D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
- D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
- D006 Cadmium
- D008 Lead
- D009 Mercury
- F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a computerized version of the U. S. Census map using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each *Toxic Site Profile*, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a computerized version of the U. S. Census map. These site locations are identified "address-matched."

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxics Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect .

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹
Data attributes updated from: 3/14/2007. Data obtained by Toxics Targeting: 3/14/2007.
New Facilities updated through: 3/14/2007. Data obtained by Toxics Targeting: 3/14/2007.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry. ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.²
Data attributes updated through: 8/15/2007. Data obtained by Toxics Targeting: 8/16/2007.
New Facilities updated to: 8/15/2007. Data obtained by Toxics Targeting: 8/16/2007.

3) **Corrective Action Activity (CORRACTS):** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency¹
Data attributes updated through: 6/6/2006. Data obtained by Toxics Targeting: 6/16/2006.
New facilities updated through: 6/6/2006. Data obtained by Toxics Targeting: 6/16/2006.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. No Further Remedial Action Planned (NFRAP) sites are also included. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹
Data attributes updated through: 3/07/2007. Data obtained by Toxics Targeting: 3/26/2007.
New Facilities updated through: 3/07/2007. Data obtained by Toxics Targeting: 3/26/2007.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination. ASTM required.* Source: New York State Department of Environmental Conservation.²
Data attributes updated through: 8/15/2007. Data obtained by Toxics Targeting: 8/16/2007.
New Facilities updated to: 8/15/2007. Data obtained by Toxics Targeting: 8/16/2007.

New York, NY 10007

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the May 2007 Environmental Assessment Statement (EAS) prepared by Warren & Panzer Engineers, P.C. as well as the November 2007 Phase I Environmental Site Assessment (ESA) prepared by AKRF for the above referenced project. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The existing structure used as a warehouse would be demolished prior to starting the proposed project. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 5 and 6. Soil disturbance would be required during the proposed construction project. The project site is located in Manhattan Community District 10.

The Phase I prepared by AKRF identified several potential on-site/off-site environmental concerns from historic on-site/off-site land uses that have most likely impacted the soil/groundwater at the subject site. Some of these environmental concerns included potential on-site USEPA Class V Injection wells, presence of urban fill material, Asbestos Containing Material, lead-based paint, PCB/mercury containing electrical components, aboveground storage tanks/underground storage tanks (ASTs/USTs) for fuel oil and gasoline storage, etc.

Based upon our review of the submitted documents, DEP has the following comments:

- As a result of Phase I findings, DEP has determined that an adequate soil and groundwater investigation must be completed across the lots 5 and 6. The soil and groundwater analytical findings from the requested site investigation will ensure that any subsequent remedial requirements to

reduce/eliminate all potential environmental/health risks for construction workers and current/future occupants of the site are identified as part of the environmental review for the proposed project. A Phase II Workplan and Health and Safety Plan should be prepared and submitted to DEP for review and approval prior to any investigation work.

- There are no current development plans for Lots 12, 19, and 68, the project/potential development sites, within the proposed rezoning area at this time. However, off-site and possible on-site land uses may have impacted the soil and groundwater at these parcels. Therefore, a Phase I and Phase II Environmental Site Assessment may be necessary to adequately identify/characterize the surface and subsurface soils of the subject parcels prior to on-site soil disturbance for any proposed renovation, new construction, etc. Since these parcels are not under the control of the applicant and access is unavailable, an "E" designation should be placed on the subject parcels which would require that the fee owner of an "E" designated site conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of DEP before the issuance of a building permit by the Department of Buildings (pursuant to Section 11-15 of the Zoning Resolution-Environmental Requirements). The "E" designation also includes mandatory construction-related health and safety plans which must also be approved by the DEP. This will ensure protection of human health and the environment by requiring that suspected hazardous materials associated with these lots would be mitigated before future construction takes place.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact Gosia Pawluszko at (718) 595-6450.

Sincerely,

Terrell Estes

1.0 INTRODUCTION

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the 487 West 129th Street property in Manhattan, New York (the Site). The Site is located on the north side of West 129th Street between Amsterdam Avenue and Convent Avenue, and is occupied by the vacant eastern half of a one-story warehouse. The western half of the warehouse is used for stage set storage. A site location map is provided as Figure 1.

The Phase II study was intended to determine whether past or present on- or off-site activities have adversely affected the subject property. The scope of the Phase II study was based on the findings of the Phase I Environmental Site Assessment (ESA) performed for the site by AKRF, Inc., dated November 19, 2007. The investigation was conducted on February 29, 2008 in accordance with the Sampling Protocol and Health and Safety Plan dated February 2008, and included the collection of soil samples for laboratory analysis at locations shown on Figure 2.

2.0 SITE BACKGROUND

2.1 Site Characterization

The site is located in the central portion of the block bounded by Convent Avenue to the east, West 129th Street to the south, Amsterdam Avenue to the west, and West 130th Street to the north, and comprises Lot 6 of Tax Block 1969. The site is approximately 100 feet wide (east-west) and 195 feet deep (north-south), is currently occupied by the eastern half of a one-story warehouse, and is vacant.

Based on a survey of the site conducted by Albert A. Bianco, Professional Land Surveyor, on April 16, 2005, the site is located at an elevation of approximately 36.4 feet (all elevations given relative to Manhattan borough datum). The north-adjacent sidewalk at West 130th Street is at an elevation of approximately 60.8 to 53.9 feet, above the floor of the subject building, and the building is set back from the north-adjacent sidewalk by about a foot, forming a gap between the sidewalk and the building wall. The differences in elevation between the north and south sides of the building are shown on Figure 3. Below the concrete floor, the top 4.5 to 6.5 feet of soil on the site is fill which consists mainly of sand with traces of gravel, silt, brick, concrete, ash and glass. In two borings, the fill was underlain by sand with traces of silt and gravel, which may be native soil. In the remaining three borings, refusal was encountered at shallow depths, apparently on bedrock.

Although groundwater was encountered in boring SB-2 at approximately 13 feet below grade, no groundwater could be recovered from the boring, which encountered refusal at approximately 14 feet below grade. Based on the shallow depth of refusal over most of the site and that groundwater was not encountered at any other testing location, this water most likely represents a perched water table on the bedrock; there appears to be no surficial groundwater table at the site.

2.2 Proposed Project

The proposed project involves the demolition of the on-site half of the existing one-story warehouse, and the construction of a new residential building with a ground-floor parking garage. Excavation for the proposed construction is expected to a depth of four feet below existing grade.

2.3 Previous Environmental Investigations

To identify potential sources of hazardous materials, a Phase I Environmental Site Assessment of the site was conducted by AKRF in November 2007. The Phase I identified Recognized

Environmental Conditions pertaining to past uses of the site as the Metropolitan Street Railway Company Third Avenue Division Power Station, and the Third Avenue Railway Company car house and repair shop; and past and present uses of the surrounding area, including properties with buried gasoline tanks and/or reported spills in an anticipated upgradient groundwater flow direction and/or in close proximity to the site. In addition, the Phase I noted the presence of floor drains that were suspect drywells. However, during the Phase II, pipes were observed in the floor drains. These pipes most likely connect to the municipal sewer system, and the floor drains are thus not drywells. After 1951, the site was used as a Metropolitan Opera Association warehouse.

NYC Buildings Department records included a 1941 Oil Burner Application and a 1949 Certificate of Occupancy for 495 West 129th Street (the collective address of the on-site and off-site warehouse halves) noted that the building had a boiler room in the cellar. Neither the cellar nor the boiler room was observed on-site, and no evidence of tanks was noted during the site visit or in regulatory databases. A cellar was observed in the off-site western half of the subject building, which contained the Metropolitan Opera warehouse. Although the warehouse employees interviewed during the Phase II had no knowledge of any tanks in the building, the suspect tank indicated by the Oil Burner Application may have been located in the off-site warehouse's cellar in the past.

3.0 FIELD ACTIVITIES

This section summarizes the site investigation activities. Field activities were conducted on February 29, 2008 by AKRF personnel and ZEBRA Environmental Corp. of Lynbrook, New York (ZEBRA). Five soil borings were advanced at the subject property (the four corners and center of the site), as shown on Figure 2.

3.1 Soil and Groundwater Sampling and Analysis

The soil borings were advanced using a track-mounted Geoprobe[®] direct push probe (DPP) unit to a depth of 15 feet below grade or to refusal, whichever was encountered first. The proposed depth of excavation is four feet across the site. However, AKRF attempted to advance the borings deeper to determine the characteristics of underlying soil, which will remain following development, and to determine whether groundwater exists above the bedrock. Refusal was encountered at shallow depths, between 4.5 and 14 feet, in all soil borings.

Eight soil samples were collected at the site for laboratory analysis. Soil samples were collected using five-foot long, two-inch diameter, stainless steel macrocore piston rod samplers fitted with an internal acetate liner. Soil samples were field-screened using a photoionization detector (PID), which measures relative concentrations of volatile organic compounds (VOCs) in the soil. At each boring location, AKRF field personnel recorded and documented subsurface conditions. Soil boring logs are provided in Appendix A.

Soil samples were collected for laboratory analysis from each of the soil borings, based on field observations (odor and staining) and PID readings. The two samples with the highest organic vapor reading were selected for laboratory analysis. If no significant above-background organic vapors were detected, then the samples were collected from the first four feet below grade (the proposed depth of excavation), and from the soil immediately beneath the proposed depth of excavation. Only one soil sample was collected from borings SB-1 and SB-3 due to shallow refusal and the small amount of soil recovered. The soil samples were analyzed by Alpha Woods Hole Labs, a New York State Department of Health ELAP-certified laboratory, for VOCs by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides

by EPA Methods 8081, polychlorinated biphenyls (PCBs) by EPA method 8082, and Target Analyte List (TAL) metals.

Groundwater was encountered at approximately 13 feet below grade in soil boring SB-2. A temporary well point was installed in this boring. Since refusal was met in the boring at 14 feet below grade, a temporary one-inch PVC well was installed with five feet of screen at a depth of 9 to 14 feet below grade. No groundwater was recovered from this boring due to the shallow depth of the well and/or poor recovery time. Based on this information and observations of the remaining borings, it appears that this water is perched above the bedrock, and that there is no surficial groundwater at the site.

Samples slated for laboratory analysis were placed in laboratory-supplied containers in accordance with EPA protocols.

3.2 Field Observations

The concrete floor of the building was located at the level of the entrance to the site from West 129th Street. The north-adjacent sidewalk on West 130th Street slopes down toward the west, and was located approximately 20 feet above the floor level. Soil encountered below the concrete floor during this investigation primarily consisted of uncontrolled fill (sand with traces of gravel, silt, brick, concrete, ash and glass), which was observed to a depth of 4.5 to 6.5 feet below grade. In borings SB-2 and SB-5 in the western portion of the site, the fill was underlain by sand with traces of silt and gravel, which may be native soil. In the remaining three borings, refusal was encountered at shallow depths, apparently on bedrock. Groundwater was encountered at approximately 13 feet below grade in boring SB-2, but no groundwater sample could be recovered from the boring.

Two floor drains were observed in the southeastern portion of the subject site. These drains were identified as suspect drywells in the 2007 Phase I. However, pipes were observed in both drains, which were likely connected to the city sewer and are thus not drywells. A slight tar-like odor was noted in a floor drain, but no staining or elevated PID readings were detected within the drain.

Two test pits excavated as part of a previous geotechnical study were observed adjacent to the eastern and northern walls. Both test pits were approximately one foot deep, and filled with pieces of the concrete floor and fill consisting of black and dark brown sand with traces of gravel, brick, and concrete. An organic odor was noted in the soil in both test pits, but no staining or elevated PID readings were detected.

The headspace of each soil sample was screened for VOCs by opening a cavity in a portion of the sample and placing the probe of a MiniRAE 2000 PID inside the cavity. An elevated PID headspace reading of 157 parts per million (ppm) and a slight petroleum-like odor were detected in a soil sample collected from boring SB-1 at a depth of approximately 5 feet. The sample, however, was primarily gravel and brick, and a sufficient amount of soil was not able to be collected for analysis. A PID reading of 936 ppm, and a petroleum-like odor, were detected in soil collected from boring SB-2 at a depth of approximately 12 to 14 feet. Slight tar-like or organic odors were noted in portions of the other borings, but PID readings remained below 1 ppm. Results of the field screening activities are provided in the soil boring logs in Appendix A.

4.0 LABORATORY ANALYTICAL RESULTS

4.1 Soil Analytical Results

Eight discrete soil samples were collected for laboratory analysis. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum #4046 (TAGM) Recommended Soil Cleanup Objectives (RSCOs). Since the proposed project would involve the construction of a residential building on the site, and remaining on-site soil would be encapsulated beneath this building's foundation, the proposed project would fit the definition of a restricted residential use as defined in NYSDEC regulation Part 375-1.8(g)(2)(ii). Thus, the soil sample analytical results were also compared to NYSDEC Part 375 Soil Cleanup Objectives (SCOs) for restricted residential use. Soil descriptions, observations, and PID readings were recorded on the soil boring logs provided in Appendix A. Laboratory analytical data sheets are included in Appendix B.

VOCs

Fifteen VOCs were detected in sample SB-2 (12'-14') at concentrations between 3.6 and 87 parts per million (ppm). Of these, nine VOCs (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, acetone, ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, naphthalene, and p-isopropyltoluene) exceeded their respective TAGM RSCOs; however, only 1,2,4-trimethylbenzene exceeded the Part 375 SCO. Trace levels of VOCs (including benzene, toluene, acetone, and naphthalene) were detected in samples SB-2 (0'-2'), SB-3 (0'-2') and SB-5 (5'-7'). Sample SB-3 (0'-2') was re-analyzed for VOCs due to the failure of a quality control test for the first analysis; the results of the second analysis are reported.

Sample SB-2 (12'-14') had elevated VOC reportable detection limits (RDL) due to the dilution required by the high concentration of VOCs; as a result, fifteen VOCs had detection limits above their respective TAGM RSCOs. These compounds might be present in the sample above TAGM RSCOs; however, the RDL for these compounds, except vinyl chloride, were below Part 375 SCOs. Thus, of the undetected compounds, only vinyl chloride may have been present in exceedance of its Part 375 SCO.

Based on the distribution of VOCs in the samples and the low levels of SVOCs detected in sample SB-2 (12'-14'), the elevated VOC levels in this sample do not appear to originate from an on-site petroleum spill. The only location where elevated concentrations of VOCs were detected was collected from within the perched water table and may reflect groundwater conditions affected from an off-site source. No elevated VOCs were detected in the sample collected from above this interval (0-2 feet below grade) and no elevated PID readings or odors were noted above the deeper sample collected from 12 to 14 feet below grade. Therefore, this detection of VOCs appears to reflect an off-site source. Soil analytical results for VOCs are presented in Table 1.

SVOCs

Twelve SVOCs were detected in the soil samples at concentrations up to 51 ppm, with six common polycyclic aromatic hydrocarbons (PAHs), including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and phenanthrene exceeding their respective TAGM RSCOs in soil samples SB-1 (0'-2'), SB-3 (0'-2'), and SB-5 (0'-3'). These PAHs, except phenanthrene, also exceeded their respective Part 375 SCOs in sample SB-3 (0'-2'), which had a total PAH concentration of 282 ppm.

All of the soil samples analyzed contained elevated SVOC reportable detection limits (RDL) due to dilutions required by sample characteristics that may interfere with analysis, or by high concentrations of SVOCs. As a result, 33 SVOCs had detection limits above their respective TAGM RSCOs. Thus, additional SVOCs may be present in the soil samples. No Part 375 SCOs exist for some of these compounds, and the Part 375 SCOs for some of the remaining compounds were higher than their respective RDL. However, the RDL for the SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, hexachlorobenzene, indeno(1,2,3-cd)pyrene and pentachlorophenol were higher than their respective Part 375 SCOs, and these nine compounds may be present at concentrations that exceed the Part 375 SCOs.

Based on the nature and distribution of the compounds detected and field observations, the elevated levels of SVOCs are most likely due to the presence of urban fill beneath the site. The boring logs note the presence of ash and asphalt within the fill, which would account for the elevated concentrations of such PAHs. Soil analytical results for SVOCs are presented in Table 2.

Metals

Seven metals (cadmium, calcium, copper, lead, magnesium, nickel and zinc) exceeded their respective TAGM RSCOs, based on average Eastern USA soil background levels, the soil samples, and mercury exceeded its TAGM RSCO in samples SB-2 (0'-2'), SB-3 (0'-2'), SB-5 (0'-3'), and SB-5 (5'-7'). Two metals also exceeded their part 375 SCOs in two soil samples. Lead was detected at a concentration of 1,400 ppm in sample SB-3 (0'-2'), exceeding its SCO of 400 ppm, and mercury slightly exceeded its Part 375 SCO in samples SB-2 (0'-2') and SB-3 (0'-2').

Based on the type and distribution of the identified metals concentrations, the metals are most likely attributable to urban fill. Analytical results for metals are presented in Table 3.

Pesticides and PCBs

No pesticides or PCBs were detected above the reportable detection limits in any of the soil samples. Analytical results for PCBs and pesticides are presented in Table 4.

4.2 Groundwater Analytical Results

Groundwater was encountered at approximately 13 feet below grade in boring SB-2. However, this boring encountered refusal on apparent bedrock at approximately 14 feet, and a groundwater sample could not be collected. Based on the shallow depth of refusal in the remaining borings and that groundwater was not encountered in any other boring, it appears that this water is perched above the bedrock, and that there is no surficial groundwater at the site.

5.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the 487 West 129th Street property in Manhattan, New York. The Phase II study was intended to determine whether current or former on- or off-site activities have adversely affected the subject property. The scope of the Phase II study was based on the findings of the Phase I Environmental Site Assessment (ESA) performed for the site by AKRF, Inc., dated November 19, 2007 and in accordance with the Sampling Protocol and Health and Safety Plan dated February 2008. The investigation was conducted on February 29, 2008, and included the collection of soil samples for laboratory analysis.

Based on a survey of the site conducted in April 2005, the building's concrete floor is at an elevation of approximately 36.4 feet, and is approximately 24.4 to 17.5 feet below the sidewalk grade at 130th Street. Soil encountered below the concrete floor primarily consisted of uncontrolled fill (sand with traces of gravel, silt, brick, concrete, ash and glass), which was observed to a depth of 4.5 to 6.5 feet below the floor. In borings SB-2 and SB-5 in the western portion of the site, the fill was underlain by sand with traces of silt and gravel, which may be native soil. In the remaining three borings, refusal was encountered at shallow depths, apparently on bedrock. Groundwater was encountered at approximately 13 feet below grade in boring SB-2, but no groundwater sample could be recovered from the boring. Based on the shallow depth of refusal on apparent bedrock in the remaining borings and that no groundwater was encountered in any other boring, it appears that the water observed in boring SB-2 is perched above the bedrock, and that there is no surficial groundwater at the site.

Floor drains in the southeastern portion of the site, identified as suspect drywells in the November 2007 Phase I ESA report, were observed to contain pipes, most likely connected to the municipal sewer system, and are thus not drywells. Two test pits excavated as part of a previous geotechnical study were observed adjacent to the eastern and northern walls. Both test pits were approximately one foot deep, and were filled with pieces of the concrete floor and fill consisting of black and dark brown sand with traces of gravel, brick, and concrete. An organic odor was noted in soil in both test pits, but no staining or elevated PID readings were detected.

Eight soil samples were collected from the borings for laboratory analysis. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum #4046 (TAGM) Recommended Soil Cleanup Objectives (RSCOs) and NYSDEC Part 375 Soil Cleanup Objectives (SCOs) for restricted residential use.

An elevated photoionization detector (PID) reading and a petroleum-like odor were detected in boring SB-2 at approximately 10.5-14.5 feet below grade. A slight petroleum-like odor and an elevated PID reading were noted in boring SB-1 at a depth of approximately 4.5 feet, but the sample recovery was poor and consisted mainly of gravel and concrete. A sufficient amount of soil could not be collected for laboratory analysis. Laboratory analysis detected nine VOCs exceeding their respective TAGM RSCOs in sample SB-2 (12'-14'). This sample had elevated VOC reportable detection limits (RDL) due to sample dilution for analysis. As a result, fifteen VOCs had detection limits above their respective TAGM RSCOs, therefore, additional VOCs may be present in the sample that could not be reported above TAGM RSCOs. Only one VOC (1,2,4-trimethylbenzene) exceeded its Part 375 SCO in soil sample SB-2 (12'-14'). Trace levels of several VOCs were detected in samples SB-2 (0'-2'), SB-3 (0'-2') and SB-5 (5'-7'). Based on field observations and the elevated levels of VOCs and low levels of SVOCs detected in sample SB-2 (12'-14'), the elevated VOC levels in this sample do not appear to originate from an on-site petroleum, spill, which would have resulted in elevated VOC and/or SVOC levels in the overlying soil. The elevated concentrations of VOCs in SB-2 (12'-14') may be attributable to an off-site spill that has migrated on-site.

Twelve SVOCs, mainly polycyclic aromatic hydrocarbons (PAHs), were detected in five of the soil samples. Six common polycyclic aromatic hydrocarbons (PAHs) exceeded their respective TAGM RSCOs in soil samples SB-1 (0'-2'), SB-3 (0'-2'), and SB-5 (0'-3'). All of these PAHs except phenanthrene also exceeded their respective Part 375 SCOs in sample SB-3 (0'-2'), which had a total PAH concentration of 282 ppm. All of the soil samples had elevated SVOC reportable detection limits (RDL) due to sample dilutions for analysis. As a result, 33 SVOCs had detection limits above their respective TAGM RSCOs. Thus, additional SVOCs may be present in these samples above TAGM RSCOs. In addition, the RDL for the nine SVOCs were above their respective Part 375 SCOs. Based on the nature and distribution of the compounds detected and field observations, the elevated levels of SVOCs are most likely due to the presence of urban fill beneath the site. In some of the borings, the fill was noted to include ash, which contains high levels of PAHs.

Lead exceeded its SCO in sample SB-3 (0'-2'), and mercury slightly exceeded its SCO in two soil samples [SB-2 (0'-2') and SB-3 (0'-2')]. Other metals were present in the soil samples at concentrations below their respective SCOs. Based on the type and distribution of the identified metals concentrations, the metals may be attributable to the historical uses of the site as a railway power station and a railway car house and repair shop, and/or to urban fill. No PCBs or pesticides were detected in any of the soil samples.

The proposed development would include the demolition of the on-site half of the existing one-story warehouse, and the construction of a new residential building with a ground-floor parking garage. Excavation for the proposed construction is expected to four feet below existing grade. Based on this investigation, on-site soil includes urban fill. Based on observations and laboratory analysis, the southern portion of the site may have been affected by off-site petroleum releases; however, the affected area may be limited to the interval just above the bedrock. All soil and fill excavated as part of site development activities should be managed in accordance with all applicable regulations. If petroleum-contaminated soil or any other type of contamination is identified, it should be managed in accordance with all applicable requirements. All soil intended for off-site disposal should be tested in accordance with the requirements of the receiving facility. Transportation of all material leaving the site for off-site disposal will be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.

Based on observations, a perched water table may be present on bedrock in the southwestern portion of the site, at a depth of 13 or more feet below surface grade. No surficial groundwater is present on the site. Based on the depth of the detected contamination (8 to 10 feet below the excavation depth), it is not anticipated that this will affect the proposed development and dewatering will not be necessary during construction. If, however, dewatering is required, discharge water must meet the New York City Department of Environmental Protection (NYCDEP) criteria for effluent to municipal sewers, in accordance with the NYCDEP Bureau of Wastewater Treatment (BWT) Wastewater Quality Control Permit. Due to the detection of VOCs in the deep soil sample [SB-2 (12'-14') in the southern portion of the site], it is recommended to include a vapor barrier in the building's design to alleviate the possibility of vapor intrusion into the building.

6.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Conclusions and Recommendations, and Limitations, Sections (Sections 5.0 and 7.0), the issue of appropriate management of off-site disposal of soil warrants careful consideration. Any material being disposed of off-site is a regulated waste, and disposal must be in accordance with:

- Requirements of the specific receiving facility;
- Requirements of any agencies overseeing the cleanup/excavation; and
- Federal and state requirements (sometimes in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other ‘clearly contaminated’ materials), the requirements are usually fairly well defined. It is the situation where contamination is not readily apparent (e.g., so called “historic or urban fill” or “construction and demolition debris” or material that may have been formerly identified as “clean fill”) that present the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most of the excavated material is considered “contaminated” for purposes of waste disposal. Concentrations of the various contaminants in historic fill can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than outlined in this investigation. Portions of this material could be classified as hazardous waste.

It is important that the intended disposal facility (or facilities) be identified in advance of off-site disposal. Agency approval is sometimes required for disposal, and the facility will frequently require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and sometimes numerous other parameters (related to size, percentage of liquids, presence of odors, etc.) for acceptance at the facility. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these above reasons, we recommend that professional advice be sought prior to preparing bid documents and contracts incorporating soil disposal.

7.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report may contain conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the enclosed recommendations to be reevaluated or modified.

Chemical analyses may have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for the use solely by Inner City Contracting, LLC. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

New York, NY
Soil Analytical Results

NS : No soil clean-up objective listed
NA : Not Analyzed
U : compound not detected
mg/kg : milligrams per kilogram = parts per million (ppm)
µg/L : micrograms per liter, or parts per billion

Part 375 Soil Cleanup Objectives : Soil Clean-up Objectives listed in NYSDEC (New York State Department of Environmental Conservation) "Part 375" Regulations (6 NYCRR Part 375).

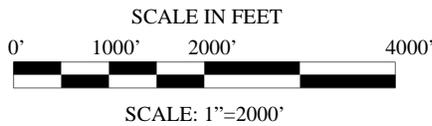

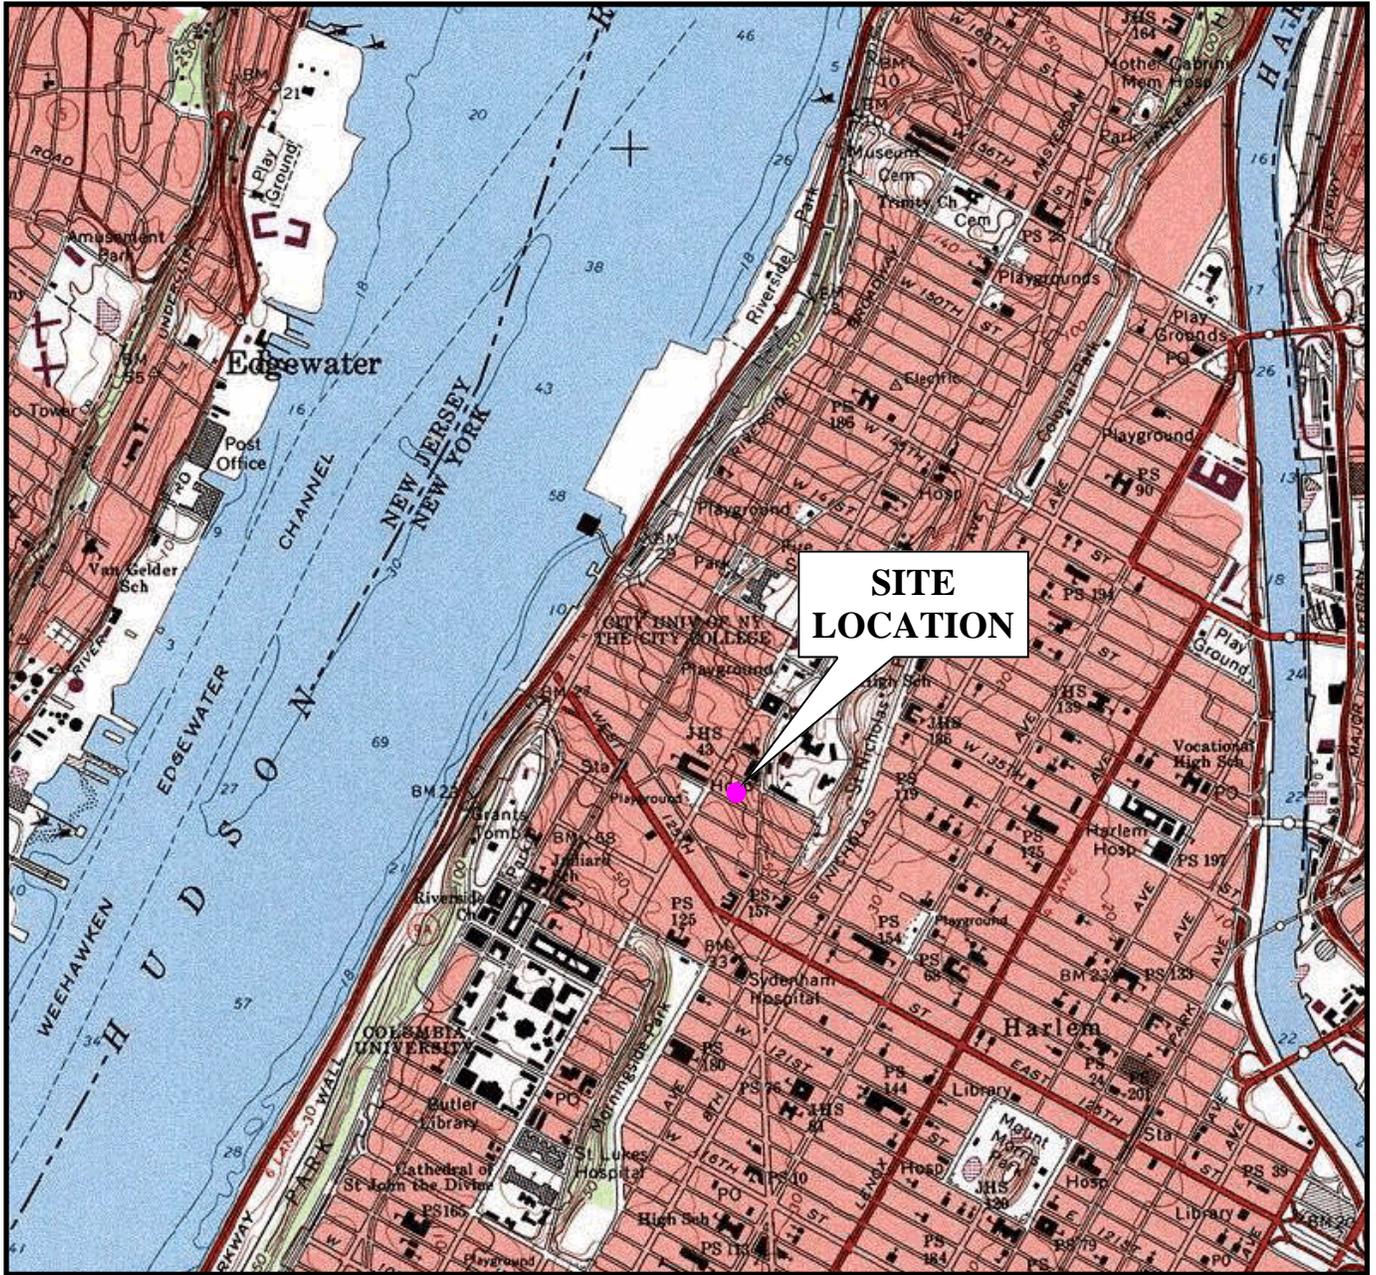

TAGM 4046 Recommended Soil Cleanup Objectives : Recommended Soil Clean-up Objectives listed in NYSDEC (New York State Department of Environmental Conservation) Technical and Administrative Guidance Memorandum (TAGM) #4046

Laboratory analytical methods included the following:

TCL VOCs using EPA Method 8260
TCL SVOCs using EPA Method 8270 (base neutral compounds only)
PCBs using EPA Method 8082
Pesticides using EPA Method 8081
TAL metals using EPA Methods 6010B and 7470A

Analysis results from a field blank sample and a trip blank sample are included for comparison with the sample results in order to indicate the presence of any cross-contamination or laboratory contaminants. Since the field blank and trip blank samples were collected in a water matrix, the blank results are reported in parts per billion (ppb).

Notes: PID - Photoionization detector ND - Not Detected

Groundwater was encountered at approximately 13 feet. Refusal at 14 feet below grade. Installed temporary one-inch well screen at 9'-14' below surface. Groundwater samples were not taken due to poor recovery time. Soil samples analyzed for VOCs, SVOCs, pesticides, PCBs, and TAL metals.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized by: Richard L. Weston
Technical Representative

**ALPHA ANALYTICAL
NARRATIVE REPORT**

Laboratory Job Number: L0802902

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

Sample Receipt

At the client's request, the analysis of sample "FD-1" was placed on hold.

With the client's authorization, the following compounds are not reported on the Volatile Organics list: p-Diethylbenzene, 4-Ethyltoluene, and 1,2,4,5-Tetramethylbenzene.

Total Metals

The samples were re-analyzed on dilution in order to quantitate the samples within the dynamic linear range for Calcium and Iron. The dilutions are as follows:

L0802902-03: 10x for Iron

L0802902-05: 10x for Calcium and Iron

L0802902-09: 10x for Calcium

The WG313283-1 laboratory duplicate RPD for Arsenic is above method acceptance criteria due to sample non-homogeneity.

The WG313460-1 laboratory duplicate RPD for Calcium is above method acceptance criteria, however, the sample and duplicate results are less than 5 times the reporting limit, therefore, the RPD is valid.

The WG313283-2 MS % recoveries for Aluminum, Calcium, Iron, Magnesium, Manganese, and Potassium are invalid because the sample concentration is greater than four times the spike amount added. The MS % recovery for Antimony is below method acceptance criteria. A post-digestion spike was performed with an acceptable recovery of 92%. The MS % recovery for Sodium is above method acceptance criteria due to the concentration (below reporting limit) of this element in the spiked sample.

Calcium is present in the WG313283-3 method blank, however, all associated sample results are greater than 10x the amount detected in the blank.

Volatile Organics

L0802907-04 has elevated detection limits due to the 200x dilution required by the elevated concentrations of non-target compounds in the sample.

The surrogate % recovery for 1,2-Dichloroethane-d4 is above method acceptance criteria on L0802902-05. Re-analysis achieved similar results. The results of both analyses are reported.

ALPHA ANALYTICAL
NARRATIVE REPORT

Laboratory Job Number: L0802902

Continued

The surrogate % recovery for 4-Bromofluorobenzene is above method acceptance criteria on L0802902-07. The sample is non-detect for all target compounds.

Semivolatile Organics

L0802902-03 has elevated detection limits due to the 5x dilution required by the sample matrix.

L0802902-05, -06, and -07 have elevated detection limits due to the 5x dilutions required by the matrix interferences encountered during the concentration of the samples and the 5x dilutions required by the matrix of the samples (total dilutions 25x). The surrogates could not be recovered due to the dilutions required to quantitate the samples.

L0802902-09 has elevated detection limits due to the 10x dilution required by the elevated concentrations of non-target compounds in the sample.

The WG313384-2 LCS % recovery for 2,4-Dinitrotoluene is above, and the LCS % recovery for 2,4-Dinitrophenol is below, method acceptance criteria. The MS/MSD % recoveries are acceptable.

The WG313384-3/4 MS % recoveries for Fluoranthene and Pyrene are above method acceptance criteria due to the presence of these compounds in the spiked sample. The LCS % recoveries are acceptable.

WG313450: An LCS/LCSD was performed in lieu of an MS/MSD due to limited sample volume available for analysis.

The WG313450-2/3 LCS/LCSD RPDs are above method acceptance criteria for 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,4-Dichlorobenzene, and 2-Chlorophenol.

PCB

L0802902-05 has elevated detection limits due to the 2x dilution required by the matrix interferences encountered during the concentration of the sample.

Pesticides

L0802902-05 has elevated detection limits due to the 5x dilution required by the sample matrix.

WG313451: An LCS/LCSD was performed in lieu of an MS/MSD due to insufficient sample volume available for analysis.

Robert Dobruskin
Director, Environmental Assessment and Review
New York City Department of City Planning
22 Reade Street, Room 4E
New York, NY 10007

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the March 2008 Phase II Subsurface Investigation prepared by AKRF for the above referenced project site. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 6. The project site is located in Manhattan Community District 10.

The Phase II concluded that soil disposal requirements for the proposed development project/excavation activities may require hazardous waste disposal/recycling options if future disposal analysis reveals significant contaminant concentrations.

Based upon our review of the submitted documents, DEP has the following comments:

- As a result of Phase II findings, a Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) for Lot 6 should be submitted for DEP review and approval.
- An adequate sub-slab vapor barrier must be installed during the proposed construction project to reduce/eliminate potential on-site/off-site groundwater contamination from impacting the proposed site/structure.
- Due to the elevated concentration levels of volatile organic compounds detected on-site which are associated with an off-site spill and the engineering controls (vapor barrier) necessary to avoid significant hazardous materials impacts, the applicant should enter into a Restrictive Declaration

must be designed to restrict the manner in which the property may be developed or redeveloped, by requiring that additional testing or remediation measures, if required, serve as a condition precedent to any change of use or sub-surface excavation conducted as part of any future development or redevelopment of the property. All other development sites should receive Hazardous Materials "E" designations.

- Please note that the February 2008 Site Investigation was completed without DEP's written Workplan/HASP approval.
- Please note, as previously indicated in our March 21, 2008 correspondence, that based on the results of the Phase I Investigation, all development sites which are not controlled by the applicant should receive an "E" designation for hazardous materials to ensure that the appropriate level of investigation and, if necessary, remediation be conducted to the satisfaction of DEP prior to development of those sites.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact Gosia Pawluszko at (718) 595-6450.

Sincerely,

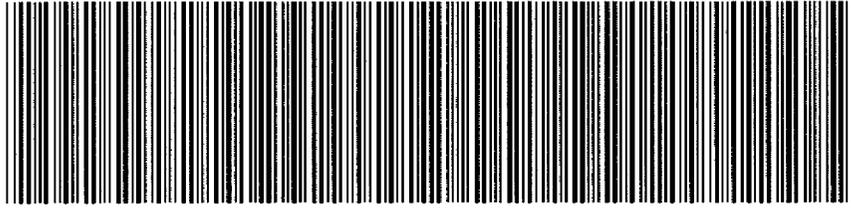

Terrell Estes

DECLARATION

This DECLARATION made as of the 21st day of April, 2008, by West 129th Street Realty I, LLC having an office located at 161 Suffolk Street, New York, NY 10002 and West 129th Street Realty II, LLC having an office located at 161 Suffolk Street, New York, NY 10002 (hereinafter referred to collectively as the "Declarants");

WITNESSETH

WHEREAS, the Declarants are the fee owner of certain real property located in the County of New York, City and State of New York, designated for real property tax purposes as Lot 6 of Tax Block 1969 commonly known by the street address as 487 West 129th Street (the "Subject Property") and is more particularly described in Exhibit A, annexed hereto and made part hereof; and

WHEREAS, Lawyers Title Insurance Corporation has issued a Certification of Parties in Interest, annexed hereto as Exhibit B and made a part hereof, that as of the 17th, day of March, 2008, the Declarants, herein after also referred to as the ("Party(ies)-in-Interest"), are the only Party(ies)-in-Interest (as defined in subdivision (d) of the definition of "zoning lot" set forth in Section 12-10 of the Zoning Resolution of the City of New York) in the Subject Property; and

WHEREAS, all Parties-in-Interest to the Subject Property have executed this Declaration; and

WHEREAS, Declarants have proposed to rezone the Subject Property from M1-1 to R7A and has submitted an application numbered 080039ZMM (the "Application") for review by the New York City Department of City Planning (the "DCP") under the Uniform Land Use Review Procedure (the "ULURP") as set forth in the New York City Charter, sections 197-c, 197-d, 200 and 201 and the procedures set forth in the paragraph immediately following; and

WHEREAS, an environmental assessment of the Subject Property pursuant to the State Environmental Quality Review Act (the "SEQRA") and the City Environmental Quality Review (the "CEQR") is under review in connection with the Application (CEQR # 07DCP076M) and, pursuant to the SEQRA and CEQR, the Department of Environmental Protection (the "DEP") has reviewed the environmental assessment, including the historic land use of the Subject Property; and

WHEREAS, the results of such review as documented in DEP's April 16, 2008 attached hereto as Exhibit C and made a part hereof, indicate the potential presence of hazardous materials; and

WHEREAS, the Declarants desire to identify the existence of any potential hazardous materials and remediate any such hazardous materials found in connection with the development or redevelopment of the Subject Property and has agreed to submit a hazardous materials sampling protocol prepared by a qualified consultant and including a health and safety plan, (as approved

by DEP the "Sampling Protocol"), which shall be submitted for the approval of DEP and to test and identify any potential hazardous materials pursuant to the approved Sampling Protocol and, if such hazardous materials are found, to submit a hazardous materials remediation plan, including a health and safety plan, (as approved by DEP the "Remediation Plan") and upon the approval of the Remediation Plan by DEP, the Declarants shall provide for the remediation of such hazardous materials; and

WHEREAS, the Declarants agree to implement the Sampling Protocol and all hazardous material remediation required by the Remediation Plan, if any, and desires to restrict the manner in which the Subject Property may be developed or redeveloped by having the implementation of the Sampling Protocol and Remediation Plan, if any, performed to the satisfaction of DEP, as evidenced by a writing as set forth herein, be a condition precedent to any change of use or soil disturbance for any such development or redevelopment; and

WHEREAS, the Declarants intend this Declaration to be binding upon all successors and assigns; and

WHEREAS, the Declarants intend this Declaration to benefit all land owners and tenants including the City of New York ("the City") without consenting to the enforcement of this Declaration by any party or entity other than the City.

NOW, THEREFORE, the Declarants hereby declare and agree that the Subject Property shall be held, sold, transferred, and conveyed, subject to the restrictions and obligations which are for the purpose of protecting the value and desirability of the Subject Property and which shall run with the land, binding the successors and assigns of the Declarants so long as they have any right, title or interest in the Subject Property or any part thereof:

1. (a) Declarants covenant and agree that no application for grading, excavation, foundation, alteration, building or other permit respecting the Subject Property which permits soil disturbance shall be submitted to or accepted from the Department of Buildings (the "DOB") by the Declarants until DEP has issued to DOB, as applicable, either a Notice of No Objection as set forth in Paragraph 2(a), a Notice to Proceed as set forth in Paragraph 2(b), a Notice of Satisfaction as set forth in Paragraph 2(c) or a Final Notice of Satisfaction as set forth in Paragraph 2(d). Declarants shall submit a copy of the Notice of No Objection, Notice to Proceed, Notice of Satisfaction or Final Notice of Satisfaction to the DOB at the time of filing of any application set forth in this Paragraph 1(a).

(b) Declarants further covenant and agree that no application for a temporary or permanent Certificate of Occupancy that reflects a change in use group respecting the Subject Property shall be submitted to or accepted from DOB by the Declarants until DEP has issued to DOB, as applicable, either a Notice of No Objection as set forth in Paragraph 2(a), a Notice of Satisfaction as set forth in Paragraph 2(c) or a Final Notice of Satisfaction as set forth in Paragraph 2(d). Declarants shall submit a copy of the Notice of No Objection, Notice of

Satisfaction or Final Notice of Satisfaction to the DOB at the time of filing of any application set forth in this Paragraph 1(b).

2. (a) Notice of No Objection - DEP shall issue a Notice of No Objection after the Declarants have completed the work set forth in the DEP approved Sampling Protocol and DEP has determined in writing that the results of such sampling demonstrate that no hazardous materials remediation is required for the proposed project.

(b) Notice to Proceed - DEP shall issue a Notice to Proceed after it determines that: (i) the Remediation Plan has been approved by DEP and (ii) the permit(s) respecting the Subject Property that permit grading, excavation, foundation, alteration, building or other permit respecting the Subject Property which permits soil disturbance or construction of the superstructure are necessary to further the implementation of the DEP approved Remediation Plan.

(c) Notice of Satisfaction - DEP shall issue a Notice of Satisfaction after the Remediation Plan has been prepared and accepted by DEP and DEP has determined in writing that the Remediation Plan has been completed to the satisfaction of DEP.

(d) Final Notice of Satisfaction - DEP shall issue a Final Notice of Satisfaction after the Remediation Plan has been prepared and accepted by DEP and DEP has set forth in writing, that the Remediation Plan has been completed to the satisfaction of DEP and all potential hazardous materials have been removed or remediated and no further hazardous remediation is required on the Subject Property as determined by DEP.

3. Declarants represent and warrant with respect to the Subject Property, that no restrictions of record, nor any present or presently existing estate or interest in the Subject Property nor any lien, encumbrance, obligation, covenant of any kind preclude, presently or potentially, the imposition of the obligations and agreements of this Declaration.

4. Declarants acknowledge that the City is an interested party to this Declaration and consents to the enforcement of this Declaration solely by the City, administratively or at law or at equity, of the obligations, restrictions and agreements pursuant to this Declaration.

5. The provisions of this Declaration shall inure to the benefit of and be binding upon the respective successors and assigns of the Declarants, and references to the Declarants shall be deemed to include such successors and assigns as well as successors to their interest in the Subject Property. References in this Declaration to agencies or instrumentalities of the City shall be deemed to include agencies or instrumentalities succeeding to the jurisdiction thereof.

6. Declarants shall be liable in the performance of any term, provision, or covenant in this Declaration, subject to the following provisions:

The City and any other party relying on this Declaration will look solely to the fee estate interest of the Declarants in the Subject Property for the collection of any money judgment recovered against Declarants, and no other property of the Declarants shall be subject to levy, execution, or other enforcement procedure for the satisfaction of the remedies of the City or any other person or entity with respect to this Declaration. The Declarants, including its officers, managers and members, shall have no personal liability under this Declaration.

7. The obligations, restrictions and agreements herein shall be binding on the Declarants or other parties in interest only for the period during which the Declarants and any such Party-in-Interest holds an interest in the Subject Property; provided, however, that the obligations, restrictions and agreements contained in this Declaration may not be enforced against the holder of any mortgage unless and until such holder succeeds to the fee interest of the Declarants by way of foreclosure or deed in lieu of foreclosure.

8. Declarants shall indemnify the City, its respective officers, employees and agents from all claims, actions, or judgments for loss, damage or injury, including death or property damage of whatsoever kind or nature, arising from Declarants' obligations under this Declaration, including without limitation, the negligence or carelessness of the Declarants, its agents, servants or employees in undertaking such obligations; provided, however, that should such a claim be made or action brought, Declarants shall have the right to defend such claim or action with attorneys reasonably acceptable to the City and no such claim or action shall be settled without the written consent of the City.

9. If Declarants are found by a court of competent jurisdiction to have been in default in the performance of its obligations under this Declaration, and such finding is upheld on a final appeal by a court of competent jurisdiction or by other proceeding or the time for further review of such finding or appeal has lapsed, Declarants shall indemnify and hold harmless the City from and against all reasonable legal and administrative expenses arising out of or in connection with the enforcement of Declarants' obligations under this Declaration as well as any reasonable legal and administrative expenses arising out of or in connection with the enforcement of any judgment obtained against the Declarants, including but not limited to the cost of undertaking the Remediation Plan, if any.

10. Declarants shall cause every individual or entity that between the date hereof and the date of recordation of this Declaration, becomes a Party-in-Interest (as defined in subdivision (c) of the definition of "zoning lot" set forth in Section 12-10 of the Zoning Resolution of the City of New York) to all or a portion of the Subject Property to waive its right to execute this Declaration and subordinate its interest in the Subject Property to this Declaration. Any mortgage or other lien encumbering the Subject Property in effect after the recording date of this Declaration shall be subject and subordinate hereto as provided herein. Such waivers and subordination shall be attached to this Declaration as Exhibits and recorded in the Office of the County or City Register.

11. This Declaration and the provisions hereof shall become effective as of the date of this Declaration. Within five (5) business days of the date hereof, Declarants shall submit this Declaration for recording or shall cause this Declaration to be submitted for recording in the Office of the County or City Register, where it will be indexed against the Subject Property. Declarants shall promptly deliver to the DEP and the Department of City Planning proof of recording in the form of an affidavit of recording attaching the filing receipt and a copy of the Declaration as submitted for recording. Declarants shall also provide a certified copy of this Declaration as recorded to DEP and DCP as soon as a certified copy is available.

12. This Declaration may be amended or modified by Declarants only with the approval of DEP or the agency succeeding to its jurisdiction and no other approval or consent shall be required from any other public body, private person or legal entity of any kind. A statement signed by the Deputy Commissioner of the Bureau of Environmental Planning and Assessment of DEP, or such person as authorized by the Deputy Commissioner, certifying approval of an amendment or modification of this Declaration shall be annexed to any instrument embodying such amendment or modification.

13. Any submittals necessary under this Declaration from Declarants to DEP shall be addressed to the Deputy Commissioner of the Bureau of Environmental Planning and Assessment of DEP, or such person as authorized by the Deputy Commissioner. As of the date of this Declaration DEP's address is:

New York City Department of Environmental Protection
59-17 Junction Blvd
Flushing, New York 11373

14. Declarants expressly acknowledge that this Declaration is an essential element of the SEQRA review conducted in connection with the Application and as such the filing and recordation of this Declaration may be a precondition to the determination of significance pursuant to the SEQRA Regulations, Title 6 New York Code of Rules and Regulations ("NYCRR") Part 617.7.

15. Declarants acknowledge that the satisfaction of the obligations set forth in this Declaration does not relieve Declarants of any additional requirements imposed by Federal, State or Local laws.

16. This Declaration shall be governed by and construed in accordance with the laws of the State of New York.

17. Wherever in this Declaration, the certification, consent, approval, notice or other action of Declarants, DEP or the City is required or permitted, such certification, consent, approval, notice or other action shall not be unreasonably withheld or delayed.

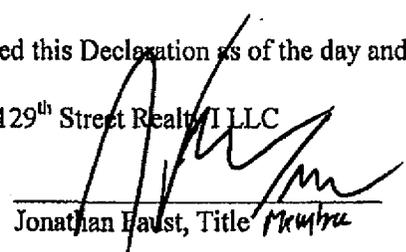

18. In the event that any provision of this Declaration is deemed, decreed, adjudged or determined to be invalid or unlawful by a court of competent jurisdiction, such provision shall be severable and the remainder of this Declaration shall continue to be in full force and effect.

19. This Declaration and its obligations and agreements are in contemplation of Declarants receiving approvals or modified approvals of the Application. In the event that the Declarants withdraws the Application before a final determination or the Application is not approved, the obligations and agreements pursuant to this Declaration shall have no force and effect and this Declaration shall be cancelled.

20. Notice of Cancellation - Declarants may request that DEP issue a Notice of Cancellation upon the occurrence of the following steps: (i) Declarants has withdrawn the Application in writing before a final determination on the Application; (ii) the Application was not approved by the DCP; or (iii) DEP has issued a Final Notice of Satisfaction indicating that all potential hazardous materials have been removed or remediated and no further hazardous remediation is required on the Subject Property. Upon such request, DEP shall issue a Notice of Cancellation after it has determined to DEP's own satisfaction that the above referenced steps, as applicable, have occurred. Upon receipt of a Notice of Cancellation from DEP, Declarants shall cause such Notice to be recorded in the same manner as the Declaration herein, thus rendering this Restrictive Declaration null and void. Declarants shall promptly deliver to DEP and the DCP a certified copy of such Notice of Cancellation as recorded.

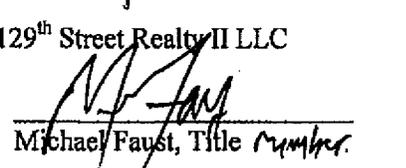

IN WITNESS WHEREOF, Declarants have executed this Declaration as of the day and year first above written.

EXHIBIT A

**LEGAL DESCRIPTION OF SUBJECT PROPERTY
Tax Block 1969, Lot 6**

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of West 130th Street (as now open and in use, 60 feet wide) distant 154 feet 7 inches easterly from the corner formed by the intersection of the said southerly side of West 130th Street and the easterly side of Amsterdam Avenue (as now open and in use, 100 feet wide);

RUNNING THENCE easterly along the southerly side of West 130th Street, 95 feet 5 inches;

THENCE southerly along a line at right angles with the southerly side of West 130th Street, a distance of 198 feet 8-3/4 inches to an angle point (survey) 198 feet 7 inches (deed)

(Tax Map shows 198 feet 8 inches to the northerly side of West 129th Street)

THENCE southeasterly along a line forming an interior angle of 242 degrees 03 minutes 10 seconds with the last mentioned line 2 feet 4-1/4 inches to a point on the northerly side of West 129th Street;

THENCE westerly along the northerly side of West 129th Street a distance of 97 feet 6 inches;

THENCE northerly along a line at right angles with the northerly side of West 129th Street, 199 feet 10 inches to the point or place of **BEGINNING**.

OF THE CITY OF NEW YORK - AS AMENDED
EFFECTIVE AUGUST 18, 1977**

LAWYERS TITLE INSURANCE CORPORATION, a Title Insurance Company licensed to do business in the State of New York and having its principal office at 140 East 45th Street, New York, New York, hereby certifies that as to the land hereafter described being a tract of land, either unsplit or consisting of two or more lots of record, contiguous for a minimum of ten linear feet, located within a single block, that all the parties in interest constituting a party as defined in Section 12 - 10, subdivision (d) of the Zoning Resolution of the City of New York, effective December 15, 1961, as amended, are the following:

<u>NAME/ADDRESS</u>	<u>NATURE OF INTEREST</u>	<u>DECLARATION OR WAIVER</u>
1. West 129th Street Realty I, LLC 161 Suffolk Street New York, NY 10002	Fee owner (Tenant-in-common)	
2. West 129th Street Realty II, LLC 161 Suffolk Street New York, NY 10002	Fee owner (Tenant-in-common)	

The subject tract of land with respect to which the foregoing parties are the parties in interest as aforesaid, is known as Tax Lot Number 6 in Block 1969 on the Tax Map of the City of New York, New York County and more particularly described as follows:

SEE ATTACHED SCHEDULE "A"

SCHEDULE A

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of West 130th Street (as now open and in use, 60 feet wide) distant 154 feet 7 inches easterly from the corner formed by the intersection of the said southerly side of West 130th Street and the easterly side of Amsterdam Avenue (as now open and in use, 100 feet wide);

RUNNING THENCE easterly along the southerly side of West 130th Street, 95 feet 5 inches;

THENCE southerly along a line at right angles with the southerly side of West 130th Street, a distance of 198 feet 8-3/4 inches to an angle point (survey) 198 feet 7 inches (deed)

(Tax Map shows 198 feet 8 inches to the northerly side of West 129th Street)

THENCE southeasterly along a line forming an interior angle of 242 degrees 03 minutes 10 seconds with the last mentioned line 2 feet 4-1/4 inches to a point on the northerly side of West 129th Street;

THENCE westerly along the northerly side of West 129th Street a distance of 97 feet 6 inches;

THENCE northerly along a line at right angles with the northerly side of West 129th Street, 199 feet 10 inches to the point or place of **BEGINNING**.

The said premises are known as and by street address 487 West 129 Street, New York, NY as shown on the following DIAGRAM:

EXHIBIT C

DEP letter dated April 16, 2008 to follow

April 16, 2008

Robert Dobruskin
Director, Environmental Assessment and Review
New York City Department of City Planning
22 Reade Street, Room 4E
New York, NY 10007

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the March 2008 Phase II Subsurface Investigation prepared by AKRF for the above referenced project site. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 6. The project site is located in Manhattan Community District 10.

The Phase II concluded that soil disposal requirements for the proposed development project/excavation activities may require hazardous waste disposal/recycling options if future disposal analysis reveals significant contaminant concentrations.

Based upon our review of the submitted documents, DEP has the following comments:

- As a result of Phase II findings, a Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) for Lot 6 should be submitted for DEP review and approval.
- An adequate sub-slab vapor barrier must be installed during the proposed construction project to reduce/eliminate potential on-site/off-site groundwater contamination from impacting the proposed site/structure.
- Due to the elevated concentration levels of volatile organic compounds detected on-site which are associated with an off-site spill and the engineering controls (vapor barrier) necessary to avoid significant hazardous materials impacts, the applicant should enter into a Restrictive Declaration for Lot 6 with DEP to ensure all remediation activities are completed prior to or during construction of the proposed development. The Restrictive Declaration

DIAL
EST

must be designed to restrict the manner in which the property may be developed or redeveloped, by requiring that additional testing or remediation measures, if required, serve as a condition precedent to any change of use or sub-surface excavation conducted as part of any future development or redevelopment of the property. All other development sites should receive Hazardous Materials "E" designations.

- Please note that the February 2008 Site Investigation was completed without DEP's written Workplan/HASP approval.
- Please note, as previously indicated in our March 21, 2008 correspondence, that based on the results of the Phase I Investigation, all development sites which are not controlled by the applicant should receive an "E" designation for hazardous materials to ensure that the appropriate level of investigation and, if necessary, remediation be conducted to the satisfaction of DEP prior to development of those sites.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact Gosia Pawluszko at (718) 595-6450.

Sincerely,

Terrell Estes

1.0 INTRODUCTION

Inner City Contracting, LLC is proposing to construct a new residential building with a ground-floor parking garage at 487 West 129th Street in Manhattan, New York. The site is located in the central portion of the block bounded by Convent Avenue to the east, West 129th Street to the south, Amsterdam Avenue to the west, and West 130th Street to the north, and comprises Lot 6 of Tax Block 1969. The site is currently occupied by the eastern half of a one-story warehouse, and is vacant. A site location map is provided as Figure 1.

The purpose of this Remedial Action Plan (RAP) is to present procedures for managing on-site soil and groundwater in accordance with applicable federal, state, and local regulations, including guidelines for temporary on-site stockpiling and off-site transportation and disposal of soil. The plan is based upon the findings presented in AKRF, Inc.'s Phase I Environmental Site Assessment dated November 2007 and Subsurface (Phase II) Investigation Report dated March 2008. A site plan is provided as Figure 2.

2.0 SITE BACKGROUND

2.1 Site Characterization

Based on a survey of the site conducted on April 16, 2005 by Albert A. Bianco, Professional Land Surveyor, the site is located at an elevation of approximately 36.4 feet (all elevations given relative to Manhattan borough datum). The north-adjacent sidewalk at West 130th Street is at an elevation of approximately 60.8 to 53.9 feet. Below the concrete floor, the top 4.5 to 6.5 feet of soil on the site is fill, which consists of mainly sand with traces of gravel, silt, brick, concrete, ash and glass. In two borings advanced during AKRF's March 2008 Subsurface Investigation, the fill was underlain by sand with traces of silt and gravel, which may be native soil. In the remaining three borings, refusal was encountered at shallow depths, on apparent bedrock.

Although groundwater was encountered in a boring at approximately 13 feet below grade, no groundwater could be recovered from the boring, which encountered refusal at approximately 14 feet below grade. Based on the shallow depth of refusal over most of the site and that groundwater was not encountered at any other testing location, this water was indicative of a perched water table on the bedrock; there appears to be no surficial groundwater table at the site.

2.2 Proposed Project

The proposed project involves the demolition of the on-site half of the existing one-story warehouse, and the construction of a new residential building with a ground-floor parking garage. Excavation for the proposed construction is expected to a depth of four feet below existing grade. Although not anticipated, if groundwater is encountered during development activities and/or dewatering is required for construction, testing would be necessary to ensure compliance with NYCDEP sewer discharge requirements. If necessary, the water would be pre-treated prior discharge to the City's sewer system, as required by NYCDEP permit/approval requirements.

2.3 Previous Environmental Investigations

Phase I Environmental Site Assessment, AKRF, Inc., November 2007

To identify potential sources of hazardous materials, a Phase I Environmental Site Assessment of the site was conducted by AKRF in November 2007. The Phase I identified Recognized Environmental Conditions pertaining to past uses of the site as the Metropolitan Street Railway Company Third Avenue Division Power Station, and the Third Avenue Railway Company car house and repair shop; and past and present uses of the surrounding area, including properties with buried gasoline tanks and/or reported spills in an anticipated upgradient groundwater flow direction and/or in close proximity to the site. In addition, the Phase I noted the presence of floor drains that were suspect drywells. However, during the Phase II, pipes were observed in the floor drains. These pipes most likely connect to the municipal sewer system, and the floor drains are thus not drywells. After 1951, the site was used as a Metropolitan Opera Association warehouse.

NYC Buildings Department records included a 1941 Oil Burner Application and a 1949 Certificate of Occupancy for 495 West 129th Street (the collective address of the on-site and off-site warehouse halves) noted that the building had a boiler room in the cellar. Neither the cellar nor the boiler room was observed on-site, and no evidence of tanks was noted during the site visit or in regulatory databases. A cellar was observed in the off-site western half of the subject building, which contained the Metropolitan Opera warehouse. Although the warehouse employees interviewed during the Phase I had no knowledge of any tanks in the building, the suspect tank indicated by the Oil Burner Application may have been located in the off-site warehouse's cellar in the past.

Subsurface (Phase II) Investigation, AKRF, Inc., March 2008

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the 487 West 129th Street property in Manhattan, New York. The Phase II study was intended to determine whether current or former on- or off-site activities have adversely affected the subject property. The scope of the Phase II study was based on the findings of the Phase I Environmental Site Assessment (ESA) performed for the site by AKRF, Inc., dated November 19, 2007, and in accordance with the New York City Department of Environmental Conservation (NYSDEC)-approved Sampling Protocol and Health and Safety Plan dated February 2008.

Eight soil samples were collected for laboratory analysis. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum #4046 (TAGM) Recommended Soil Cleanup Objectives (RSCOs) and NYSDEC Part 375 Soil Cleanup Objectives (SCOs) for restricted residential use.

An elevated photoionization detector (PID) reading and a petroleum-like odor were detected in boring SB-2 at approximately 10.5-14.5 feet below the building's floor slab. A slight petroleum-like odor and an elevated PID reading were noted in boring SB-1 at a depth of approximately 4.5 feet, but the sample recovery was poor and consisted mainly of gravel and concrete; a sufficient amount of soil could not be collected for laboratory analysis. Laboratory analysis detected nine VOCs exceeding their respective TAGM RSCOs in sample SB-2 (12-14'), which was collected within the perched water table, observed at approximately 13 feet below the floor slab during drilling. This sample had elevated VOC reportable detection limits (RDLs) due to sample dilution for analysis. As a result, fifteen VOCs had detection limits above their respective TAGM

RSCOs, therefore, additional VOCs may be present in the sample that could not be reported above TAGM RSCOs. Only one VOC (1,2,4-trimethylbenzene) exceeded its Part 375 SCO in soil sample SB-2 (12'-14'). Trace levels of several VOCs were detected in samples SB-2 (0-2'), SB-3 (0-2') and SB-5 (5-7'). Based on field observations and the elevated levels of VOCs and low levels of SVOCs detected in sample SB-2 (12-14'), the elevated VOC levels in this sample did not appear to originate from an on-site petroleum spill, which would have resulted in elevated VOC and/or SVOC levels in the overlying soil. The elevated concentrations of VOCs in SB-2 (12-14') were possibly attributable to an off-site spill that migrated on-site.

Twelve SVOCs, mainly polycyclic aromatic hydrocarbons (PAHs), were detected in five of the soil samples. Six common PAHs exceeded their respective TAGM RSCOs in four of the soil samples. All of these PAHs, except phenanthrene, also exceeded their respective Part 375 SCOs in sample SB-3 (0-2'), which had a total PAH concentration of 282 parts per million (ppm). All of the soil samples had elevated SVOC reportable detection limits (RDL) due to sample dilutions for analysis. As a result, 33 SVOCs had detection limits above their respective TAGM RSCOs. Thus, additional SVOCs were noted to be potentially present in these samples above TAGM RSCOs. In addition, the RDL for the nine SVOCs were above their respective Part 375 SCOs. Based on the nature and distribution of the compounds detected and field observations, the elevated levels of SVOCs were attributed to the presence of urban fill beneath the site. In some of the borings, the fill was noted to include ash, which contains high levels of PAHs.

Lead exceeded its SCO in sample SB-3 (0-2'), and mercury slightly exceeded its SCO in two soil samples [SB-2 (0-2') and SB-3 (0-2')]. Other metals were present in the soil samples at concentrations below their respective SCOs. Based on the type and distribution of the identified metals concentrations, the metals may be attributable to the historical uses of the site as a railway power station and a railway car house and repair shop, and/or to urban fill. No PCBs or pesticides were detected in any of the soil samples.

Groundwater was encountered at approximately 13 feet below grade in boring SB-2. This boring encountered refusal on apparent bedrock at approximately 14 feet. A sufficient volume of water could not be collected for analysis. Based on the shallow depth of refusal in the remaining borings and that groundwater was not encountered in any other boring, it appears that this water is perched above the bedrock, and that there was no surficial groundwater at the site. Based on the depth of the detected contamination (8 to 10 feet below the planned excavation depth for the proposed development), it was not anticipated that this contamination would affect the proposed development. Due to the detection of VOCs in the deep soil sample [SB-2 (12-14') in the southern portion of the site], it was recommended to include a vapor barrier in the building's design to alleviate the possibility of vapor intrusion into the building.

3.0 CONSTRUCTION MEASURES

Excavation for the proposed construction is expected to four feet below existing grade. Based on the Phase II Subsurface Investigation, on-site soil includes primarily urban fill. Any soil and fill materials excavated as part of any future site development activities at the site will be managed in accordance with all applicable regulations as detailed in Section 3.3. Based on observations and laboratory analysis, the southern portion of the site may have been affected by off-site petroleum releases; however, the affected area may be limited to the interval just above the bedrock. If petroleum-contaminated soil or any other type of contamination is identified, it will be managed in accordance with all applicable requirements. Soil intended for off-site disposal will be tested in accordance with the requirements of the receiving facility. Transportation of material leaving the site for off-site disposal will be tested in accordance with

federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc., as detailed in Section 3.4.

Although not anticipated, it is possible that previously unidentified tanks, drums, and/or containers may be encountered during excavation. A contingency plan for the removal of such tanks is provided in Section 3.1. In the event that petroleum-contaminated soil is encountered, a contingency plan is provided in Section 3.2 for appropriate handling, testing, and disposal of these materials during general excavation. All work outlined within the RAP is subject to the Construction Phase Environmental Health and Safety Plan (CHASP) developed for the site.

3.1 Petroleum Tank Removal

If underground storage tanks (USTs) are encountered, the tanks and any appurtenances will be cleaned, removed and disposed of in accordance with accepted industry standards and applicable federal, state, and local regulatory agency requirements. Tank and soil removal from the vicinity of any discovered underground storage tanks will be conducted in accordance with the New York State Department of Environmental Conservation (NYSDEC), Division of Spills Management Spill Prevention Operations Technology Series (SPOTS) Memo No. 14 "Site Assessments at Bulk Storage Facilities" and in accordance with the NYSDEC, Bureau of Spill Response, STARS Memo No. 1, "Petroleum-Contaminated Soil Guidance Policy," August 1992. Laboratory testing of both characterization samples and of samples obtained from the excavation areas will include STARS Method 8021 for VOCs and STARS Method 8270 for SVOCs.

According to 6 NYCRR Part 612.2, the existing State Petroleum Bulk Storage listing for the site must be updated to reflect the discovery and subsequent removal of any known or additional tanks from the site. Tank removal activities and any associated petroleum-contaminated soil removal must be documented in a Spill Closure Report, which will be submitted to NYSDEC. In addition, the removal of any gasoline underground storage tanks must be reported to the New York City Fire Department.

Typical tank removal procedures are summarized as follows:

1. Open fill cap or vent pipe and measure for product. Collect a sample of the product. Tank contents will be sampled in accordance with applicable federal, state and local requirements and tested in accordance with the requirements of the receiving facility. Proper disposal of tank contents at an approved facility will be dictated by sample results.
2. Excavate to expose the tank. Vacuum liquid tank contents and pumpable tank bottom residue.
3. Excavate around the tank with care to avoid release of tank and piping contents. Hand excavation around the tank may be necessary. The sides of all excavated areas will be properly stabilized in accordance with OSHA regulations. Continuously monitor the excavated areas in the worker breathing zone for the presence of flammable, toxic or oxygen deficient atmosphere with a photoionization detector (PID), a combustible gas indicator (CGI), and an oxygen meter.
4. Inert the tank of flammable vapors using dry ice and verify using an oxygen meter (less than 7 percent). An access hole will be cut in the tank and the tank will be thoroughly cleaned of residual liquids and sludges.
5. Entry of the tank, if necessary, will be conducted in conformance with OSHA confined space requirements.

6. Remaining fuels, loose slurry, sludge materials and wastewater will be collected in DOT-approved drums, sampled and analyzed for disposal characterization. After disposal characterization, waste material will be removed and disposed of in accordance with applicable regulations.
7. Remove the tank and all associated piping from the ground and clean the outside of the tank. The tank and piping will be rendered "not reusable," removed from the site and disposed of according to applicable regulations with proper documentation. Remove and dispose of all concrete tank support structures or vaults as encountered.
8. Spill reporting to the NYSDEC Spill Hotline (800-457-7362) will be conducted, as necessary.
9. After tank removal, examine for evidence of petroleum releases in accordance with NYSDEC, Division of Spills Management Spill Prevention Operations Technology Series (SPOTS) Memo No. 14 "Site Assessments at Bulk Storage Facilities." If there is evidence of a petroleum release, follow procedures for Soil Contamination Plan in addition to the procedures below.
10. Suspect materials will be field-screened with a photoionization detector (PID). If soil contamination is present, excavate and remove contaminated soil from the tank areas in accordance with the stockpiling and/or direct-loading procedures presented in Sections 3.2.1 and 3.2.2. Material will be excavated until field screening with a PID yields concentrations of less than 20 ppm and until there are no remaining visible signs of contamination or odors. After contaminated soil removal, collect endpoint samples at each sidewall and at the bottom of the excavation for analytical testing as specified in the NYSDEC, Bureau of Spill Response, STARS Memo No. 1, "Petroleum-Contaminated Soil Guidance Policy," August 1992.
11. Photo-document all procedures and record all procedures in a bound field notebook.
12. Copies of all testing results, correspondence with disposal facilities concerning classification of materials, and permits/approvals will be maintained by the project manager and will be submitted to the NYSDEC in a Tank Closure Report.
13. A signed affidavit will be prepared by the licensed tank installation (removal) contractor and submitted to the New York City Fire Department certifying proper removal of the tank(s).

3.2 Soil Contamination Plan

If sludges or soil known to be contaminated or showing evidence of potential contamination, such as discoloration, staining, or odors is encountered during excavation activities, the following procedures will be implemented:

1. Spill reporting to the NYSDEC Spill Hotline (800-457-7362) will be conducted, as necessary.
2. The suspected soil will be sampled for laboratory analyses. Soil samples will be analyzed for parameters required by the intended disposal facility.
3. If the suspect soil is contaminated based on sampling results, it will be excavated and removed in accordance with the stockpiling and/or direct-loading procedures presented below. Soils intended for off-site disposal will be disposed of in accordance with applicable federal, state and local requirements and tested in accordance with the requirements of the

- receiving facility. Additional sample analysis may be required by alternative disposal facilities. Additional analysis may be run on existing sample material at the laboratory as long as all holding time and preservation requirements have not been exceeded. If there are exceedances to these requirements or if additional sampling material is required by the laboratory to complete the required analysis, additional samples may be collected.
4. The excavated soil will then be disposed of in accordance with all applicable federal, state and local regulations, as described in Section 3.4.
 5. The excavation will continue vertically until no evidence of contamination is noted in the base of the excavation or until groundwater is encountered. The excavation will continue horizontally until no evidence of contamination is noted in the sidewalls of the excavation. Post-excavation endpoint samples will be collected from the sides and bottom of the excavated area, as required by the NYSDEC. Analytic parameters for post excavation soil samples will be determined based on NYSDEC. If post-excavation samples exceed action levels, then additional excavation will be performed, as warranted.
 6. Copies of correspondence with disposal facilities concerning classification of materials, testing results, and permits/approvals will be maintained by the project manager and will be submitted to NYSDEC in a Spill Closure Report.

3.2.1 Stockpiling Procedures

Petroleum-contaminated soil or excess fill material intended for off-site disposal may be stockpiled temporarily or loaded directly onto trucks for off-site disposal, if pre-approved by the receiving facility. No petroleum-contaminated soil encountered that is excavated from the site will be re-used on-site for grading or other purposes. For soil that will be stockpiled, the stockpiles will be placed on polyethylene sheeting. If the soil is expected to remain on-site overnight or longer, the stockpile will be covered with similar polyethylene sheeting and be secured with large rocks or other appropriate weights to protect against leaching or runoff of contaminants into groundwater or stormwater. The surface surrounding the stockpile will be graded to provide for positive drainage away from the pile. Stockpiles will be managed to minimize dust generation, run-off and erosion, using water, plastic covers, silt fences, and/or hay bales, as necessary.

Soil will be segregated and stockpiled based on its known or anticipated type and/or level of contamination (based on analytical data, PID readings, odor, staining, etc.). Stockpiles will be separated by a sufficient distance to ensure that mixing of dissimilar or potentially dissimilar materials does not occur. The location and classification of stockpiles will be tracked on site drawings and updated, if necessary, at the end of each workday according to the following categories:

- Non-petroleum contaminated soil for off-site disposal;
- Petroleum-contaminated soil for off-site disposal; and
- Soil pending analysis.

Copies of site drawings will be kept in the field log book. Stockpiles intended for off-site disposal may be mixed with other compatible stockpiles on-site (compatibility will be determined by the requirements of the receiving disposal facility), but hazardous wastes (if any) will not be mixed with non-hazardous wastes.

3.2.2 Alternatives to Stockpiling

Alternative procedures to stockpiling could include, but are not limited to, agreement(s) from the intended disposal or treatment facilities to accept boring data and/or analytical data previously obtained so that materials may be directly loaded into trucks for shipment to the disposal facility.

3.3 Soil Disposal

Disposal will be in accordance with applicable federal, state and local requirements, including those for hazardous waste, industrial waste, petroleum-contaminated soil, construction and demolition debris, etc.

The testing performed on the site indicates that most of the soil that would be disturbed during the development of the project site is historic fill. This material must be disposed of at a permitted Part 360 disposal facility and cannot be sent to a Soil Recycling Facility (Part 360-16 Registration Facility) except in accordance with a Beneficial Use Determination.

If excess excavated soil is intended for re-use off-site, approval of a generic or case-specific Beneficial Use Determination (under 6 NYCRR Part 360) from the NYSDEC may be required. Such alternatives may include, but are not limited to, cold mix and hot mix asphalt manufacture at permitted off-site facilities.

As applicable, manifest forms and shipment manifest records will be completed as required by the appropriate regulatory agencies for verifying the material and quantity of each load in unit of volume and weight.

3.4 Transportation

Transportation of material leaving the site for off-site disposal will be in accordance with federal, state and local requirements (including 6NYCRR Part 364 and U.S. DOT regulations) covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.

The schedule for truck arrival will be coordinated to meet the approved project schedule. The schedule will be compatible with the availability of equipment and personnel for material handling operations at the job site. Trucks will be protected against contamination by properly covering and lining them with compatible material (such as polyethylene) or by decontaminating them prior to any use other than hauling contaminated materials.

All vehicles leaving the project site will be inspected to ensure that contaminated soil adhering to the wheels or under carriage is removed prior to the vehicle leaving the site. Any situations involving material spilled in transit or mud and dust tracked off-site will be remedied. The access routes will be inspected for road conditions, overhead clearance, and weight restrictions.

Contaminated materials from other projects will not be combined with material from the construction area. The transporter will not deliver waste to any facility other than the disposal facility(s) listed on the shipping manifest.

3.5 Dust Control

To prevent the potential off-site transport of dust that may contain above-background levels of contaminants, the following dust control measures will be implemented during all earth-disturbing operations:

- Water will be available (and used) on-site for sprinkling/wetting to suppress dust in dry weather or as necessary.
- All haul trucks will have tarp covers.
- Stabilized construction entrances (gravel pads) and wash stations will be placed at access points to prevent tracking out of dust.

All work that involves soil disturbance or otherwise generates dust will be performed utilizing methods to minimize dust generation to the extent practicable. Particulate air monitoring requirements will be conducted as discussed in Section 3.6 of this Plan.

3.6 Air Monitoring

An air monitoring program will be implemented during all earth-disturbing operations. The air monitoring is intended to avoid or minimize exposure of the field personnel and the public to potential environmental hazards in the soil during excavation of such soil. Results of this air monitoring times will be used to determine the appropriate response action, if needed. A photoionization detector (PID) will be used to perform the air monitoring and will be calibrated with isobutylene in accordance with the manufacturer's recommendations.

A Dust Trak[®] dust monitor or equivalent will be used to measure concentration of total particulate matter during excavation activities.

Measurements for particulate, and if necessary, volatile organic compounds, will be taken prior to commencement of the work and for at least 1 minute every 60 minutes during the work. The action levels developed for the site are based upon 15-minute averages of the monitoring data. The measurements will be made as close to the workers as practicable and at the breathing height of the workers. The Site Safety Officer (SSO) will set up the equipment and confirm that it is working properly. His/her designee may oversee the air measurements during the day. The initial measurement for the day will be performed before the start of work and will establish the background level for that day. The final measurement for the day will be performed after the end of work. The action levels and required responses are listed in Table 1.

Table 1
Action Levels and Required Responses

Instrument	Action Level¹	Response Action
Particulate Monitoring (during all excavation activities disturbing on-site fill or petroleum-contaminated soil)	Less than 5 mg/m ³	Level D
	Between 5 mg/m ³ and 125 mg/m ³	Level C. Apply dust suppression measures. If less than 2.5 mg/m ³ , resume work using Level D. Otherwise, upgrade Level C.
	Above 125 mg/m ³	Stop work. Apply additional dust suppression measures. Resume work when less than 125 mg/m ³ and maintain Level C.
Volatile Organic Compound Monitoring (with PID)	Less than 10 ppm in breathing zone.	Level D or D-Modified (Requires coveralls and steel toe boots) (As applicable: Chemical resistant gloves, chemical resistant boot covers, Hard hat, safety glasses, face shield, or escape mask)
	Between 10 and 20 ppm	Level C. (Requires Full Face or half face respirator, Hooded chemical resistant two piece Tyvek suite or overalls, Chemical resistant inner and outer gloves, Chemical resistant boot covers, Steel toe and shank boots) (As applicable: Hard hat, face shield, or escape mask)
	More than 20 ppm	Stop work. Resume work when source of vapors is abated and readings are less than 20 ppm above background
Notes: ¹ 15-minute time-weighted average; parts per million (ppm); milligrams per cubic meter (mg/m ³)		

3.7 Groundwater Management Plan

Based on AKRF's observations during the March 2008 Phase II Subsurface Investigation, a perched water table may be present on bedrock in the southwestern portion of the site, at a depth of 13 (or more) feet below surface grade. No surficial groundwater is present on the site. Groundwater is not anticipated to be encountered during development activities, however, if dewatering is required for construction, testing would be required to ensure compliance with NYCDEP sewer discharge requirements. Regulatory protocols may require pretreatment of groundwater pumped from the site before discharge into the sewer system. Prior to initiating any dewatering activities, a groundwater sample should be analyzed to ensure it meets the New York City Department of Environmental Protection (NYCDEP) criteria for effluent to municipal sewers as part of the application process for the NYCDEP Bureau of Wastewater Treatment (BWT) Wastewater Quality Control Permit. Any contaminated groundwater generated by construction dewatering will be treated on-site, if necessary, to meet discharge limitations. Following on-site treatment, the water would be discharged to the City sewer with the appropriate permit.

4.0 PROJECT DESIGN MEASURES

4.1 Site Cap and Importation of Fill

The proposed development would include the demolition of the on-site half of the existing one-story warehouse, and the construction of a new residential building with a ground-floor parking garage. If any areas are not covered in this manner, such areas would be covered with a minimum of two feet of imported clean soil. There is no planned importation of fill; however, if plans change and soil must be imported, any such soil imported to the site would meet the criteria outlined in NYSDEC TAGM 4046. Non-virgin imported material that does not have an approved NYSDEC Beneficial Use Determination will be tested at the originating facility for Target Compound List (TCL) VOCs, TCL SVOCs, pesticides, PCBs, and Target Analyte List (TAL) metals by a New York State-certified laboratory. The results will be compared to the appropriate NYSDEC Recommended Soil Cleanup Objectives and submitted to the NYCDEP for review and approval prior to importing of the material. No construction and demolition (C&D) debris will be imported to the site for use as fill.

A vapor barrier will be installed below the buildings as part of the proposed construction. The vapor barrier will consist of a 10 millimeter high density polyethylene (HDPE) membrane, or equivalent, which will be applied to the underside of the foundation slab, as shown on Figure 3. Any penetrations through the foundations will be sealed in accordance with the manufacturer's specifications.

5.0 QUALITY ASSURANCE/QUALITY CONTROL

All necessary analyses will be performed by a laboratory that has received approval from the New York State Department of Health's Environmental Laboratory Approval Program (ELAP) for the methods that require analysis.

5.1 Sample Collection

Samples will be collected in accordance with the following procedures:

- Record sample observations (evidence of contamination, PID readings, soil classification) in field log book.
- Collect an aliquot of soil or groundwater using a dedicated and disposable plastic sample spoon or sample bailer and place in laboratory-supplied sample jars. One grab sample will be collected for volatile organic compound analysis, if applicable. One composite sample will be collected for all other analyses.
- Seal and label the sample jars as described in Section 5.6 and place in a chilled cooler.

5.2 Decontamination Procedures

To avoid contamination and cross-contamination of samples, only dedicated or disposable sampling equipment may be used to collect these samples. All non-disposable equipment involved in field sampling must be decontaminated before being brought to the sampling location, and must be properly decontaminated after use.

5.3 Sample Identification

All samples will be consistently identified in all field documentation, chain-of-custody documents and laboratory reports using an alpha-numeric or alpha-alpha code. For stockpiled soil, the alpha prefix will be “SP” and the numbers following the alpha prefix will correspond to excavated stockpiles, beginning with “1, 2, 3...etc.” For example, the first sample collected from the first stockpile will be labeled “SP-1-1” and the first sample collected from the second stockpile will be labeled “SP-2-1.”

For groundwater samples, the alpha prefix will be “GW” and the number following the prefix will correspond to the sample number. For example, the first groundwater sample collected for sample analysis will be labeled “GW-1” and the second sample will be “GW-2.”

5.4 Sample Labeling and Shipping

All sample containers will be labeled with the following information:

- Site identification
- Sample identification
- Date and time of collection
- Analysis(es) to be performed
- Sampler’s initials

Once the samples are collected and labeled, they will be placed in chilled coolers and stored in a cool area away from direct sunlight to await shipment to the laboratory. Soil samples will be shipped to the laboratory at a frequency that will not result in an exceedance of applicable holding times for sample methods. At the start and end of each workday, field personnel will add ice to the coolers as needed.

The samples will be prepared for shipment by placing each sample jar in a sealable plastic bag, then wrapping each bag in bubble wrap to prevent breakage, adding freezer packs and/or fresh ice in sealable plastic bags and the chain-of-custody form. Samples will be shipped overnight (e.g., Federal Express) or transported by a laboratory courier. All coolers shipped to the laboratory will be sealed with mailing tape and a chain-of-custody (COC) seal to ensure that the coolers remain sealed during delivery.

5.5 Sample Custody

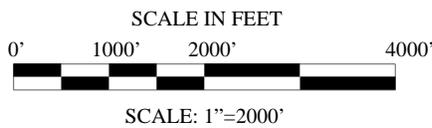

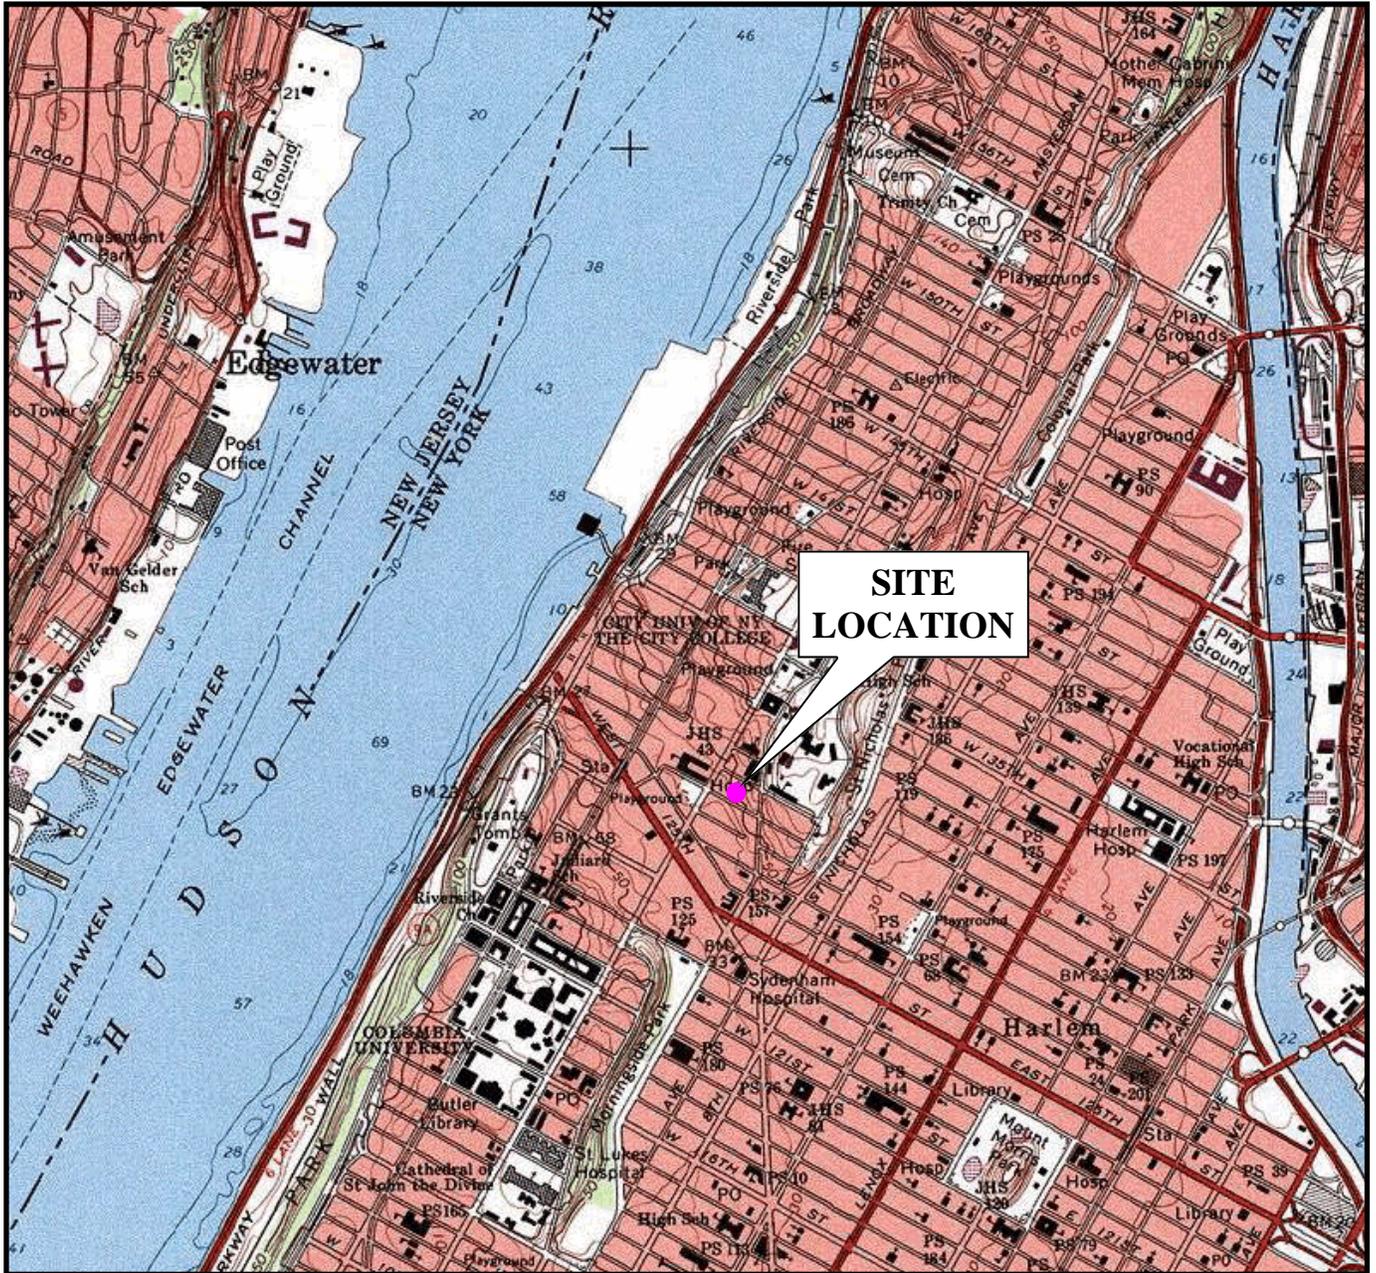

Field personnel will be responsible for maintaining the sample coolers in a secured location until they are picked up and/or sent to the laboratory. The record of possession of samples from the time they are obtained in the field to the time they are delivered to the laboratory or shipped off-site will be documented on COC forms. The COC forms will contain the following information: project name; names of sampling personnel; sample number; date and time of collection and matrix; and signatures of individuals involved in sample transfer, and the dates and times of transfers. Laboratory personnel will note the condition of the custody seal and sample containers at sample check-in.

5.6 Documentation

A sample log book will be maintained. The following information, as a minimum will be recorded to the log.

- Sample identification number
- Sample location
- Field Observations
- Sample Type
- Analyses
- Date/Time of collection
- Collector's name
- Sample procedures and equipment utilized
- Date sent to laboratory/name of laboratory
- Copies of site drawings indicating stockpile numbers and locations

APPENDICES

- Appendix A - Potential Health Effects from On-site Contaminants
- Appendix B - Incident Report
- Appendix C - Emergency Hand Signals

1.0 PURPOSE

The purpose of this Construction Phase Environmental Health and Safety Plan (CHASP) is to assign responsibilities, establish personnel protection standards and mandatory safety practices and procedures, and provide for contingencies that may arise during construction at the project site. The CHASP is intended to minimize health and safety risks resulting from the known and potential presence of hazardous materials on the site.

This plan is not designed to address potential geotechnical, mechanical, or structural safety concerns, nor to supersede or replace any OSHA regulation and/or local and state construction codes or regulations.

2.0 APPLICABILITY

Work subject to this CHASP includes activities that disturb the existing soil on-site. The contractors and their subcontractors involved in the construction project will provide a copy of this CHASP to their employees whose work involves any potential exposure to the on-site chemical hazards, and will complete all work in accordance with this CHASP.

3.0 SITE DESCRIPTION

3.1 General Information

Inner City Contracting, LLC is proposing to construct a new residential building with a ground-floor parking garage at 487 West 129th Street in Manhattan, New York. The site is located in the central portion of the block bounded by Convent Avenue to the east, West 129th Street to the south, Amsterdam Avenue to the west, and West 130th Street to the north, and comprises Lot 6 of Tax Block 1969. The site is currently occupied by the eastern half of a one-story warehouse, and is vacant. The proposed development would include the demolition of the on-site half of the existing one-story warehouse.

3.2 Hazard Potential

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the 487 West 129th Street property in Manhattan, New York in March 2008. The Phase II study was intended to determine whether current or former on- or off-site activities have adversely affected the subject property. The scope of the Phase II study was based on the findings of the Phase I Environmental Site Assessment (ESA) performed for the site by AKRF, Inc., dated November 19, 2007 and in accordance with the New York City Department of Environmental Conservation (NYSDEC)-approved Sampling Protocol and Health and Safety Plan dated February 2008.

Eight soil samples were collected for laboratory analysis. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum #4046 (TAGM) Recommended Soil Cleanup Objectives (RSCOs) and NYSDEC Part 375 Soil Cleanup Objectives (SCOs) for restricted residential use.

An elevated photoionization detector (PID) reading and a petroleum-like odor were detected in boring SB-2 at approximately 10.5-14.5 feet below the building's floor slab. A slight petroleum-like odor and an elevated PID reading were noted in boring SB-1 at a depth of approximately 4.5 feet, but the sample recovery was poor and consisted mainly of gravel and concrete; a sufficient amount of soil could not be collected for laboratory analysis. Laboratory analysis detected nine

VOCs exceeding their respective TAGM RSCOs in sample SB-2 (12-14'). This sample had elevated VOC reportable detection limits (RDL) due to sample dilution for analysis. As a result, fifteen VOCs had detection limits above their respective TAGM RSCOs, therefore, additional VOCs may be present in the sample that could not be reported above TAGM RSCOs. Only one VOC (1,2,4-trimethylbenzene) exceeded its Part 375 SCO in soil sample SB-2 (12'-14'). Trace levels of several VOCs were detected in samples SB-2 (0-2'), SB-3 (0-2') and SB-5 (5-7'). Based on field observations and the elevated levels of VOCs and low levels of SVOCs detected in sample SB-2 (12-14'), the elevated VOC levels in this sample did not appear to originate from an on-site petroleum spill, which would have resulted in elevated VOC and/or SVOC levels in the overlying soil. The elevated concentrations of VOCs in SB-2 (12-14') were possibly attributable to an off-site spill that migrated on-site.

Twelve SVOCs, mainly polycyclic aromatic hydrocarbons (PAHs), were detected in five of the soil samples. Six common PAHs exceeded their respective TAGM RSCOs in four of the soil samples. All of these PAHs, except phenanthrene, also exceeded their respective Part 375 SCOs in sample SB-3 (0-2'), which had a total PAH concentration of 282 parts per million (ppm). All of the soil samples had elevated SVOC reportable detection limits (RDL) due to sample dilutions for analysis. As a result, 33 SVOCs had detection limits above their respective TAGM RSCOs. Thus, additional SVOCs were noted to be potentially present in these samples above TAGM RSCOs. In addition, the RDL for the nine SVOCs were above their respective Part 375 SCOs. Based on the nature and distribution of the compounds detected and field observations, the elevated levels of SVOCs were attributed to the presence of urban fill beneath the site. In some of the borings, the fill was noted to include ash, which contains high levels of PAHs.

Lead exceeded its SCO in sample SB-3 (0-2'), and mercury slightly exceeded its SCO in two soil samples [SB-2 (0-2') and SB-3 (0-2')]. Other metals were present in the soil samples at concentrations below their respective SCOs. Based on the type and distribution of the identified metals concentrations, the metals may be attributable to the historical uses of the site as a railway power station and a railway car house and repair shop, and/or to urban fill. No PCBs or pesticides were detected in any of the soil samples.

Groundwater was encountered at approximately 13 feet below grade in boring SB-2. However, this boring encountered refusal on apparent bedrock at approximately 14 feet, and a groundwater sample could not be collected. Based on the shallow depth of refusal in the remaining borings and that groundwater was not encountered in any other boring, it appears that this water is perched above the bedrock, and that there is no surficial groundwater at the site. Based on the depth of the detected contamination (8 to 10 feet below the planned excavation depth for the proposed development), it was not anticipated that this contamination would affect the proposed development. Due to the detection of VOCs in the deep soil sample [SB-2 (12-14') in the southern portion of the site], it was recommended to include a vapor barrier in the building's design to alleviate the possibility of vapor intrusion into the building.

3.3 Hazard Evaluation

The most likely routes of exposure are breathing of volatile and semi-volatile compounds or particulate-laden air released during soil disturbing activities, dermal contact, and accidental ingestion. Appendix A includes specific health effects from the known on-site chemicals. The remaining sections of this CHASP address procedures (including training, air monitoring, work practices and emergency response) to reduce the potential for unnecessary and unacceptable exposure to these contaminants.

The potential adverse health effects from these detected contaminants are diverse. Many of these compounds are known or suspected to result in chronic illness from long-term exposures. However, due to the limited nature of the proposed construction, only acute effects are a potential concern.

This CHASP addresses potential environmental hazards from the presence of hazardous materials. It is not intended to address the normal hazards of construction work, which are separately covered by OSHA regulations and/or local and state construction codes and regulations. Although some of the chemicals of concern listed in the sections below were not detected during the Phase II study conducted, they are included here as a precaution.

3.3.1 Hazards of Concern

3.3.4 Chemicals of Concern

Chemicals	REL/PEL/STEL (ppm)	Health Hazards
Benzene	REL = 0.1 ppm PEL = 1 ppm STEL = 5 ppm	Irritation eyes, skin, nose, respiratory system; dizziness; headache, nausea, staggered gait; anorexia, lassitude, dermatitis; bone marrow depression, potential occupational carcinogen.
Xylenes	REL = 100 ppm PEL = 100 ppm	Irritation eyes, skin, nose, throat; dizziness, excitement, drowsiness, uncoordination, staggering gait; corneal vacuolization; anorexia, nausea, vomiting, abdominal pain; dermatitis
Ethylbenzene	REL = 100 ppm PEL = 100 ppm	Irritation eyes, skin, mucous membrane; headache; dermatitis; narcosis, coma.
Naphthalene	REL = 10 ppm PEL = 10 ppm	Irritation eyes; headache, confusion, excitement, malaise; nausea, vomiting, abdominal pain; irritation bladder; profuse sweating; jaundice; hematuria (blood in the urine), renal shutdown; dermatitis, optical neuritis, corneal damage
Polycyclic Aromatic Hydrocarbons (PAHs)	REL = 0.1 mg/m ³ PEL = 0.2 mg/m ³	Irritation skin, body fluids; reduced ability to fight disease; birth defects; carcinogen
Lead	REL= 0.1 mg/m ³ PEL= 0.05 mg/m ³	Weak, lassitude, insomnia; facial pallor, pale eye, anorexia, low-weight, malnutrition, constipation, abdominal pain, colic; anemia; gingival lead line; tremors, paralysis wrists and ankles; encephalopathy; kidney disease; irritation eyes; hypotension.
Particulate	PEL = 15 mg/m ³ (total) PEL = 5 mg/m ³ (respirable)	Irritation eyes, skin, throat, upper respiratory system
Comments: REL = NIOSH Recommended Exposure Limit PEL = OSHA Permissible Exposure Limit STEL = OSHA Short Term Exposure Limit mg/m ³ = milligrams per cubic meter ppm = parts per million		

4.0 HEALTH AND SAFETY OFFICER

The contractor or engineer will designate one of its personnel as the Site Safety Officer (SSO). The SSO will be a competent person responsible for the implementation of this plan. The SSO will have completed a 40-hour training course (up-dated by an annual refresher) that meets OSHA requirements of 29 CFR Part 1910, Occupational Safety and Health Standards. The SSO has stop-work authorization, which he/she will execute on his/her determination of an imminent safety hazard, emergency situation, or other potentially dangerous situation. If the SSO must be absent from the site, he/she will designate a suitably qualified replacement that is familiar with the CHASP.

5.0 TRAINING

All those who enter the work area while intrusive activities are being performed must recognize and understand the potential hazards to health and safety. All construction personnel upon entering the site must attend a brief training meeting, its purpose being to:

- Make workers aware of the potential hazards they may encounter;
- Instruct workers on how to identify potential hazards;
- Provide the knowledge and skills necessary for them to perform the work with minimal risk to health and safety;
- Make workers aware of the purpose and limitations of safety equipment; and
- Ensure that they can safely avoid or escape from emergencies.

Each member of the construction crew will be instructed in these objectives before he/she goes onto the site. Construction personnel will be responsible for identifying potential hazards in the work zone. The SSO or other suitably trained individual will be responsible for conducting the training program. Others who enter the site must be accompanied by a suitably-trained construction worker.

6.0 GENERAL WORK PRACTICES

To protect the health and safety of the field personnel, all field personnel will adhere to the guidelines listed below during activities involving subsurface disturbance in contaminated areas.

- Eating, drinking, chewing gum or tobacco, and smoking are prohibited, except in designated areas on the site. These areas will be designated by the SSO.
- Workers must wash their hands and face thoroughly on leaving the work area and before eating, drinking, or any other such activity. The workers should shower as soon as possible after leaving the site.
- Contact with contaminated or suspected surfaces should be avoided.
- The buddy system should always be used; each buddy should watch for signs of fatigue, exposure, and heat stress.

7.0 PERSONAL PROTECTIVE EQUIPMENT & AIR MONITORING

7.1 Personal Protective Equipment

The personal protection equipment required for various kinds of site investigation tasks are based on 29 CFR 1910.120, Hazardous Waste Operations and Emergency Response, Appendix B, “General Description and Discussion of the Levels of Protection and Protective Gear.”

AKRF field personnel and other site personnel will wear, at a minimum, Level D personal protective equipment. The protection will be based on the air monitoring described in Section 7.2.

Level of Protection Summary

LEVEL OF PROTECTION & PPE	1 – Excavation	2 – Other Earth Moving Activities
Level D (x) Steel Toe Shoes (x) Hard Hat (within 25 ft of excavator) (x) Work Gloves	(x) Safety Glasses () Face Shield (x) Ear Plugs (within 25 ft of drill rig/excavator) (x) Latex Gloves	Yes
Level D – Modified (in addition to Level D) (x) Tyvek Coveralls	(x) Nitrile Gloves () Overboots () Saranex Coveralls	As necessary
Level C (in addition to Level D – Modified) () Half-Face Respirator (x) Full Face Respirator () Full-Face PAPR	() Particulate Cartridge () Organic Cartridge (x) Dual Organic/Particulate Cartridge	If PID > 10 ppm (breathing zone)
Comments: Cartridges to be changed out at least once per shift unless warranted beforehand (e.g., more difficult to breath or any odors detected).		

7.2 Work Zone Air Monitoring

Real time air monitoring will be performed with a photoionization detector (PID) during sampling and excavation work at areas where petroleum or other volatile organic compounds are detected. Monitoring with a particulate air monitor will be conducted during excavation and other earth moving activities. Measurements would be taken prior to commencement of work and continuously during the work as outlined in the following table. Measurements will be made as close to the workers as practicable and at the breathing height of the workers. The SSO will set up the equipment and confirm that it is working properly. His/her designee may oversee the air measurements during the day. The initial measurement for the day will be performed before the start of work and will establish the background level for that day. The final measurement for the day will be performed after the end of work. The action levels and required responses are listed in the following table:

Action Levels and Required Safety Response Actions

Instrument	Task to be Monitored	Action Level	Response Action
PID (OVM 580B or equivalent)	All tasks	Less than 10 ppm in breathing zone.	Level D or D-Modified
		Between 10 and 500 ppm	Level C
		More than 500 ppm	Stop work. Resume work when readings are less than 500 ppm.
Particulate monitor (DustTrak 8520 Aerosol Monitor or equivalent)	All tasks	Less than 5 mg/m ³	Level D
		Between 5 mg/m ³ and 125 mg/m ³	Level C. Apply dust suppression measures. If < 2.5 mg/m ³ , resume work using Level D. Otherwise, use Level C.
		Above 125 mg/m ³	Stop work. Apply additional dust suppression measures. Resume work when less than 125 mg/m ³ .

Field personnel will be trained in the proper operation of all field instruments at the start of the field program. Instruction manuals for the equipment will be on file at the site for referencing proper operation, maintenance and calibration procedures.

The equipment will be calibrated according to manufacturer specifications at the start of each day of fieldwork. If an instrument fails calibration, the project manager will be contacted immediately to obtain a replacement instrument and arrange for repairs. A calibration log will be maintained to record the date of each calibration, any failure to calibrate and corrective actions taken. The PID will be calibrated each day using 100 parts per million (ppm) isobutylene standard gas.

8.0 DECONTAMINATION PROCEDURES**8.1 Personnel Decontamination**

Personnel decontamination (decon), if deemed necessary by the SSO, will take place in a designated decontamination area. This area will be delineated during each stage of work. Personnel decontamination will consist of the following steps:

- Soap and potable water wash and potable water rinse of gloves;
- Coverall removal (if applicable);
- Glove removal;
- Disposable clothing removal; and

- Field wash of hands and face.

8.2 Sampling Equipment Decontamination

Any non-disposable sampling equipment for confirmatory sampling or other equipment that is in contact with contaminated materials will be decontaminated in accordance with the following procedure:

- Double wash with solution of Simple Green[®] and clean tap water;
- Double rinse with clean tap water;
- Rinse with clean distilled water; and
- Allow equipment to air dry.

8.3 Heavy Equipment Decontamination

If heavy equipment comes in contact with contaminated materials, it will be decontaminated prior to being relocated to a clean area or leaving the site. A designated decontamination pad will be constructed, where soil, dust, or oil will be washed off the exterior, undercarriage, and wheels or tracks of the equipment. Wash water will be collected for treatment and/or disposal.

9.0 EMERGENCY RESPONSE

9.1 Emergency Procedures

In the event that an emergency develops on site, the procedures delineated herein are to be immediately followed. Emergency conditions are considered to exist if:

- Any member of the field crew is involved in an accident or experiences any adverse effects or symptoms of exposure while on site.
- A condition is discovered that suggests the existence of a situation more hazardous than anticipated.
- A spill of oil or other hazardous materials.

General emergency procedures, and specific procedures for personal injury, chemical exposure and radiation exposure, are described below. In the event of an accident or emergency, an Incident Report form should be filled out and placed in the project file. An example Incident Report form is provided in Appendix C. Information on emergency hand signals is provided in Appendix D.

9.1.1 Chemical Exposure

If a member of the field crew demonstrates symptoms of chemical exposure the procedures outlined below should be followed:

- Another team member (buddy) should remove the individual from the immediate area of contamination. The buddy should communicate to the SSO (via voice and hand signals) of the chemical exposure. The SSO should contact the appropriate emergency response agency.
- Precautions should be taken to avoid exposure of other individuals to the chemical.
- If the chemical is on the individual's clothing, the chemical should be neutralized or removed if it is safe to do so.

- If the chemical has contacted the skin, the skin should be washed with copious amounts of water.
- In case of eye contact, an emergency eye wash should be used. Eyes should be washed for at least 15 minutes.
- All chemical exposure incidents must be reported in writing to the AKRF Health and Safety Officer. The SSO is responsible for completing the Incident Report Form.

9.1.2 Personal Injury

In case of personal injury at the site, the following procedures should be followed:

- Another team member (buddy) should signal the SSO that an injury has occurred.
- A field team member trained in first aid can administer treatment to an injured worker.
- If deemed necessary, the victim should then be transported to the nearest hospital or medical center. If necessary, an ambulance should be called to transport the victim.
- The SSO is responsible for making certain that an Incident Report Form is completed. This form is to be submitted to the AKRF Health and Safety Officer. Follow-up action should be taken to correct the situation that caused the accident.
- Any incident (near miss, property damage, first aid, medical treatment, etc.) must be reported.

A first-aid kit, eye-wash, and blood-borne pathogens kit will be kept on-site during the field activities.

9.1.3 Evacuation Procedures

- The SSO will initiate evacuation procedures by signaling to leave the site or containment structure.
- All personnel in the work area should evacuate the area and meet in the common designated area.
- All personnel suspected to be in or near the contract work area should be accounted for and the whereabouts or missing persons determined immediately.
- The SSO will then give further instruction.

9.1.4 Procedures Implemented in the Event of a Major Fire, Explosion, or Emergency

- Notify the paramedics and/or fire department, as necessary;
- Signal the evacuation procedure previously outlined and implement the entire procedure;
- Isolate the area;
- Stay upwind of any fire;
- Keep the area surrounding the problem source clear after the incident occurs; and
- Complete accident report for and distribute to appropriate personnel.

9.1.5 Spill Response

All personnel must take every precaution to minimize the potential for spills during site operations. Any spill will be reported immediately to the SSO. The SSO will then determine and report any required spills to the NYCDEP and/or NYSDEC Hotlines. Spill control apparatus (sorbent materials) will be located on-site. All materials used for the clean up of spills will be containerized and labeled separately from other wastes. The SSO, in consultation with AKRF’s Project Manager, will determine if additional spill response measures are required.

9.2 Hospital Directions

The location of the nearest hospital, as shown on Figure 1, is Harlem Hospital Center. The address of the hospital is 506 Lenox Avenue New York, NY (New York). The hospital entrance is on the left (north) side of West 135th Street, between Lenox Avenue and Fifth Avenue.

Hospital Information and Directions

Hospital Name:	Harlem Hospital Center
Phone Number:	(212) 434-2000
Address/Location:	506 Lenox Avenue, New York, NY 10037 intersection of West 135 th Street
Directions:	From site, go EAST on West 129th Street toward Convent Avenue Turn RIGHT onto Convent Avenue Convent Avenue becomes Morningside Avenue Turn LEFT onto West 125th Street / Dr. Martin Luther King Jr. Boulevard Turn LEFT onto Lenox Avenue Turn RIGHT on West 135th Street. The hospital entrance is on the left (north) side of West 135th Street, between Lenox Avenue and Fifth Avenue.

9.3 CHASP Contact Information

APPENDIX A
POTENTIAL HEALTH EFFECTS FROM ON-SITE CONTAMINANTS

This fact sheet answers the most frequently asked health questions (FAQs) about benzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

HIGHLIGHTS: Benzene is a widely used chemical formed from both natural processes and human activities. Breathing benzene can cause drowsiness, dizziness, and unconsciousness; long-term benzene exposure causes effects on the bone marrow and can cause anemia and leukemia. Benzene has been found in at least 813 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is benzene?

(Pronounced bĕn'zĕn')

Benzene is a colorless liquid with a sweet odor. It evaporates into the air very quickly and dissolves slightly in water. It is highly flammable and is formed from both natural processes and human activities.

Benzene is widely used in the United States; it ranks in the top 20 chemicals for production volume. Some industries use benzene to make other chemicals which are used to make plastics, resins, and nylon and synthetic fibers. Benzene is also used to make some types of rubbers, lubricants, dyes, detergents, drugs, and pesticides. Natural sources of benzene include volcanoes and forest fires. Benzene is also a natural part of crude oil, gasoline, and cigarette smoke.

What happens to benzene when it enters the environment?

- Industrial processes are the main source of benzene in the environment.
- Benzene can pass into the air from water and soil.
- It reacts with other chemicals in the air and breaks down within a few days.
- Benzene in the air can attach to rain or snow and be carried back down to the ground.

- It breaks down more slowly in water and soil, and can pass through the soil into underground water.
- Benzene does not build up in plants or animals.

How might I be exposed to benzene?

- Outdoor air contains low levels of benzene from tobacco smoke, automobile service stations, exhaust from motor vehicles, and industrial emissions.
- Indoor air generally contains higher levels of benzene from products that contain it such as glues, paints, furniture wax, and detergents.
- Air around hazardous waste sites or gas stations will contain higher levels of benzene.
- Leakage from underground storage tanks or from hazardous waste sites containing benzene can result in benzene contamination of well water.
- People working in industries that make or use benzene may be exposed to the highest levels of it.
- A major source of benzene exposures is tobacco smoke.

How can benzene affect my health?

Breathing very high levels of benzene can result in death, while high levels can cause drowsiness, dizziness, rapid heart rate, headaches, tremors, confusion, and unconsciousness. Eating or drinking foods containing high levels of benzene can cause vomiting, irritation of the stomach, dizziness, sleepiness, convulsions, rapid heart rate, and death.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

The major effect of benzene from long-term (365 days or longer) exposure is on the blood. Benzene causes harmful effects on the bone marrow and can cause a decrease in red blood cells leading to anemia. It can also cause excessive bleeding and can affect the immune system, increasing the chance for infection.

Some women who breathed high levels of benzene for many months had irregular menstrual periods and a decrease in the size of their ovaries. It is not known whether benzene exposure affects the developing fetus in pregnant women or fertility in men.

Animal studies have shown low birth weights, delayed bone formation, and bone marrow damage when pregnant animals breathed benzene.

How likely is benzene to cause cancer?

The Department of Health and Human Services (DHHS) has determined that benzene is a known human carcinogen. Long-term exposure to high levels of benzene in the air can cause leukemia, cancer of the blood-forming organs.

Is there a medical test to show whether I've been exposed to benzene?

Several tests can show if you have been exposed to benzene. There is test for measuring benzene in the breath; this test must be done shortly after exposure. Benzene can also be measured in the blood, however, since benzene disappears rapidly from the blood, measurements are accurate only for recent exposures.

In the body, benzene is converted to products called metabolites. Certain metabolites can be measured in the urine. However, this test must be done shortly after exposure and is not a reliable indicator of how much benzene you have been exposed to, since the metabolites may be present in urine from other sources.

Has the federal government made recommendations to protect human health?

The EPA has set the maximum permissible level of benzene in drinking water at 0.005 milligrams per liter (0.005 mg/L). The EPA requires that spills or accidental releases into the environment of 10 pounds or more of benzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set a permissible exposure limit of 1 part of benzene per million parts of air (1 ppm) in the workplace during an 8-hour workday, 40-hour workweek.

Glossary

Anemia: A decreased ability of the blood to transport oxygen.

Carcinogen: A substance with the ability to cause cancer.

CAS: Chemical Abstracts Service.

Chromosomes: Parts of the cells responsible for the development of hereditary characteristics.

Metabolites: Breakdown products of chemicals.

Milligram (mg): One thousandth of a gram.

Pesticide: A substance that kills pests.

This ToxFAQs information is taken from the 1997 Toxicological Profile for Benzene (update) produced by the Agency for Toxic Substances and Disease Registry, Public Health Service, U.S. Department of Health and Human Services, Public Health Service in Atlanta, GA.

Where can I get more information? For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about ethylbenzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

HIGHLIGHTS: Ethylbenzene is a colorless liquid found in a number of products including gasoline and paints. Breathing very high levels can cause dizziness and throat and eye irritation. Ethylbenzene has been found in at least 731 of the 1,467 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is ethylbenzene?

(Pronounced ěth' əl bĕn' zĕn')

Ethylbenzene is a colorless, flammable liquid that smells like gasoline. It is found in natural products such as coal tar and petroleum and is also found in manufactured products such as inks, insecticides, and paints.

Ethylbenzene is used primarily to make another chemical, styrene. Other uses include as a solvent, in fuels, and to make other chemicals.

What happens to ethylbenzene when it enters the environment?

- Ethylbenzene moves easily into the air from water and soil.
- It takes about 3 days for ethylbenzene to be broken down in air into other chemicals.
- Ethylbenzene may be released to water from industrial discharges or leaking underground storage tanks.
- In surface water, ethylbenzene breaks down by reacting with other chemicals found naturally in water.
- In soil, it is broken down by soil bacteria.

How might I be exposed to ethylbenzene?

- Breathing air containing ethylbenzene, particularly in areas near factories or highways.
- Drinking contaminated tap water.
- Working in an industry where ethylbenzene is used or made.
- Using products containing it, such as gasoline, carpet glues, varnishes, and paints.

How can ethylbenzene affect my health?

Limited information is available on the effects of ethylbenzene on people's health. The available information shows dizziness, throat and eye irritation, tightening of the chest, and a burning sensation in the eyes of people exposed to high levels of ethylbenzene in air.

Animals studies have shown effects on the nervous system, liver, kidneys, and eyes from breathing ethylbenzene in air.

How likely is ethylbenzene to cause cancer?

The EPA has determined that ethylbenzene is not classified as to human carcinogenicity.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

No studies in people have shown that ethylbenzene exposure can result in cancer. Two available animal studies suggest that ethylbenzene may cause tumors.

How can ethylbenzene affect children?

Children may be exposed to ethylbenzene through inhalation of consumer products, including gasoline, paints, inks, pesticides, and carpet glue. We do not know whether children are more sensitive to the effects of ethylbenzene than adults.

It is not known whether ethylbenzene can affect the development of the human fetus. Animal studies have shown that when pregnant animals were exposed to ethylbenzene in air, their babies had an increased number of birth defects.

How can families reduce the risk of exposure to ethylbenzene?

Exposure to ethylbenzene vapors from household products and newly installed carpeting can be minimized by using adequate ventilation.

Household chemicals should be stored out of reach of children to prevent accidental poisoning. Always store household chemicals in their original containers; never store them in containers children would find attractive to eat or drink from, such as old soda bottles. Gasoline should be stored in a gasoline can with a locked cap.

Sometimes older children sniff household chemicals, including ethylbenzene, in an attempt to get high. Talk with your children about the dangers of sniffing chemicals.

Is there a medical test to show whether I've been exposed to ethylbenzene?

Ethylbenzene is found in the blood, urine, breath, and

some body tissues of exposed people. The most common way to test for ethylbenzene is in the urine. This test measures substances formed by the breakdown of ethylbenzene. This test needs to be done within a few hours after exposure occurs, because the substances leave the body very quickly.

These tests can show you were exposed to ethylbenzene, but cannot predict the kind of health effects that might occur.

Has the federal government made recommendations to protect human health?

The EPA has set a maximum contaminant level of 0.7 milligrams of ethylbenzene per liter of drinking water (0.7 mg/L).

The EPA requires that spills or accidental releases into the environment of 1,000 pounds or more of ethylbenzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set an occupational exposure limit of 100 parts of ethylbenzene per million parts of air (100 ppm) for an 8-hour workday, 40-hour workweek.

Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about lead. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

HIGHLIGHTS: Exposure to lead can happen from breathing workplace air or dust, eating contaminated foods, or drinking contaminated water. Children can be exposed from eating lead-based paint chips or playing in contaminated soil. Lead can damage the nervous system, kidneys, and reproductive system. Lead has been found in at least 1,026 of 1,467 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is lead?

(Pronounced lĕd)

Lead is a naturally occurring bluish-gray metal found in small amounts in the earth's crust. Lead can be found in all parts of our environment. Much of it comes from human activities including burning fossil fuels, mining, and manufacturing.

Lead has many different uses. It is used in the production of batteries, ammunition, metal products (solder and pipes), and devices to shield X-rays.

Because of health concerns, lead from gasoline, paints and ceramic products, caulking, and pipe solder has been dramatically reduced in recent years.

What happens to lead when it enters the environment?

- Lead itself does not break down, but lead compounds are changed by sunlight, air, and water.
- When lead is released to the air, it may travel long distances before settling to the ground.
- Once lead falls onto soil, it usually sticks to soil particles.
- Movement of lead from soil into groundwater will depend on the type of lead compound and the characteristics of the soil.
- Much of the lead in inner-city soils comes from old houses painted with lead-based paint.

How might I be exposed to lead?

- Eating food or drinking water that contains lead.
- Spending time in areas where lead-based paints have been used and are deteriorating.
- Working in a job where lead is used.
- Using health-care products or folk remedies that contain lead.
- Engaging in certain hobbies in which lead is used (for example, stained glass).

How can lead affect my health?

Lead can affect almost every organ and system in your body. The most sensitive is the central nervous system, particularly in children. Lead also damages kidneys and the reproductive system. The effects are the same whether it is breathed or swallowed.

At high levels, lead may decrease reaction time, cause weakness in fingers, wrists, or ankles, and possibly affect the memory. Lead may cause anemia, a disorder of the blood. It can also damage the male reproductive system. The connection between these effects and exposure to low levels of lead is uncertain.

How likely is lead to cause cancer?

The Department of Health and Human Services has determined that lead acetate and lead phosphate may reasonably

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

be anticipated to be carcinogens based on studies in animals. There is inadequate evidence to clearly determine lead's carcinogenicity in people.

How can lead affect children?

Small children can be exposed by eating lead-based paint chips, chewing on objects painted with lead-based paint, or swallowing house dust or soil that contains lead.

Children are more vulnerable to lead poisoning than adults. A child who swallows large amounts of lead may develop blood anemia, severe stomachache, muscle weakness, and brain damage. A large amount of lead might get into a child's body if the child ate small pieces of old paint that contained large amounts of lead. If a child swallows smaller amounts of lead, much less severe effects on blood and brain function may occur. Even at much lower levels of exposure, lead can affect a child's mental and physical growth.

Exposure to lead is more dangerous for young and unborn children. Unborn children can be exposed to lead through their mothers. Harmful effects include premature births, smaller babies, decreased mental ability in the infant, learning difficulties, and reduced growth in young children. These effects are more common if the mother or baby was exposed to high levels of lead.

How can families reduce the risk of exposure to lead?

Avoid exposure to sources of lead. Do not allow children to chew or mouth painted surfaces that may have been painted with lead-based paint (homes built before 1978). Run your water for 15 to 30 seconds before drinking or cooking with it. This will get rid of lead that may have leached out of pipes. Some types of paints and pigments that are used as make-up or hair coloring contain lead. Keep these kinds of products away from children. Wash children's hands and faces often to remove lead dusts and soil, and regularly clean the house of dust and tracked in soil.

Is there a medical test to show whether I've been exposed to lead?

A blood test is available to measure the amount of lead in your blood and to estimate the amount of your exposure to lead. Blood tests are commonly used to screen children for lead poisoning. Lead in teeth and bones can be measured with X-rays, but this test is not as readily available. Medical treatment may be necessary in children if the lead concentration in blood is higher than 45 micrograms per deciliter (45 µg/dL).

Has the federal government made recommendations to protect human health?

The Centers for Disease Control and Prevention (CDC) recommends that children ages 1 and 2 be screened for lead poisoning. Children who are 3 to 6 years old should be tested for lead if they have never been tested for lead before and if they receive services from public assistance programs; if they live in or regularly visit a building built before 1950; if they live in or visit a home built before 1978 that is being remodeled; or if they have a brother, sister, or playmate who has had lead poisoning. CDC considers children to have an elevated level of lead if the amount in the blood is 10 µg/dL.

The EPA requires lead in air not to exceed 1.5 micrograms per cubic meter (1.5 µg/m³) averaged over 3 months. EPA limits lead in drinking water to 15 µg per liter.

The Occupational Health and Safety Administration (OSHA) develops regulations for workers exposed to lead. The Clean Air Act Amendments of 1990 banned the sale of leaded gasoline. The Federal Hazardous Substance Act bans children's products that contain hazardous amounts of lead.

You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about naphthalene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

SUMMARY: Exposure to naphthalene happens mostly from breathing air contaminated from the burning of wood or fossil fuels, industrial discharges, tobacco smoke, or moth repellents. Exposure to large amounts of naphthalene may damage or destroy some of your red blood cells. Naphthalene has been found in at least 536 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is naphthalene?

(Pronounced năf'thə-lēn')

Naphthalene is a white solid that is found naturally in fossil fuels. Burning tobacco or wood produces naphthalene. It has a strong, but not unpleasant smell.

The major products made from naphthalene are moth repellents. It is also used for making dyes, resins, leather, tanning agents, and the insecticide, carbaryl.

What happens to naphthalene when it enters the environment?

- Naphthalene enters the environment from industrial uses, and from its use as a moth repellent.
- It also enters from the burning of wood or tobacco, and from accidental spills.
- Naphthalene evaporates easily.
- In air, moisture and sunlight break it down, often within 1 day.
- Naphthalene in water is destroyed by bacteria or evaporates into the air.
- Naphthalene binds weakly to soils and sediment.
- It does not accumulate in animals or fish.

- If dairy cows are exposed to naphthalene, some of it will be in their milk.
- If laying hens are exposed, some of it will be in their eggs.

How might I be exposed to naphthalene?

- Breathing low levels in outdoor air.
- Breathing air contaminated from industrial discharges or from burning wood or fossil fuels.
- Breathing air in homes or businesses where cigarettes are smoked, wood is burned, or moth repellents are used.
- Drinking water from contaminated wells.
- Touching clothing, blankets, or coverlets that are treated with naphthalene.

How can naphthalene affect my health?

Exposure to large amounts of naphthalene may damage or destroy some of your red blood cells. This could cause you to have too few red blood cells until your body replaces the destroyed cells. People, particularly children, have developed this problem after eating naphthalene-containing moth-balls or deodorant blocks. Some of the symptoms of this

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

problem are fatigue, lack of appetite, restlessness, and pale skin. Exposure to large amounts of naphthalene may also cause nausea, vomiting, diarrhea, blood in the urine, and a yellow color to the skin.

Animals sometimes develop cloudiness in their eyes after swallowing naphthalene. It is not clear if this also develops in people.

When mice were repeatedly exposed to naphthalene vapors for 2 years, their noses and lungs became inflamed and irritated.

How likely is naphthalene to cause cancer?

The Department of Health and Human Services (DHHS), the International Agency for Research on Cancer (IARC) and the EPA have not classified naphthalene as to its human carcinogenicity.

No studies are available in people. Naphthalene has caused cancer in studies in female mice, but not in male mice or in rats of either sex.

Is there a medical test to show whether I've been exposed to naphthalene?

Tests are available that measure levels of naphthalene and its breakdown products in urine, stool, blood, or maternal milk. A small sample of your body fat can also be removed and analyzed for naphthalene. These tests are not routinely available in a doctor's office. However, a sample taken in a doctor's office can be sent to a special laboratory, if needed.

These tests cannot determine exactly how much naphthalene you were exposed to or predict whether harmful effects will occur.

Has the federal government made recommendations to protect human health?

The EPA recommends that children not drink water containing over 0.5 parts of naphthalene per million parts of water (0.5 ppm) for more than 10 days, or 0.4 ppm for longer than 7 years. Adults should not drink water with more than 1 ppm for more than 7 years. For water consumed over a lifetime, the EPA suggests it contain no more than 0.02 ppm naphthalene. The EPA requires that discharges or spills into the environment of 100 pounds or more be reported.

The Occupational Safety and Health Administration (OSHA) has set a limit of 10 parts per million (10 ppm) for the level of naphthalene in workplace air over an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) considers more than 250 ppm of naphthalene in air to be immediately dangerous to life or health. This is the exposure level of a chemical that is likely to cause permanent health problems or death.

Glossary

Carcinogenicity: Ability of a substance to cause cancer.

CAS: Chemical Abstracts Service.

Insecticide: A substance that kills insects.

Sediment: Mud and debris that have settled to the bottom of a body of water.

You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about polycyclic aromatic hydrocarbons (PAHs). For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

SUMMARY: Exposure to polycyclic aromatic hydrocarbons usually occurs by breathing air contaminated by wild fires or coal tar, or by eating foods that have been grilled. PAHs have been found in at least 600 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What are polycyclic aromatic hydrocarbons?

(Pronounced pŏl'ī-sī'klīk ār'ə-măt'īk hī'drə-kar'bənz)

Polycyclic aromatic hydrocarbons (PAHs) are a group of over 100 different chemicals that are formed during the incomplete burning of coal, oil and gas, garbage, or other organic substances like tobacco or charbroiled meat. PAHs are usually found as a mixture containing two or more of these compounds, such as soot.

Some PAHs are manufactured. These pure PAHs usually exist as colorless, white, or pale yellow-green solids. PAHs are found in coal tar, crude oil, creosote, and roofing tar, but a few are used in medicines or to make dyes, plastics, and pesticides.

What happens to PAHs when they enter the environment?

- PAHs enter the air mostly as releases from volcanoes, forest fires, burning coal, and automobile exhaust.
- PAHs can occur in air attached to dust particles.
- Some PAH particles can readily evaporate into the air from soil or surface waters.
- PAHs can break down by reacting with sunlight and other chemicals in the air, over a period of days to weeks.

- PAHs enter water through discharges from industrial and wastewater treatment plants.
- Most PAHs do not dissolve easily in water. They stick to solid particles and settle to the bottoms of lakes or rivers.
- Microorganisms can break down PAHs in soil or water after a period of weeks to months.
- In soils, PAHs are most likely to stick tightly to particles; certain PAHs move through soil to contaminate underground water.
- PAH contents of plants and animals may be much higher than PAH contents of soil or water in which they live.

How might I be exposed to PAHs?

- Breathing air containing PAHs in the workplace of coking, coal-tar, and asphalt production plants; smoke-houses; and municipal trash incineration facilities.
- Breathing air containing PAHs from cigarette smoke, wood smoke, vehicle exhausts, asphalt roads, or agricultural burn smoke.
- Coming in contact with air, water, or soil near hazardous waste sites.
- Eating grilled or charred meats; contaminated cereals, flour, bread, vegetables, fruits, meats; and processed or pickled foods.
- Drinking contaminated water or cow's milk.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

- ❑ Nursing infants of mothers living near hazardous waste sites may be exposed to PAHs through their mother's milk.

How can PAHs affect my health?

Mice that were fed high levels of one PAH during pregnancy had difficulty reproducing and so did their offspring. These offspring also had higher rates of birth defects and lower body weights. It is not known whether these effects occur in people.

Animal studies have also shown that PAHs can cause harmful effects on the skin, body fluids, and ability to fight disease after both short- and long-term exposure. But these effects have not been seen in people.

How likely are PAHs to cause cancer?

The Department of Health and Human Services (DHHS) has determined that some PAHs may reasonably be expected to be carcinogens.

Some people who have breathed or touched mixtures of PAHs and other chemicals for long periods of time have developed cancer. Some PAHs have caused cancer in laboratory animals when they breathed air containing them (lung cancer), ingested them in food (stomach cancer), or had them applied to their skin (skin cancer).

Is there a medical test to show whether I've been exposed to PAHs?

In the body, PAHs are changed into chemicals that can attach to substances within the body. There are special tests that can detect PAHs attached to these substances in body tissues or blood. However, these tests cannot tell whether any

health effects will occur or find out the extent or source of your exposure to the PAHs. The tests aren't usually available in your doctor's office because special equipment is needed to conduct them.

Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) has set a limit of 0.2 milligrams of PAHs per cubic meter of air (0.2 mg/m³). The OSHA Permissible Exposure Limit (PEL) for mineral oil mist that contains PAHs is 5 mg/m³ averaged over an 8-hour exposure period.

The National Institute for Occupational Safety and Health (NIOSH) recommends that the average workplace air levels for coal tar products not exceed 0.1 mg/m³ for a 10-hour workday, within a 40-hour workweek. There are other limits for workplace exposure for things that contain PAHs, such as coal, coal tar, and mineral oil.

Glossary

Carcinogen: A substance that can cause cancer.

Ingest: Take food or drink into your body.

Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about xylene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

SUMMARY: Exposure to xylene occurs in the workplace and when you use paint, gasoline, paint thinners and other products that contain it. People who breathe high levels may have dizziness, confusion, and a change in their sense of balance. This substance has been found in at least 658 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

What is xylene?

(Pronounced zī'lēn)

Xylene is a colorless, sweet-smelling liquid that catches on fire easily. It occurs naturally in petroleum and coal tar and is formed during forest fires. You can smell xylene in air at 0.08–3.7 parts of xylene per million parts of air (ppm) and begin to taste it in water at 0.53–1.8 ppm.

Chemical industries produce xylene from petroleum. It's one of the top 30 chemicals produced in the United States in terms of volume.

Xylene is used as a solvent and in the printing, rubber, and leather industries. It is also used as a cleaning agent, a thinner for paint, and in paints and varnishes. It is found in small amounts in airplane fuel and gasoline.

What happens to xylene when it enters the environment?

- Xylene has been found in waste sites and landfills when discarded as used solvent, or in varnish, paint, or paint thinners.
- It evaporates quickly from the soil and surface water into the air.

- In the air, it is broken down by sunlight into other less harmful chemicals.
- It is broken down by microorganisms in soil and water.
- Only a small amount of it builds up in fish, shellfish, plants, and animals living in xylene-contaminated water.

How might I be exposed to xylene?

- Breathing xylene in workplace air or in automobile exhaust.
- Breathing contaminated air.
- Touching gasoline, paint, paint removers, varnish, shellac, and rust preventatives that contain it.
- Breathing cigarette smoke that has small amounts of xylene in it.
- Drinking contaminated water or breathing air near waste sites and landfills that contain xylene.
- The amount of xylene in food is likely to be low.

How can xylene affect my health?

Xylene affects the brain. High levels from exposure for short periods (14 days or less) or long periods (more than 1 year) can cause headaches, lack of muscle coordination, dizziness, confusion, and changes in one's sense of balance. Exposure of

ToxFAQs Internet home page via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

people to high levels of xylene for short periods can also cause irritation of the skin, eyes, nose, and throat; difficulty in breathing; problems with the lungs; delayed reaction time; memory difficulties; stomach discomfort; and possibly changes in the liver and kidneys. It can cause unconsciousness and even death at very high levels.

Studies of unborn animals indicate that high concentrations of xylene may cause increased numbers of deaths, and delayed growth and development. In many instances, these same concentrations also cause damage to the mothers. We do not know if xylene harms the unborn child if the mother is exposed to low levels of xylene during pregnancy.

How likely is xylene to cause cancer?

The International Agency for Research on Cancer (IARC) has determined that xylene is not classifiable as to its carcinogenicity in humans.

Human and animal studies have not shown xylene to be carcinogenic, but these studies are not conclusive and do not provide enough information to conclude that xylene does not cause cancer.

Is there a medical test to show whether I've been exposed to xylene?

Laboratory tests can detect xylene or its breakdown products in exhaled air, blood, or urine. There is a high degree of agreement between the levels of exposure to xylene and the levels of xylene breakdown products in the urine. However, a urine sample must be provided very soon after exposure ends because xylene quickly leaves the body. These tests are not routinely available at your doctor's office.

Has the federal government made recommendations to protect human health?

The EPA has set a limit of 10 ppm of xylene in drinking water.

The EPA requires that spills or accidental releases of xylenes into the environment of 1,000 pounds or more must be reported.

The Occupational Safety and Health Administration (OSHA) has set a maximum level of 100 ppm xylene in workplace air for an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) and the American Conference of Governmental Industrial Hygienists (ACGIH) also recommend exposure limits of 100 ppm in workplace air.

NIOSH has recommended that 900 ppm of xylene be considered immediately dangerous to life or health. This is the exposure level of a chemical that is likely to cause permanent health problems or death.

Glossary

Evaporate: To change from a liquid into a vapor or a gas.

Carcinogenic: Having the ability to cause cancer.

CAS: Chemical Abstracts Service.

ppm: Parts per million.

Solvent: A liquid that can dissolve other substances.

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the May 2008 Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) prepared by AKRF for the above referenced project site. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 5 and 6. The project site is located in Manhattan Community District 10.

The RAP and CHASP are acceptable as long as the following comments and recommendations are incorporated into a final/revised RAP and CHASP.

- Clean fill text, page 10 of the RAP - Two (2) feet of certified clean fill/top soil must be imported from an approved facility/source and graded across all landscaped/grass covered areas of the site not capped with concrete/asphalt. The certified clean fill/top soil must be segregated at the source/facility, have qualified environmental personnel collect representative samples at a frequency of one (1) sample for every 250 cubic yards, analyze the samples for Target Compound List (TCL) volatile organic compounds, semi-volatile organic compounds, pesticides/PCBs and Target Analyte List (TAL) metals by a New York State Department of Health Environmental Laboratories Approval Program-certified laboratory, compare to New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum 4046 Recommended Soil Clean-up Objectives, and receive DEP written approval to use the clean fill/top soil. Upon receipt of DEPs written approval, the clean fill/top soil may be transported to the site for grading. The clean fill/top soil should not be comprised of any construction and demolition debris. A highly visible demarcation barrier

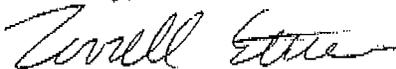

DEPT OF CITY PLANNING
RECEIVED
2003 AUG -6 PM 3:00
ENVIRONMENTAL REVIEW DIV.

(i.e., orange plastic construction fence or equivalent) must be installed below the 2 foot certified clean fill/top soil cap;

- The vapor barrier must be 15-mil in thickness (not 10-mil as proposed). A specific vapor barrier manufacturer, type, sample, and chemical resistance information fact sheet(s) for the identified on-site contaminants must be included in the RAP;
- Upon completion of all DEP requested remedial requirements, a P.E.-certified Remedial Closure Report should be submitted to DEP. This report should demonstrate that all remedial activities have been properly implemented. At a minimum, the report should include all transportation manifests, soil disposal/recycling certificates, proof of importing and grading certified clean fill/top soil for all landscaped areas as well as all pre-approved soil analytical testing results for the imported fill/top soil, proof of vapor barrier installation beneath all slabs (including photographs), etc;
- The EAS should describe the remedial measures necessary to avoid significant adverse hazardous materials impacts consistent with the RAP and CHASP;
- Due to the identified site conditions and required remedial measures, a Restrictive Declaration that would be binding on the property's successors and assigns is necessary to prevent future exposure to either construction workers or future occupants. The Restrictive Declaration must be designed to restrict the manner in which the property may be developed or redeveloped, by requiring that additional testing or remediation measures, if required, serve as a condition precedent to any change of use or sub-surface excavation conducted as part of any future development or redevelopment of the property. The Restrictive Declaration should be drafted for review and approval by DEP prior to being executed and recorded.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact me at (718) 595-4473.

Sincerely,

Terrell Estes

Attn.: Mr. Jonathon Feigenbaum

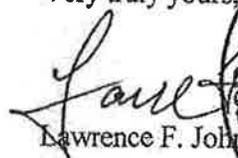

Re: 487 West 129th Street
Manhattan, New York

Dear Mr. Feigenbaum:

In accordance with our proposal of September 20, 2012, we have completed our geotechnical investigation for the proposed apartment towers in Manhattan, New York. The attached report, "Geotechnical Engineering Report, Proposed Apartment Towers, 487 West 129th Street, Manhattan, New York", summarizes our findings.

Please contact the undersigned if you have any questions.

Very truly yours,

Lawrence F. Johnson

1.0 Introduction

1.1 General

This report presents the results of a subsurface investigation and geotechnical evaluation for two proposed apartment towers at 487 West 129th Street in Manhattan, New York. The project is located on the north side of 129th Street between Amsterdam and Convent Avenues. It extends from 129th Street to 130th Street.

1.2 Project Description

The proposed project consists of two eight story apartment towers over a three level parking garage that covers the full site. The lowest floor level will be elevation approximately 11.6 feet below the existing slab-on-grade.

The building will be constructed of precast plank on load bearing masonry. No structural loadings are available at this time. For the purposes of this report we are assuming an average load of 150 psf per floor, excluding the weight of a possible mat foundation.

1.3 Scope of Study

This study was conducted in accordance with our proposal of September 20, 2012. The study analyzes subsurface information to determine the physical properties and characteristics of subsurface materials and evaluates this information for the purpose of establishing geotechnical design criteria. Specifically, conclusions and recommendations are presented regarding the following:

1. Foundation type.
2. Groundwater.
3. Site seismic classification and potential for soil liquefaction.
4. Other subsurface conditions which may affect design or construction of the proposed structure.

This report has been prepared for the exclusive use of Inner City Contracting, LLC, for specific application to the proposed project in New York, New York, in accordance with generally accepted geotechnical engineering practices in this area. In the event that the nature, design or location of the proposed construction changes, the conclusions and recommendations in this report may no longer be valid.

2.0 Geotechnical Investigation

2.1 Test Borings

Between October 9 and 25, 2012, CMI Subsurface Investigations, Inc. took eight test borings at the locations shown on Figure 1. The test borings were logged and monitored by Michal Thomas, P.E. of Heller and Johnsen. Logs are provided in Appendix A. The test borings were located by taping from existing site features. No surface elevations were obtained. However all borings were taken from the existing slab-on-grade which is relatively flat.

Each test boring was advanced with 2-3/4 inch I.D. hollow-stem augers which provided a cased hole from which samples could be extracted. Samples were taken with a 1-3/8 inch I.D. split-spoon sampler driven (normally) 24 inches into the ground with a 140 lb. hammer falling 30 inches. Blows per 6 inches on the sampler were recorded. The foregoing constitutes a standard penetration test from which relative density and other soil characteristics can be estimated. A donut hammer was used for the SPT testing. Donut hammers typically transmit about 45% of theoretical energy compared with 60% for safety hammers. Additionally, the driller reduced the drop height from the standard 30 inches to 24 inches on some of the tests. Therefore, the energy correction factor is in the range of 0.6 to 0.75.

Bedrock was cored in test boring HJ-1 through HJ-4 with an NX core barrel and diamond bit. Recovery, coring time, and RQD (Rock Quality Designation) for the core run are recorded on the appended logs. RQD is determined by measuring the total length of pieces of core 4 inches or greater and dividing by the length of the run, expressed as a percentage. Core fractures that can be attributed to the drilling operation are not considered as fractures in determining RQD.

2.2 Water Level Readings

Monitor wells were installed in HJ-3 and HJ-4. Water level readings were measured by the driller at the times recorded on the boring logs. It should be noted that future water level readings may vary due to tidal, seasonal and climatic fluctuations, storm events and stabilization time.

2.3 Laboratory Testing

Six water content determinations were performed on soil samples obtained from the test borings. Results are provided in Appendix B.

3.0 Site and Subsurface Conditions

3.1 Site

The site is covered by a warehouse that dates to at least 1902 based on available Sanborn maps. Its usage has been identified as the Metropolitan Street Railway Company (Third Avenue Division) Power Station; Third Avenue Railway Company Car House Repair Shop (1912); Metropolitan Opera House Storage (1951, 1976, 1989, 2006).

The warehouse floor slab is at the sidewalk level along 129th Street, but is approximately 24 feet below 130th Street due to the steep rise in grades to the north in this area. The north wall of the warehouse is a brick wall that appears to bear on the retaining wall. The brick wall is offset about five feet from the retaining wall at sidewalk level.

3.2 Local Geology

The bedrock in this area consists of Manhattan schist. Early glaciers from the northeast cut the bedrock troughs oriented in the direction of the glacier's path. Later glacials came from the northwest and overrode the soils embedded in the troughs. As a result, the deeper soils are dense and highly overconsolidated.

3.3 Subsurface Conditions

The test borings provide a generalized subsurface profile consisting, in descending order, of: fill, glacial deposits which generally become finer with depth and bedrock.

The fills vary in depth from 5 to 10 feet. Several, but not all, of the test borings encountered concrete at depths of about ten feet. It is likely that these represent abandoned and filled in repair pits. As such they would be limited in size, surrounded by buried foundation walls.

The glacial soils consist of dense sands and gravels to depths of 20 to 25 feet, overlying fine sand and then silt. The silts were encountered primarily in the southeastern portion of the site at depths of 40 to 50 feet. The high "N" values and local geology suggest that the silts are highly overconsolidated.

Water levels were measured at depths of 24.3 to 25.0 feet in monitor wells installed in test borings HJ-3 and HJ-4.

4.0 Evaluation

4.1 Foundations

Based on an average load of 150 psf per floor for a concrete framed building, and a 3 foot thick mat foundation, the average load will be 2100 psf. The lowest floor will extend 11.5 feet below the current slab-on-grade. Therefore, the bottom of the mat foundation will extend 14.5 feet below grade. Based on the 8 test borings, the excavation for the mat will extend through all of the existing fill materials.

The weight of the excavated materials will be on the order of 1750 psf. While this is less than the anticipated building weight, the underlying soils will act in recompression because of the glacial loadings.

The thickness of compressible soils between the bottom of the mat and the top of weathered bedrock or boulders overlying bedrock varies from 15 to 40 feet, increasing in a southerly direction. The more compressible of the soils are the silts penetrated in the southern portion of the building. The less compressible materials are the sands and gravelly sands. This will result in greater settlements in the southern portion of the site.

The differential settlement may be better dealt with by constructing separate mat foundations for the two towers. In this case, settlement of the northern tower would be in the range of $\frac{1}{4}$ to $\frac{1}{2}$ inch, and the southern tower would be in the range of $\frac{1}{2}$ to 1- $\frac{1}{4}$ inches. The structural design of the mat foundations will require subgrade moduli, which will vary across the site because of the differential settlement. Once a structural engineer is selected, and we are able to discuss the soil structure interaction issues, we will develop and provide appropriate subgrade moduli for the proposed building.

Spread footing foundations are suitable for the section of the garage located between the two towers. Spread footings bearing on dense sand may be proportioned on the basis of an allowable bearing pressure of 4 tsf. Settlements for this section of the garage are expected to be in the range of $\frac{1}{2}$ to 1 inch.

Groundwater is not expected to be a major problem for the excavation since measured water levels in the two wells were deeper than 24 feet.

4.2 Underdrainage System

An underdrainage system is recommended for the parking garage. Its purpose is to protect the garage from flooding in the case of an extreme event. It will also allow the mat foundations and foundation walls to be designed without hydrostatic pressure or waterproofing, and allow the

division of the mat foundation to accommodate differential settlement between the two towers.

4.3 Lateral Earth Pressures

All backfill placed behind foundation walls must consist of free-draining granular materials. The on-site granular fills, which will be excavated during construction, contain silt and foreign materials and are unsuitable for this use. In areas where foundation walls are cast against shoring or underpinning, vertical drainage boards should be provided. Their locations will depend in part on the type of shoring used.

Design basement walls as restrained walls. Use an equivalent fluid pressure of 55 psf per foot of depth plus a uniform pressure equal to one half of any surcharge. The lateral pressure from surcharges should be taken as a uniform pressure equal to one half the vertical surcharge pressure. All values of lateral earth pressure are based on a free-draining backfill being used and footing drains installed. The on-site soils are not suitable for reuse as free-draining backfill. For cast-in-place concrete and masonry walls, a friction factor of 0.5 can be used to determine the sliding resistance at the base.

4.4 Seismic Considerations

The on-site soils were determined to be not susceptible to liquefaction during the IBC design earthquake.

In accordance with NYCBC 2008, the site may be classified as Site Class D. The NYCBC provides MCE Spectral Accelerations of $S_s=0.071$ and $S_1=0.365$ for New York City.

4.5 Underpinning and Lateral Earth Support

At this time, the design and location of the north wall of the structure has not been finalized. A stone and mortar gravity retaining wall provides lateral support to the sidewalk along 130th Street and supports a differential soil height of 24 feet. The existing north wall of the warehouse consists of a brick wall located approximately five feet south of the sidewalk along 130th Street. It is assumed that the brick wall is bearing on the footing for the stone and mortar retaining wall. We understand that the new north wall will be designed in a manner which allows the retaining wall to remain in place, and minimize the underpinning and shoring requirements necessary to maintain the stability of the retaining wall. Test pits should be taken to determine the vertical and lateral extents of the retaining wall footing once the design of the new north wall is better understood.

The south wall of the parking garage will be adjacent to the sidewalk along 129th Street. It is expected that an H-pile and lagging earth support system can be installed in the sidewalk to allow excavation for the one level below grade.

The east wall will be adjacent to an existing building that does not have a basement. The lowest floor of that building matches the floor elevation of the warehouse. The foundations of the adjacent building must be underpinned prior to excavating for the parking garage. Approach pit underpinning is probably the most economical.

The west wall will be inside the existing warehouse but will abut a masonry wall that was added recently to sub-divide the warehouse. The wall and the portion of the warehouse to its west is owned by the Metropolitan Opera. Available foundation plans show that the concrete block wall is supported on a 2 ft wide footing that extends 18" below the bottom of the slab. The masonry wall is in line with the back side of a row of columns that pre-dated the construction of the wall. These columns are supported on stone piers and footings of unknown depth. The wall and column footings must be underpinned. Approach pit underpinning is probably the most economical.

5.0 Summary

Based on our review of available subsurface data, we offer the following conclusions and recommendations:

1. The existing fill is not suitable for support of foundations or slabs-on-grade. If any of these materials remain after the excavation for the mat foundation, these materials must be removed.
2. Support the structure on a combination of spread footings for the area between the towers and mat foundations for each tower. Anticipated maximum settlements are estimated at approximately $\frac{3}{4}$ inch.
3. A permanent underdrainage system is recommended beneath the mat foundation. It would consist of a network of perforated pipes placed in a layer of crushed stone that is underlain by filter fabric. The pipes would lead to a sump. It is anticipated that the system will be low flow levels if any except for extreme events.
4. Refer to Section 4.4 for lateral earth pressures and design of foundation and retaining walls.
5. Underpinning and shoring requirements for each side of the excavation are discussed in Section 4.5. Test pits should be taken prior to construction along the east, west and north sides of the project. The project specifications should require the contractor to engage a Professional Engineer licensed in New York State to design the underpinning and shoring.
6. The on-site soils were determined to be not susceptible to liquefaction during the NYC Building Code design earthquake.

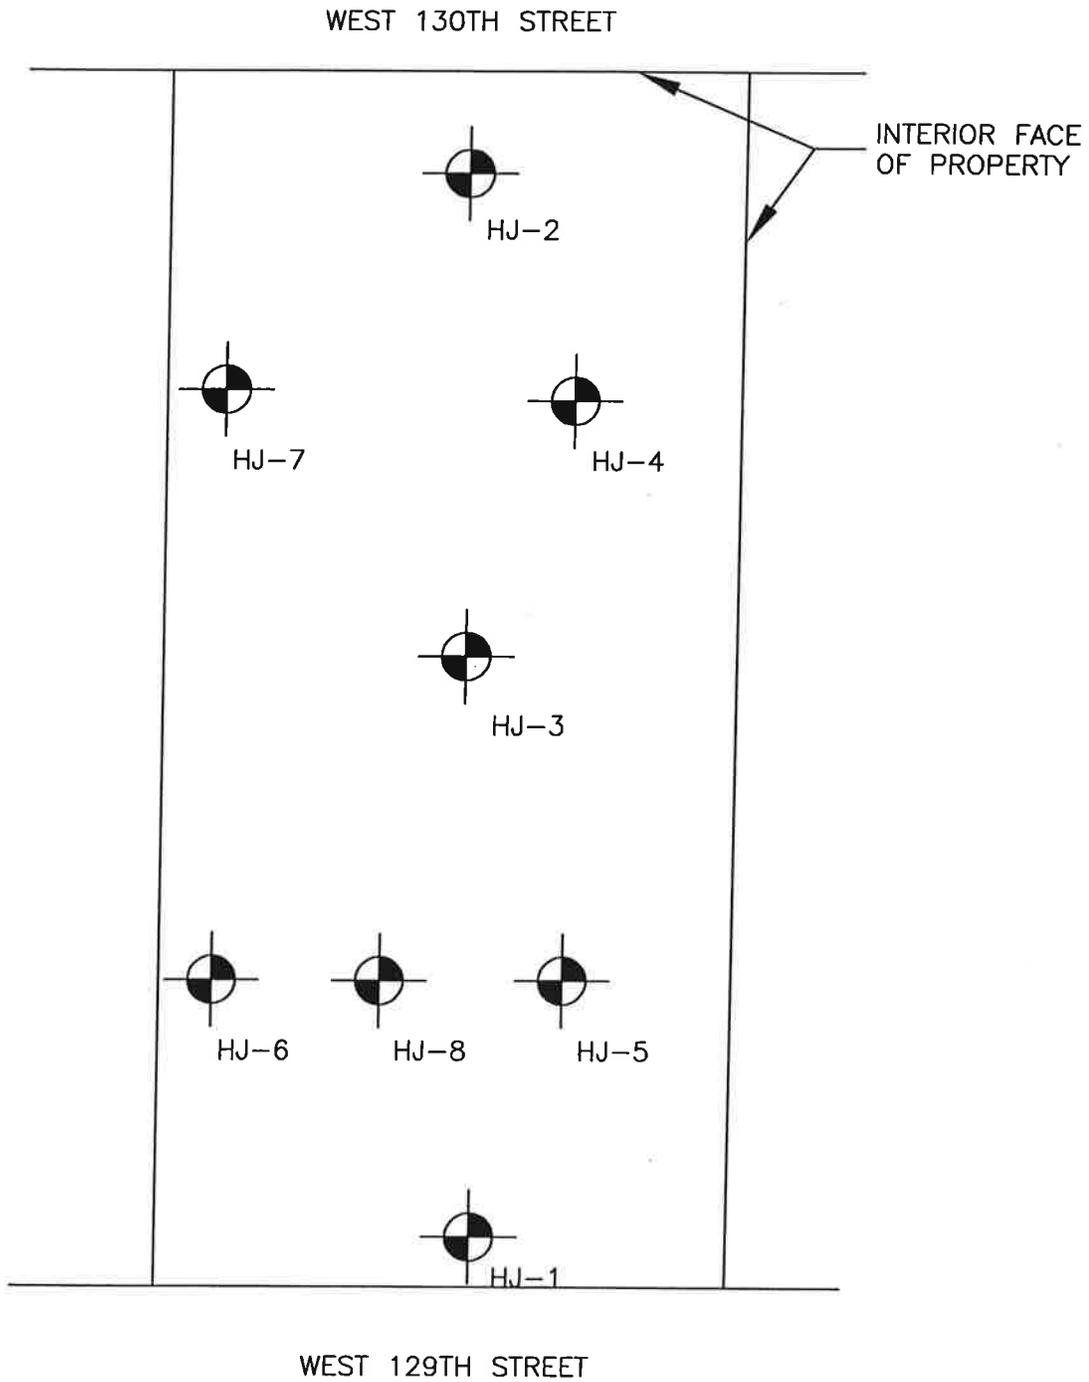

HELLER AND JOHNSEN

7. In accordance with the 2008 NYC Building Code, the site may be classified as Site Class D. The Code provides MCE Spectral Accelerations of $S_s=0.071g$ and $S_1=0.365g$.
8. Provide Heller and Johnsen with an opportunity to review final plans and specifications prior to bidding to determine that our geotechnical recommendations have been properly interpreted and implemented.
9. Engage a geotechnical engineer to provide field monitoring services for the foundation and earthwork phases of construction and to make on site design modifications in the event unexpected conditions are encountered.

Re: Phase I Environmental Site Assessment
487 West 129th Street– New York, NY
AKRF Project Number 11978

Dear Mr. Feigenbaum:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

JUNE 2014

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Inner City Contracting LLC to perform a Phase I Environmental Site Assessment (ESA) of a Property located at 487 West 129th Street, New York, NY (also identified as Tax Block 1969, Lot 6). At the time of AKRF's reconnaissance, the approximately 20,000-square foot Property was a vacant portion of a one-story building with a partial cellar. AKRF previously conducted a *Phase I ESA* (November 2007) and *Subsurface (Phase II) Investigation* (March 2008) of the Property, and prepared a *Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP)* for construction proposed at the Property (May 2008).

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

The Property building was constructed prior to 1902 and was historically occupied by: a power station, car house, and repair shop for a railway company; automobile repair; a bus garage; and a Metropolitan Opera warehouse. The building was vacant since 2006.

At the time of AKRF's reconnaissance, the Property consisted of the vacant eastern portion of a one-story building with a partial cellar. The abutting western portion of the building is considered to be off-site and was used by Metropolitan Opera as a warehouse to store stage sets. The greater surrounding area was predominantly commercial and residential. A Verizon garage and a Metropolitan Transit Authority (MTA) bus garage were located on the south-adjacent block.

This assessment revealed the following:

Recognized Environmental Conditions (RECs)

- No evidence of petroleum storage tanks was noted on the Property, and no tanks were registered for the Property with the New York State Department of Environmental Conservation (NYSDEC). Computerized NYC Buildings Department records noted fuel oil use and a cellar-level boiler room at 495 West 129th Street (the collective address of the Property and the off-site Metropolitan Opera warehouse) in 1949. Thus, the Property building's cellar, which was not accessible for inspection, may have historically contained an aboveground or underground fuel oil tank, which may remain on the Property, or may have been removed.
- Historical uses of the Property building as: a power station, car house, and repair shop for a railway company; an automobile repair shop; and a bus garage may have affected subsurface conditions beneath the Property.
- The May 2008 subsurface investigation noted an apparent perched groundwater table approximately 13 feet below the building floor. Field evidence of contamination [elevated photoionization detector (PID) readings and petroleum-like odors] were noted in two borings at the south side of the Property, and elevated concentrations of petroleum-related volatile organic compounds (VOCs) were detected in a soil sample collected within the perched water table at the southwestern corner of the building. Based on field observations indicating that the contamination appeared to be associated primarily

with the perched water table and laboratory analytical results, the Phase II report concluded that the contamination did not appear to originate from an on-site petroleum spill, and was instead attributable to contaminant migration from an off-site spill.

- The Property is underlain by approximately 5 to 10 feet of fill (sand, gravel, silt, brick, concrete, ash and glass). The May 2008 subsurface investigation identified somewhat elevated concentrations of semi-volatile organic compounds (SVOCs) and metals in on-site soil, likely associated with historical uses of the Property and/or the fill materials. An approximately 20-cubic yard pile of soil, brick, and concrete associated with test pit excavation was observed during the reconnaissance; no odors or staining were noted.
- The east-adjacent auto repair shop was historically a garage with gasoline USTs, and was listed in the regulatory database as a generator of hazardous waste (benzene and chlorinated solvents). A Chinese laundry (which may have included dry cleaning) was historically located on the eastern side of the Property block. An apartment building on the eastern site of the Property block was identified with a PBS listing and an active-status spill. A Verizon garage registered as a Petroleum Bulk Storage (PBS) facility and a bus garage (a historical railway car house listed in the regulatory database with closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing) were located on the south-adjacent block.

Controlled Recognized Environmental Condition (CREC)

- A Metropolitan Transit Authority (MTA) bus garage located on the south-adjacent block was listed in the regulatory database with several closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing. This facility was historically a railway car house.

Other On-Site Environmental Concerns (items outside the scope of E1527-13 such as ACM, LBP and/or PCBs in building materials or fill/debris)

- Based on the building's age, asbestos-containing materials (ACM) may be present. Suspect ACM observed during the reconnaissance included: thermal pipe insulation; window glazing and caulking; and roofing materials. These materials were observed to be in fair to poor condition, with damaged thermal pipe insulation and roofing.
- Based on the building's age, lead-based paint may be present. Painted surfaces were observed to be in fair to poor condition, with peeling paint noted throughout the building. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.
- Based on the building's age, fluorescent lighting fixtures and electrical equipment on the Property may contain polychlorinated biphenyls (PCBs). No evidence of leaks or stains from these fixtures and equipment was observed.
- The Property underwent City Environmental Quality Review (CEQR) in 2009 for a rezoning. As part of CEQR, the developer entered into a Restrictive Declaration in April 2008 to ensure that remedial activities are completed to the satisfaction of the NYC Department of Environmental Protection (DEP) prior to or during construction of the proposed development. This would include the implementation of a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) prepared by AKRF in May 2008 for the proposed development, as well as DEP requirements outlined in a July 31, 2008 letter commenting on the RAP and CHASP.

Potential for Vapor Migration

This Phase I assessment identified a potential for subsurface vapors and thus a potential for vapor migration onto the Property, based on the RECs noted.

RECOMMENDATIONS

- Historical uses of the Property and surrounding area may have affected subsurface conditions beneath the Property, and the 2008 Phase II investigation indicated petroleum contamination beneath a portion of the Property. Although the contamination was attributed to an off-site source, it is possible that excavation for Property redevelopment will indicate evidence of an on-site spill reportable to NYSDEC. Since the preparation of the May 2008 DEP-approved RAP and CHASP, management of Restrictive Declaration sites was transferred from the DEP to the NYC Mayor's Office of Environmental Remediation (OER). The Property remediation/redevelopment will need to be conducted to the satisfaction of OER as a condition for obtaining a Certificate of Occupancy for the new building. AKRF recommends contacting OER to determine the appropriate remedial measures, which may include: producing an updated RAP and CHASP (due to the age of the original RAP and CHASP and/or changes in the proposed development); additional subsurface investigation (e.g., groundwater and soil vapor sampling); and more stringent requirements for environmental monitoring during construction, and for vapor control measures to prevent vapor intrusion into the new building.
- Any excavated soil should be handled and disposed of in accordance with all applicable federal, state and local regulations. If any petroleum storage tanks are encountered, they should be properly assessed, closed, and removed. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. If dewatering is required during construction activities, it should be in accordance with DEP requirements.
- AKRF recommends sampling the damaged suspect ACM to determine whether they contain asbestos. Any damaged ACM should be removed or repaired in accordance with applicable requirements by a licensed asbestos abatement contractor. Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any ACM that would be disturbed by the renovation or demolition must be properly removed prior to such activity.
- Unless there is labeling or test data indicating that fluorescent lighting fixtures are not mercury- and/or PCB-containing, and that electrical equipment does not contain PCBs, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any activities (such as renovation or demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Inner City Contracting LLC to perform a Phase I Environmental Site Assessment of a Property located at 487 West 129th Street, New York, NY (also identified as Tax Block 1969, Lot 6). At the time of AKRF's reconnaissance, the approximately 20,000-square foot Property was a vacant portion of a one-story building with a partial cellar. AKRF previously conducted a *Phase I ESA* (November 2007) and *Subsurface (Phase II) Investigation* (March 2008) of the Property, and prepared a *Remedial Action Plan (RAP)* and *Construction Health and Safety Plan (CHASP)* for construction proposed at the Property (May 2008).

At the time of AKRF's reconnaissance, the Property consisted of the vacant eastern portion of a one-story building with a partial cellar. The off-site western portion of the building was a Metropolitan Opera warehouse used to store stage sets. The greater surrounding area was predominantly commercial and residential. A Verizon garage and a Metropolitan Transit Authority (MTA) bus garage were located on the south-adjacent block.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*). Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP); and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

On May 30, 2014, Ms. Asya Bychkov of AKRF conducted a reconnaissance of the Property accompanied by Mr. John Schroeder of Inner City Contracting LLC, who answered pertinent questions. Neighboring properties were also viewed, but only from public rights-of-way. The weather was sunny and approximately 80 °F, the visibility good, and the premises adequately illuminated. Photographs from the reconnaissance are included in Appendix A.

2.1 General Site Conditions

The Property was located at 487 West 129th Street and comprised the approximately 20,000-square foot eastern portion of a single-story warehouse structure with a partial cellar, which was vacant at the time of the reconnaissance. The Property building was not served by elevators, unheated, and illuminated by natural light from roof-level windows and fluorescent lights.

The western portion of the warehouse (considered to be off-site) was owned and operated by the Metropolitan Opera. According to Mr. Schroeder, the Property was vacant since at least 2006 and was formerly part of the west-adjacent Metropolitan Opera warehouse used for storing stage sets. A concrete block demising wall was constructed to separate the two portions of the building in 2006. A mezzanine level was observed along the entire eastern length of the building.

A two-level brick enclosure was located in the southeastern corner of the Property. The ground floor of this enclosure contained a bathroom, locker room, and utility room with an (apparently electrically-powered) hot water heater. A stairwell adjacent to the utility room led to a vacant room on the upper (mezzanine) level, which was connected to the open mezzanine that ran along the eastern edge of the building. Mr. Schroeder believed that floor drains noted throughout the building were connected to the municipal sewer system.

Interior finishing materials included painted brick and concrete walls, concrete floors, and metal and wood ceilings. The building materials were observed to be in fair to poor condition, with peeling paint observed throughout, and holes noted in the roof. Puddles of rainwater and water staining (due to the damaged roof) were observed on the building floor. Two test pits adjacent to building walls and several small holes (reportedly the locations of geotechnical borings) were noted in the floor. An approximately 20-cubic yard pile of soil, brick, and concrete associated with test pit excavation was observed in the building. No odors or oil-like staining were noted on the building floor or in the soil. A monitoring well installed during a 2012 geotechnical study (see Section 7.0) was observed in the northern portion of the Property. A second monitoring well installed in the central portion of the Property during the same study was not observed, but may remain on-site since no record of its removal was provided.

A doorway in the northeastern corner of the building led to a cellar, which could not be accessed due to a steep entrance staircase partially blocked by building debris and fallen leaves (a steel grate above the staircase was open to air). An approximately 20-foot by 20-foot area of the ground floor was elevated approximately six inches above the main floor grade, possibly corresponding to the cellar's ceiling. The steel grate and a metal hatch were located at the West 130th Street level above the cellar entrance, and were visible from West 130th Street. Mr. Schroeder was not aware of the existence or purpose of this cellar. A pulley system observed at the cellar entrance may have been used historically for moving items stored in the cellar.

2.2 Topography and Hydrogeology

Based on a 2005 survey, the Property is located at an elevation of approximately 36.4 feet above the Manhattan Borough Datum (MBD). Regional surface topography slopes down to the southwest. The north-adjacent sidewalk at West 130th Street is at an elevation of approximately 60.8 to 53.9 feet MBD. Previous studies summarized in Section 7.0 indicated that the Property is underlain by approximately 5 to 10 feet of fill (sand, gravel, silt, brick, concrete, ash and glass) above a layer of apparent native soil (sand, gravel, and silt). A geotechnical study in 2012 identified apparent concrete layers approximately 5 to 10 feet below the building floor, possibly associated with historical rail car repair pits. Weathered bedrock was encountered approximately 35 to 61 feet below the building floor, and competent bedrock was encountered approximately 36 to 66 feet below the building floor, sloping down toward the south.

A subsurface investigation (AKRF, May 2008) identified apparent perched groundwater approximately 13 feet below the building floor. The geotechnical study indicated that groundwater was approximately 24.3 to 25 feet below the building floor. Based on USGS mapping, groundwater is expected to flow in a southwesterly direction toward the Hudson River, approximately 0.45 mile away. However, actual water table depth and groundwater flow direction can be affected by many factors including subsurface openings or obstructions such as basements, underground utilities, bedrock geology, the A/B/C/D Line subway tunnels approximately 1,000 feet to the east, and other factors beyond the scope of this assessment. Groundwater in Manhattan is not used as a source of potable water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present at the Property. No records relating to USTs on the Property were identified in the regulatory database or computerized NYC Fire Department (FDNY) records.

Computerized NYC Buildings Department records for 495 West 129th Street (a historical collective address of the Property and the off-site Metropolitan Opera warehouse) included a 1949 oil burner application, and a 1949 Certificate of Occupancy noting that the building had a boiler room in the cellar. No fuel tank was located in the cellar of the off-site warehouse at the time of the November 2007 Phase I ESA. The Property cellar was not accessed for inspection. The historical fuel tank may have been located on-site or in the off-site portion of the building, and may have been an aboveground storage tank (AST) or a UST.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

During the reconnaissance, no evidence, such as tanks or vaults likely to contain tanks, vent pipes, or fill caps, was observed to indicate that ASTs are or were present at the Property. No records relating to ASTs on the Property were identified in the regulatory database or computerized FDNY records.

As previously noted, computerized NYC Buildings Department records for 495 West 129th Street included a 1949 oil burner application and a 1949 Certificate of Occupancy noting that the building had a boiler room in the cellar. No fuel tank was located in the cellar of the abutting warehouse at the time of the November 2007 Phase I ESA. The Property cellar was not accessible for inspection. The historical fuel tank may have been located on-site or in the off-site portion of the building, and could have been an AST or a UST.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs)

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the building's age, fluorescent lighting fixtures and electrical equipment may contain PCBs. No evidence of leaks or stains from these fixtures was observed.

2.5 Lead-Based Paint

After 1977, the use of lead-based paint inside commercial structures was restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Exterior and interior painted surfaces were observed to be in fair to poor condition, with peeling paint noted throughout the building. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

The Property was supplied with electricity. The Property was connected to the municipal water and sewer systems, and Mr. Schroeder believed that floor drains on the Property were connected to the municipal sewer system.

2.7 Waste Management and Chemical Handling

The Property was vacant, with no waste generation observed at the time of the reconnaissance. An approximately 20-cubic yard pile of soil, brick and concrete associated with test pit excavation was observed; no odors or staining were noted. No chemical storage was noted on the Property.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database the average level of radon found in basements in Manhattan is 2.08 picocuries/liter, below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM observed during the reconnaissance included: thermal pipe insulation; window glazing and caulking; and roofing materials. These materials were observed to be in fair to poor condition, with damaged thermal pipe insulation and roofing observed. ACM may also be present in other locations not readily accessible during the reconnaissance. This reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

AKRF recommends sampling the damaged suspect ACM to determine whether they contain asbestos. Any damaged ACM should be removed or repaired in accordance with applicable requirements by a licensed asbestos abatement contractor. Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any ACM that would be disturbed by the renovation or demolition must be properly removed prior to such activity.

4.0 ADJACENT LAND USE

The western (off-site) portion of the building was a Metropolitan Opera warehouse used to store stage sets. The greater surrounding area was predominantly commercial and residential. An apparent vacant warehouse east-adjacent to the Property contained an auto repair shop on the ground floor. A Verizon garage and an MTA bus garage with a smokestack (the Amsterdam Bus Depot) were located on the south-adjacent block. The smokestack may be associated with historical industrial uses or a heating plant; however, no such uses were identified in the MTA garage on historical Sanborn maps. A park with a swimming pool was located on the southwest-adjacent block. Riverside Park was located two blocks to the east.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use Maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1893, 1902, 1909, 1912, 1951, 1969, 1976, 1989, and 2006 were reviewed.

1893

Sanborn coverage was not available for the Property in 1893.

Land north of the Property was shown on the 1893 map. The Convent of the Sacred Heart comprised a large campus located approximately 200 feet north-northeast of the Property. A coal storage facility was located at the northern end of the Convent. A contractor's yard and a hospital were located approximately 300 feet north of the Property on the corner of West 131st Street and Amsterdam Avenue. A coal yard was located approximately 400 feet northwest of the Property on West 130th Street. A factory labeled "Smith and Kaufman Silk Ribbon" was located approximately 600 feet north-northwest of the Property on West 132nd Street. The remainder of the surrounding area was developed primarily with two to five-story dwellings and commercial buildings.

1902

The Property was developed with as a one-story building labeled as a Metropolitan Street Railway Company power station.

A vacant lot was west-adjacent to the Property, with two to five-story dwellings and commercial buildings beyond. Vacant lots and a single-story dwelling were east-adjacent to the Property. A railway car house and a wagon yard were located south of the Property across West 129th Street. The Manhattan Brewery, an iron works, and a blacksmith were located approximately 500 feet south of the Property. The remainder of the surrounding area was developed primarily with two to five-story dwellings and commercial buildings. No other significant changes from the 1893 map were noted.

1909

Sanborn coverage was not available for the Property in 1909.

Land north of the Property was shown on the 1909 map. A Chinese Laundry was located approximately 700 feet northwest of the Property at the corner of West 131st Street and Old Broadway. A coal yard was present approximately 800 feet northeast of the Property. A school was shown on the northeast-adjacent block. The remainder of the surrounding area was primarily residential and commercial in nature.

1912

The Property building was labeled as the Third Avenue Railway Company Car House and Repair Shop.

Two to five-story dwellings and commercial buildings were located west of the Property on the same block. A garage and repair shop was located at the east-adjacent site and contained two 550-gallon gasoline USTs and one 825-gallon gasoline UST. The Bernaeimer and Schwartz Pilsner Brewing Company, which included an ice house and ice plant, were located approximately 200 feet southeast of the Property across West 129th Street. A Chinese laundry was located approximately 500 feet west of the Property on Old Broadway. A garage with one 250-gallon gasoline UST was located approximately 700 feet west of the Property, between West 129th and West 130th Streets. The remainder of the surrounding area was developed primarily with two- to six-story dwellings and commercial buildings, with some manufacturing and light industrial facilities throughout.

1951

The Property building was labeled the Metropolitan Opera Association Warehouse, and had been extended westward to include the former vacant lot west-adjacent to the Property (the current location of the off-site Metropolitan Opera warehouse). A small cellar with an apparent boiler was shown in the northeastern corner of the Property building, and a small enclosure (possibly the existing two-level brick enclosure) was shown in its southeastern corner.

The 825-gallon gasoline UST and one 550-gallon gasoline UST shown on the 1912 map remained in the east-adjacent garage, but the second 550-gallon gasoline UST was no longer shown in this building. A Chinese laundry was located approximately 150 feet east of the Property on the same block. The railway car house shown on the 1902-1912 maps south of the Property across West 129th Street was labeled as a bus garage, and a repair shop was located in the southeastern corner of this building. A garage located approximately 200 feet southeast of the Property across West 129th Street contained four 550-gallon gasoline USTs. Two garage and repair shops with gasoline USTs were located approximately 500 to 700 feet north-northwest of the Property. Three gasoline filling stations with several gasoline USTs were noted approximately 800 to 1,000 feet west of the Property. A building labeled the Uncle Sam Chemical Manufacturing Company, located approximately 1,000 feet north-northwest of the Property near the intersection of West 131st Street and Old Broadway, had two 550-gallon gasoline USTs. Two additional school buildings and a swimming pool were shown on the northeast-adjacent block. The remainder of the surrounding area was developed with two- to six-story dwellings, commercial buildings, garages, automotive-related facilities, hospitals, and warehouses.

1969

Sanborn coverage was not available for the Property in 1969.

Land to the north of the Property was shown on the map. The College of the City of New York, formerly the Convent of the Sacred Heart, was located approximately 200 feet north-northeast of the Property. A coal storage facility was located at the northern end of the college. A paint shop was located approximately two blocks north of the Property on Amsterdam Avenue between West 131st and West 133rd Streets. A laundry facility and a boiler room were shown at the Manhattanville Houses apartment building complex, located approximately 500 to

800 feet northwest of the Property. The remainder of the area denoted on the available maps was developed primarily with two- to six-story dwellings and commercial buildings.

1976

No changes from the 1951 map were noted at the Property.

The bus garage located south of the Property across West 129th Street was shown with two repair shops in its southern portion. The Chinese laundry shown on the 1951 map approximately 150 feet east of the Property was no longer present. No other significant changes from the 1951 and 1969 maps were noted in the surrounding area.

1989

No significant changes from the 1976 map were noted on the Property or in the surrounding area.

2006

The Property remained similar to the 1989 map.

The garage located approximately 200 feet southeast of the Property was labeled as a Verizon garage. Due to the level of detail, the map did not specify whether gasoline USTs were present in this garage or the garage east-adjacent to the Property. No further significant changes from the 1989 map were noted in the surrounding area.

To summarize, the Sanborn maps indicated that the Property building was constructed prior to 1902 and was historically occupied by a power station for a railway company, followed by a railway car house and repair shop. The building was used as a Metropolitan Opera warehouse since sometime between 1912 and 1951. The 1951-2006 Sanborn maps showed a small cellar with an apparent boiler in the northeastern corner of the Property building, and a one-story addition to the western side of the building (the existing abutting Metropolitan Opera warehouse).

Nearby sites with some potential to have affected subsurface conditions beneath the Property included: an east-adjacent garage and auto repair shop with gasoline USTs; a Chinese laundry on the eastern side of the Property block (which may have included dry cleaning); a railway car house (followed by a bus garage) with repair shops on the south-adjacent block; and a garage with gasoline USTs on the south-adjacent block. The surrounding area historically included residential, commercial, manufacturing and auto-related uses.

5.1.2 Historical Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Primary Land Use Tax Output (PLUTO) information provided by Toxics Targeting, Inc. of Ithaca, New York, the Property tax lot is zoned as R7A (general residence), and was listed with one building built in 1900 and classified as E1 (warehouse). This was consistent with historical Sanborn maps, which indicated that the Property building was constructed prior to 1902.

5.1.4 Recorded Land Title Records

Title records provided by Inner City Contracting LLC identified West 129th Street Realty LLC as the Property owner, and indicated that the Property was purchased from the Metropolitan Opera Association Inc. in 2005. No environmental liens or Activity and Use Limitations (AULs) were identified.

5.1.5 Local Street Directories

City Directories prepared by Environmental Data Resource, Inc. were reviewed. The City Directories consisted of the names of businesses located on-site and in adjacent properties, compiled from city and telephone directories and listed at approximately seven-year intervals starting with 1920. The directories identified the following at the Property address: automotive repair in 1927; a bus garage in 1934; a garage and warehouse in 1942; and a transit corporation in 1947. These historical on-site uses may have affected subsurface conditions beneath the Property.

The City Directory search results are included in Appendix E.

5.2 Regulatory Review

The regulatory database listings, shown in Appendix B, were obtained from Toxics Targeting, Inc. of Ithaca, New York. The introduction of Appendix C includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

Databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. Facilities subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) are discussed with State RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding properties and thus impacting property values.

One NPL site was identified within a one-mile radius of the Property. The Hudson River PCB Sediments site, associated with sediment contamination in the Hudson River, approximately 0.45 mile west of the Property, is not anticipated to affect the Property based on listing details.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern).

One CERCLIS site was identified within a ½-mile radius of the Property. The Hudson River PCB Sediments site, associated with sediment contamination in the Hudson River, approximately 0.45 mile west of the Property, is not anticipated to affect the Property based on listing details.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

No potentially on-site ERNS listings were identified.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

One TRIS site was identified within a ¼-mile radius of the Property. Amsterdam Bus Depot, located at 1381 Amsterdam Avenue, approximately 220 feet south-southwest of the Property, was listed for the transfer of 9,500 pounds of ethylene glycol (antifreeze) to a waste broker for recycling in 1997. Although a minor antifreeze spill was reported at this facility, based on its location in an anticipated downgradient groundwater flow direction, this listing not expected to have significantly affected the Property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ¼-mile radius of the Property.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a ¼-mile radius of the Property.

Air Discharge Facilities Index (ADF)

This federal database includes information on certain air emission sources.

Two Air Discharge Facilities were identified within a ¼-mile radius of the Property, but were not anticipated to affect the Property based on location (more than 240 feet away in anticipated downgradient or cross-gradient groundwater flow directions) and listing details.

5.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Historic Utility Sites.

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

No spills were reported for the Property. Four hundred fifty-six spills were reported within a ½-mile radius of the Property, including 28 active-status spills and 428 closed-status spills. Releases with some potential to affect subsurface conditions beneath the Property included the following:

- In October 2012, a tank test failure was reported at an apartment building at 48 Convent Avenue, approximately 190 feet east-southeast of the Property. According to the listing, a No. 6 fuel oil AST failed a tightness test and was to be repaired and re-tested. The listing remains active.
- Amsterdam Bus Depot, located at 1381 Amsterdam Avenue, approximately 220 feet south-southwest of the Property, was listed for ten closed-status petroleum spills. Two spills were reported for tank test failures in January 1992 and July 1994. Additionally, approximately 400 gallons of petroleum, paint, lube oil, hydraulic oil, and/or antifreeze were reportedly released at the site during maintenance and other on-site activities between 1992 and 2002.

Although these listings may have affected the Property, the potential for impact is minor based on the listing details and the anticipated groundwater flow direction. Based on the listing details, distance, and/or the anticipated groundwater flow direction, other spill listings are not likely to have affected the Property. Details of all listed spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

Two RCRA TSD facilities were identified within a ½-mile radius of the Property, but were not anticipated to affect the Property based on their locations of more than 1,490 feet in anticipated cross-gradient groundwater flow directions. One of these TSD

facilities was also identified as a CORRACTS facility. No other CORRACTS sites were reported within a one-mile radius of the Property.

Fifty-six RCRA Generators/Transporters were reported within a 1/8-mile radius of the Property. The nearest facility, LCS Development LLC, located at 40 Convent Avenue, east-adjacent to the Property, was listed as a Conditionally Exempt Small Quantity Generator (CESQG) of benzene, carbon tetrachloride, 1,1-dichloroethylene, tetrachloroethylene, trichloroethylene and vinyl chloride in 2014. This facility may have affected subsurface conditions beneath the Property. 40 Convent Avenue was identified as a garage and auto repair shop with gasoline USTs on historical Sanborn maps, and was observed to include auto repair during the reconnaissance. A Chinese Laundry (potentially a dry cleaner) was east-adjacent to this building on the 1951 Sanborn map.

Based on their location and/or listing details, the remaining RCRA facilities are not anticipated to have affected the Property.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

Two CBS facilities were listed within a 1/8-mile radius of the Property. Amsterdam Bus Depot, located at 1381 Amsterdam Avenue, approximately 260 feet southwest of the Property, was listed with: two closed and removed ethylene glycol (antifreeze) ASTs; one former 500-gallon ethylene glycol AST converted to an unspecified use; and one active 500-gallon ethylene glycol AST. Although a minor antifreeze spill was reported at this facility, based on its location in an anticipated downgradient groundwater flow direction, this listing not expected to have significantly affected the Property. The second facility was unlikely to have affected the Property based on its location approximately 470 feet west-southwest (in an anticipated downgradient groundwater flow direction) of the Property.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No Solid Waste Facilities were identified within a 1/2-mile radius of the Property.

Petroleum Bulk Storage (PBS) Database

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

The Property was not listed on the PBS database. Twenty-one PBS sites were identified within a 1/8-mile radius of the Property. Details of PBS facilities with some potential to affect environmental conditions at the Property based on their proximity and/or listing details are listed in Table 1.

Table 1
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Approximate Distance/Direction from Property
Amsterdam Bus Depot 1381 Amsterdam Avenue	4 x 5,000 UST	Diesel	Closed In Place	220 feet south-southwest
	1,000 UST	Lube Oil	Closed In Place	
	550 UST	Other	Closed In Place	
	15,000 AST	No. 2 Fuel Oil	Closed In Place	
	2 x 4,000 AST	Diesel	Closed-Removed	
	4,000 AST	No. 2 Fuel Oil	Closed-Removed	
	500 AST	Waste Oil	In Service	
	500 AST	Other	Administr. Closed	
	15,000 AST	No. 2 Fuel Oil	In Service	
	1,080 UST	Lube Oil	Closed In Place	
	1,000 AST	Lube Oil	In Service	
	3 x 400 AST	Other	Converted to Non-Regulated Use	
1,000 AST	Other	In Service		
10,000 AST	Diesel	Temp. Out of Service		
Verizon New York 460 West 129 th Street	2 x 4,000 UST	Gasoline	Closed-Removed	350 feet south-southeast
	4,000 UST	Gasoline	In Service	
	550 AST	Waste Oil	In Service	
48 Convent Avenue	5,000 AST	No. 2 Fuel Oil	In Service	200 feet east-southeast

Notes: AST - aboveground storage tank
UST - underground storage tank

An active-status spill at 48 Convent Avenue, and closed-status spills at Amsterdam Bus Depot, were identified with limited potential to affect the Property. Based on their distance and the anticipated groundwater flow direction, the remaining PBS listings are unlikely to have affected the Property. No releases with the potential to affect the Property were reported for the other PBS facilities. Details of the PBS facilities located within a 1/8-mile radius of the Property are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

Two State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the Property. Based on their location of more than 0.45 mile in anticipated downgradient groundwater flow directions, these sites are not expected to have affected the Property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment, but that cannot be remediated using monies from the Hazardous Waste Remediation Fund.

No SHSWDSs were identified within a one-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a 1/8-mile radius of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding, through the Clean Water/Clean Air Bond Act of 1996, to reimburse costs for site investigation and remediation. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Environmental Restoration Programs were identified within a 1/2-mile radius of the Property.

Voluntary Cleanup Program

In contrast to the Environmental Restoration Program, the Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of generally privately-owned sites. It allows volunteers to obtain NYSDEC liability releases following cleanup. New sites are no longer accepted into this program (see the Brownfield Cleanup Program, below) though existing sites may continue to be addressed. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

One Voluntary Cleanup Program site was identified within a 1/2-mile radius of the Property. Consolidated Edison-West 132nd Street Station, located approximately 1,700 feet northwest of the Property at 12th Avenue between West 131st and West 133rd Streets, was the location of two former manufactured gas holders, the last of which was closed in 1962. Based on its distance and the anticipated groundwater flow direction, this facility is unlikely to have affected the Property.

Brownfield Cleanup Program

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

One Brownfield Cleanup Program site was identified within 1/2-mile of the Property, but based on its location of more than 0.45 mile south (in an anticipated cross-gradient groundwater flow direction), it is not likely to have affected the Property.

Historic Utility Sites

This is an inventory of certain power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports from 1898 to 1950.

No historical utility sites were reported within a 1/8-mile radius of the Property.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings and Finance Departments were viewed for the Property. The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendices C (Fire Department Records) and D (Buildings and Finance Department Records).

Fire Department (FDNY)

The computerized FDNY Tanks database was searched regarding past or current motor vehicle fuel and heating oil tank listings within a 1/8-mile radius of the Property. The Property was not identified in the FDNY database. Seven listings were identified in computerized FDNY tank records within the 1/8-mile radius. The nearest facility, located at 450 West 131st Street, approximately 295 feet northeast of the Property, was listed with a 10,000-gallon No. 2 fuel oil tank (unspecified whether UST or AST). Based on its proximity and the anticipated groundwater flow direction, although no spills were listed for this site in the NYSDEC database, potential undetected releases from this off-site facility may have affected the Property. Based on listing details, distance, and/or the anticipated groundwater flow direction, the remaining facilities are unlikely to have affected subsurface conditions beneath the Property.

Buildings Department (DOB)

Computerized Buildings Department records for the Property tax lot identified no records. The following records were identified for 497 West 129th Street (the off-site portion of the building):

- A 1921 Certificate of Occupancy (C of O) for a one-story garage at 487-497 West 129th Street.
- A 1949 C of O for a one-story warehouse with a boiler room in the cellar.
- A 1949 oil burner application.
- A 2006 application to install a demising wall dividing the building (signed off in 2011).
- A 2010 application to increase the height of the demising wall from 29 to 30 feet to extend to the roof (signed off in 2011).

The majority of the other listed actions were associated with various inspections, alterations and repairs. Files pertaining to the oil burner application were unavailable for review. The tank associated with this application (likely located in or near the boiler room) may have been located in the on-site cellar, or in the off-site portion of the building.

Land Title Records and Tax Records

Electronic property transaction records for the Property Block and Lot were reviewed from the New York City Department of Finance Office of the City Register Automated City Register Information System (ACRIS). Deed information obtained from the ACRIS files is summarized as follows:

Year	Grantor/Grantee Listed on Deed
2005	Grantor is: Metropolitan Opera Association, Inc.; Grantee is: West 129 th Street Realty II, LLC
2005	Grantor is: : Metropolitan Opera Association, Inc.; Grantee is: Metropolitan Opera Association, Inc.

The ACRIS records also identified a Restrictive Declaration recorded in April 2008, which is discussed in Section 7.0.

Department of City Planning

A search of NYC Environmental Quality Review Requirements (CEQR) data by Toxics Targeting, Inc. indicated that three lots within a 1/8-mile radius of the Property, including one lot east-adjacent to the Property, were assigned (E) designations in December 2009 as a result of the West 129th Street Rezoning (07DCP076M). The designations included hazardous materials-related requirements, which may not represent known contamination, but indicate that the potential for hazardous materials issues at these locations was identified during environmental review for the rezoning. The Property was not assigned an (E) designation.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department

- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Property or any adjoining properties, and a review of additional records would not likely add significant pertinent information or affect the conclusions of this report.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that Inner City Contracting LLC provide any pertinent information regarding the Property, specifically:

- Whether any *environmental liens* or *activity and land use limitations (AULs)* are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether there is any historic fill on-site?
- Whether they had any information regarding an active spill on the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

According to Inner City Contracting LLC, the Phase I was performed to evaluate the Property prior to the demolition of the on-site portion of the building, followed by the construction of a new residential building. Previous studies provided by Inner City Contracting LLC are summarized in Section 7.0. Mr. Schroeder had no information regarding any hazardous waste generation on the Property, environmental liens or other activity use limitations on the Property, any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products, or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

Phase I Environmental Site Assessment – 495 West 129th Street, AKRF, Inc., November 2007

A Phase I ESA was conducted for the Property in 2007 (495 West 129th Street was the collective address of the Property and the abutting Metropolitan Opera warehouse). The Phase I ESA indicated the following:

- Historical use of the Property as a power station, car house, and repair shop for a railway company, followed by a Metropolitan Opera warehouse.

- On-site floor drains that were suspected to be drywells. However, during the Subsurface (Phase II) Investigation, pipes were observed in the floor drains (i.e., these drains likely connected to the municipal sewer system, and were thus not drywells.)
- NYC Buildings Department records for 495 West 129th Street included a 1949 oil burner application, and a 1949 Certificate of Occupancy noting that the building had a boiler room in the cellar. The on-site cellar was not observed during the 2007 reconnaissance, likely due to the entrance being obscured by the mezzanine structure. A cellar was observed in the abutting Metropolitan Opera warehouse. Warehouse employees interviewed during the Phase I ESA had no knowledge of any tanks in the building. The Phase I ESA concluded that the suspect tank indicated by the oil burner application may have been located in the off-site warehouse's cellar in the past. However, the 2014 reconnaissance identified a small partial cellar on the Property, which was inaccessible for inspection. The suspect tank may be located in this cellar, or may have been located there in the past.
- Past and present uses of the surrounding area with some potential to have affected the Property, including properties with gasoline USTs and/or reported spills in an anticipated upgradient groundwater flow direction and/or in close proximity to the Property.

Subsurface (Phase II) Investigation – 487 West 129th Street, AKRF, Inc., March 2008

AKRF conducted a subsurface (Phase II) investigation at the Property in March 2008. The investigation entailed the advancement of five borings throughout the Property, and the collection of eight soil samples for laboratory analysis. The investigation identified the following:

- The Property was underlain by approximately 4.5 to 6.5 feet of fill materials (sand, gravel, silt, brick, concrete, ash and glass). In two borings, the fill was underlain by apparent native soil (sand, silt and gravel). Refusal was encountered at shallow depths (approximately 4.5 to 14 feet below Property floor grade). Groundwater was encountered approximately 13 feet below floor grade in boring SB-2 in the southwestern corner of the Property, and was likely perched on bedrock. A sufficient volume of water could not be collected for analysis.
- An elevated photoionization detector (PID) reading and a petroleum-like odor were detected in the boring in the southwestern corner of the Property at approximately 10.5-14.5 feet below floor grade. A slight petroleum-like odor and an elevated PID reading were noted in the boring in the southeastern corner of the Property at a depth of approximately 4.5 feet, but boring recovery was poor (mainly gravel and concrete); a sufficient amount of soil could not be collected for laboratory analysis. Laboratory analysis detected elevated concentrations of petroleum-related volatile organic compounds (VOCs) in the sample collected from the southwestern corner of the Property at a depth of 12 to 14 feet, within the perched water table. Several of these VOCs exceeded New York State Department of Environmental Conservation (NYSDEC) Subpart 375 Unrestricted Use Soil Cleanup Objectives (USCOs), with the VOC 1,2,4-trimethylbenzene [detected at 87 parts per million (ppm)] also exceeding its Subpart 375 Restricted Residential Use Soil Cleanup Objective (RRSCO) of 52 ppm. Trace levels of several VOCs were detected in three other soil samples.
- Twelve semi-volatile organic compounds (SVOCs), mainly polycyclic aromatic hydrocarbons (PAHs), were detected in five of the soil samples analyzed. Five PAHs exceeded their respective RRSCOs in one sample, which had a total PAH concentration of 282 parts per million (ppm). Fill material in this sample was noted to include ash, which contains high levels of PAHs. Samples from boring SB-2 contained no SVOCs in exceedance of USCOs or RRSCOs. Based on the nature and distribution of the compounds detected and field observations, the elevated levels of SVOCs were attributed to the urban fill materials.

- Six metals (chromium, copper, lead, mercury, nickel, and zinc) slightly exceeded USCOs in one to four samples. Lead and mercury also exceeded RRSCOs in one and two samples, respectively. Based on the type and distribution of the identified metals concentrations, the metals may be attributable to the historical uses of the Property as a railway power station, car house and repair shop, and/or to urban fill. No PCBs or pesticides were detected in any of the soil samples.

Based on field observations and the elevated levels of VOCs and low levels of SVOCs detected in the sample collected from 12 to 14 feet below grade in the southwestern corner of the Property, the Phase II report concluded that elevated VOC levels in this sample did not appear to originate from an on-site petroleum spill, and were attributed to contaminant migration from an off-site spill.

Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) – 487 West 129th Street, AKRF, Inc., May 2008

Based on the findings of the Phase II investigation, AKRF prepared a RAP and an associated CHASP for implementation during a proposed development, which entailed the demolition of the on-site portion of the former warehouse, followed by construction of a new residential building whose ground floor would be entirely occupied by a parking garage. Excavation for the new construction was anticipated to approximately four feet below the existing floor grade across the entire Property.

The RAP addressed requirements for items such as: soil stockpiling, disposal and transportation; dust control; quality assurance; procedures for closure and removal of any petroleum storage tanks encountered during construction; measures to be undertaken if contamination is encountered; capping of the Property with building foundations or (for any landscaped areas not covered by foundations) with two feet of clean soil approved by the New York City Department of Environmental Protection (DEP); and measures to prevent intrusion of any subsurface vapors into the new building. The vapor control measures included installation of a vapor barrier consisting of high-density polyethylene (HDPE) membrane beneath the new foundation slab. The CHASP included measures for worker and community protection, including personal protective equipment, air monitoring if contamination is encountered, and dust control.

Since the Property was undergoing City Environmental Quality Review (CEQR) for a rezoning, the RAP and CHASP were submitted to DEP for review and approval. In a letter dated July 31, 2008, DEP indicated that the RAP and CHASP were acceptable provided the following measures were undertaken: any imported clean fill must be tested at a frequency of 1 sample per 250 cubic yards prior to importation and compared to NYSDEC Technical and Administrative Guidance (TAGM) 4046 (a soil cleanup guidance used at the time); the vapor barrier must be a minimum of 15 mil thick, and specifications for the vapor barrier must be included in the RAP; a Professional Engineer (P.E.)-certified closure report must be submitted to DEP following the completion of remedial activities; and the developer must enter into a Restrictive Declaration to ensure that the remedial activities are carried out to DEP's satisfaction. A copy of DEP's letter is included in Appendix D.

Environmental Assessment Statement (EAS) – West 129th Street Rezoning, AKRF, Inc., May 2009

An EAS was prepared by AKRF in May 2009 as part of CEQR to rezone the Property and adjacent land prior to the proposed construction of a residential building on the Property. The EAS summarized the findings of AKRF's November 2007 Phase I ESA and March 2008 Phase II, and indicated that a RAP and a CHASP were prepared for the proposed development. The EAS also noted that the developer entered into a Restrictive Declaration to ensure that all remedial activities would be completed to the satisfaction of the DEP prior to or during construction of the proposed development. A copy of the Restrictive Declaration, recorded in April 2008, is included in Appendix D.

Geotechnical Engineering Report – Proposed Apartment Towers, 487 West 129th Street, New York, NY, Heller and Johnsen, December 2012

A geotechnical study was conducted at the Property in December 2012. Eight borings were advanced to approximately 42 to 70 feet below the building's floor. Two monitoring wells were installed to determine the groundwater elevation. The study indicated that the Property was underlain by a 5 to 10-foot layer of fill materials (sand, gravel, brick, concrete, and/or silt) above a layer of apparent native soil (sand, gravel, and silt). Several borings encountered concrete or hard drilling (possibly due to concrete) approximately 5 to 10 feet below grade, which was attributed to historical rail car repair pits. Weathered bedrock was encountered approximately 35 to 61 feet below grade, and competent bedrock was encountered approximately 36 to 66 feet below grade, sloping down toward the south. Groundwater was encountered approximately 24.3 to 25 feet below grade. No evidence of contamination was noted in the boring logs.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The Property building's cellar was not safely accessible for inspection. Although Mr. Schroeder was not aware of any petroleum storage tanks on the Property, historical Sanborn maps indicated an apparent boiler (possibly associated with a fuel tank) in this cellar.
- Interviews and user-provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

9.0 FINDINGS

This assessment revealed the following Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), Historic RECs (HRECs), *De Minimis* Conditions and/or Environmental Concerns:

Recognized Environmental Conditions (RECs)

- No evidence of petroleum storage tanks was noted on the Property, and no tanks were registered for the Property with the New York State Department of Environmental Conservation (NYSDEC). Computerized NYC Buildings Department records noted fuel oil use and a cellar-level boiler room at 495 West 129th Street (the collective address of the Property and the off-site Metropolitan Opera warehouse) in 1949. Thus, the Property building's cellar, which was not accessible for inspection, may have historically contained an aboveground or underground fuel oil tank, which may remain on the Property, or may have been removed.
- Historical uses of the Property building as: a power station, car house, and repair shop for a railway company; an automobile repair shop; and a bus garage may have affected subsurface conditions beneath the Property.
- The May 2008 subsurface investigation noted an apparent perched groundwater table approximately 13 feet below the building floor. Field evidence of contamination [elevated photoionization detector (PID) readings and petroleum-like odors] were noted in two borings at the south side of the Property, and elevated concentrations of petroleum-related volatile organic compounds (VOCs) were detected in a soil sample collected within the perched water table at the southwestern corner of the building. Based on field observations indicating that the contamination appeared to be associated primarily with the perched water table and laboratory analytical results, the Phase II report concluded that the contamination did not appear to originate from an on-site petroleum spill, and was instead attributable to contaminant migration from an off-site spill.
- The Property is underlain by approximately 5 to 10 feet of fill (sand, gravel, silt, brick, concrete, ash and glass). The May 2008 subsurface investigation identified somewhat elevated concentrations of semi-volatile organic compounds (SVOCs) and metals in on-site soil, likely associated with historical uses of the Property and/or the fill materials. An approximately 20-cubic yard pile of soil, brick, and concrete associated with test pit excavation was observed during the reconnaissance; no odors or staining were noted.
- The east-adjacent auto repair shop was historically a garage with gasoline USTs, and was listed in the regulatory database as a generator of hazardous waste (benzene and chlorinated solvents). A Chinese laundry (which may have included dry cleaning) was historically located on the eastern side of the Property block. An apartment building on the eastern site of the Property block was identified with a PBS listing and an active-status spill. A Verizon garage registered as a Petroleum Bulk Storage (PBS) facility and a bus garage (a historical railway car house listed in the regulatory database with closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing) were located on the south-adjacent block.

Controlled Recognized Environmental Condition (CREC)

- A Metropolitan Transit Authority (MTA) bus garage located on the south-adjacent block was listed in the regulatory database with several closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing. This facility was historically a railway car house.

Other On-Site Environmental Concerns (items outside the scope of E1527-13 such as ACM, LBP and/or PCBs in building materials or fill/debris)

-
- Based on the building's age, asbestos-containing materials (ACM) may be present. Suspect ACM observed during the reconnaissance included: thermal pipe insulation; window glazing and caulking; and roofing materials. These materials were observed to be in fair to poor condition, with damaged thermal pipe insulation and roofing.
 - Based on the building's age, lead-based paint may be present. Painted surfaces were observed to be in fair to poor condition, with peeling paint noted throughout the building. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.
 - Based on the building's age, fluorescent lighting fixtures and electrical equipment on the Property may contain polychlorinated biphenyls (PCBs). No evidence of leaks or stains from these fixtures and equipment was observed.
 - The Property underwent City Environmental Quality Review (CEQR) in 2009 for a rezoning. As part of CEQR, the developer entered into a Restrictive Declaration in April 2008 to ensure that remedial activities are completed to the satisfaction of the NYC Department of Environmental Protection (DEP) prior to or during construction of the proposed development. This would include the implementation of a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) prepared by AKRF in May 2008 for the proposed development, as well as DEP requirements outlined in a July 31, 2008 letter commenting on the RAP and CHASP.

Potential for Vapor Migration

This Phase I assessment identified a potential for subsurface vapors and thus a potential for vapor migration onto the Property, based on the RECs noted.

10.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term “Recognized Environmental Condition” or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

The Property building was constructed prior to 1902 and was historically occupied by: a power station, car house, and repair shop for a railway company; automobile repair; a bus garage; and a Metropolitan Opera warehouse. The building was vacant since 2006.

At the time of AKRF’s reconnaissance, the Property consisted of the vacant eastern portion of a one-story building with a partial cellar. The off-site western portion of the building was a Metropolitan Opera warehouse used to store stage sets. The greater surrounding area was predominantly commercial and residential. A Verizon garage and a Metropolitan Transit Authority (MTA) bus garage were located on the south-adjacent block.

This assessment revealed the following:

Recognized Environmental Conditions (RECs)

- No evidence of petroleum storage tanks was noted on the Property, and no tanks were registered for the Property with the New York State Department of Environmental Conservation (NYSDEC). Computerized NYC Buildings Department records noted fuel oil use and a cellar-level boiler room at 495 West 129th Street (the collective address of the Property and the off-site Metropolitan Opera warehouse) in 1949. Thus, the Property building’s cellar, which was not accessible for inspection, may have historically contained an aboveground or underground fuel oil tank, which may remain on the Property, or may have been removed.
- Historical uses of the Property building as: a power station, car house, and repair shop for a railway company; an automobile repair shop; and a bus garage may have affected subsurface conditions beneath the Property.
- The May 2008 subsurface investigation noted an apparent perched groundwater table approximately 13 feet below the building floor. Field evidence of contamination [elevated photoionization detector (PID) readings and petroleum-like odors] were noted in two borings at the south side of the Property, and elevated concentrations of petroleum-related volatile organic compounds (VOCs) were detected in a soil sample collected within the perched water table at the southwestern corner of the building. Based on field observations indicating that the contamination appeared to be associated primarily with the perched water table and laboratory analytical results, the Phase II report concluded that the contamination did not appear to originate from an on-site petroleum spill, and was instead attributable to contaminant migration from an off-site spill.
- The Property is underlain by approximately 5 to 10 feet of fill (sand, gravel, silt, brick, concrete, ash and glass). The May 2008 subsurface investigation identified somewhat elevated concentrations of semi-volatile organic compounds (SVOCs) and metals in on-site soil, likely associated with historical

uses of the Property and/or the fill materials. An approximately 20-cubic yard pile of soil, brick, and concrete associated with test pit excavation was observed during the reconnaissance; no odors or staining were noted.

- The east-adjacent auto repair shop was historically a garage with gasoline USTs, and was listed in the regulatory database as a generator of hazardous waste (benzene and chlorinated solvents). A Chinese laundry (which may have included dry cleaning) was historically located on the eastern side of the Property block. An apartment building on the eastern site of the Property block was identified with a PBS listing and an active-status spill. A Verizon garage registered as a Petroleum Bulk Storage (PBS) facility and a bus garage (a historical railway car house listed in the regulatory database with closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing) were located on the south-adjacent block.

Controlled Recognized Environmental Condition (CREC)

- A Metropolitan Transit Authority (MTA) bus garage located on the south-adjacent block was listed in the regulatory database with several closed-status spills, a PBS listing, Chemical Bulk Storage, and a Toxic Chemical Release Inventory listing. This facility was historically a railway car house.

Other On-Site Environmental Concerns (items outside the scope of E1527-13 such as ACM, LBP and/or PCBs in building materials or fill/debris)

- Based on the building's age, asbestos-containing materials (ACM) may be present. Suspect ACM observed during the reconnaissance included: thermal pipe insulation; window glazing and caulking; and roofing materials. These materials were observed to be in fair to poor condition, with damaged thermal pipe insulation and roofing.
- Based on the building's age, lead-based paint may be present. Painted surfaces were observed to be in fair to poor condition, with peeling paint noted throughout the building. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.
- Based on the building's age, fluorescent lighting fixtures and electrical equipment on the Property may contain polychlorinated biphenyls (PCBs). No evidence of leaks or stains from these fixtures and equipment was observed.
- The Property underwent City Environmental Quality Review (CEQR) in 2009 for a rezoning. As part of CEQR, the developer entered into a Restrictive Declaration in April 2008 to ensure that remedial activities are completed to the satisfaction of the NYC Department of Environmental Protection (DEP) prior to or during construction of the proposed development. This would include the implementation of a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) prepared by AKRF in May 2008 for the proposed development, as well as DEP requirements outlined in a July 31, 2008 letter commenting on the RAP and CHASP.

Potential for Vapor Migration

This Phase I assessment identified a potential for subsurface vapors and thus a potential for vapor migration onto the Property, based on the RECs noted.

RECOMMENDATIONS

- Historical uses of the Property and surrounding area may have affected subsurface conditions beneath the Property, and the 2008 Phase II investigation indicated petroleum contamination beneath a portion

of the Property. Although the contamination was attributed to an off-site source, it is possible that excavation for Property redevelopment will indicate evidence of an on-site spill reportable to NYSDEC. Since the preparation of the May 2008 DEP-approved RAP and CHASP, management of Restrictive Declaration sites was transferred from the DEP to the NYC Mayor's Office of Environmental Remediation (OER). The Property remediation/redevelopment will need to be conducted to the satisfaction of OER as a condition for obtaining a Certificate of Occupancy for the new building. AKRF recommends contacting OER to determine the appropriate remedial measures, which may include: producing an updated RAP and CHASP (due to the age of the original RAP and CHASP and/or changes in the proposed development); additional subsurface investigation (e.g., groundwater and soil vapor sampling); and more stringent requirements for environmental monitoring during construction, and for vapor control measures to prevent vapor intrusion into the new building.

- Any excavated soil should be handled and disposed of in accordance with all applicable federal, state and local regulations. If any petroleum storage tanks are encountered, they should be properly assessed, closed, and removed. Any evidence of a petroleum spill must be reported to NYSDEC and addressed in accordance with applicable requirements. If dewatering is required during construction activities, it should be in accordance with DEP requirements.
- AKRF recommends sampling the damaged suspect ACM to determine whether they contain asbestos. Any damaged ACM should be removed or repaired in accordance with applicable requirements by a licensed asbestos abatement contractor. Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any ACM that would be disturbed by the renovation or demolition must be properly removed prior to such activity.
- Unless there is labeling or test data indicating that fluorescent lighting fixtures are not mercury- and/or PCB-containing, and that electrical equipment does not contain PCBs, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any activities (such as renovation or demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).

11.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Michelle Lapin, P.E.
Senior Vice President

Asya Bychkov, P.E.
Environmental Engineer

12.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Property, and to identify existing and/or potential environmental issues associated with the Property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to the Property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Inner City Contracting LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

REGULATORY RECORDS REVIEW

TOXICS TARGETING

PHASE I

ENVIRONMENTAL DATABASE REPORT

**487 W 129TH STREET
NEW YORK, NY 10027**

MAY 22, 2014

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

- *Table Five: Tax Parcel Map Information Table*

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

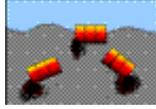

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

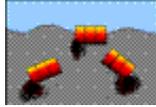

Search Radius

One-Mile

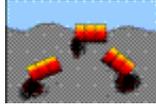

1) ***National Priority List for Federal Superfund Cleanup***: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

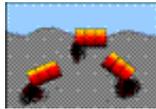

2) ***Delisted National Priority List Sites***: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) ***New York Inactive Hazardous Waste Disposal Site Registry***: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

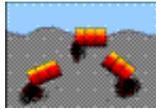

4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying***: a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

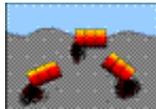

5) ***RCRA Corrective Action Activity (CORRACTS)***: waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile

6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) ***CERCLIS NFRAP***: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites***: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) ***New York Solid Waste Facilities Registry***: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York City 1934 Solid Waste Sites***: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

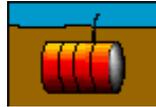

13) ***New York State Major Oil Storage Facilities:*** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

14) ***New York State Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) ***New York City Fire Dept Tank Data:*** tank data from 1997.

Eighth-Mile

16) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

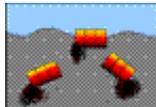

17) ***New York Chemical Bulk Storage Facilities:*** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) ***New York Hazardous Substance Disposal Site Draft Study:*** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) ***Federal Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) ***Federal Air Discharges:*** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.**
- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

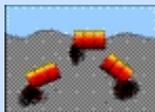

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

The former Film Storage Warehouse is approximately 0.25 acres and is located at 203-209 West 146th St. in Manhattan. The property is located on the north site of West 146th St. between Adam Clayton Powell Jr. Boulevard and Fredrick Douglass Boulevard. The site is bounded on the north and west by residential buildings, and on the east by commercial buildings with residences on the upper floors. The former warehouse site has been unoccupied for over 50 years and is currently vacant. A site investigation was funded by EPA as a targeted site assessment. A Site Investigation Report was approved in November 2004. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal sites.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Several contaminants were detected in soils including semivolatile compounds, (primarily polyaromatic hydrocarbons) and several metals. Most of the soil contamination appears to be related to historic fill material. The building interior also has debris piles containing asbestos and lead (from insulation and lead paint, respectively). Soil vapor beneath the building contains volatile organic compounds above expected background concentrations.

ASSESSMENT OF HEALTH PROBLEMS:

None provided

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

The site is located on portions of two blocks bounded by West 131st Street, West 133rd Street, Broadway, and 12th Avenue in upper Manhattan. The surrounding area is highly urbanized. The site is the location of two former gas holders, the last of which was closed in 1962.

The Site Characterization Report has shown that no MGP related contamination is located on the site. The Department determined that no further action was necessary in a letter dated March 18, 2008.

Contaminated soil vapor was found under one of the buildings on the site, but it was determined that the contamination was not MGP-related and an issue was referred to the regional spills division.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The site characterization report has shown that no MGP-related contamination is found on the site. Therefore the Department has determined that no further action is necessary on the site.

ASSESSMENT OF HEALTH PROBLEMS:

No evidence of manufactured gas plant waste material was found at the site, therefore, no exposure to manufactured gas plant waste is expected. However, petroleum related contaminants and tetrachloroethene and trichloroethene are present in soil vapor. The potential exists for exposure to these contaminants through the soil vapor intrusion pathway in current and future buildings.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location:

The Former Shell Service Station and Parking garage site is located in an urban area. The site is located on St. Nicholas Ave., between 121st Street (south) and 122nd Street (north) in the Borough of Manhattan.

Site Features:

The site currently contains an operating multi-story parking garage and a former gasoline service station with automobile repair facility. The site is comprised of two adjacent tax parcels (Lots 30 and 35) totaling approximately 0.468 acres.

Current Zoning and Land Use:

The site is zoned R8A/R7A (residential) with a C2-4 (commercial) overlay. Current use is commercial. Surrounding properties include a mix of multi-family residential and commercial/retail uses. The intended use is mixed-use residential and commercial with community facility space.

Past Use of the site:

Prior uses on Lot 30 include coal storage, a junkyard and the parking garage. On Lot 35, the former uses include a carriage factory, auto repair and the gas station.

Site Geology and Hydrogeology

Depth to groundwater is approximately 20 feet below ground surface. Groundwater flows to the north.

CONFIRMED HAZARDOUS WASTE DISPOSED:

1,2,4-TRIMETHYLBENZENE	UNKNOWN
BENZO [K] FLUORANTHENE	UNKNOWN
BENZO (A) PYRENE	UNKNOWN
METHYLENE CHLORIDE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination:

Based upon the results of several investigations, contaminants of concern include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and polychlorinated biphenyls (PCBs). The contaminants of concern do not appear to be contributing to off-site environmental impacts that require additional investigation or remedial action.

Soil - Volatile organic compounds (VOCs) were found at concentrations exceeding the Unrestricted Use Soil Cleanup Objectives, including acetone at 0.056 ppm and methylene chloride at a concentration of 0.22 ppm. In addition, "Stoddard solvent" was identified at a concentration of 671 ppm. Semi-volatile organic compounds (SVOCs) have been found including benzo(a)anthracene at 2.3 ppm, benzo(a)pyrene at 2 ppm, and benzo(k)fluoranthene at 3.6 ppm. Two metals were detected at concentrations exceeding their

respective UUSCOs: lead at 2980 ppm and mercury at 2.45 ppm.

Groundwater - The results from groundwater samples show detections of several VOCs above groundwater standards including 1,1,2-trichloroethane (2.9 ppb), 2-isopropyltoluene (9.1 ppb), total xylenes (25 ppb), tetramethylbenzene (43 ppb), 1,2,4-trimethylbenzene (11 ppb), isopropylbenzene (19 ppb) and n-propylbenzene (30 ppb). Several SVOCs were also detected above their respective groundwater standards, including benzo(a)anthracene at 0.07 ppb, benzo(b)fluoranthene at 0.09 ppb, benzo(k)fluoranthene at 0.03 ppb, chrysene at 0.07 ppb, and ideno(1,2,3)pyrene at 0.04 ppb. PCBs were detected in groundwater above standards at 2.2 ppb.

Soil Vapor - Elevated concentrations of several petroleum VOCs (including 1,2,4-trimethylbenzene at 26 ug/m3 and xylenes at 100 ug/m3) and chlorinated solvents (tetrachloroethylene at 112 ug/m3 and trichloroethene at 14.9 ug/m3) were found throughout the site. The investigation indicates that the presence of PCE in soil vapor can likely be attributed to an off-site source, due to the lack of PCE in on-site soil or groundwater.

Significant Threat:

NYSDEC and NYSDOH have determined that this site does not pose a significant threat to human health or the environment.

ASSESSMENT OF HEALTH PROBLEMS:

Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no occupied enclosed structures at the site, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Sampling indicates that off-site soil vapor intrusion as a result of this site is not a concern for off-site buildings.

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

Tank Number	Tank Size	Tank Test Method	Leak Rate	Gross Leak or Failure
	550	USTest 2000/P/LL plus USTest 2000/U	0.00	FAIL
The following tank was deleted from the reported data. Data reflects last reported information.				
	550	USTest 2000/P/LL plus USTest 2000/U	0.00	GROSS LEAK RATE

Caller Remarks:

12 550 gallon tanks that are manifolded together failed tank test

DEC Investigator Remarks:

3/14/03 REASSIGNED FROM TIBBE TO VOUGHT.

12/5/03-Vought-See also closed Spill #0200338 at same location.

1/8/04 Reassigned from Vought to K Foley.

2/25/04 File review(KMF):

13X550gal gasoline, 1X550gal waste oil, 1X550gal fuel oil USTs documented as closed in closure report submitted by National Environmental 12/10/96. A total of six samples were taken in three excavations and tested for VOC/SVOCs. All samples were composites and returned below STARs guidelines. VOCs were non detect. SVOCs had minor hits. Compositing VOC samples is unacceptable and soil borings should be completed. No groundwater samples were taken.

9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. B. Beck proposes to do three Geoprobe borings, one in each source area. Report to be submitted by 1/8/05.

2/9/05 Received Groundwater Sampling and Investigation Report prepared by National Environmental. Three Georpbobes were drilled adjacent to the suspected source area in the vicinity of the existing USTs. Soil samples were collected from 10–14'bgs, the elevation of the bottom of the existing tanks. All samples were stained and exhibited odor. Soil concentrations were very high for VOCs in all three borings. Groundwater was encountered at 28'bgs and is suspected to flow toward the Hudson River, south and west. Total BTEX in GW ranged from 15758ppb(B–2) to 142952ppb(B–1). MTBE in GW ranged from ND(B–2, B–3) to 3169ppb(B–1). Bedrock is anticipated at 50–60'bgs.

National proposing five permanent monitoring wells, two upgradient and three downgradient. Proposing sampling only for VOCs since naphthalene was the only SVOC detected above TAGM RSCOs and GWQS.

2/9/05 Issued letter approving five well locations and requiring two additional borings within the waste oil and heating oil tank areas(as previously agreed upon during 9/29/04 meeting). Also requesting fill port locations and additional sampling location if appropriate. Summary report due 5/15/05.

2/2/06: Case reassigned to Andersen. Sent Bruce Beck an email asking for update on work required in 2/9/06 letter and status of overdue report.

2/3/06: Sent letter to Cary Wolf asking for update on work required in 2/9/06 letter and status of overdue report.

3/13/06: Received letter from Bruce Beck stating that they are currently soliciting quotes for drilling.

5/19/06: Consent order meeting with Wolf scheduled for June 2 at 11am.

6/8/06: Meeting with NYSDEC, Barry Cohen (Wolf's attorney's) and Bruce Beck (Wolf's consultant) regarding the consent order. Barry Cohen noted that this site was condemned by the city to build a medical center for Columbia University.

7/10/06: Emailed Bruce Beck to set up a meeting to discuss deliverables required for consent order.

8/2/06: Meeting on 7/25/06 to discuss deliverables with Bruce Beck. This site is currently owned by Columbia University.

11/28/06: Site taken out of Wolf Consent Order. Remediation will be handled by Columbia University.

12/11/06: Left voice message with Barry Cohen to get contact at Columbia University.

12/18/06: Emailed Barry Cohen to get contact information for Columbia University.

1/2/07: Sent stipulation agreement to Columbia University, due back 2/2/07.

2/1/07: Received call from Russell Salman (312-902-5390). A workplan for redevelopment will be submitted today. Stipulation agreement will be discussed following approval of the workplan.

2/1/07: Spoke to Richard Leland of Kramer & Levin (office 212 715 8087, cell 917 539 0000, email rleland@kramerlevin.com). He is the new attorney for Columbia University. He requested to have a meeting next week to discuss this site.

2/6/07: Meeting scheduled with Toni Finger (212-715-9239) and Richard Leland of Kramer & Levin on 2/13/07 at 10am.

2/13/07: Met with Toni Finger of Kramer and Levin, and Arnold Fleming of Fleming Lee Shue, both representing Columbia. The Department will issue another stip to Columbia University for remediation of this site.

3/5/07: Issued another stip.

3/14/07: Received and approved alterations to the Corrective Action Plan to account for receipt and review of a FOIA request.

3/29/07: A one week extension was granted to sign the stipulation agreement.

4/17/07: Received executed stip. Effective date 4/16/07.

5/2/07: Left voice message for Arnold Fleming to discuss plan for this site.

5/11/07: Followed up on the FOIL request – it hasn't been processed yet.

5/16/07: Spoke to Arny Fleming. The FOIL request was received, an investigation will be scheduled.

6/14/07: Spoke to Toni Finger and consultant. Existing wells are dry and may be tank wells. Geoprobe work may be done. Extension through 7/16/07.

7/11/07: Approved workplan for installation of 8 soil borings. Deadline extended to 7/30/07.

7/12/07: Received email from Mary Manto: "This e-mail will confirm our discussion earlier this afternoon.

The geoprobe borings will be installed at the locations referenced in your approval letter dated 7/10/07. However, in accordance with Item 1 of the Corrective Action Plan attached to the 3/5/07 Stipulation Agreement, the focus of this initial geoprobe investigation is the determination of the presence of free product in the groundwater on the property. Each boring will be installed to groundwater depth (approximately 30 feet bg) and the 2-foot interval directly above the groundwater will be examined to determine the presence of free product. PID screening will be conducted along the entire length of the boring. No additional soil or groundwater delineation will be performed as part

of this initial task. As we discussed, hand-digging is required to 6 feet at each boring location. This work will be done on 7/12-13. The borings will be installed on 7/16-17. Mary S. Manto, Project Director Fleming-Lee Shue, Inc.
158 West 29th Street, 9th Floor
New York, NY 10001".

7/13/07: Received email from Mary Manto: "Per my earlier e-mail, we need to clear the on-site locations to 6' by hand digging. The driller was able to hand dig only one location yesterday and will not be back on the site until Monday. Right now, we are assuming that it will be Wednesday of next week before we can start installing the borings. "

7/23/07: Received email from Mary Manto:"we have just finished the hand digging for the geoprobe locations on the above property. Although we encountered significant amounts of subsurface debris, piping, etc., we were able to clear locations within several feet of the original locations. We are scheduled to start installing the borings on 7/23-24."

7/30/07: Spoke to Toni Finger. Product was discovered. Requested a meeting to discuss investigation workplan. She will submit potential meeting times by email.

7/31/07: Meeting scheduled for 8/6/07 at 3pm to discuss workplan.

8/6/07: Meeting with Mary Manto (Fleming Lee Shue), Patrick Narea (Fleming Lee Shue), Toni Finger, Stephen Munier (Gorton Associates), and DEC Carlson and Sun. Site will be excavated down to 70 ft during Columbia redevelopment. A workplan for additional delineation, well installation, and boring logs from initial borings will be submitted in 30 days - September 6, 2007.

Received email from Toni Finger:"I write to confirm our conversation whereby it was agreed that Columbia would have until September 6, 2007 to submit an investigation work plan to DEC for the above-referenced matter."

9/7/07: Reviewed ISR workplan. Six wells will be installed. Report due within 90 days of initiation of access. Workplan approved.

9/28/07: Received email from Mary Manto:" this is to notify you that the work described in the /Phase II Environmental Site Investigation Work Plan/ for the above site is scheduled to start on Tuesday, 10/2/07. We will notify you of any changes in schedule. Please give us a call if you have any questions.
Regards, Mary"

mary@flemingleeshue.com

3/10/08: Reviewed Investigation Report. Six monitoring wells installed. Impacted groundwater found in all wells. Soil impact above TAGM standards found in MW3. Spoke with Mary Manto regarding lack of well gauging data. Received email with gauging data. Report approved. A remedial action plan is required within 60 days, as per Stipulation Agreement.

3/26/08: Received phone call from Mary Manto. She requested that a meeting be held to discuss remedial options at this site.

4/8/08: Meeting with Columbia University (Whitfield Chandler), Mary Manto (Fleming Lee Shue), Karen Mintzer (Kramer Levin), Joel Landes (Langan). RAP submission deadline extended to June 10.

5/21/08: Received RAP. Requested borings logs be submitted.

5/22/08: Received revised RAP with Appendix E added with boring logs.

5/28/08: Reviewed Remedial Action Plan. The RAP indicates that the site will be excavation to 48 – 70 ft bg. A slurry wall will be installed at the property boundary, extending 90 – 145 ft bg. Additionally, a trench 20 ft wide by 20 ft deep will be installed in the streets adjacent to the property in order to relocate the sewer line. The RAP proposes monitoring the existing well network quarterly until the site is excavation. The RAP proposes collecting three endpoint samples in the sewer relocation area, and installing three temporary monitoring wells between the slurry wall and sewer relocation area. Limited subsurface investigations were performed in preparation for the slurry wall and sewer relocation excavations. These investigations noted off-site soil and groundwater impact. Sent letter requiring a revised RAP with : 1) revision to tables 1a and 1b to include sampling depth, 2) collection of on-site endpoint samples as per DER10, 3) submission of a more detailed CAMP, 4) additional off-site soil and gw delineation.

6/3/08 – Carlson: Received phone call from Smita Day (sday@langan.com) requesting approval to submit an RAP Addendum instead of a revised RAP. Sent email to Smita Day stating that the Department will accept submission of an RAP Addendum instead of a revised RAP.

7/2/08 – Carlson: Emailed Smita Day to followup on RAP Addendum submittal date. Received phone call from Smita Day. RAP Addendum will be submitted on 7/7/08.

7/21/08 – Carlson: Reviewed RAP Addendum. Borings will be completed instead of endpoint samples. A draft CAMP was included, a final copy is required before excavation is begun. An Off-site delineation workplan is required.

8/4/08 – Carlson: Reviewed CAMP. Six air monitoring stations surround entire block and a meteorological system were proposed. VOCs and particulates will be monitored as per NYSDOH standards. Sent letter requiring revised CAMP. Additional air monitoring stations to the SE of the site, and additional notification procedures are required.

8/13/08 – Carlson: Approved CAMP Addendum. Four Air Monitoring Stations (AMS) were proposed. Sent letter requesting one of the AMS be moved closer to the site, and requesting the AMS be kept in place permanently instead of only for the duration of the utility excavation.

8/18/08 – Carlson: Spoke to Joel Landes. AMS will be shifted to follow utility excavation. The background stations will not be

kept in place for the duration of work at the site. Another site plan will be submitted for AMS locations during excavation of the site.

8/25/08 – Carlson: Site visit conducted on 8/21/08. Utility excavation is being conducted at night. Met with Ramesh Raman and Gregory Lempin (gl2309@columbia.edu) of Columbia University and Doane Edward Cafferty of Langan.

Received email from Gregory Lempin of Columbia with utility excavation schedule. Completion schedule is 5.5 years.

9/8/08 – Carlson: Received CAMP Addendum response letter from Langan.

12/3/08 – Carlson: Received email from Smita Day of Langan: "As requested in your letter dated August 4, 2008, the following is a summary of the air monitoring conducted during utility relocation work along Broadway between West 129th Street and West 130th Street, in the vicinity of 3225 Broadway ("Site"). On August 11 and 12, and between August 18 through October 31, 2008, Langan provided continuous, real-time air monitoring during the utility relocation excavation and remediation activities in accordance with the commitments agreed upon in Community Air Monitoring Plans submitted for the Site. Both air monitoring stations (see attached figure for locations) are equipped with a photoionization detector (PID) to monitor and measure total volatile organic compounds (VOC) and a particulate meter to monitor and measure particulates with a diameter less than or equal to 10 micrometers (PM10). Concentrations of VOCs and PM10 were not observed at levels exceeding the background VOC and PM10 thresholds."

12/8/08 – Carlson: Spoke to Smita Day. The waste oil AST was removed. The USTs are in place. The station is not operational anymore.

5/27/09 – Carlson: Left phone message for Smita Day to followup on site redevelopment.

5/28/09 – Carlson: Received phone call, quarterly sampling was completed, update report and off-site delineation workplan will be submitted. They plan on closing tanks at the end of the year.

6/3/09: DEC Regional Direction received an inquiry from mayor's office.

6/5/09 – Carlson: Received email from Tarek Khouri, work plan and quarterly report will be submitted in two weeks.

6/12/09 – Carlson: Tank removal scheduled to start Monday 6/15.

6/16/09 – Carlson: Witnessed tank removal.

7/2/09 – Carlson: Received off-site delineation workplan and quarterly monitoring report, mark wants a third well, sent email – revised workplan due in 30 days.

7/13/09 – Carlson: Received email from Tarek Kouri discussing previous sampling that was completed off-site. Replied with a question regarding one of the documents.

7/21/09: DEC Tibbe spoke to Tarek Kouri. A revised site plan with three well locations was submitted.

8/5/09 – Carlson: Issued letter approving revised off-site delineation workplan.

11/18/09 – Carlson: Reviewed investigation report and quarterly report. Upgradient well MW9 may have upgradient source. Spoke to DEC Rahman about upgradient spills 0903767 (closed) and 0713473 (open), he will review report and get back to me. All spills owned by Columbia and will be redeveloped.

2/12/10 – Carlson: Received emails from John Gavras on 2/8 and 2/9. Utility relocation work has begun. Soil stockpiled for disposal. Water main installation scheduled for early March. Emailed john gavras – when is water main installation scheduled to begin?

2/16/2010 – Carlson: Received email from John Gavras. Water main trench is at a final depth of 11 ft. Sewer main trenching will begin in early March.

2/24/2010 – Carlson: Met with John Gavras on-site. Saw utility trench excavation to 10 ft. Endpoint samples will be collected from combined sewer trench excavation to begin in a couple weeks.

3/2/2010 – Carlson: Sent email requiring endpoint samples be collected in both utility trenches. Soil should be sampled before it is used as backfill.

3/9/2010 – Carlson: Spoke to John Gavras. Water main has been installed in trench already, trench bottom is no longer accessible. He wants to test backfill by waste characterization sampling.

3/10/10 – Carlson: Contacted Sam Arakhan at Solid Waste Division, he said waste characterization sampling is for soil disposal, soil to be reused must be sampled by EPA Method 8260/8270.

3/17/2010 – Carlson: Received email from John Gavras, he spoke to Sam Arakhan and the soil to be reused can be tested for hazardous waste classification parameters. Sent email response, test for hazardous waste classification parameters as per solid waste division's direction.

4/9/2010 – Carlson: Reviewed Update Report. Wells sampled on 12/22/2009. No LNAPL present. Max BTEX concentration 73,026 ppb (MW2), maximum MTBE concentration 802 ppb (MW2). Dissolved concentrations in upgradient wells.

6/15/2010 – Carlson: Phone conversation with John Gavras. CAMP will be modified to include mobile monitoring stations in the work zone. He will send a letter.

6/23/10 – Carlson: Spoke to John Gavras. Hand clearing has begun in trench area, piles will be driven next week.

7/14/2010 – Carlson: Reviewed June 2010 update report. Wells sampled 3/4/2010.

8/6/2010 – Carlson: Reviewed air monitoring station location plan with CAMP modification to use mobile air monitoring stations instead of fixed locations. Issued approval letter.

Columbia University Contact: Keith Pettey (kp2307@columbia.edu)

9/22/2010 – Carlson: Spoke to Ryan Manderbach. Excavation in progress. The first utility trench endpoint was collected.

Groundwater sampling to be performed tomorrow. One of the wells was damaged – will be inspected tomorrow.

10/27/2010 – Breen: Langan's Ilkay Cam–Spanos sent in via e–mail Utility relocation trench and endpoint sample location map. see e–docs.

11/16/2010 – Breen: Received Quarterly G/W Monitoring Report on CD from Langan (2Q – 2010). This is the sixth and last Quarterly. Pre–construction excavation of the area is to begin in December 2010. The wells are to be abandoned. After the mass excavation Langan will submit a spill closure report. This final Quarterly monitoring found no free product, but selected exceedances of G/W Stds for dissolved in all wells except wells 8 and 9. See edocs for selected summary pages. See CD for full report.

12/1/2010 – Breen: Ryan called to follow up on his Quarterly Monitoring report and to make sure DEC was comfortable with the wells being abandoned due to construction.

12/8/2010 – Breen: Langan's Ilkay Cam–Spanos sent in via e–mail Utility relocation trench and endpoint sample location map with comments on activities. 39 truck loads of impacted soil was found between 7 and 20 bgs. see e–docs.

12/16/2010 – Breen: Langan sent in weekly progress report. see e–docs for e–mail and for sketch/drawing.

11/23/11 – Carlson: Spoke to Ryan Manderbach – site had been excavated to 10–15 ft. Slurry walls are being installed. Site will then be excavated to 18 ft and a slab will be installed. Excavation will then be completed below the slab to 55 ft. Excavation to 18 ft will commence in approximately 6 months.

3/6/2013 – Carlson: Visited site. Site is being excavated and redeveloped. Excavation and redevelopment is by top–down method. The first floor slab was poured and excavation is being conducted below the slab. Most of the impacted soil was removed already. They are using foam as they excavate. A slurry was poured along the property boundary.

11/6/2013 – Carlson: Spoke to Ryan Manderbach (212–479–5582), they found a geotechnical well during excavation (site was excavated to 60 ft below grade, well probably extends to bedrock). Well to be decommissioned by pressure grouting in order to ensure stability of new structure. borings outside slurry wall to be installed in a couple months. endpoint samples from excavation were all ND. closure report to be submitted after borings outside slurry wall are installed.

3/21/14 – Carlson: Spoke to Ryan Manderbach. Report for on–site excavation will be submitted to OER and DEC in May 2014. Off–site borings have not been completed yet. Results of off–site borings to be submitted in a separate report.

HYDRAULIC OIL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

Historical hydraulic oil contamination (10 yrs. ago)... may have impacted groundwater. This property is currently owned by Columbia University... material is under the sidewalk. Historical spill #9904142 The whole area will be excavated 70ft down ... Langan will oversee the clean up.

DEC Investigator Remarks:

contamination found in one boring, sheen in GW.Location is 131st Street and Broadway. Site is "E' designated.More borings will be done.(sr)

10/29/09- DECPiper- Surface spill adjacent ot this site was generated and closed 0903767. In June 2008, additional investigation of this spill 0713473 discovered pet odor in boring on lot 6. 8 550 gal tanks have been removed from lot 6 thus far. The site is

going to be excavated to 45–60 fet bgs for project. Residual product remoains under lot 6.

12/15/09 The site is part of Columbia University's proposed Manhattanville Development Project. The proposed project area comprises approx. 17 acres. Project area bounded to the north by West 133rd Street, to the south by west 125th/w 129th st, to the east by Broadway and to the west by 12th Avenue. Development activities within the project area will include infrastructure improvements, building demolition, construction of a slurry wall, and excavation of soil for below-grade construction. The project area will be excavated to an average of approx 45 to 60 ft below ground surface. In March 2008, during Langan's subsurface investigation work near 3249 B'way, staining and petroleum odor were observed in soil boring SWT-B11/SWTMW11 at approx. 32ft bgs about 6ft east of the property boundary. In June 2008, subsurface investigation activities resumed in different parts of the Project and it included site 6. During drilling activities in the basement of building on site 6 (block 1996, lot no 36), staining/odor and high PID reading in soil boring FA-B103 was observed. A MW was installed at the same location in the building basement, but no free product or sheen observed on the GW surface. Spill no 0903767 (now closed) was associated with few USTs found at site 6. The site is under several Restrictive Declarations (RD) generated by the NYC Dept. of City Planning pursuant to their review of the Final Environmental Impact Statement, Remedial Action Plan and CHSP for the project. Caller Remarks:

FOUND A SHEEN IN THE SOIL DURING A PHASE TWO TEST, THE SHEEN IS 8 – 10 FEET DEEP IN THE GROPUND. SOIL; SAMPLES WERE TAKEN.

DEC Investigator Remarks:

8/18/05 – Raphael Ketani. I spoke to the consultant today, Mr. Tarak Khouri. He told me that they are doing borings in the basement of an intact building. The last boring will be on 8/19. The building is at Columbia University, though he didn't specify that Columbia owned the building. They are boring to 20ft. A sheen was seen in the moist soil, but there are no USTs or ASTs in the basement. A phase 1 investigation revealed that this was a former Con Ed mfg site. Soil samples were sent to Spectrum Analytical, a DOH certified lab, for full soil analysis. The soils have a petroleum odor (high PID readings). After the investigation, the building will be demolished and all soils will be shipped via a hazardous waste transporter. The soil will be excavated down to 15 feet. A soil analytical report will be sent to Jeff Vought of the Spills unit.

8/19/05 – Raphael Ketani. I left a message for John Vasapollo (718) 482–0700 ext. 132 to call me back, regarding who the actual owners are and their address, on his voice mail.

4/1/06–Vought–Received message from Ilkay Cam (Langan 212–479–5410 fax 212–479–5444). Six tanks were found and removed and endpoint samples were collected. Vought called Ilkay Cam and left message to return call to DEC. Vought received call from and spoke to Cam and concrete slab under tanks. Slab and tanks were in good condition. No bottom endpoint samples were collected as concrete slab and no staining on slab. Tanks were removed because Columbia is going to install a new elevator shaft. During excavation for shaft, tanks were discovered. Tanks were 550–gallon gasoline USTs. PBS registration was submitted and five endpoint samples were collected. No VOC exceedences in samples and SVOC exceedences in PAHs. Excavation difficult to extend due to existence of piers. One fill line coming from street and fill line was filled with concrete. DEC will receive complete report. RP address will be sent in and Langan and site contact is:

John Vassapollo soil contamination letter will be sent with additional requirements of: 1)endpoint soil sampling 2)delineation of soil and groundwater contamination. Vought received email from
615 W 131st Street
c/o First Pioneer Properties, Inc.
34–09 Queens Boulevard
Long Island City, NY 11101.

4/4/06–Vought–Sent soil contamination letter with above requirements.

05/15/06–Vought–Received call from John Vassapollo (718–482–0700x132 917–838–0118) and returned call and left message to return call to DEC. Vought received call and spoke to Vassapollo and delivery of number 4 to site and tank was overfilled. Spill into boiler room. No sewers or drains affected. Spill was on concrete. Boiler room is on north side of building and tanks referred to above are on south side of building. Columbia is tenant and John is the building manager and Columbia will be handling elevator shaft remediation but Vassapollo requested CC'd on DEC correspondence.

05/17/06–Vought–Spill transferred from DEC Vought to DEC Piper as per DEC Austin.

08/11/06–Vought–Received call from Vassapollo who requested no further action on north side of spill. (Tanks referred to above in

previous comments are located on the south side of site that require further action). No further action on north side of site required by DEC Vought due to spill on concrete and no impact to subsurface. Further action on south side of site will be handled by DEC Piper via Langan Engineering.

9/13/06– DEC Piper spoke w/ Ilkay at Langan Engineers. AS per conversation, a total of seven tanks have been removed. Closure report is under review and will be submitted shortly.

9/11/03 TIPPLE UPDATING// CALL FROM ATTORNEY//WANTS TO GET CLEANUP GOING//ATC TO DO WORK// WILL CONTACT DEC & PRESENT DATA TO
DATE OLD TANKS EITHER UNDER BUILDING OR BELOW PARKING LOT.

FRED UMANE ATTORNEY WORKING FOR --- ZEICHNER ELLMAN AND KRAUSE

575 LEX AVE ---212-826-3509

6/29/04 TIPPLE UPDATING//ATC has not done any work since proposal to PRP. Attorney does not answer phone// sent letter to PRP.

10/28/05 - ATC conducted a site investigation, installed 4 wells, sampled the GW and found some contamination. They think it is
from an off-site source. Will send in the report to DEC for review. - KST

11/4/05 - assigned to Jon Kolleeny for PM assignment. Sent an email to ATC requesting a hardcopy of teh report for review. -
KST

11/4/05- The case is reassigned to I. Islam.

11/8/05- Today received from Koon the hard copy of the RI and Exposure assessment (combined) for the site prepared by ATC Assoc.
for review.- II

12/14/05- Reviewed the above-mentioned RI and Exposure Assessment report submitted by ATC Inc. ATC argues that the contamination
may be coming from an off-site source, and that the contamination does not pose an exposure hazard. Accordingly, they request
closure of the spill.

The Department responds as follow: The spill case cannot be closed at this time. The high levels of soil and groundwater
contamination identified beneath the basement are suggesting of an on-site source.

The Department requests the following actions:

1. Additional monitoring wells should be installed and soil and groundwater samples collected to more completely delineate the
area of contamination, and better determine the groundwater flow direction.
2. Indoor air sampling should be performed in the basement, and sub-slab soil gas samples should be collected to evaluate
potential vapor impacts to the site.

The RP is told by a letter with a copy to ATC Inc. to submit a work plan for additional investigation of soil and groundwater,
indoor air and sub-slab soil gas sampling for Departmental review and approval. The results of these investigative activities
should be summarized in a report with a remedial proposal to address site conditions.- II

07/31/06: Transferred to S.Kraszewski. - SK

10/18/06: Changed DEC Lead from "Needs Reassign" to "Stephen Kraszewski." - JK

11/09/06: Reassigned from Stephen Kraszewski to Chanda.(Chanda)

12/11/06:Kartik Chanda of DEC sent a letter to the property owner(Steven Kraus), requiring that be submuitted a site investagation work plan to DEC for approval by 01/25/2007, as required in the previous letter.

12/28/06:Chanda received a phone call from Pamela Oelerich, Ph:212-432-8545(ATC)concerning the status of the site.

01/19/07: Chanda received an e-mail from Pamela Oelerich , ATC Associated Inc., with attached the Site Investigation Work Plan.

01/23/07: Chanda reviewed the site investigation work plan, prepared by ATC Associates Inc., dated 01/19/07. On 1/23/07, Chanda approved the Investigation Work Plan, requiring that an investigation summary report must be submitted to DEC for review by March 23,2007.

3/2/07: Chanda received a letter from Pemela Oelerich , ATC Associates Inc. regarding time extension request to submit the investigation summary report.

The Department approved the extension and sent a letter to RP(Steven Kraus) and his consultant(Pamela Oelerich), requiring that an investigation summery report be submitted to the department for review by April 23, 2007.

5/8/07: Chanda received an Investigation Summary Report (ISR)prepared by ATC Associates Inc., dated May 7, 2007.

5/15/07: Chanda reviewed the Investigation Summary Report and has the following comments:

1. The soil analytical results from soil borings SB-MW-05 and SB-MW-06 showed elevated levels of VOCs. The levels of BTEX concentrations ranged from 82.22 ppm to 137.58 ppm. The soil samples exceed NYSDEC standards for Recommended Soil Cleanup Objectives for gasoline contaminated soils.

2. The groundwater (GW) analytical results showed elevated levels of VOCs for monitoring wells MW-02, MW-03, MW-04, MW-05, MW-08, and MW-09. The levels of BTEX concentrations ranged from 16.99 ppb to 444.60 ppb. The high VOC concentrations indicated that the GW had been contaminated and thus, are required to be remediated and monitored.

3. The sub-slab vapor analytical results from samples SSV-03 and SSV-04 showed elevated levels of VOCs and Toluene. The levels of toluene concentration ranged from 3,100 µg/m³ to 4,500 µg/m³, which are above the NYSDOH Background Levels.

4. The indoor air analytical results from samples IA-01, IA-02, IA-03 and IA-04 showed elevated levels of VOCs and Toluene. The levels of toluene concentration ranged from 4,000 µg/m³ to 6,900 µg/m³, which are above the NYSDOH Background Levels.

5/16/07: Kartik Chanda of DEC sent a letter to RP(Steven Kraus) and his consultant (Pamela Oelerich) ATC Associates Inc.The Department requires the followings:

1. Quarterly Groundwater Sampling.
2. One Semi-Annual Indoor Air and Sub-Slab Vapor Samplings. Additional investigation may be required by the Department upon review of these monitoring reports.

9/6/07: On 8/10/07, Chanda received an email from Ms. Pamela Oelerich, ATC Associates Inc.(ATC), regarding quarterly groundwater

BTEX(ppb)= 14.16---72.8-----41.14----240.00---340.00---19.29-----25.98-----120.00-----ND
 Mtbe(ppb)= ND-----ND-----ND-----1.79----21.40----ND-----ND-----ND-----ND

3/26/08
 BTEX (ppb) ND-----148.1-----98.4-----487.5-----58.45----ND-----5.58-----50.9-----11.78
 MTBE (ppb) ND-----ND-----ND-----ND-----ND-----ND-----ND-----ND-----ND-----ND

-No SVOCs were detected above the method detection limit in samples exception of naphthalene.

-VOC concentrations in MW-03, MW-07, MW-08, and MW-09 were relatively similar to concentrations detected in 9/20/07.

6/19/08: Chanda received a phone call from ATC Associates Inc., regarding the schedule of indoor air and sub-slab vapor sampling events end of June 2008. Chanda sent a letter to RP and his consultant requiring that the next GW quarterly report with semi annual indoor air and sub-slab vapor sampling results must be submitted by 7/31/08 for review and approval.

7/1/08: Chanda received one month extension request via email from ATC Associated Inc. dated 6/30/08. Based on the reasons presented, the Department hereby grants a one month extension to submit the quarterly groundwater and semiannual indoor air reports. Chanda extended the deadline to 8/29/08.

8/29/08: Chanda received a Quarterly Report (fourth quarter) dated August 2008, prepared by ATC Associates Inc.(ATC) see eDocs.

Chanda reveiwed the Quarterly report and has the followings:

-Groundwater gauging and sampling of MW-1 through MW-9 and samples analysis for VOCs and SVOCs.

-Collection of four sub-slab vapor samples for analysis via EPA method TO-15 for VOCs.

-Collection of four indoor air samples and one outdoor air sample and analysis via EPA method TO-15 for VOCs.

-Comparison of the July 2008 groundwater laboratory analytical results with the previous investigations revealed that overall the concentrations of VOCs appear to be declining in MW-02,MW-03, MW-04, MW-05, and MW-07. The comparison revealed that VOC concentrations increased from the March 2008 sampling event in MW-08. The review of the results for MW-09 revealed anincrease in the concentrations of isopropylbenzene, sec-butylbenzene, and tert-butylbenzene and a decrease in the concentrations of 1,3,5-trimethylbenzene, ethylbenzene, and toluene from the March 2008 sampling event. Overall, total concentration of VOCs is lower than the March 2008 sampling events in most monitoring wells.

-In sub-slab soil vapor result showed that Toluene was detected in all samples at concentrations ranging from 37 to 57 micrograms per cubic meter (ug/m3); all of which are below or equal the upper limit of the NYSDOH Background Level of 57 ug/m3 (toluene was detected at concentrations ranging from 17 to 6,800 ug/m3 in the December 2007 sampling event). Concentrations of 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, mand p-xylene, and o-xylene were found above the NYSDOH Background Levels in SSV-01, SSV-03, and SSV-04 but below their respective EPA Values.

- Indoor air sampling results showed that concentrations of toluene (1,100 to 2,300 ug/m3) and ethylbenzene (42 to 74 ug/m3) were found above the NYSDOH Background Levels and the Indoor Air EPA Values. M- and p-xylene and o-xylene were detected at

concentrations above the NYSDOH Background Levels in all indoor air samples collected but below their respective Indoor Air EPA Values.

10/23/08: Chanda sent a letter to RP and his consultant requiring that:

1. All existing monitoring wells, MW-1 through MW-8, must be gauged and surveyed to determine the correct groundwater flow direction. Groundwater samples must be collected and analyzed for petroleum constituents via EPA Method 8260/8270. From this data, create a groundwater contour map and plume delineation map.

2. Indoor air sampling must be performed in accordance with NYSDOH Division of Environmental Health Assessment Indoor Air Sampling and Analysis Guidance available at <http://www.health.state.ny.us/environmental/indoors/air/guidance.htm>. Note that the guidance requires a household product inventory and completion of the Indoor Air Quality Questionnaire and Building Inventory available at <http://www.health.state.ny.us/environmental/indoors/air/docs/questionnaire.pdf>. The HVAC system should be operating under normal occupied conditions. Results will be forwarded to the NYSDOH for review. If PID readings are detected, the Department must be notified immediately.

The next Quarterly Report will be submitted to DEC by 12/15/08 for review and approval.

12/07/09 – Transferred to Tibbe

11/12/10 – spill re-assigned from Tibbe to Joe O'Connell.

3/5/13 – In December 2010, communication between DER and Skyline Windows consultant to discuss the project. The area of the site was eventually going to be included in larger Columbia University (CU) project. Subsequently (12/23/2010) had communications with CU consultant regarding plans to demolish the Skyline Windows building. Because there were monitoring wells in the basement of the building, requested proper abandonment of wells before building demolition. Met with CU consultant in April 2011 to discuss project status; was advised that some work would be starting in the area; that the Skyline property would be mostly occupied with trucks/equipment for the project area that was south of W. 130th Street; that eventually they would be excavating the former Skyline; that they would be taking characterization samples now for disposal; sent a narrative and figure on April 8, 2011. The figure shows the larger block and the tax lot numbers (in hexagon in the figure); former Skyline is Block 1997 Lot 14; this lot was included in property transaction with eventual deed to "The Trustees of Columbia University" in early 2012. Inquired about project status on 3/4/13 and discussed with CU consultant: former Skyline is in roughly the same status as it had been; work may be occurring soon within the street bed of W. 130th Street and other actions may occur north of the street in the coming months. The CU consultant inquired if there was any way to get a coordinated response from DEC as there are numerous spills within the footprint of the larger construction site; I said I would look into it. (JOC)

Caller Remarks:

stain of unk oil on a metal plate clean up pending remediation program coned#143504

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

Con Ed e2mis #143504

3/23/07: Con Ed Chad Pfeiffer submitted results of samples collected following remedial excavation. Results are in eDocs. Sent e-mail to Pfeiffer:

"As per our telephone conversation, I am concerned that a number of these composited samples have relatively high TPH values. This leads me to conclude that at least one of the grab samples that comprised the composite would exceed the cleanup goal of 10,000 ppm. As such, we agreed that you would have the contractor remove some additional bluestone/soil and re-sample utilizing grab samples.

The locations to be re-excavated are:

1. Area R2-NE
2. Area R2-E
3. Area R2-sw
4. Area R4-NW
5. Area R4-W
6. Area R4-SW

For sampling (TPH only, in this case) we should use the following guidelines:

For a narrow excavation (i.e., less than 5 feet wide), collect one grab sample per 10 linear feet of excavation and one from each end. For example, for a 10 foot long excavation, you would collect 3 samples total (one from each end, and one from the center of the excavation). If the trench is wider, collect same linear distance , but one from each side of the excavation." (JHO)

3/30/07 – second round of samples collected – still have high TPH (actually higher than shallow soils). Requested additional excavation. Con Ed (Chad Pfeiffer) indicated that additional excavation may not be possible due to undermining of unit. Will meet at site to discuss options. (JHO)

5/3/07: Inspected location with Con Ed (Chad Pfeiffer and Vic Faster) – they will conduct additional sampling along west side of unit to delineate extent of remaining contaminated soil. See eDocs for analytical results and site photos.(JHO)

3/12/08: spill number 9808980 closed and cross-referenced to this spill. (JHO)

01/15/10-HRAHMED-Spill number 0908202 closed, as the cleanup of the recent release was done. As per Randall Austin and Jacob Krimgold, the historic contamination should be remediated under this spill. The work plan has been uploaded to eDocs submitted by Chad of ConEd.

6/21/10 – changed Lead DEC to JMOCONN (JOC)

7/21/10 – Austin – See spill#0908202 – ruptured disc on 10/21/09 led to release of over 1700 gals of dielectric fluid – this new spill was cleaned up and closed out – #0203037 remains open – end

found old tank during excavation/stains to soil

DEC Investigator Remarks:

07/24/12–Hiralkumar Patel.

alternate addresses: 640–644 W 131st Street, 641–645 W 130th Street

no PBS record found.

other spill : 0707311. spill 0707311 was reported on 10/03/07 as NYC DEP reported motor oil spilled from cars. DEC Piper inspected site and found a body repair shop at the site. he did not observed any oil. case closed.

11:00 AM:– spoke with Ryan at Langan. he mentioned that a 550 gal gasoline UST was discovered along the northern line of the property during excavation to install a concrete guide wall at 10 ft depth. he mentioned that the entire city block will be excavated down to 200 ft depth as part of on–going development. no piping were attached to the tank. he mentioned that tank was found along the sidewalk. he mentioned that tank was found around 2 ft bg. there was no contamination observed around the tank, but staining and high PID readings (305 ppm) were noted in soil beneath the tank. contractor dug down to 10 ft depth as part of the project and poured a concrete guide wall. Ryan mentioned that tank was mostly filled with water with some residual product. soil removed from the excavation has been desposed off properly. asked him about shoring along the exterior as site will be excavated down to 200 ft depth. he does not know location of shoring: inside or outside of the guide wall. asked him to provide such information. also asked him about any previous investigation data. he mentioned that there were soil borings installed on site as part of waste characterization. there were some borings installed near the area where gasoline tank found. during investigation, groundwater was found around 10 ft depth. there was not groundwater observed in excavation for guide wall (which was 10 ft deep). asked him to submit results of soil and groundwater samples from the gasoline tank area.

Ryan Manderbach

Langan Engineering

Ph. (212) 479–5582

email: rmanderbach@langan.com

11:17 AM:– sent email to Ryan. asked him to submit site map with sample location and previous boring/well locations near tank area. also asked to submit results of soil and groundwater samples collected near the tank area. inquired him about any endpoint samples collected prior to pouring guide wall in former tank location.

4:08 PM:– received email from Ryan including site map and results of soil and groundwater samples collected in Oct. 2011. no contamination found in samples collectd around area where 550 gal tank was found. he mentioned that endpoint samples were not collected from the tank area because the entire area below the tank will be excavated to a minimum of 55 ft bg.

08/16/12–Hiralkumar Patel.

11:14 AM:– received call from Ryan. he mentioned that there is no work in progress in the area where tank was found.

06/24/13–Hiralkumar Patel.

2:10 PM:– left message for Ryan.

MTA NEW YORK CITY TRANSIT
2 BROADWAY, C2.10, NY 10004
BUS: 646-252-3470/ CELL: 646-879-1970

4/26/12 – Raphael Ketani. During the monthly meeting, the consultant stated that free product is recovered from a few wells on a monthly basis. An investigation/remediation report will be submitted.

2/27/2013 – Raphael Ketani. Mr. Mathelier (646) 252-3470 sent me the following case summary:

In 1995, Following discovery of an anomalous volume of petroleum product in the OWS system in the diesel dispenser area at the depot (southwestern area of the depot), NYSDEC assigned No. 9506400 to the spill. In late 1995 and early 1996, a Remedial Investigation (RI) was conducted and included the installation of several monitoring wells (MW-1 through MW-23) in the dispenser area. Product has only been present in MW-1, MW-3, MW-11 and MW-12. Through Vactruck recovery, high vacuum enhanced fluid recovery from 1997 to 2001 approximately 2,620 gallons of product was recovered from these product-bearing monitoring wells.

However, in 2008, groundwater levels in the dispenser area dropped by as much as 2.7 feet. During these periods of lower water levels, product appeared in well MW-5 (to thickness as much as .28 feet). Groundwater levels have risen and no product has been detected in this well since then. The presence of product at depth in MW-5 suggests a free product phase floating on the groundwater and trapped beneath the water table. As agreed with the NYSDEC, an investigation was warranted to better delineate the limits of the free product plume around MW-5 (north of the dispenser area). As part of this investigation, an evaluation of the feasibility of installing a remediation system to enhance product recovery was proposed.

The investigation began in July/August 2010 and included the installation of monitoring wells MW-24, MW-25, MW-26 and MW-27 (around MW-5/ north of the dispenser area), chemical and geotechnical analyses and groundwater and product level monitoring. Geotechnical results indicated that the soils range from sand with silt (with hydraulic conductivity range of 10-5 to 10-3 cm/sec) to sand with gravel (with hydraulic conductivity range of 10-3 to 10-1 cm/sec). Chemical analytical results revealed soil samples with the presence of VOCs above the CP-51 criteria and no SVOCs above the CP-51 criteria. Dissolved-phase groundwater samples collected from product-free wells throughout the site.

A section covering evaluations of geotechnical results, free product plume limits, soil analytical results, groundwater analytical results and feasibility of installing a product recovery system is included. [he's referring to the February 2013 Manhattanville Depot Investigation Report] Based on these evaluations, the following recommendations are: implement a pump test to refine the hydraulic conductivity data needed for further detailed design; groundwater samples shall be collected during the pump test and analyzed to determine the level of pretreatment required prior to discharge to the municipal sewer system; evaluation of remedial technologies based on the pump test and groundwater analytical results while evaluating the financial feasibility of such strategy.

3/6/13 – Raphael Ketani. I reviewed the February 2013 Manhattanville Depot Investigation Report. The site is 500 feet east of the Hudson River at an approximate elevation of 109 feet. Groundwater varies in depth from 8 to 9.5 feet below grade.

The subsurface investigation took place during July and August of 2010. Wells MW-24 to MW-27 were installed. PID readings were 976 ppm at 8 feet down in boring MW-25 and 441 ppm at 12 feet down in MW-27. Borings MW-24 and MW-27 had odors from 3 to 16 feet below grade. Boring MW-26 had odors and PID hits from 12 to 42 feet down with 1932 ppm at 29 feet. The soils were mostly sandy with some silt.

The soil sample were taken at MW-25 at 8 to 10 feet had many VOC hits in the thousands of parts per billion with only total xylenes and 1,2,4-trimethylbenzene as significant exceedences. The other soil samples from the three other borings were mostly non-detect or J values. There were no SVOC hits. MW-27 at 10 to 15 feet had exceedences for benzene, total xylenes and 1,2,4-trimethylbenzene. The SVOCs were almost all non-detect.

The hydraulic conductivity of the groundwater was tested and found to vary from 10-5 to 10-1 cm/sec. This corresponded to silt or very fine sand up to sediment with coarse sand and gravel. Eighteen (18) wells were sampled during September 2010. MW-4, MW-5, MW-13, MW-15, MW-16, MW-20, MW-23 to MW-26 and MW-01 had 2 to 7 low to moderate VOC hits. MW-11 had 9 VOC hits which were low to 130 ppb with one hit of 2300 ppb of p-isopropyltoluene. MW-9 had 9 VOC hits with moderate to high exceedences to 23,000 ppb of toluene. The SVOCs were almost entirely non-detect for all of these groundwater samples, except for 1300 ppb of naphthalene at MW-9 and 18 ppb of naphthalene at MW-11. MW-17, MW-19, MW-21 and MW-22 were almost entirely non-detect for VOCs and SVOCs. MW-27 had 11 VOC hits with 3 hits in the low triple digits. The SVOCs were almost entirely non-detect.

It was agreed years ago by the DEC and the NYCT that MTBE concentrations greater than 100 ppb in some samples collected during September 2010 were representative of gasoline contamination and not characteristic of the site contamination – which was primarily diesel fuel. The concentrations and types of contamination (mostly BTEX with d-naphthalene) in MW-9 suggests that it may be from the former MGP site which used to be at this location.

According to the report, two methods of addressing the contamination are being considered. These are lowering the water table 4 feet using 4 extraction wells by pumping at 5 to 114 gpm, and surfactant flushing. It will be determined whether installing and operating a remediation system is financially feasible.

They will do pumping to refine their understanding of the hydraulic conductivity. They will also resample the groundwater. Based on the pumping tests and the groundwater results, the best remedial method will be determined. After the best method is chosen, a cost estimate will be done.

I approved the Investigation Report and drafted a letter for the review of Hassan Hussein, EE III and head of Unit C in DER. In the letter, I stated that I was approving the report, but I also stated that they must redevelop the wells first. Then they must wait 2 months after the date of development before taking the groundwater samples in order to allow the disturbed groundwater to leave the vicinities of the affected wells. After they have taken the samples, then they can do the hydraulic conductivity testing.

3/19/13 – Raphael Ketani. Mr. Hussein approved the letter and it was sent out.

12/18/13 – Raphael Ketani. At the request of Mr. Mathelier, the DEC located the contact person for the Columbia University Manhattanville development project next door. This person is Serena Sinckler, Coordinator for the Manhattanville project, at (212) 854-4142. The general development project e-mail address is projx@columbia.edu.

12/19/13 – Raphael Ketani. Marcello Valez, head of construction and project management (212) 854-3992, called regarding what was

the DEC's concern about the Columbia University Manhattanville construction project and what was the nature of the NYCT Manhattanville remediation project.

12/20/13 – Raphael Ketani. I tried to return Mr. Valez's call, but I was told by Ms. Sinckler that he had left for vacation. Ms. Sinckler added that she will try to have one of the vice presidents return my call.

Later, Ms. Sinckler called again and said that I should talk to Greg Lempin at (212) 851-7058. So, I tried to contact Mr. Lempin, but his voice mail box was full. I will try him later.

12/23/13 – Raphael Ketani. Mr. Lempin called me today. He said that the Columbia University project is between W. 129th Street and W. 130th Street. He added that this was about 400 or so feet away from the NYCT Manhattanville project site. I gave him Mr. Mathelier's phone number and asked that he contact him regarding the groundwater issues. Mr. Lempin said that he will. I also sent Mr. Lempin a map showing the location of the NYCT Manhattanville site.

Caller Remarks:

Caller states her building had a failure on it's heating oil system that caused an odor of oil in the building including her 4th floor apartment. Caller talked to regional office on this date to see if there was a report but they said there wasn't a report on file. Caller reported the issue to the bldg super as early as Sept 19th. Super had an oil company out on Wednesday 9/25 when a "large leak" was discovered and fixed.

DEC Investigator Remarks:

09/27/13--Hiralkumar Patel.

Kristina called earlier inquiring about any spill reported at the site. searched database and found no record of spill. she was concerned about fire hazards. she stated that as per building super, there is 'large' spill in basement. as she was concerned about fire hazards, suggested her to call FDNY. also asked her to report spill to DEC hotline.

received spill report at 3:37 PM.

alternate address: none

no other spills found.

PBS #: 2-283045. as per PBS record, the site has one 1,500 gal #2 oil UST. the tank installed in Jan. 1955. tank system is due for tightness test.

3:45 PM:-- spoke with FDNY Manhattan dispatch who confirmed that no reports were filed with FDNY regarding this issue.

3:48 PM:-- spoke with Kristina. she spoke with building super and super was going to call FDNY. Kristina stated that there is petroleum odors in building and she is concerned.

3:51 PM:-- left message for Calvin, building super.

3:54 PM:-- left message for Eric Underwood, property manager.

Calvin Fraley **building super**
Ph. (347) 203-6044

123rd Street Investor, LLC.
c/o Dermot Realty Management Co.
729 7th Avenue, 15th Floor
New York, NY 10019
Attn.: Eric Underwood **property manager**

PH. (347) 865-4655

after discussing with DEC Austin, case assigned to DEC Tim. Tim will visit site.

9/28/13 TJD

Site inspection. Spoke with affected resident in Apt. 4W (Kristina) – odors are still permeating basement, stairwell and upper floor tenant spaces. As per notifier, spill occurred approximately 9/13 and liquids were removed by building super (Calvin Fraley 347 203 6044) utilizing granular absorbents. Basement concrete floor is stained with #2FO and exhibits strong petroleum odors. A second spill was also identified on sidewalk in proximity to fill port – super states this is a regular occurrence following hose disconnect after delivery (Oil carrier is Statwide). DeMeo explained regulations associated with responsibility of transfer and advised building super to monitor deliveries and report spill in the event of reportable overfill/housekeeping conditions associated with fuel deliveries.

Building representative (super) states building manager/owner have been informed of discharge and not authorized any further cleanup actions. Building manager is Dermont Realty @(877 379-8484 x6134) – multiple contacts for management company were provided to DEC – messages left with no return calls received to following building reps:
Eric Underwood – 347 865 4655
Mauricio – 646 747 6147

During discussion with affected tenant (4W), DEC became aware of a second tenant in Apt 2E who reported to have several family members experiencing physical symptoms (dizziness, headaches & nausea) associated with petroleum odors. DEC spoke with these affected residents also and advised them to contact DOH via 311 to report indoor air concerns and possible related health conditions.

DEC independently contacted 311 and made referral to DOH: callback requested
Service Request #: C1-1-894504504
Date Submitted: 09/28/13 12:02:01 PM
Request Type: Indoor Air Quality
Details: Chemical Vapors/Gases/Odors

No callback from DOH was received.

Building super was issued a NOV for PBS/Spill violations and directed to retain the services of a qualified environmental contractor to complete cleanup including recovery of washwater. A small area around the hot water heater is open to soil which has been affected by the petroleum discharge. The super was further directed to hand excavate the impacted soils to a clean/structural endpoint without undermining equipment. DEC requested callback with an update from building super no later than 9/30/13.

PBS violations referred to PBS Unit for follow-up.

DEC photos, NOV and DOH referral have been uploaded to E-DOCS.

DEC Investigator Remarks:

site visit needed.

12/04/08 I visited the site today morning. There is a gas station @673 W 125th Street(PBS: 2-601507). The gas station may be a source of contamination. Therefore, Langan investigation report needs to be reviewed. I called Langan and requested them to send us the report.(sr)

12/09/08 Rec'd call from Jackie DiCrescio from DiCrescio & Trivedi,LLP. She represents 673 W 125th Street and requested info on the spill case. Her contact phone # is (516)470-1379.(sr)

03/06/09 Rec'd investigation report from Langan Engineering. Boring location adjacent to the tank at 673 W 125th, found contamination. Therefore, spill address is changed to 673 W 125th Street.(sr)

03/09/09 CSL was sent to

Dhanota Brothers Inc
673 West 125th Street
New York, NY 10027
Attn: Gurnam Singh(sr)

04/02/09 Rec'd call from Patty Badding of EMS @(908)500-7160. Subsurface investigation will be done next week.(sr)

10/05/09 Spoke with Patty Badding regarding investigation rpt. She will send it to my attention.(sr)

11/13/09 Rec'd Investigation Summary Rpt prepared by Env'tl Management Solutions, Inc. Two 4,000 gal gasoline and one 4,000 gal diesel USTs, 3 pump islands on site. Eight soil borings performed on site. Soil borings around tank field and pump islands were advanced through water table 16 ft below surface. Six soil samples showed VOC exceedances above TAGM. Five GW samples were analyzed, all of them exceeded DEC GW Quality Standards. Total BTEX ranged from 3,100 ug/l to 10,090 ug/l. Other VOCs in GW: Benzene 4,700 ug/l; Ethylbenzene 3,400 ug/l; MTBE 14,000 ug/l; Naphthalene 790 ug/l; Total VOCs: 22,100 ug/l. No liquid phase hydrocarbon in GW observed. Case is under Consent Order with DLA (Lead: Lou Oliva). EMS recommends to install GW monitoring wells and prepare remedial strategy.

07/21/10 EMS installed four monitoring wells on site to characterize GW and determine GW flow direction. Monitoring wells were installed on four sides of property. MW-1 on west portion of site, adjacent to 12th Ave; MW-2 on north portion of site, adjacent to W 130th St; MW-3 installed on south side along W 125th St; MW-4 installed on east side, in front of store. Wells were sampled on March 09, 2010. Gasoline odor was detected in all wells except MW-1. Sheen was observed in MW-2. GW flow direction was determined to be in westerly direction. VOCs in GW: Benzene 1,100 ug/l; Toluene 1,400 ug/l; Ethylbenzene 2,600 ug/l; MTBE 1,200 ug/l; Naphthalene 870 ug/l; 1,2,4 Trimethylbenzene- 3,000 ug/l. Based on investigation, plume has not been completely delineated. Off-site investigation required. Rpts in edocs. Spoke with Patty Badding. She will prepare a offsite investigation rpt and submit to DEC for approval. Three 4,000 gallon USTs were tightness tested on 05/01/2009. Tanks passed test.(sr)

** Case transferred to Remediation section for future management. **

08/02/10: This spill case transferred from S. Rahman to J. Kolleeny. - JK

11/04/10: Sent email to consultant Patricia Badding of Env'tl Mgt. Solutions (EMS): "Patty: I wanted to let you know that Sharif Rahman is no longer managing this spill case for DEC, spill has been transferred to me. I will look over RIWP and get back to you and your client with either an approval or with any questions or comments I may have." Patty sent email reply: "Hi John - Do you think we would be able to use Columbia wells for delineation if they are in right locations?" I sent reply: "My initial reaction is, as long as Columbia wells are in right locations and are properly screened to straddle water table (do you have well construction logs, or can you get them?), it's OK with me to use them for delineation, as long as there are no access issues with Columbia. But please let me take a look at your investigation work plan and familiarize myself with site and project a little more before I give a final answer on this." - J. Kolleeny

12/21/10: Sent email to Patty Badding of EMS: "Hi Patty, I was just wondering if you have any updated information on this project, as to whether or not Columbia University may be taking over investigation and remediation? Site is under a consent order, and I don't want to let it sit idle for too long because order has compliance milestones built into it that should be

adhered to. If Columbia's involvement is still unclear, I should probably complete my review of your remedial investigation plan and issue an approval letter, so you can proceed with investigation. Please let me know." Patty sent email reply: "Hi John – I left a message a couple minutes ago to get an update. I should hear back by tomorrow. I'm going to set up a date Thursday to get some \$ and monitor wells for product. I'll email again tomorrow." – JK

12/09/11: Sent email to Patty Badding of EMS: "Hi Patty, I came across an EMS investigation work plan for this site on my desk top, and I seem to remember that you wanted me to hold off on approving it because there was a possibility that Columbia University might take over cleanup. Do you have any update on this site? If there are no indications of Columbia taking over spill cleanup, I will have to require that current Responsible Party move forward with work plan for off-site delineation and then preparation of a remedial plan. Please let me know." Patty sent reply: "Hi Jon, Yes, Columbia is going to take over property through eminent domain. I don't know how far along things are on takeover, but it is currently being operated by same owner. I will email his attorney to check status and get back to you." – JK

07/31/12: Received phone call from Ryan Manderbach of Langan Engrg., who stated that Columbia Univ. has taken over this property and is on verge of removing USTs; they plan to only remove tanks and surrounding soil, and not chase contam because area will be redeveloped by install'n of 200 ft. deep slurry wall and excavation of entire site to depth of 60 ft. I said it was okay to proceed with UST removal but that some closure assessment soil sampling and screening should be performed to document soil conditions, and PBS Application Form must be submitted to our PBS unit to provide notice of UST removal. Ryan agreed and said he would send email to confirm our discussion. – J. Kolleeny

08/09/12: On 8/8/12, received email from Ryan Manderbach of Langan: "Jonathan, Columbia University recently acquired subject property. Property is portion of a 2-block construction site that will be enclosed by a perimeter slurry foundation wall. Columbia proposes to remove 3 USTs from property prior to install'n of slurry wall. After tanks are removed, we plan to backfill excavation with clean fill and/or RCA. One soil sample will be collected from each tank bottom prior to backfilling of excavation. Future construction of property, in addition to slurry wall, includes excavation of majority of property to approx 45 ft below grade. At this time, we intend to excavate soil as necessary for UST closure. A demarcation layer will be placed between remaining soil and clean fill/RCA, and potentially contaminated soil that remains will be remediated during future development of property. All future activities related to spill will be coordinated with NYSDEC. Property is listed as "E" designated. NYC Office of Env'tl Remediation (OER) recently approved Remedial Action Plan (RAP) covering this property. Attached is OER-approved RAP (figures and appendices not included). Please note that this rpt was approved prior to Columbia acquiring this above referenced property. Please contact me with any questions." I sent back email reply (to rmanderbach@langan.com): "Ryan, Thanks for your email and attachments. I understand that Columbia intends to move forward with removal of USTs at this site, with excavation of soil necessary to get USTs out and collection of soil samples from beneath each UST. I concur with this proposal, with understanding that Remedial Action Plan approved by OER for this and related properties, involving excavation of larger site to depths of 42–74 ft below grade and emplacement of slurry wall, will be implemented at some point in future and will address soil and GW impacts that extend beyond immediate UST area. I would like to ask that Langan Engrg & Env'tl Services determine if wells at this site still exist and are serviceable, and if so, that wells be gauged and sampled in near future to provide updated information on GW conditions. Also, a remedial investigation for this spill site needs to be completed (with a plan submitted for my review and approval), and once remedial investigation is completed, a Remedial Action Plan specific to this spill site should be prepared and submitted for my review/approval. Please let me know if you have any questions, and please keep me informed about progress at site." Uploaded Langan's RIR and RAP into eDocs. – J. Kolleeny

09/12/12: Reviewed Off-Site Spill Delineation Work Plan Modification rpt by Langan Engrg & Env'tl, dated 9/10/12 (in eDocs). This plan revises and updates Oct. 2010 Remedial Investig Work Plan for this site prepared by Env'tl Mgmt Solutions, which was not

implemented due to pending property transfer. Langan work plan proposes install'n of 3 off-site 2-inch wells to delineate potential off-site impacts – keeping two locations from EMS work plan, eliminating well to north in EMS plan, and adding another well to WSW. Plan states that at each boring, soil will be continuously sampled and screened for field indications of contam, e.g., odors, staining & PID readings, and that if gross contam is observed, soil samples may be collected for lab analysis. Following well install'n, wells will be developed & sampled, and investig summary rpt with results of these activities will be submitted to DEC. After confirming with Ryan Manderbach of Langan that existing wells were sampled prior to UST removal (2 of which were destroyed during UST pull), I sent approval letter (in eDocs) to:

Mr. Gregory Lempin
Columbia Univ. – Manhattanville Development
615 West 131st Street, 2nd Floor
New York, NY 10017
(212) 851-7058; gl2309@columbia.edu

but asking that usual DEC soil sampling protocol be followed (i.e., two samples per boring for lab analysis, from interval with highest PID reading and from interval just above GW; if no PID hits, then only sample from above GW), and requesting that, based on investig results and all available historical soil & GW data, a RAP specific to this site be prepared and submitted for DEC review/approval. – J. Kolleeny

06/12/13: Received email from Ryan Manderbach of Langan Engrng: "Jon, I wanted to notify you that contractor at Manhattanville has begun excavation for and install'n of slurry wall panels adjacent and on Site. Please give me a call if you have any questions." – J. Kolleeny

03/05/14: Reviewed UST Closure and Off-Site Spill Delineation Rpt by Langan, dated 2/13/14 (in eDocs in 3 parts: main text, figs & tables; Appendix A; and Appendices B-H). Rpt documents removal of three 4,000-gal USTs & assoc. piping, removal of 70 tons of contaminated soil, and collection of 3 end-point soil samples in Aug. 2012. Rpt also summarizes completion of 3 off-site soil borings, collection of soil samples, and install'n of three mon wells in October 2012, and sampling of GW from new and existing wells to evaluate GW conditions and potential off-site impacts. Based on data obtained, Langan concludes that there are petroleum impacts to on-site soil & GW, including 0.5 ft of LNAPL in well MW-4, but off-site soil and GW have not been significantly impacted. Langan recommends preparation of a RAWP to address on-site petroleum impacts during development of site. Prior to implementation of RAWP, Langan recommends implementing annual GW monitoring/sampling events for off-site wells, and further investigating free product in MW-4 by installing two up-gradient temporary wells to north and east. I sent letter (in eDocs) to Gregory Lempin of Columbia Univ (gl2309@columbia.edu), cc to Ryan Manderbach of Langan, approving these recommendations but requiring that (1) on-site wells also be monitored/sampled annually, (2) prior to preparation of RAWP, LNAPL recovery should be implemented as an IRM, with product removed from MW-4 by appropriate method and regular gauging (at least quarterly) of well for product recharge; if product returns, it should be removed and absorbent sock placed in well between gauging events, and (3) install'n of new up-gradient temporary wells should proceed prior to preparation of RAWP, with soil sampling during install'n; if product is identified in temporary wells, permanent wells should be installed at those locations and new wells added to LNAPL recovery program; add'l wells may also be needed to further delineate LNAPL plume. If no product is found in temporary wells, GW grab samples should be collected to further delineate GW contaminant plume. Letter also requested that DEC be advised when well install'n has been scheduled. – JK

APPENDIX B SITE NO. 56.

01/28/2008: Site Investigation Report (SIR) received by NYSDEC from Con. Edison. See eDocs(MA, 03/2/08)

3/06/08: The Department sent comments letter to Con Ed in response to the SIR. Details in eDocs. (MA)

4/14/08: Con Ed's consultant (Langan) responded to NYSDEC comments letter of March 6, 2008. (MA)

2/13/12 – Raphael Ketani. I was given Con Ed site 56 to work on as my project. Associated spills for this site are #8102007, #8303209, #8912498, #9514638 and #0130047. However, spills #8102007, #8912498, #9514638 and #0130047 have been closed (leaving #8303209 as the only other open spill). The Con Ed spill locations are 56–1 to 56–8. Location 56–5 is being handled under separate cover (according to Con Ed). Also, according to Con Ed, locations 56–1, 56–3, 56–6 and 56–7 have been closed. This leaves locations 56–2, 56–4 and 56–8 as still open.

3/13/12 – Raphael Ketani. I tried to contact the new Con Ed project manager, Ed Wiederkehr (wee–der–ker) (718) 267–3868, but could only leave a voice message.

3/14/12 – Raphael Ketani. I tried to contact Mr. Wiederkehr, but could only leave a voice message. Next, I tried to contact Barry Cohen (718) 204–4252, the former Con Ed manager, but I could only leave a voice message.

Mr. Wiederkehr responded by e–mail as he was out of the office. He asked what the DEC wanted to discuss about site 56. I responded back that we needed to know the current status of progress on the remediation. I also added that I thought the discussion regarding method 8100M had been resolved and that it was now up to Con Ed to do the remediation and send the DEC the end point results.

Later, Barry Cohen of Con Ed (718) 204–4252 responded back that they were waiting for Tim LeBarron of DEC to review the information regarding method 8100M.

3/15/12 – Raphael Ketani. I received an e–mail today regarding test method 8100M (8015). Attached to this e–mail was a letter from Hassan Hussein, EE 3 Region 2, to Mr. Madsen of Con Ed. In the letter, Mr. Hussein stated that 8100M was approved provided the same standard operating procedure was used and that the samples were processed by a lab which is ELAP certified for 8100M/8015. Gravimetric method 9071A, method 9071 and method 9071B were also approved with the same requirements. So, the way seemed to be clear for Con Ed to start sending samples to the lab and for generating analytical results.

4/11/12 – Raphael Ketani. I drafted a letter for the review of Hassan Hussein, EE III at the Department. In the letter

- 1) I approved the Langan September 2008 Remedial Action Work Plan;
- 2) included two conditions which had originally been put forth by the previous project manager, Joseph O'Connell, in his December 15, 2011 letter;
- 3) referenced letters sent by Mr. Hussein on February 14, 2012 and March 15, 2012 in which he states that test methods 8100M, 9071, 9071A, 9071B, 8015B and 8015C had been approved by the Department;
- 4) and stated that the additional requirements for submission of the test method SOP, and all documentation related to the first set of analyses by any laboratory using the Modified EPA Method 8100, remain as indicated.

The letter was approved by Mr. Hussein and sent out today.

2/21/2013 – Raphael Ketani. I contacted Ed Wiederkehr (wee-der-ker) (718) 267-3868 by phone and told him that the DEC hadn't heard about any progress regarding the remediation of the contamination at the Con Ed sites 56-2, 56-2 and 56-8. I added that we were very concerned that no progress was taking as this is a high priority case. Mr. Wiederkehr apologized for not keeping the DEC informed about what was going on and responded that the work will start during the second quarter of 2013. I told Mr. Wiederkehr to keep the DEC updated and to let us know several days in advance of when the work will start. He said that he will.

REPORTED TO THE FDNY AS A 200 GALLON PLUS HEATING OIL SPILL AT THE ABOVE LOCATION – CALLER STILL ENROUTE TO THE SCENE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"
 Mike Mulqueen called from this location.
 Jeff responded immediately, by visiting the location.

Dispatcher # 280 (NYFD), called for spill #. E.R.

This spill was called in again by Al Eastman Tank Cleaners.

Spill # 0300342 E.R.

4/24/2003–Vought–Site summary by Vought:

4/10/2003–Vought–Site visit by Vought. FDNY on–scene. Spill caused by Leak in flange, non–working high level alarm and malfunction of petrometer resulting in overflow of tank. Tank manway bolts missing from tank resulting in filling of manway.

Upon FDNY arrival tank manway filled with oil and rising bubbles indicating loss of oil to subsurface (FDNY approximates that 700 gallons lost to subsurface). In addition to loss of fuel through manway, spill also overflowed out of manway and ran down lawn and seeped through basement wall into Marshak Science Building. Delivery performed by Empire State Fuel Oil. No spill occurred out of vent pipe. Spill occurred to Tank #1. Delivery ordered by DASNY. Interagency meeting held by Vought. NYSDEC requires

1) Monitoring of basement wall for product seepage and recovery

2) Excavation of all impacted soil including endpoint samples, powerwashing of sidewalk, tank repair (high level alarm, petrometer and manway bolts) and borings around tank.

3) Tightness testing of tanks.

4/14/2003–Vought–Received e–mail from Rolando Arco (PSI, Inc. 212–889–0294) stating that scope of work being put together and requesting a call to Jane Weber (PSI–917–602–4246). Vought also received attached document from Bruce Suffern stating sidewalks were powerwashed, soil excavation was started to a depth of 12' below grade (approximately 20 cubic yards of soil were removed), and cleanup of basement seepage area. Endpoint samples collected by PSI who will also oversee remediation.

4/18/2003–Vought–Received email from Rolando Arco stating that initial delineation will take place on 4/21 followed by submission of laboratory results and work description to NYSDEC.

4/23/2003–Vought–Received document from Bruce Suffern stating that 23 soil borings were performed in vicinity of UST's. Site plan and analyticals will be sent to NYSDEC.

4/24/2003–Vought–Called Rolando Arco and left message that Vought will call Weber. Vought called Weber and no endpoint samples taken from excavation. Approximately 13 borings performed with 23 soil samples. More borings will be performed on 4/28 to delineate tanks and lawn contamination. Very minor amount of contamination seeping into basement. Jane Weber will send report by 5/18. Tank #1 still being used despite lack of tightness test. Vought called Thomas Zakarian to affirm requirement of tightness test and that Tank should not be used until test is performed. Zakarian agreed to have the tank tested immediately.

4/28/2003–Vought–Site visit by Vought on 4/28/2003. Three excavations performed and sealed with plastic 1)soil adjacent to curb excavated to depth of 2' 2)soil adjacent to wheelchair ramp excavated to depth of 4' 3)lawn excavated to depth of 2'. Twenty three soil borings will be performed by PSI and results will be sent to NYSDEC. Bedrock depth ranging from 16' below grade adjacent to basement to 4' below grade adjacent to curb.

9/16/2003–Vought–NYSDEC requires: 1)Tank testing of Tank #1 2)Results of subsurface investigation 3)Removal of contaminated soil between tanks and building 4)repair of tanks including manway, high level alarm and petrometer. Letter sent to CCNY with the above requirements. Vought called Esther Hundley (212–541–0430) and left message to return call with address for letter.

1/7/04–Vought–Spill transferred from Vought to Austin.

01/27/04 – Sawyer – Spill transferred from Austin to Sawyer.

12/16/05– DEC Piper placed call into rolando at PSI to get update/info.

1/4/06– DEC Piper spoke w/ Tarek at Langan Eng. regarding open spill. Though an investigation was performed, and #2 fuel oil was encountered, and oil was seeping into the basement of the MARshak bld, no remedial measures were taken. Piper placed call into Ester Hundley at CCNY requesting call back. DEC Piper received call form Esther regarding site. She will provide letter regarding status, activities at the Marsack Bldg.

5/8/06–Piper placed call into Ester Hundley at CCNY requesting call back.

5/10/06– DEC Piper placed call into Howard Apsan 212 794 5555– Director of Env Health and Safety, CUNY. Left message requesting callback and info.

4/30/07– DECP iper left message for Brian Newman w. Mgmt co.

residencial multi dweling. contained to basement. pumping oil now

DEC Investigator Remarks:

2/17/14 TJD

Primary dispatched Secondary Responder (Patel to site). Riteway Tank Service retained for cleanup – onsite with vac trucks for recovery. Drains affected – NYCDEP notified. Initial investigation reveals tank failure.

02/15/14–Hiralkumar Patel.

8:45 PM:– visited site. met Anthony Lara and Gerardo Merejildo (building super). site has one 5,000 gal AST sitting on floor. remote fill port is located along the curb on Morningside Ave. the vent pipe is located on western foundation wall.

as per Gerardo, he ordered 2,000 gal #4 oil and Statewide delivered oil around 4 PM. Statewide delivered total of 1,900 gal before oil spilled from vent pipe. observed oil, under vent pipe, in sub–grade alley along the western wall of the building. oil

sprayed onto western wall also due to overflow. Mr. Gerardo mentioned that delivery driver was aware of spill from the vent pipe.

Anthony mentioned that oil started leaking from bottom of the tank and due to oil pressure in tank, oil splashed onto tank room wall as high as 6 ft.

inspected basement boiler room. found oil seeping through wall between tank and boiler room. inspected tank room. found oil on tank room floor. found a break in tank room wall, on floor, where a steam line goes to other part of basement. due to break in tank room wall, spilled oil from tank ran outside the tank room. inspected impacted area outside the tank room. Riteway crew pumped out loose product from floor, but further cleanup needed. observed a pit in the next room. spilled oil got into this pit. found opening under the west wall of this pit.

found petroleum odors in main lobby on first floor. asked Anthony to set up ventilation systems in basement as well as lobby on first floor. also asked to seal the fill port to prevent any misdelivery.

as per Gerardo, no vapor complaints received from any tenant. its 7 story building.

9:17 PM:– spoke with Michael Savino at Statewide. discuss about no spill reports from oil company when spill occurred at 4 PM and driver knew about the spill. Mike mentioned that prior to reporting spill, he wanted Anthony Lara to inspect the site. informed Mike about possible relocation, due to vapors in building.

9:38 PM:– spoke with Marry Gorgon (718–209–1558), maintenance supervisor at building management. informed her about possible relocation, due to vapors in building.

02/16/14–Hiralkumar Patel.

12:08 PM:– spoke with Anthony. he installed a temp tank and ventilation fans in building. he has not received any vapor complaint. no further cleanup in progress as waiting for signed proposal.

02/18/14–Hiralkumar Patel.

alternate addresses: 364 West 123rd Street, 95 to 97 Morningside Ave, 96 to 98 Morningside Ave

PBS #: 2–195790. as per PBS record, the site has one 5,000 gal #6 oil AST in contact with soil.

other spills #: 1206053, 1206166

spill # 1206053 was reported on 09/19/12 due to #4 oil spill into tank room. DEC Rahman visited site and observed oil puddles in tank room. Associated Env. did subsurface investigation, via installation of six borings, in tank room and found no contamination. they also conducted indoor air survey. based on available information, case closed.

spill # 1206166 was reported on 09/21/12 by Castle Oil due to 50 gal #4 oil spill. case closed and merged with spill # 1206053.

email: msavino@statewideoil.com

10:12 AM:- spoke with Anthony. he mentioned that no further cleanup happened over the weekend. he is working on cost estimate and will send to building manager.

11:32 AM:- spoke with Ms. Gorgon at management. she confirmed that building owner will do required cleanup. she also mentioned that a new gas heating system will be installed soon and they will not install any new oil tank.

02/21/14-Hiralkumar Patel.

2:30 PM:- visited site. met Joe from Riteway. inspected main lobby on 1st floor and basement. no petroleum odors noted in main lobby. a window fan was in operation in main lobby. no petroleum odors noted in basement, other than spill impacted areas around the tank room. Riteway crew installed another temp tank today and will resume cleanup. spill cleanup under the vent pipe is completed. some oil noted in corner of boiler room floor. air scrubber in operation in the basement. Joe mentioned about inspection by NYC DOH inspector earlier today.

another spill reported (spill #: 1310999) by NYC DOH inspector.

3:19 PM:- spoke with Allan Friedman at NYC DOH. informed him about on-going spill investigation/cleanup. Allan asked for copy of spill report.

02/24/14-Hiralkumar Patel.

12:43 PM:- sent letter to Mr. Singer and Mr. Savino requiring delineation of contamination and endpoint samples. also asked to test tank system, prior to filling it again. asked them to submit report by the end of 04/30/14. letter emailed to Mr. Singer, Mr. Savino and Anthony.

12:50 PM:- sent email to Allan at NYC DOH, including copy of spill report.

03/04/14-Hiralkumar Patel.

2:25 PM:- visited site. no petroleum odors noted in main lobby or basement. found exhaust fan in room, behind tank room where most of oil accumulated.

03/10/14–Hiralkumar Patel.

9:33 AM:– spoke with Rob at Riteway. they drilled four boreholes in tank room corners and found contamination underneath the floor. Rob has sent proposal for tank removal and working on it.

report due on 04/30/14.

THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE SEARCH RADIUS FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM, OR STORMS. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

Tank was leaking releasing 5 gal of material onto the dirt floor. Petro will be stopping the leak. Unknown who is doing the clean

up.

DEC Investigator Remarks:

Sangesland called Petro requesting further details – Rep will call back

This spill needs follow-up

10.28.05 Sharif– I called James Young who was not available at that time. Left message for him to call back about the clean up of the spill.

03/01/06 Sharif Rahman– I spoke with Madeline Reese, (212)828–8573 and she would relay the department’s concern to James Young.

03/27/06 Sharif Rahman– Clean up letter went to

James Young
355 W 123rd Street, Apt#1A
New York, NY 10027

05/11/06 Sharif Rahman– I called Petro ,516–686–2030 and spoke with Keanny @ ext.3324. He informed me the customer’s account is not active now and the customer did not respond to fix the tank problem. So, they suspended the delivery due to unsafe condition of the tank.

08/07/06 Rahman– Tried to inspect the baement tank room, but could not get access as no body was found in the house. It looked like the house is now abandoned and no body lives there. Certified mail letter dated May 11’ 06 returned undelivered.

GASOLINE	PETROLEUM	0	UNKNOWN	0	UNKNOWN	SOIL

Caller Remarks:

2,500–gal gasoline tank removed in mid–1990s, dispenser suspected to have leaked. Spill was not reported at the time.

DEC Investigator Remarks:

Limited site investigation performed by Promatec/TRC, found very minor impact to soil, but not all locations were sampled, and wells installed appear not to have been downgradient from the tank. However, after meeting at site with consultants, it became apparent that additional investigation would be impossible due to space constraints and the nearby presence of subsurface utilities and a subway line. In light of this and minor nature of contamination identified, DEC agreed to No Further Action status for site in letter issued 9/5/97. – J. Kolleeny

Caller Remarks:

CALLER WAS EMPLOYED TO DO SOIL SAMPLES AND TEST FROM AN ABANDONED TANK USING METHOD 82-70 -- CANTAMINATED SOIL FOUND -- MIKE MULQUENE HAS ALREADY TALKED TO CALLER ABOUT THIS CONDITION

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" 7/29/99 Bob Abramo (718-624-7490)- Abra Consulting -called - He has just been hired by the owner to close out this spill. He has a copy of soil boring work & test results for borings done around the abandoned 3,000 gal fuel oil storage tank buried in rear of shoe store.

Sangesland asked Mr. Obrano to send a copy of these test results along with a 1-2 page description of "Proposed Plan Of Action" for work to be done to clean up the site. Some sort of Bio may be called for since the tank can not be moved.

8/26/99 - Sangesland read the report forwarded by Mr. Abramo and agreed with Mr. Abramo's plan to install 1 or 2 wells in the area around the abandoned tank in the sidewalk. Sangesland said if the depth to ground water was too much (50+ ft) then it would not be representative of the tank (problems could be from further away)..... Problem still remains what to do about the confirmed contamination.

2/11/2000 - Mr. Abramo called to say one well was installed to 27' Sample tested to 8021 and 8270 All results were below limits except (enbyutel benzene 52 ppm). There still is contamination of soil between tank and building. Sangesland asked Mr. Abramo to propose some type of remediation (Bio?) on the trapped soil contamination.

Mr. Abramo proposed ORC. Sangesland said no. DEC requires some type of biological "bugs" which will be injected into the soil to work on the problem above the groundwater line.

5/2/2000 - Mr. Abramo said "Bio Rem" Rep suggests 4 geoprobe type injection wells around the tank along with 1,000 gal of Biorem. Sangesland said to go ahead, leave the site until Sept 1st and then retest the monitoring well. Hopefully it will be clean and

can be closed out.

9/25/2000 – Mr. Ed Correll (Soil Mechanics 516–221–7500) was hired by the owner do what it takes to close out the case. Mr. Correll was told of the DEC history on the site. Sangesland asked Mr. Correll to do the following:

- 1) Get specific details on what type of "Bio" work was done in July 2000 (DEC has no records).
- 2) After a "couple" of months, retest the existing well and conduct another geoprobe between the tank and the building to check the condition.
- 3) Prepare a report that either shows the site is clean or "Justifies" why the existing contamination is not a problem
Contamination is contained, encapsulated and would undermine the building if it were removed.

If a report is submitted, DEC will review it and determine if additional work is needed.

12/13/2000 – Thomas McCurdy of The Breakthrough Group (856–810–3402) submitted a closure request letter. It states that at some point (approx 8/2000) an application of Bio–Rem was made at two points between the tank and the building. On 10/24/2000 MW–1 was sampled and found non–detect for all contaminants within 8270 & 8021. MTBE = 1 ppb

1/2/2001 – Spill has been closed

CLOSED STATUS TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

TANK TEST PERFORMED WITH GROSS FAILURE AND NO SIGN OF LEAKAGE.
 IN THE ULLAGE PORTION.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD" 12/03/2001. YK talked to Tony Cagiano (LiRo) @ (516) 938LiRo. LiRo performed test under DDC heating oil contract. Will investigate and remediate site if necessary. Upon completion a report will be issued.

11/05/03. J. Krimgold spoke to Tony Cagiano (LiRo). The tank in

question is an AST incased in concrete. Tank was removed and replaced with a new one. No contamination was found during tank removal. Mr. Cagiano will send a letter to support this conversation next week.

11/12/03. J. Krimgold received a letter from LiRo stating that no evidence of oil spilled was found during removal of the old AST tank. Also a copy of a tightness test report indicating that a "leak" was found in the ullage portion of the tank was attached. New AST was installed. NFA.

TANK FAILED THE TEST'

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE/DO"
1/17/03 TJD

Demeo contact Bernie at NYC Tank Testing for additional information regarding tank size and building contact information. Location is unregistered with PBS. NYC Tank Testing was retained for test by Alba Combustion (718 931 1700). Tank is reportably a concrete wrapped 1,080 gallon.

According to NYC Tank Testing a cut manway on top of tank is likely cause of tank test failure. No reported petroleum release at location. At time of test failure 39 inches of product remain in tank. Product has not been removed. NYC Tank Testing has not been authorized to do any additional work.

Rose Marie from Alba Combustion was contacted to obtain owner information and confirm tank size. Information not available at time of inquiry. Alba will call DEC with requested information ASAP.

Alba Combustion called back with contact as follows:

Juan Ortiz – Building Super (917)412–5688

Mercedes Gonzalez – President of Tenants Association(212)662–3373

Juan contacted and stated tank has been leaking for several months. He cleans up the oil leaking from tank enclosure on a daily basis. No plan in place to empty or repair tank.

Mercedes contacted who confirmed situation is an ongoing problem. Location is a HPD building. Mercedes provided following contact for HPD: Ms. Sumada Mena (212) 863–7313

Ms. Mena contacted, she was aware of situatioun at building and confirmed HPD retained NYC Tank Testing to test tank. Demeo directed Ms. Mena to empty tank as leak has existed for months and has not been repaired. Ms. Mena stated she was building coordinator and not the appropriate contact. Demeo was provided contact information for Willie Kesknen from Technical Services Group (212)863–7307. Demeo left message for Willie Keskinen.

Mr. Keskinen Director of TIL/Tech Group from HPD has stated a contractor will be at building today to empty tank and install temporary tank. Address for HPD is 100 Gold Street, NY NY 10038.

Tank Test letter not sent as tank is to be taken out of service for repairs and/or replacement.

Tipple to perform site visit and assess situation.

1/17/2003 TIPPLE VISITED SITE, Spoke with the building super Jaun Ortiz the oil had been cleaned daily since the leak began months ago. The stain on the floor indicates that the oil had never gotten close to the sump area and the floor surrounding the vaulted area is sound. There is a staining on the wall adjacent to the vault indicating the high probability of a leaking fill/vent line in addition to a tank problem.

Building super will call and leave message once the tank is emptied and a temporary tank installed.

05/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.

Talked to Ms. Mena on phone (212)863-7313 she said, They have changed the tank three years ago. New york city owned this building. -QA

Address:

HPD/TIL

100 Gold Street

Room 7 T - 1

NY NY 10038

06/21/06: Called to Willy Keskinen, Deputy Director, HPD. Talked to Ms. Shirley (secretary) regarding information of spill. She said she will convey to Mr. Willy and he will call me back at the earliest. -QA

07/19/06: Called Ms. Sumada Mena and left message to call me back. -QA

07/20/06: Ms. Losario Vera (212)863-5199 called me and said she is trying to get the information regarding spill as soon as she will get she will send it to me. -QA

09/11/06: Called Mr. Willy Keskinen He was not available. Left message at (212)863-7307 Extn. 8893 to call me back regarding spill. -QA

10/12/06: Mr. Berney (718)731-7011 called me and he said he will do more researches and then he will call me back. -QA

10/18/06: Mr. Willie Keskinen, Deputy Director, TIL/Tech (Department of Housing Preservation and Development) sent me a closing confirmation letter to close the spill. According to his letter they hired S.J. Fuel company for clean up work. The purpose of installing a new oil tank was that the existing tank had a minor leak on the tank itself. No oil was spilled on the floor. The existing oil tank was old and replaced with a new tank. Also the basement has a new cement floor in and around the new tank, and shows no sign of oil spillage. Based on these information DEC staff closed the spill. -QA

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "BREEN"
 1/12/2004 spill transferred from Sangesland to Breen

12/21/05 – Mr. Steve Arthur of TDX Construction called and will provide a spill closure petition report shortly. Transferred from George Breen to Koon. – KST

05/016/06: This spill is transferred from Mr. Koon Tang to Q. Abidi.
 Contacted to Ms. Lucy Monell (212)283–9218, she said that she is living temporary there. Left message for Mr. Alfonso Polanco at (212)863–7374 and talked to Mr. Luna (212)863–7385 he will try to get information about the spill and e–mail me. –QA

5/17/06 – mr. Steve Arthur of HPD called and said that he has additonal data and a report for this spill. He will drop off the report today. – KST

06/07/06: Called to Mr. Alfonso Polanco, left message to call me back regarding spill. –QA

06/12/06: This spill case transferred from Q. Abidi to J. Kolleeny. Reviewed Request for Spill Closure submitted by TDX on 5/16/06 on behalf of NYCDDC. Tightness test results indicate leak was in ullage (dry) portion of tank. No signs of product leakage or spillage were observed at the time of the test. The tank, reportedly an AST in the building basement, was taken out of service, purged, cleaned and removed by Gemstar in February 2003, and replaced with a new 2,000-gallon AST. Spoke with Winston Deans of TDX on 6/12/06, who said that according to Carmello Saia of Gemstar, no signs of contamination or spillage were observed when the old tank was removed. The new tank has been incorrectly registered as containing unleaded gasoline (PBS form incorrectly filled out – see PBS #2-470740). Based on the information provided, it appears that this spill has not caused an adverse environmental impact, therefore, the spill case is closed. – J. Kolleeny

9/25/13-Vought-Received call from and spoke to Hagai Barlev (Ph:917-686-2664) and he is owner and management company for site and

is requesting closure of spill. DEC Sangesland had further requirements but Hagai was not sure what needed to be done to close spill. Top cap to tank was not sealed properly and was repaired and was retested. Tank is a 5000-gallon aboveground UST and there are no spills. Tank is registered on PBS as per Hagai. Spill reassigned from Sangesland to Mahat as per Vought. PBS #2-603028 shows a 5000-gallon #2 fuel oil AST and mailing info as per PBS is:

Boro Fuel Oil Co.
 2 Church Avenue
 Brooklyn, NY 11218
 Attn: Jeffrey Cohn
 Ph:(718)854-7500

DEC Requires:
 1)copy of passing test results
 2)statement of work performed.

09/27/13: Mahat
 Received an email (Fax) from Mr. Hagai Barlev requesting to close the spill. Seal on the top cap of the tank was leaking. The cap is seal tight now and no more leak in the TFT test. He also attached the TFT test result. The tank passed test and it is uploaded on E-docs. Case is closed as per Mahat and Vought.

9/25/03 TIPPLE SENT REQUEST FOR DOCUMENTATION

5/5/05 MT///Report submitted did not address the Leaking tank.

8/22/2005 Sangesland spoke to Steve Arthur with TDX Construction (718-472-0577). TDX was hired by HPD to complete the work at this site. Mr. Arthur said the old tank at this site failed it's pressure test because of an air leak around the manway. The tank was aboveground in the basement with a cement wrap around it (not underground like the PBS says). In March 2002 the old tank and piping was removed from the site and no contamination was found. A new tank was installed with all new piping and an overfill prevention system. --- Spill Closed

12/30/05 – A letter was sent to the property owner requesting all available information regarding steps taken to address the spill case (J. Moras).

1/11/06 – I received a call from Steve Arthur (TDX Construction) yesterday; at that point I realized the spill had been closed out in August by Region 2 staff. Mr. Arthur requested an NFA letter, which was sent out today (J. Moras).

DEC Investigator Remarks:

7/15/2008 TTF sent to:

Amsterdam Ave Investor LLC, 1274 Amsterdam Ave, NY, NY 10027
see eDocs

07/06/10–Zhune spoke to John Leddy from Protest. He said the system failed with dry leak. Protest thought the problem was vent pipe.

07/06/10–Zhune spoke to Rosie Aviles. She said persom in charge is John Vayner (646) 747–6104. Left a message.

08/30/11– Manager of the building– William 877–379–8484

09/01/11= Protest sent the report dated March 23, 2011. The report include the passing test report.

On Juno 30, 2008 Peo Test peromed a tightness test on the tank system and it failed with a gross dry leak. On March 4, 2011, Pro Test returned to the site to repair the corroded vent line. After the repair to the vent line the system was retest and the tank system failed the test with a small dry leak. On March 21, 2011 Pro Test technicians returned and isolated the kines from the tank to test the tank only. the tank passed a test without the remote fill attached. The remote fill line was corroded just inside of the building wall. On March 22, 2011 we replaced the remote fill line. The tank system was tested after the repair and the system passed the test. There was no evidence of visible contamination within the tank room. As per manager of the building the tank was tested for mortgage refinancing purpose. Spill Closed.

RECOMMEND TO LOCATE TANK AND REPAIR PROBLEM.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"
01/26/04

Transferred from

Rommel to Austin
02/17/04: Reassigned from AUSTIN to KRIMGOLD.

Transferred to Albany for review under Spills Closure Initiative

10/2/09 – Austin – Spill transferred from Albany staff to Ketani, for further investigation – end

10/23/01 – Raphael Ketani. The spill occurred on 7/25/01 as a result of a tank test failure.

The site was the location of the Warren Electrical Supply Co. at 641 West 131 Street, NY, 10027. The alternate addresses are 641–651 West 131 Street. The block and lot are 1998 and 10. The two story commercial building was constructed in 1926. It was sold on 12/31/98 to 641–651 West 131 Street Holding, LLC. Then on 5/5/06 it was sold to the Trustees of Columbia University, 535 W. 116 Street, NY, 10027.

The PBS registration is #2–606518. There is a 2,000 gal. UST with #2 oil. It was closed in place on 3/11/09. The present owner is listed as Columbia University, 400 W. 119 Street, NY, 10027. The phone number is (212) 854–6645.

10/26/09 – Raphael Ketani. I attempted to contact a representative of Columbia University at the above telephone number, but could only leave a message.

Mr. Lauth (loff) called me back. He said that he has been dealing with the building since 2006. The electrical company is gone. Verizon is now there. The heat is now electric. He had never heard of this incident. Mr. Lauth said that Columbia bought the building in 2003. He added that the Environmental Division will deal with the case and they will call me back. He said that they will hire a contractor to do a soil investigation. I told him that both soil and groundwater samples will need to be collected.

12/8/09 – Raphael Ketani. Tarek Khouri of Langan Engineering (212) 479–5450 sent me an e–mail stating that the tank in question failed its tightness test on 7/25/01. However, it passed its second test on 8/28/01. On 9/30/08, the tank and its associated piping was closed by Metropolitan Heat and Power Company (Mr. Khouri attached an affidavit). The property will be excavated to at least 45 feet below grade for the upcoming ManhattanVille development project.

I looked at the affidavit. It indicated that the tank and its piping had been cleaned out and closed. The affidavit was dated 3/11/09.

I wrote back to Mr. Khouri that the state needed a document indicating whether the leak was a dry one or a wet one.

12/15/09 – Raphael Ketani. Mr. Khouri sent me the following e–mail with attachments containing the July failed tank test and the August passing tank test. His e–mail is below:

I was able to locate the original failed test for the tank in question. See attached. It was a dry leak. Also as noted in the A–1 Crown Corp cover letter, the leak was above the oil level leak (vacuum). It appears the first test was not done properly (tested through the vent). They had to come in at later date and retest. As such, it appears that a spill did not occur.

I reviewed the failed July tank test report and the passing August tank test report. I was satisfied that the tank and its fuel management system were actually intact and that an oil release had not taken place.

Based upon the affidavit, and the passing tank test report, it has been determined that there was no release of oil to the environment and, therefore, there is no threat to human well being. Therefore, I am closing the spill case.

1775 Broadway – Suite 510
New York, NY 10019

09/10/08–Vought–Violation hearing for spill #0805791 with DEC Burke, DEC Falvey, DEC Vought and Dermot (Carmen Santiago):

Carmen Santiago
The Dermot Company Realty Management Co., Inc.
1775 Broadway
Suite 510
New York, NY 10019
Ph: 646-747-6129
Fax: 212-245-4803
email: csantiago@dermotcompany.com

As per Santiago she is waiting to sign a proposal for ProTest to inspect, repair and retest. New property owner is:

Thayer Street Portfolio Investors, LLC at 87 Post Avenue
320 West 57th Street

07/06/10- Zhune spoke to John Leddy from Protest. He said They tested the system and failed with dry leak. Protest thought that the problem was the universal union of the remote fill line on top of the tank. They did not do any isolation test. As per John, Dermot Realty Management stop business with protest.

07/06/10- Zhune spoke to Rosie Aviles. She said person in charge is John Vayner (646) 747-6104. Left a message

09/01/11- Pro Test sent the report dated March 14, 2001. The report includes the passing test.

On June 30, 2008 Pro test performed a tightness test on the above subject tank system and it failed with a dry leak. On March 11, 2001, Pro Test returned to isolate the tank from its associated lines. The remote fill line was isolated from the tank due to a loose connection. The manhole cover was regasketed and rebolted. The petrometer connection was tightened. The tank passed a test the remote fill. The remote fill line was reattached and its connection at the tank tightened. Upon reconnection of all lines, the tank system passed a retest. There was no evidence of visible contamination within the tank vault.

As per manager of the building the tank was tested for mortgage refinancing purpose.

Spill Closed.

BROKEN GAUGE – NO PRODUCT IN TANK AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"

6/8/05 – Site transferred to TLGibbons in Central Office

8/5/05 – Called Phil Fazin, Crown Leak Detection, 516–939–2959, who reported tank test failure on 2/15/01. He said the job was referred to Petroleum Tank Cleaners, Inc. (PTC), 718–624–4842, for repairs. Spoke to Diana at PTC and she said had the files on this spill and faxed them to me. On 2/8/01, PTC dug soil to tank and replaced vent line and fill line, plugging old fill line and cementing old fill box. On 2/20/01, PTC performed a tank test which failed. On 3/6/01, PTC removed tank assembly and replaced, retested tank and it passed. I asked about whether any contaminated soil had been identified. She said that no contaminated soil was found. Caller Remarks:

tank test failed.dont supect any release.repairs will be made

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"
9/24/04 Sangesland spoke to "Ester" at the facilites office.

Property is part of CCNY Campus.

According to her notes, one tank failed because of a leaking gasket on the manway. The other tank failed because of air bubbles in the "drop tube".

Repair work is being done and the school has rescheduled another tank test for 9/30/04.

01/03/05 – Sawyer – Talked to Ester at CCNY Campus and she will find documentation on what was done to repair the tanks.

09/13/05– Jacob–During repairs which was done on October 28, 2004, stained soil that exhibited an organic odor was encountered under the concrete slab on and around UST#2.Langan collected four endpoint soil samples. The analytical results from the endpoint soil sampling are presented on table 1 & 2 on appendix E on closure report, dated July 6,2005.

Caller Remarks:

oil water seperator was found to contain approx. 60gals of paint...paint contained to seperator/clean up crew en route

DEC Investigator Remarks:

10/21/09-Vought-Duty desk officer. Called NYCT Clare Sammon ((646)252-5777) and left message to return call.

10/22/09-Vought-Received call from and spoke to Sammon. Oil water separator consists of three tanks and third tank connected to sewer. Spill was mostly oil with minor paint and lab analysis of product being performed. Spill only made it to second tank and as such no discharge to sewers or drains. Second chamber was pumped clean by Clean Ventures. Spill closed by Vought as no impact to soil, groundwater or drains.

Caller Remarks:

VENDER DROPPED A BARRLE AND IS ALLC LEANE DAND NO DRAINS OR SEWER EFFECTED

DEC Investigator Remarks:

8/1/08 – Raphael Ketani. I called up Christina Ryszewski of NYC Transit (646) 252-5939. She said the vendor, Metro Lube, was unloading containers of product in the street outside the bus depot. One of the barrels of lube oil tipped over on the street and the lube oil ran out. It was 9-DW lubricant – bus differential gear oil. The oil was contained on the street and cleaned up by depot personnel. No sewers or drains were affected.

Based upon the fact that it was heavy oil and the fact that it was quickly cleaned up and the fact that the spill happened on the street, I am closing the spill case.

COMING OUT OF WALL IN BACK OF 419 W 129TH ST POOLING IN BETWEEN BLDGS - FDNY WAS AT SCENE ON 3/2/94 DEP NOTIFIED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "AUSTIN"
 Spill site is reassigned from Zhitomirsky to Austin. Updated by Rashid Ahmed on 04/29/2004.

6/13/05 Heitzman - There are several spills that possibly relate to this:

9401941, 2/20/94, 412 W 129th - spill into courtyard and storm drain, 100 gallons

9400780, 4/17/94, Convent Ave & 128th - tank overflow, "oil all over"

9401006, 4/17/94, 419 W 128th - call to request removal of drums from cleanup

9401906, 5/9/94, 419 W 128th - oil leak on the ground that comes up when it rains

9402093, 5/12/94, 419 W 128th – Oil spilled into courtyard at back of building

These have all been closed out.

NEXT STEP: Perform site inspection to determine whether cleanup was complete.

Previous notes done by George Heitzman in C.O.

Spill transferred back to R-2

3/7/08 – Austin – Assigned to Ketani for further investigation – end

6/30/08 – Raphael Ketani. The spill took place on 3/2/94. Oil was coming out of the wall in back of 419 W. 129 Street in between the buildings. The spill was 100 gals. of #4 oil. The PBS is #2–606794 and is for 418 W. 129 Street. There is a 2000 gal. tank in service with #2 oil. It is an AST. The site location is block and lot 1968 and 54. The NYC Property Tax listings indicate that the HPD owns the site. HPD's address is 100 Gold Street, 7th Floor, NY, 10038–1605. Property Shark and ACRIS indicated that Edison Nesfield at 1000 Grand Concourse, Bronx, 10451 still owns the site.

I called up HPD and was eventually transferred to Victor Hernandez, Director, TIL Program, HPD, 100 Gold Street (212) 863–7317. His e-mail address is hernandv@hpd.nyc.gov. He requested an e-mail stating what DEC needed and what the spill was all about. I sent the e-mail.

John Cullen of HPD (212) 863–7371 called me. He said he was the PBS Coordinator. He asked me about the spill. He sounded very angry over the phone. I told him that it happened on 3/2/94. He said he knows this because he went to the spill report via the public spills site. He asked who reported the spill. I told him it was a spill case manager from DEC. He said angrily, "A case manager from DEC?" "You can report your own spills?" I said yes. He said how is this possible. I told him that anyone can call in a spill for free oil or contaminated soil. He said "So one of your people just happened to be there?" I told him that she or he was probably called to the spill, saw what was happening and called it in. I told him it was #4 oil, according to the remarks section. He said they use #2. I told him that sometimes the type of oil is misunderstood in the "heat" of the emergency response. I also told him that the spill is indicated as coming from 419 W. 129 Street, but this is probably a mistake as 419 is across the street. Mr. Cullen said angrily "It probably did come from 419." I told him that though the oil type may be mistaken and the source may be mistaken, DEC still has to check out 418–420 W. 129 Street as this is the spill location for the case. He said angrily "So DEC is going to twist the facts and blame HPD?" I told him that mistakes are made on spill reports and that I was not here to fight with him. I asked him to contact the super for the building and the workers and ask them whether they remember the spill. I told him that I will call the super if he wants. He said he will have to locate his phone number. I suggested that the super and I make a joint site inspection and maybe this will resolve the issue. He said this sounded fair. Mr. Cullen said he will get back to me.

8/18/08 – Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. A followup call needs to be made to Mr. Cullen or a letter sent to find out whether an investigation took place or any documentation is available showing that the spill had been cleaned up.

10/31/11–Hiralkumar Patel. case transferred from DEC Hasan to DEC Patel.

04/11/13–Hiralkumar Patel.

10:40 AM:– visited site 419 W 129th St. met with Narciso Ferreira (646–358–9920), building super. Mr. Ferreira is working for last four years only and does not know anything about spill in 1994. site has one 3,000 gal #4 oil AST (2–602928) in vault in basement. as per Mr. Ferreira, the tank is on saddles and tank bottom is about 10 inches above the floor.

during inspection, no sign of oil spill noted in building 419 W 129th St. buildings 419 and 418–420 on W 129th Street are on slope towards the west.

as per caller remarks, oil was seeping into back of 419 W 129th Street pooling between buildings. as per records, building 418–420 W 130th Street is located back of building 419 W 129th Street. so spill may have occurred at building 418–420 W 130th Street, instead of building 418–420 W 129th Street.

reviewed PBS and spill database for building 418–420 W 130th Street. no spill record found for building 418 W 130th Street. as per PBS #: 2–161470 for building 418 W 130th St, site has one 5,000 gal AST in contact with soil for #2 fuel oil. the tank at 418 W 130th St was installed in Jan. 1932. there is no tank test record available. as per NYC DOB record, owner for building 418 W 130th Street applied for permit in Jan. 1998 to replace boiler and change petroleum product grade.

after discussion with DEC Austin, case closed based on following:

- no spill record for building 418 W 129th Street, other than the subject spill. as per discussion between DEC Ketani and NYC HPD, building 418 W 129th Street use #2 fuel oil and it is located across from building 419 W 129th Street. also, as per caller's remarks, oil found seeping in back of building 419 W 129th Street. buildings 418 and 419 on W 129th Street are located on hill with slope towards the west (towards Convent Ave). based on site location, it is not possible for any oil spill at building 418 W 129th Street to seep into back of building 419 W 129th Street
 - as per caller's remarks, oil found coming out of wall in back of building 419 W 129th Street and pooling between buildings.
- during site visit on 04/11/13, observed a partition wall between buildings 418 W 130th Street and 419 W 129th Street. oil seeping through wall and pooling in back of the building indicates spill on surface.
- no spill record for building 418 W 130th Street
 - observations during site visit

based on available information, changed following information in original spill report:

- place: from "420–418 West 129th St." to "back of 419 West 129th Street"
- street: from "420 West 129th St." to "418–420 West 130th Street"

Previous notes made by George Heitzman

Spill transferred back to R-2

3/7/08 – Austin – Assigned to Ketani for further investigation – end

5/20/08 – Raphael Ketani. The site is an apartment building at 408–410 West 130 Street, Manhattan. The PBS case is #2–236403 with 2 tanks, a 5000 and a 1080. The 5000 gal. is in service and the 1080 gal. has been converted to non-regulatory use. Both have #2 oil. The original spill was called in on 12/22/93 by Lt. Broderick of the NYFD (718) 430–0231. It consisted of a possible leak of #4 oil from the 5000 gal. tank (the PBS shows that the tank was installed in 1949). The oil was seeping into the basement. The site is across from PS 129.

I checked the case file and E-docs. The only item is the November 3, 2005 letter that was sent to Ana DeRojas requesting documentation that the spill was remediated.

I received a call today from Bernie Bauer of NYC Tank Testing (718) 731–7011. He said they were involved in assessing the site conditions with respect to any old or new oil spills. He said that they did tank system testing and the system passed. They did soil borings along the fill line underground and didn't find any oil contamination. However, the tank room has some old oil spillage and they will clean this up. He asked what documentation DEC needed in order to close the case. I told him that we

needed individual soil boring sample results for samples taken along the fill line and around the tank. We also needed pictures of the tank room conditions and a copy of the passing system test. He said he will do the borings around the tank and send the documentation.

Mr. Bauer said that the management company is Manor Management, 5114 Ft. Hamilton Parkway, Brklyn., 11219. I checked ACRIS and found the owners to be BTG, LLC, 408 W. 130 Street, NY, 10027-7531. I sent a CSL to BTG through Manor Management.

8/1/08 – Raphael Ketani. I received a package of documents from Abraham Wachslar of NYC Tank Testing.

8/13/08 – Raphael Ketani. I reviewed the cover letter, tank test report, pictures, and the soil analyticals for the 7 samples. All of the sample results were non-detect.

Based upon the data in the above package of documents, I am closing the spill case.

property

CON ED# 148680 . No to the five questions

DEC Investigator Remarks:

E2MIS 148680

Entered by Meyer

Third Party Spill reported by Supervisor Mandara to the Gas ERC. While a gas construction crew was excavating Gayle # 19724 found an unknown amount of fuel oil in the soil. EH&S McCallion was notified and he contacted the ERC to assist in making the E2mis report. The excavated soil will be placed on plastic and

covered with plastic. There is a fuel oil fill nearby for the oil fired house heating/hot water unit. The spill does not appear to have entered sewers or waterways and there was no smoke or fire. EH&S McCallion will follow up on this job and this report.

Logger Chris McCallion (86578) 12-JUN-2003 12:00 – I talked to Abraham Rodriguez of the DEC to discuss how his agency is handling this third party spill. He said he will have to send someone out to investigate the spill. I told him that Con Ed placed the excavated fill back where it came from. I am going to enter a stop time, but will have to wait for a resolved time since this spill has an open DEC number (03-02575).

Logger Chris McCallion (86578) 25-JUN-2003 – Changed Opn Status to "-CLOSE" for DEC closure.

8/19/09 – Austin – Search for associated spills/PBS registrations yielded nothing – closed without further concrete info provided – end

fd on scene

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"

On 6/18/01 Spill responder De Meo received a report from NYFD regarding fuel oil leaking into a HPD owned apartment building, located at 411 West 128th Street in Manhattan (spill #0102976). The oil from an unknown source was coming out of drains and small open excavations in the basement of the above mentioned property. Additionally, in the courtyard behind the property oil was observed leaching through a 20 ft. high retaining wall. A canvas of the area revealed a leaking 5,000 gallon tank at 412 West 129th Street. The above tank was leaking the fuel oil into an open excavation (3 ft x 3ft x 3ft). The building owner was instructed to empty contents of tank and address the impacts to building on W128th. Eastmond Tank cleaners was retained to pump oil and perform cleanup. DLE was notified and responded to scene. Several summons were issued for existing violations. A complete subsurface investigation will be performed.

6/14/05 Heitzman – Requested additional information from DLA concerning responsible party, summons, violations & subsurface investigation.

10/20/05 Heitzman – No response received from DLA. Documentation requested from property owner.

4/12/06 – No response received from property owner.

NEXT STEP: Perform site inspection to determine whether cleanup was complete. Obtain documentation from property owner and/or Regional DLA if available.

10/2/09 – Austin – Spill transferred from Albany staff to Ketani, for further investigation – end

10/20/09 – Raphael Ketani. As the spill originated from 412 West 129th Street, I am designating this site as the responsible party. A previous spill occurred at 412 West 129th Street on 2/20/94. The spill case is #9401941. A 5,000 gal. tank with #6 oil broke. About 100 gals. was released. The oil came through the backyard retaining wall of the building at 411 West 128th Street and entered a storm drain. A.L. Eastmond came and cleaned up the spill. There are no E-docs for this case and no database notes. The case was closed on 7/10/94 by Mark Tibbe of DEC.

The subject spill occurred on 6/18/01. Oil was coming through the backyard retaining wall for 411 West 128th Street, and coming out of drains and small excavations in the basement of 411 West 128th Street. The tank at 412 West 129th Street was found to be leaking, again.

The PBS registration is number #2-602938. There is one 5,000 gal. AST in touch with the ground. There is no installation date listed. The fuel is #2 oil. The tank location is at 408 West 129th Street, but the building is designated as 408-412 West 129th Street. The operator is listed as Barbaro Delauz (917) 299-7714. The owner is 408-412 West 129th Street Association, LLC, P.O. Box 1799, NY, 10026. The management company is Jack Jaffa and Associates, 56 Willoughby Street, Brooklyn, 11201, Yuri Jaffa (718) 855-6110.

There are no E-docs. A letter dated 10/20/2005 was sent by Albany DER to Than-Propp Equities, 405 Park Avenue, NY, 10022, but there was no response. This was the only document in the case file.

Today, I found out that the property managers listed in the PBS registration and on the letterhead are incorrect. The latest manager is Manhattan North Management (212) 996-0200. I tried calling the manager, Anna Martinez, but could only leave a voice mail message.

12/15/09 – Raphael Ketani. I made an unannounced site visit. I met the super. of 412 West 129th Street, Michael Smith (917) 299-7714. I asked him whether he had been here in 2001 when the spill took place. He said he had. He showed me the tank room. There was a fairly new tank inside on metal saddles. There were no signs of any problems with the tank. The tank room floor was free of oil stains and there were no odors. Next, Mr. Smith took me to the outside of the tank room. He pointed to the bottom of the outside wall and said that the oil had flowed out of the tank room and under the wall (see E-docs). Then, he said, the oil flowed over the edge of the back courtyard and onto the courtyard of 411 West 128th Street. I looked the area over and there were no signs of an oil spill, neither on the wall, nor in the courtyards. I thanked him for showing me the tank and left.

As the tank appeared to be in good condition, and as the spill appeared to have been cleaned up, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case.

Caller Remarks:

City college of NY site has located a possible historical spill of some type of petroleum. They are sending samples to be tested.

DEC Investigator Remarks:

Piper made a site visit to construction site. Met with project manager and project Geo. Site is an excavation in bedrock. A small amount of oil <10 gal was observed seeping out of bedrock fracture into utility trench. As there is not a lot of oil I instructed them to build a french drain along bottom of excavation that can be monitored via vertical well. Well will be monitored for a month and determination will be made to investigate further if warranted. There ar no active tanks on the property. Adjacent building had a 6 oil ust but was taken out 2 years ago. temp tank on site. This site is highest elevation of bedrock locally.

Area has been dug out. utility box installed .No additional seepage observed. Based on work to date and amount of observed fuel, this spill is closed.

DEC Investigator Remarks:

07/13/06 Rahman– Ronaldo Arco of PSI @212.889.0294 called DEC, they have taken out 35,000 gallon tank. The tank was sitting on concrete slab and three of the side walls are building structural and other side is bed rock. They will send DEC the pictures.

08/09/06 Rahman– Inspected the site with DEC Veronica Zhune on 08/07/06 morning.PSI completed the removal of one 35000 gallon UST at the site.The tank location is on top the hilly area compared to the surrounding area.The sidewalls and bottom of the excavation were either bedrock or concrete, and no visible sheen was observed on the water.A total of 786 tons of contaminated soil were excavated and disposed.PSI excavated all soils between the former tank location and the Y building to an approx. depth of 20 ft below grade. VOCs were not detected in soils. SVOCs were detected. Detected compounds are PAHs,PSI recommended, a subject of SVOCs typically found in historic urban areas such as Manhattan.No VOCs or SVOCs were detected in the July 21st water sample. There was no visual evidence of any sheen on the water on or after July 21,2006. Based on the site inspection,work performed to remove contamination and analytical data, NFA is required.

4000 PPM. INVESTIGATION CONTINUING.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.

FREE PRODUCT ENCOUNTERED ON SHALLOW WATER TABLE & BEDROCK ENCOUNTERED. TYREE DOING CLEANUP. MONITORING AND USING PASSIVEL BAILERS TO RETRIEVE PRODUCT.

Reassigned from Mulqueen to Sigona on 10/30/00.

Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.

07/22/05 – July 22, 2005 Semi-Annual Monitoring Report submitted to DEC revealed groundwater total BTEX at 442 ppb and MtBE at 301 ppb in MW-3 on the site. By Perez.

07/27/05 – Perez spoke with Shawn Healey (Tyree's PM, 631-249-3847 Ext. 236) to determine the status of the site. Tyree acknowledges that they are the responsible party for this site and they are undertaking investigatory activities and monitoring the site on a quarterly basis. By Perez.

11/10/05: Project assigned to Sarah Andersen. Reconfirmed that Tyree is the responsible party with Shawn Healey. Changed potential spiller information in UIS database.

2/28/06: Called Shawn Healey to followup on status of MW installation and overdue quarterly report.

3/13/06: Spoke with Shawn Healey, he will send me the latest report.

3/15/06: Received quarterly report dated March 13, 2006. Samples collected on 2/1/06. Only two wells onsite. Max BTEX 282ppb (W-3) and max MTBE 107 ppb (W-3). Depth to water 6 ft. Concentrations appear to be naturally attenuating.

8/21/06: Left a voice message for Shawn Healey to followup on status of overdue quarterly report.

8/31/06: Refer to spill 8709144 adjacent to this site. An odor was present in the sump. The sump will be sampled.

9/5/06: Left voice message with Shawn Healey regarding overdue update report.

9/14/06: Spoke to Shawn Healey, he will submit reports via email. Sensitive receptor survey required for this site.

10/6/06: Spoke to Shawn Healey. A report was submitted by email, but was not received. He will Fedex the report.

10/11/06: Reviewed update report. Wells sampled on 8/14/06. Max BTEX 338 ppb in MW3, max MTBE 26 ppb in W-3.

2/13/07: Spoke to Shawn Healey. He will check on the status of the most recent sampling event, and update report.

2/22/07: Received update report. Wells sampled on 2/13/07. Max BTEX 352 ppb (W-3), max MTBE 31 ppb (W-3). Continue monitoring.

7/17/07: Sent email to Shawn Healey to followup on monitoring report.

7/30/07: Left phone message for Shawn Healey to followup on status of monitoring report.

Received update report. Two wells sampled on 5/22/07. Low dissolved concentrations. Max BTEX 77 ppb, max MTBE 12 ppb. Continued quarterly sampling and reporting required.

8/24/07: Received email from Justin Keller – new Tyree PM. Will send monitoring report.

Justin C. Keller
Environmental Scientist I
The Tyree Company
208 Route 109
Farmingdale, NY 11735
Tel: 631-249-3150 ext. 229
Fax: 631-249-3281
Cell: 631-872-8689

9/5/07: Reviewed update report. Wells sampled on 8/15/07. Low dissolved concentrations. MNA. Evaluate for closure next quarter.

3/5/08: Reviewed quarterly monitoring report dated January 2008. Fluctuating concentrations. Wells sampled on 11/30/07. Max BTEX 399 ppb (W-1), max MTBE 3 ppb (W-1). Left phone message for Justin Keller, recommended that a more proactive approach be taken at this site.

3/6/08: Received email from Justin Keller (JKeller@tyreeorg.com): "As per our telephone conversation on March 6, 2008 at 3:15 PM concerning the state of spill #92-05134 at the above mentioned site, Tyree Environmental Corporation has agreed to schedule and carry out EVR events on a monthly basis on monitoring wells MW-1 and MW-3 in as action to expedite the closure of the aforementioned spill number.

Justin C. Keller
Environmental Scientist I
Tyree
208 Route 109
Farmingdale, NY 11735
Tel: 631-249-3150 ext. 229
Fax: 631-249-3281
Cell: 631-872-8689"

7/9/08 – Carlson: Reviewed update report dated May 29, 2008. Spike in groundwater concentrations. BTEX concentration 5,958 ppb in MW3. Sent letter to Tyree requiring the installation of a third on-site well. Sent letter to Mobil requiring tightness testing.

7/30/08 – Carlson: Received phone call from tank tightness test technician. Test is in progress, they can't tightness test the dispenser pans because they are filled with gravel. Spoke DEC Krimgold, dispenser pans are to be filled with gravel if they have fiberglass piping, in which case tightness testing would be difficult.

8/28/08 – Carlson: Sent letter approving Investigation Plan for installation of an additional well. RIR due in 90 days.

9/17/08 – Carlson: Spoke to Justin Keller (631-872-8689). Refusal was encountered with a Geoprobe (7 borings were encountered, depth of refusal approximately 5 ft, groundwater in other on-site wells is 6 – 7 ft. They need to go back with a bigger drill rig.

1/7/09 – Carlson: Received email from Justin Keller, remobilization is scheduled for tomorrow morning. The workplan was resubmitted indicating that a rotary air drill will be used instead of a hollow stem auger.

3/23/09 – Carlson: Received email from Justin Keller. Wells installation was not possible with an air rotary rig either. A site plan with refusal locations was submitted. Emailed Justin Keller a site plan with three alternate well locations. The sidewalk well on Broadway can be completed as a soil boring, but the other two locations should be completed as monitoring wells.

9/18/09 – Carlson: Left voice message for Justin Keller.

11/25/09 – Carlson: Subsurface Investigation Report dated October 2009. New well MW4 is clean. October 2009 Quarterly Report shows residual impact in W-1 and W-3. Historic sampling data shows the plume has stabilized. Case closed.

1	550	Unknown	0.00	UNKNOWN

Caller Remarks:

while excavating two tanks were discovered, while attempting to remove fuel was lost. clean up pending. Spoke at DEC today.

DEC Investigator Remarks:

5/12/11 – Raphael Ketani. A construction crew was trying to remove a UST. However, about 100 gals. of unknown oil was spilled. The site is block and lot 1996/3.

The contact is Ryan Manberbach (212) 479–5582 of Langan Engineering. I spoke to Mr. Manberbach. He said that the excavator was digging quickly and hit a tank in a vault. An unknown type of oil or liquid flowed out. The vault contained 1 UST and was 8 feet below grade. They did not expect to find a tank this deep and the GPR didn't indicate a vault or tank. The contaminated soil was stockpiled. A vacuum truck is collecting the spilled oil or liquid. A soil sample was sent off for waste characterization.

The site is about 1 entire city block in size and consists of 12 separate properties. There is an environmental remediation project taking place right now. There are 2 former gas stations abutting the site. It is a joint NYC Office of Environmental Remediation – NYS DEC project. They expect to dig down 55 feet below grade before they are finished. About 250,000 cu. yds. of material will be removed. Langan is not sure of the history of the site – there are few records. He said that it's a big project that was monitored by Sarah Carlson of the Region 2 DEC Superfund/Brownfield Unit. Mr. Manberbach added that Ms. Carlson will be back in September 2011.

I told Mr. Manberbach to send me pictures, analytical results for the contaminated soil, and manifests for the liquid, soil and tank. He said that he will do this.

5/26/11 – Raphael Ketani. Mr. Manberbach (212) 479–5582 called with an update regarding the site. He said that 3 more tanks were discovered. The other three contained solvents – acetone and toluene. One tank with acetone leaked. The contaminated soil has been dug out and stockpiled. They just received the classification results today. The contaminated soil is non-hazardous. They already have a site that will accept the soil. I told Mr. Manberbach that the tanks have to be registered. He said that there is a company working on the paperwork right now and they will forward it to Langan. End point samples will be taken after the pit with the tanks is completely dug out. I asked Mr. Manberbach how far down they will go. He said another 10 feet. I asked him whether that will put the floor of the pit within 10 feet of the water table. He said that it will. I told him that, in such a case, he needed to take two groundwater samples, one below the pit and one downgradient. I added that the groundwater results needed to be sent to the DEC as soon as he receives them. He said that he will. I finished the conversation by saying that all of the data and information needed to be submitted in a report to the DEC. He said that he will do this.

Later, John Gavras (212) 479–5406 (gov-ras) of Langan called. He said that the site will be excavated to 55 feet below grade. The whole block will be excavated. A 4 foot slurry wall will be installed to 35 feet below grade – into the water table. There will be 3 sub-levels. An estimated 100 gals. of acetone was released from one tank. The construction company excavator operator struck the tank. The other tanks were full. The release happened in the vault. All of the soil will be excavated around and under the vault where the 4 tanks were. End point samples will be taken. I asked Mr. Gavras how large the vault was and how large the tanks were. He said that he didn't know, but he will find out. I told Mr. Gavras that I was asking the question because an appropriate number of end points will need to be taken in the vault grave to provide coverage. He said that he understood and that he will figure out how many are needed. I told him to get back to me regarding this issue. Mr. Gavras said that he will and the conversation ended.

5/27/11 – Raphael Ketani. Mr. Gavras (212) 479–5406 called me back. He said that the concrete slab that makes up the floor of the vault is 15 feet long and 9 feet wide. He proposed doing a 30 foot long by 20 foot wide excavation. He suggested doing 6 end points. One in each sidewall and 2 in the floor. I told him that since the location would be over excavated, then the 6 borings would be acceptable.

6/14/11 – Raphael Ketani. Mr. Manberbach (212) 479–5582 called. He said that they were digging at lot 18, which is to the southwest of lot 3 (close to West 129th Street), and hit another vault. The vault was 15 feet down. It contained a tank with gasoline. The tank was vacuumed out. This discovery will be called into the Spills Hotline as a new spill. I told Mr. Manberbach to indicate to the Hotline that I will be the spill manager. I added that I will receive this new spill, refer it to the earlier open one, and close out the case. He said that he will do this.

This latter spill case became #1102949. I closed it out today and referred it to this open spill case.

8/4/11 – Raphael Ketani. I tried to contact Mr. Gavras (212) 479–5406 and Mr. Manberbach (212) 479–5582 regarding progress at the site, but I could only leave messages.

Mr. Manberbach (Ryan) returned my call. He said that all of the tanks and all of the contaminated soil have been removed. End point samples were taken and he has the results. A closure report will be put together and sent to the DEC sometime next week. Mr. Manberbach added that he is the project manager for the case.

9/15/11 – Raphael Ketani. I spoke to Mr. Manberbach (212) 479–5582. He said that the closure report was completed and is on the desk of the person at Langan who has to review it. Once the report is reviewed, it will be sent to the client for review. He was not sure how soon the DEC would get the report.

9/22/11 – Raphael Ketani. Today I received the Langan 9/22/11 Spill Closure Report. I began my review.

9/27/11 – Raphael Ketani. I finished my review of the 9/22/11 Spill Closure Report. At both the acetone and the gasoline spill locations, the contaminated soil was dug up from around and under the vaults. The soil, sludge, and liquids were sent to various disposal facilities. Manifests were included in the Report. End point samples were taken at the location of the acetone spill and excavation. There were still hits of acetone up to 3300 ppb in a floor sample and 25,000 ppb of acetone for one sidewall sample. There were also 1100 ppb of total xylenes in a floor sample. The SVOC hits for non-benzo series analytes were very low, but the results for the benzo series suggested the presence of historical fill. End point samples were not taken in the vault grave where the gasoline tank was ruptured as Langan indicated that the soil concentrations were similar to the surrounding soil which had product contamination. They also stated that the PID meter did not register any hits after the excavation was completed. However, the entire site will be excavated 45 feet to 60 feet below grade. So all of the remaining soil, no matter what the contamination concentrations are, will be removed as part of the larger site development project.

As the spills pertaining to cases #1101589 and #1102949 have been remediated and as the soil at the entire site will eventually be removed once development starts, I have determined that the residual contamination is not a threat to the public or the environment. Therefore, I am closing spill case #1101589. However, I will send an e-mail to Mr. Manberbach stating that the tanks still need to be registered and that the large remediation case for the entire site will still remain open.

ODORS EMINATING FROM SUMP IN BASEMENT, TANK TESTS ORDERED BY FIRE DEPT.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
12/2/2003 transferred from Sangesland to Rommel

3/17/05–Vought–Spill transferred from Rommel to Vought.

9/26/05–Obligado–Spill transferred from Vought to Obligado

8/31/06 – Obligado – Phone message from Joey Peck at Amerco inquiring as to this spill number. I reviewed a Closure Report for this site from 1994. According to the report, the tanks were abandoned in place with concrete slurry. 4 soil borings were advanced adjacent to the USTs, one in the vent pipe area, and one in the fill port. Only minor PAH exceedences. Called Joey Peck and told him to submit a Closure Petition including a investigation into the basement sumps with a PID to ensure no more odors emanating from sumps.

9/25/06 – Obligado – Review letter report from ERM documenting vapor investigation. No existing basement or crawl space and the property. Found a former sump that has been filled with concrete. No vapors were detected in building or around former sump. Discuss with Joe Sun. This spill is closed due to tanks have been removed in 1994, with no VOC impacts in endpoint samples, and no more vapor issues, and due to historic nature of spill.

Caller Remarks:

Fire dept. is on scene of some unknown fluid coming up from the street and flowing into the street. Fluid is not contained.

DEC Investigator Remarks:

06/30/09–Zhune spoke to Fire fighter Chamber (347)203-6886. He said there is a hole in the ground in a empty lot a product that appears to be gasoline is coming up . The heavy rain is pushing it to the side walk and to the street and is coming on a quickly speed but now that the rain stopped is coming in a very slow rate. There is not much that the Fire Department can do. The rain washed it out. NYCDEP Industrial Waste control is on the way.

07/01/09– Zhune. Ryan Responded

DECPiper – I reposnded to site. FDNY, DEP, OEM were onsite along with RP. Brookside Environmental arrived at the site with a pump truck at about 9:45pm. They pumped the contents of the tank and cleaned the asphalt and concrete surfaces all the way to the sewer location on Broadway. A total of 637 gallons of water were removed from tank for offsite disposal. Four 55-gallon drums were also generated from the sand and spill cleanup debris. The abandoned tank (a UST) in question appears to be about 550 gallons in capacity. There was no product identified in the tank.

Brookside and Langan also inspected the groundwater at the existing monitoring well in the NE corner of the site. Groundwater encountered at approximately 28.5 ft below the surface did not have visible signs of a sheen nor were there odors detected. The team also removed the grate in the SW corner of the site and found it to be a drywell. There didn't appear to be any sign of a sheen, odors nor impacts at this location as well. It appears that due to heavy rain, water had overflowed from the abandoned UST onto the asphalt and traveled onto the concrete sidewalk and into the sewer system.

Moving forward, Columbia is planning to close, per applicable NYFD and NYSDEC regulations, the tank in question and other tanks

that may be found at the site. The soil at the site will also be excavated to about 65 feet below ground surface as part of the ManhattanVille development project to allow for the construction of the new campus. As such, the source (tanks) would be removed and any potential subsurface contamination would also be remediated during the proposed construction.

10/29/09- DEC Piper- I reviewed report. 8 tanks were removed along with associated piping and grosly cont soils. Residual will be dugout later in larger project ot dig 45-60 ft bgs. There is already an open spill. see 0713473 that the remainder of the work will fall under. This spill is closed .see e-docs if warranted.

POSSIBLE FEEDER LEAK. UNKNOWN AMOUNT OF FLUID MIXED WITH WATER - APPRX 2000 GAL TOGETHER

162703.000

DEC Investigator Remarks:

162703. Also see 0512307.

Jan 24, 2006. @ 20:15 L. Crilley #15214, from Transmission Operations, discovered 2000 gallons of oil mixed with 1000 gallons of water in MH-61734S. As he was doing an inspection. The oil came from an adjacent structure. All State was on location cleaning the adjacent structure, at the time the oil was discovered. All State will be cleaning MH-61734S also. Feeder M52. 345KV. No smoke/fire involved. No sewer/waterways affected. No injuries related to the spill. Weather conditions did not contribute to the spill. Substance; dielectric fluid. Cause; unknown. Source; adjacent structure. No private property affected. No environmental tag will be hung, as per Crilley. No standing water. No sewer connection. No visual water movement. The oil/water has already been removed by All State. Clean-up is in progress. Logger: T. Haynes 82326

3/31/06

345,000 VAULT IN TH CITY. ONE OF THE TANKS IS SHWING A DISCREPANCY OF 5,100 GALLONS. BRING I VESTIGATED. NON PCB. ONE VENDER IS CHECKING THE WATERWAYS BUT THEY DO NOT THINK THAT THEY ARE AFFECTED. NRC # 786142. CON ED # 162699.

DEC Investigator Remarks:

3/8/06: Met at site with Mike Pillig, Con Ed S&TO. There are 3 separate excavations surrounding 2 manholes. Excavations 1 and 2 (two northern-most holes) are down to weathered bedrock, and down to cobbles in excavation 3. All samples in exc. 3 are below 10,000 ppm TPH except for 2 sample locations (11,000 ppm and 10,600 ppm). No additional soil can be removed due to the presence of rock and proximity to overhead support columns. Excavations 1 and 2 both have several very high TPH results (up to 30,700 ppm), but also can't excavate any further.

Contacted Matt Madsen of Con Ed's Remediation group – this spill location is part of Appendix B site 69 – to be investigated by Langan Engineering under approved work plan. They have already started the utility clearance. We agreed to have Pillig leave 2 x 8" PVC sleeves (one each in exc. 1 and 2) to allow Langan to install monitoring wells at a later date. Told Pillig to backfill excavations. (JHO)

3/9/06: e-mail from Mike Pillig:

"As we discussed, we are going to backfill all of the excavations leaving PVC pipe in the middle and north excavation to mark monitoring well locations. The site will be restored and turned over to EHS Remediation to install the monitoring wells and track the spill though to eventual closure." (JHO)

~~~~~  
e2mis no. 162699:

24-Jan-2006 – Leak declared on Feeder M52 at 13:30 hours due to tank level discrepancy of 1500 gallons at West 49th St S/S pumphouse #2. Leak rate is approximately 8 gallons per hour. Feeder M52 runs between the West 49th St S/S (637 West 49th St, N.Y., N.Y. 10036 and the Sprainbrook S/S. The feeder crosses the Harlem River between the 155th Street and 225th Street Bridges. ERT notified at 13:35 hours and Ken Marines Boat was requested to patrol river crossing. Chem Lab to dispatch PFT vans to patrol run of feeder. Gas Corrosion and Transmission Ops to inspect underground structures and feeder run. Substation Ops to inspect all associated equipment.

At 15:30 PFT found in air at Broadway and 125th St. Investigation of manholes in area found fresh dielectric fluid in manhole 61734 @ Tiemann PI and Broadway. [NOTE – see spill # 0512334, JHO] At 16:40 Allstate tanker on site and beginning to pump out manhole.

At 17:25 1/24/06 a temporary clamp was installed and holding. Allstate continues to pump out and clean manhole. Manhole wall to be broken out to make permanent repairs.

4/17/09 Con Ed conducted Appendix B Site 69 investigation activities between March and June 2006. Letter from DEC Moses Ajoku to Con Edison dated 3/27/08 advised that this spill was closed based on review of January 2008 SIR. I closed the spill in the database today using the letter date as the closure date. JOC

**Caller Remarks:**

i gallon of unknown oil spilled onto 75 gallons of water in a manhole. Unable to be cleaned up because of parking restrictions.  
 e2MIS # 156332.

**DEC Investigator Remarks:**

Richard Hudak 42514 found approx. one gallon unknown oil on top of approx. 75 gallons of water. There is no oil filled equipment in the structure. There is standing water but no visual movement. Unable to see sump, there is no sewer connection and no substantial cracks. Spill tag #41934 installed. There is no evidence of release to sewer or waterway. Two liquid samples taken for PCB and Oil Id.

Lab Sequence Number: 04-09682-001 @ 17:13 Date Approved: 11/22/2004 PCBs < 1 ppm

12/19 @ 15:05

The Final cleanup has been completed today at 14:30 hours. No solid waste was removed. All liquids were removed by the Vactor truck. The structure was double-washed with "SLIX". The Environmental tag # 41934 was removed. There was no visible sign of the source of the spill.

**Caller Remarks:**

FEEDER IS LEAKING: NOT SURE WHERE THE LEAK IS: CREW IS SEARCHING FOR IT: HASNT BEEN CLEANED UP YET:

\*\* SPILL WAS LOCATED ON BROADEAY & WEST 132ND STREET CONTAINED TO MANHOLE APX. 1100 GALLONS OF FEEDER OIL: CALLED BACK AGAIN AND IT IS CONTAINED TO A DIRT EXCAVATION:

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 6/22/04: met on site with Frank Nickolauk (S&TO). Leak was located outside W. 132nd St. PURS on 5" recirculating line. Clamp installed. Crew is removing coating to measure for permanent barrel. Once welding is complete, soil remediation will begin. (JHO)

6/24/04: Spoke with Frank Nickolauk – excavation is approx. 24' long by 9' wide. Sampling scheme set up as follows:

4 samples from floor equally spaced

4 samples from sidewalls approx. 1' off floor

1 sample from each end wall approx. 1' off floor

All will be analyzed for TPH via EPA modified 8100, and for total benzene. (JHO)

7/8/04: initial sample results received. TPH values high (16,000 to 40,000 ppm) on floor, northw all and east wall. Requested additional excavation and sampling. (JHO)

7/23/04: excavation extended north and east (new dimensions 36' long x 10' wide x 8' deep). Sample results indicate continued elevated TPH (11,000 to 17,000 ppm) on floor of excavation only. Requested additional 1 foot depth be removed, resampled. (JHO)

8/2/04: Additional soil removed, sample results indicate still have some limited areas of elevated TPH immediately below leak location. Met on-site with Leon Paretsky and Larry Crilley (S&TO). Excavation below barrel is down to 9' 6". Floor is boulders/bedrock (no more soil to be removed). According to Crilley, rainwater over last weekend accumulated in trench and no sheen was observed. Cannot excavate any deeper. OK to backfill. Close out. (JHO)

~~~~~

e2mis no. 153976:

P Abel #10966 reports that the leak detection alarm on feeder m52 in w 49 st sub station detected a leak on the feeder. Abel stated that the differanc in oil from the sister feeder was 109 gallons and leaking at a rate of 63 gallons per hour.

e2mis no. 153980:

THIS IS A CONTINUATION OF INCIDENT E2MIS 153976 (LEAK DETECTION ALARM ON FDR 52 WEST 49TH ST SUBSTATION.

5 crews from TO and CGO checking manholes. At 23:28 PFT was picked up in air by 132nd St Cooling Plant. CP was inspected again and no leak was found. Barholes were placed along 132nd St between CP and Broadway. At 03:00 6/22/04 feeder was placed on reduced pressure. At 05:00 signal was pinpointed to between 2 barholes and excavation was started approx 300' w/o Broadway on 132nd St. At approx 06:45 dielectric fluid was found in excavation. Excavation continues to uncover leak. At 07:00 CSD reports that leak rate was greatly reduced when 132nd St CP was shut down. Excavation continues and temp clamp installed at 08:00 but not holding 100%. CTW removal continues to find good pipe for welding.

Additional dielectric fluid is being removed from excavation; bucket is under clamp to collect dielectric fluid seeping from temporary clamp. Per conversation with John Hegarty, Manager, Manhattan Substation, preliminary estimate of amount of dielectric fluid released is about 1100 gals.

Clean Ventures removed 25 yd of material under CVCC052043 on 6/23/04 and 206.5 gallons of liquid under CVCC052042 on 6/22/04.

On 6/22/04 Clean Ventures removed 25 yards of material under CVCC052041. On 6/24/04 Clean Ventures removed an additional 25 cubic yards of material under CVCC 052045.

On June 25 soil samples were taken by Jacques Whitford and analyzed for dielectric fluid via method 8100 and benzene (total and

TCLP) to determine the extent of any residual contamination in the soil. The excavation was about 16 feet long, 10 feet wide and about 6 feet deep. The sample results are summarized below (Chain of Custody no DD18036, LSN No 04-0989). The samples were analyzed by ETL. In addition, Jacques Whitford performed a jar

screen test at the sampling locations to provide some qualitative sampling analyses. The results are presented in the last column of the table below.

Sample Location (depth)	TPH Conc. (ppm)	Benzene conc. (ppb)
WW (5')	4090	<0.24
4SW (5' 9")	1080	<0.24
4B (7' 4")	281	<0.25
4NW (4' 5")	77	<0.23
8SW (5' 11")	1060	<0.26
8B (7' 2")	21600	<0.23
8NW (6' 3")	593	<0.23
12SW (5' 3")	2670	4.76
12B (6' 11")	7460	<0.24
12NW (5' 6")	49.4	<0.24
16SW (5' 6")	28.8	<0.59
16B (6' 8")	16000	142
16NW (6')	39900	826
EW (5' 6")	21700	3.05

3 gal unk oil on 1000 gals of water - sample taken - clean up pending lab results

con ed #139086

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
 Con Ed e2mis Notes:

8/23/01 While working in manhole, Transmission Operations discovered 3gal unknown oil on 1000gal water. Source of the spill and cause of the spill are unknown. It spilled onto concrete manhole floor.

Spill was reclassified from a 24hr spill to a "Spill-Oil(unknown type)" due to lack of manpower.

Sample returned <1ppm PCB. S&D Environmental removed all visible traces of oil and washed stained areas. Cleanup was completed on 8/27/01.

Contaminated soil discovered during site assessment for tank closure.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"
 Transferred from Tibbe to Vought on 9/3/03.

9/17/2003-Vought-File review by Vought:

UST Closure Report-Dec 1992-Rose, Beaton and Rose-Scott Carter-Abandonment in place of two (2000-gallon) gasoline USTs. Inspection of excavation "revealed no evidence of loss of product". Site occupied by New York Telephone. Two soil borings were performed for the purpose of "site assessment", one north of UST and one south of UST. Soil samples analyzed for BTEX showed no TAGM exceedances. Soil samples obtained from depth of 10'.

Tank Closure Report-Nov 1994-Stearns and Wheler-Summary of Dec 1992 report by Rose (see above). Groundwater present at 12' during installation of two new (2000-gallon) gasoline USTs to replace those previously abandoned.

Meeting of DEC(Tibbe) with Lexcion and Bell Atlantic results in DEC requiring additional soil borings.

Limited Subsurface Investigation Report–May 1999–Site occupied by Bell Atlantic–Report by Lexicon–Five soil borings performed in Oct 1998. Groundwater estimated to flow to the southwest. Boring depths were up to 13'. Sample analyticals from SB–3 showed up to 2480000ppb total VOCs. SB3 is downgradient from abandoned USTs. Report recommends installation of monitoring wells.

May 1999–Meeting of DEC(Tibbe) with Lexicon and Bell Atlantic results in DEC requiring four monitoring wells.

Limited Subsurface Investigation Report–May 2000–Lexicon–Installation of four monitoring wells to a depth of 17'. Groundwater flows to the east. Groundwater analyticals show up to 741ppb benzene(MW4), 3100ppb toluene(MW4), 547ppb naphthalene(MW4), 896ppb MTBE(MW3) and 4.28ppb benzene(MW1). MW3 located adjacent to former piping run. Report recommends three quarterly sampling events.

June 2000–Meeting of Verizon, DEC and Lexicon resulted in DEC requiring delineation downgradient of MW4. Monitoring well (MW5) was installed to a depth of 17'in Nov 2000 due to basement renovation. Lexicon requests no further action due to "decrease in VOC concentrations by two orders of magnitude". Groundwater flow to the east. Groundwater analyticals of MW5 showed non–detect. Groundwater samples from other wells showed up to 93ppb benzene(MW4), 19.1ppb benzene(MW1), 136ppb MTBE(MW5) and 22.3ppb MTBE(MW3).

Groundwater Monitoring Reports–Nov 2000 thru Nov 2001–Lexicon–Reports sent on behalf of Verizon. OPR injection plan implemented in April 2001 injecting 270lbs of ORC at 16 locations. Post ORC injection groundwater samples showed up to 136ppb benzene(MW4), 31.2ppb MTBE(Mw3), 134ppb MTBE(MW2), and 13.87ppb benzene(MW1). Aug 2001 samples show up to 124ppb benzene(MW4), 26.2ppb MTBE(MW3), 298ppb MTBE(MW2) and 10.9J(MW1).

Update Reports–Envirotrac–Jeff Bohlen (631–471–1500)–Sept 2001 thru March 2003–March 2002 report shows groundwater flow direction is to the northwest is sampled on a quarterly basis. Five monitoring wells on–site. A second ORC application took place on 5/16/02 of 300lb at ten locations. June 2002 report shows groundwater flow to the northeast. September 2002 report shows groundwater flow to the east–southeast. Dec 2002 report shows groundwater flow to the east–southeast. March 2003 report shows groundwater flow to the north–northeast. Groundwater analyticals from March 2003 show 21ppb benzene(MW4), 670ppb toluene(MW4), 2260ppb xylene(MW4), 71ppb MTBE(MW4), 14ppb MTBE(MW2).

9/17/2003–Vought spoke with DEC Rommel and DEC requires delineation up and downgradient of most contaminated well (MW4). If analyticals from borings pass TAGM then closure will be granted upon sensitive receptor survey. If analyticals indicate contamination a more aggressive remediation technique will be required. Vought sent letter with above requirements to Envirotrac (Jeff Bolan–516–807–8983) and Verizon. Vought called Bohlen to explain requirements. Vought called Kung to explain requirements and for fax #.

9/18/2003–Vought–received call from Jerome Kung (F)212–687–3457 cell–646–483–6554. Vought called Kung to explain requirements.

9/26/2003–Vought–Received call from Jerome Kung–Borings will be performed on 10/1/03.

10/1/03–Vought–performed site visit. Borings unable to be performed due to contractors blocking access driveway.

11/6/2003--Sun--File Review by Joe Sun--

Update Reports--Envirotrac--Jeff Bohlen (631--471--1500)--April 2003

thru October 2003--June 2003 report shows groundwater flow

direction is to the northwest and was sampled on a quarterly basis. Seven (7) monitoring wells on-site. Ground water samples were collected from existing on-site monitoring wells MW-1 thru MW-5 on 9/17/2003. In response to a letter from the NYSDEC dated 9/18/2003, two (2) additional monitoring wells MW-6 and MW-7 were installed at the site to a depth of 16' on 10/7/2003. October 2003 report shows groundwater flow to the northeast. Ground water samples were collected from MW-6 and MW-7 on 10/7/2003. The results of the third quarter ground water monitoring event indicated a decrease in dissolved VOC concentrations in existing monitoring wells MW-1, MW-2, MW-3, MW-4 and MW-5. MTBE was detected in MW-6 and MW-7. The soil samples from immediately above the groundwater interface from both borings for MW-6 and MW-7 indicated that VOCs were not detected in either of the soil samples collected. Groundwater analyticals from October 2003 show 740ppb toluene(MW4), 120ppb Ethylbenze(MW-4), 2200ppb xylene(MW4), 110ppb MTBE(MW6), 37ppb MTBE(MW7).

11/6/2003--Sun--Based on soil and ground water sampling data of October 2003 Report, and no sensitive receptor up and downgradient of most contaminated well (MW-4), and also based on overall downward trend of chemical concentrations of compounds, and direction of DEC Remediation Supervisor (Jennifer Rommel), this Spill # 03-30031 is closed today by Joe Sun..

Lab Sequence Number: 04-06337-002: Flash Point, PMCC > 140 deg F

08/16/04 15:20

G.Sullivan#82558 notified the control center on 08/16/04 at 15:07hrs. that the cleanup in M27844 was completed. This was a final cleanup. There were no solids removed and no drums or barrels used in the cleanup of M27844. There was 2100 gallons of liquids removed via tanker from M82558. The method of wash was double washed with slix. The environmental tag #18715 was removed from M27844. The source and cause of the spill is still unknown at this time. The cleanup was completed on 08/16/04 at 13:00hrs. G.Sullivan#82558 notified the control center that after the cleanup was completed, the reddish water started to enter M27844 again. S.Martis#86576 of ERT was notified and said he was going to investigate. S.Martis#86576 notified the control center 14:50hrs. to say that it was O.K. to close out the E2MIS report. S.Martis#86576 also notified the control center that there is a sink hole next to M27844 and in the sink hole there are some purplish or hot pink rocks that when water passes by them could be the cause of the reddish fluid in M27844.

Caller Remarks:

Deep Excavation Project Hit Underground Storage Tank

DEC Investigator Remarks:

6/14/11 – Raphael Ketani. Mr. Manderbach called me. He said that they were digging and hit a vault. The location is southwest of another vault on block 1996 and lot 3, spill case #1101589. This is the same large vacant lot as the earlier case.

The vault's presence was unknown before hand as the radar survey could not penetrate down to 15 feet below grade. They opened the vault and discovered a tank containing 200 gal. of gasoline. They had a vacuum truck nearby and sucked out the tank.

I am closing this later case and referring it to the earlier spill case #1101589 as it is the same site.

LEAK ON FEEDER M-51 – 5000 GALS SPILLED – 300 IS ON LAND – NO CLEAN UP – CREW TRYING TO CONTAIN SPILL BY FUNNELING PRODUCT INTO ANOTHER MANHOLE – PRODUCT IS NON PCB

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"

12/2/97, 18:15 hrs: Arrived on scene, met with Paul Carbone (Con Ed ERT). Also FDNY, NYCDEP on scene. Spill came out of a manhole onto street. Con Ed crews channelling oil to downhill manholes. FDNY was first on scene and kept spilled oil near manhole using sorbents and sand. No oil to sewers. MEG scheduled to arrive 19:10 hrs.

Keith Williams (DEP) checking sewers – no impacts. NYPD Captain Murolo (26th Pct) said that DOS had sanded road up to 160th Street for cars that drove through. DEP HazMat (M. Fawzy and E. Catanzarro) took sample of oil for PCBs. USCG (P.O. Fleischer adn Sanker), NYCOEM (Mike Lee) on scene.

Originally the operating pressure on the feeder was 300 – 600 psi (500 – 1000 gph). Dropped to 260 psi, then reduced to 155 psi (250 gph). Can't go lower because must keep min pressure at Sprain Brook potheads. Total volume 600 gallons from manhole.

As of 20:44 hrs, Jerry Materazzo (Con Ed Underground Transmissions) said they were going to close stop joints to reduce flow enough to put clamp on leak.

21:39: still have not plugged line – have filled 2 vac trucks, working on the third. Two more vac trucks and a frac tank are on route. Closed one stop joint north of leak, will lower pressure south of the joint as low as possible. Still can't get clamp on, will have to lower pressure more and then bleed stop joints. (CAE)

4/15/03: APPENDIX B SITE NO. 69. TRANSFERRED FROM ENGELHARDT TO O'CONNELL.

~~~~~  
e2mis no. 113-403:

ON 12/02/97 AT 1830 HRS HPFF LEAK ON FDR M51 IN MANHOLE # 61734 ON WEST BROADWAY ABOUT 100FT SOUTH OF TIEMANN PLACE ALSO KNOWN AS WEST 127TH ST. APPROX 5000 GALS WAS LOST, UNDERGROUND TRANSMISSION AND GAS OPERATIONS IS ON SITE.

FIRE DEPARTMENT NOTIFIED MAN. CONTROL CENTER AT 1635HRS ON 12/02/97, FIRST CREW RESPONDED TO MANHOLE #61734 AT 1700 HRS. APPROX 400 GALS LEAKED ONTO STREET WHEN HE ARRIVED AT SITE AND DIVERTED THE DIELECTRIC FLUID BACK INTO MANHOLE.

Intersection should be 123rd St not 127th. 16:45 TO notified of very large leak on feeder 51. Crews to check manholes PFT van to go out. 17:00 NYCFD notified Manhattan #9 of dielectric fluid on street surface on Broadway south of 125th St. Clean Harbors and MEG called for cleanup. VNR called for excavation if necessary.

NYC Dept of Sanitation spreading sand on street. Southbound Broadway closed off south of 125th Street. 17:21 feeder removed from service. Fluid being diverted into second manhole approx 50'

south of 61734. 18:30 MEG on location pumping manhole out. 19:00 MEG cannot keep up with flow of fluid. 19:15 Clean Harbors on location to assist MEG. 20:05 TO crews closed new stop joint valves in MH63639 to hold fluid back going uphill to Sprainbrook Sta. After 5 hours could not fully stop leak. Semi-stops on both sides of leak to be closed to control leak. MEG and Clean Harbors working on cleaning up street to open at least 1 lane of southbound traffic by 7AM. Pump at 49th St shutdown at 8:15 12/3/97. Leak rate slowed down – clamp to be repositioned to stop leak.

Temporary clamp installed and holding at 11:45 12/3/97. MEG to clean out manhole and custom barrel to be fabricated. Lab results 97-13945 1 ppm PCB's: MEG lab 0.624 ppm Benzene. Lab results of fluid at stop joint (10/15/97) 14 ppm benzene. 05:15 12/5/97 repair barrel installed and pressure tested. TO signed off complete. MEG removed 31,000 gallons of oil and water. Clean Harbors removed 10 tons and 15 yds of oil contaminated material from street and manhole.

Fluid loss recalculated by CSD to be 22,934 gallons.

E2MIS 113403:

ON 12/02/97 AT 1830 HRS SHIFT MANAGER J. CLARK #20420 REPORTED HPFF LEAK ON FDR M51 IN MANHOLE #61734 ON WEST BROADWAY ABOUT 100FT SOUTH OF TIEMANN PLACE ALSO KNOWN AS WEST 127ST. APPROX 5000 GALS WAS LOST, UNDERGROUND TRANSMISSION AND GAS OPERATIONS IS ON SITE. P. BYRNES #74864 AT 1845HRS ON 12/02/97.

SUPV. P. MCHUGH REPORTED THAT FIRE DEPARTMENT NOTIFIED MAN. CONTROL CENTER AT 1635HRS ON 12/02/97, FIRST CREW RESPONDED TO MANHOLE #61734 AT 1700HRS. P. MCGRATH REPORTED THAT APPROX 400 GALS LEAKED ONTO STREET WHEN HE ARRIVED AT SITE AND DIVERTED THE DIELECTRIC FLUID BACK INTO MANHOLE.

Intersection should be 123rd St not 127th. 16:45 TO notified of very large leak on feeder 51. Crews to check manholes PFT van to go out. 17:00 NYCFD notified Manhattan #9 of dielectric fluid on street surface on Broadway south of 125th St. Clean Harbors and MEG called for cleanup. VNR called for excavation if necessary. NYC Dept of Sanitation spreading sand on street. Southbound Broadway closed off south of 125th Street. 17:21 feeder removed from service. Fluid being diverted into second manhole approx 50' south of 61734. 18:30 MEG on location pumping manhole out. 19:00 MEG cannot keep up with flow of fluid.

19:15 Clean Harbors on location to assist MEG. 20:05 TO crews closed new stop joint valves in MH63639 to hold fluid back going uphill to Sprainbrook Sta. after 5 hours could not fully stop leak. Semi-stops on both sides of leak to be closed to control leak. MEG and Clean Harbors working on cleaning up street to open at least 1 lane of southbound traffic by 7AM. Pump at 49th St shutdown at 8:15 12/3/97. Leak rate slowed down – clamp to be repositioned to stop leak.

Temporary EPA # NYP 004015293 received from ERT. Temporary Clamp installed and holding at 11:45 12/3/97. MEG to clean out manhole and custom barrel to be fabricated. 3-11 shift 12/3/97 repair barrel material being gathered. 11-7 shift 12/4/97 barrel fabricated. Lab results 97-13945 1 ppm PCB's : MEG lab .624 ppm Benzene. Lab results of fluid at stop joint (10/15/97) 14 ppm benzene. 11:00 12/4/97 barrel installed and welding started. 05:15 12/5/97 repair barrel installed and pressure tested. TO signed off complete. MEG removed 31,000 gallons of oil and water. Clean Harbors removed 10 tons and 15 yds of oil contaminated material from street and manhole.

V.Schaefer #78367. Restoration procedure to be followed to return feeder to service. As per CSD total fluid loss was 23,934 gallons. Fluid loss recalculated by CSD to be 22,934 gallons.

4/17/09 Con Ed conducted Appendix B Site 69 investigation activities between between March and June 2006. Letter from DEC Moses Ajoku to Con Edison dated 3/27/08 advised that this spill was closed based on review of January 2008 SIR. I closed the spill in the database today using the letter date as the closure date. JOC

CALLER REPORTING A SPILL OF APPROX 70 GAL/MIN OF FEEDER CABLE OIL LEAK DETECTION EQUIPMENT ON THE LINE STATES THAT THE LINE IS LEAKING ANYWHERE FROM THE WEST 49TH STREET SUBSTATION TO THE TUCKOHOE SUBSTATION IN YONKERS THIS LINE ALSO CROSSES THE HARLEM RIVER AT THE 155TH ST BRIDGE AND THE 255TH ST BRIDGE THE COAST GUARD WAS NOTIFIED BY CON EDISON LEAK WAS NOT PHYSICALLY VERIFIED AT THIS TIME CALLBACK TO CON EDISON FOR MORE INFO. CREWS CHECKING MANHOLES ON THE RUN OF THE FEEDER AND SUBSTATION FOR LEAKS NON PCB OIL INVOLVED SPILL RESPONSE BOAT ALSO NOTIFIED AND ENROUTE TO THE AREA OF THE BRIDGES

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

## APPENDIX B SITE 69

SPILL ORIGINALLY SENT TO R3. IT IS IN R2. BOB CORCORAN 12/27/2000.

12/13/00 Con Ed monitor (Okwuoha) and regional staff Mark Tibbe responded off hours to 70gal/hr dielectric fluid leak at Broadway and LaSalle. Spill came from leaking feeder that runs from W 49th St Substation to a substation in Yonkers. Cleanup and repair were in progress upon arrival. Con Ed said oil samples had been taken and soil samples will be taken after cleanup is completed.

12/15/00 Okwuoha Notes: Spoke with John Monahan. Spill location covered with steel plates, however Con Ed dug up soil 30m south of spill spot in order to remove the asbestos coating and put on a new hand wrapped coating. Instructed John that sample results must be faxed over before backfilling can be authorized.

2/6/01 Met with J. Tranchina and Chem Lab at 123rd St and Broadway. Will take samples for TPH. (KMF)

7/2/04 Spill submitted for closure. TPH concentrations OK for closure. (JHO)

~~~~~  
Con Ed e2mis #134737:

12/13/00 0855hrs USI Leak detection indicates a leak of 70gal/hr on fdr M52. Gas Corrosion dispatched to patrol run of feeder and inspect manholes. Two PFT vans dispatched to patrol feeder. Substation Operations to inspect all associated equipment. Feeder M52 runs between the W 49th St and Sprainbrook Substations. S&D to patrol river crossing.

TO sent 2 crews to check Manhattan and 2 crews to check Bronx and Westchester. Both PFT vans out running feeder. Feeder removed from service at 09:48. At 1300 barhole crew requested to sample from 125th to LaSalle PI. At 1600 Clean Harbors notified to respond and stand by. Excavation started 120' s/o LaSalle PI. At 23:30 12/13/00 temp clamp installed. Custom barrel fabricated and installed 23:00 12/14/00. ETI performed 3rd party weld inspection. Feeder returned to service at 05:13 12/15/00. Other damaged sections of pipe found and repairs to be done to them also.

Chem Lab reported 00-11684 <1ppm PCB in fluid, 00-11685 44ppb TCLP benzene in soil and 00-11687 <1ppm PCB in soil. On 12/15/00 Clean Harbors removed 6cu yds of material. CSD reports total loss for leak is 979.5 gal. On 12/28/00 Clean Harbors removed 15cu yds of spill material from trench.

Samples were taken in the area of the leak location on February 6, 2001, by a representative from Jacques Whitford. Sample locations were selected by Kerry Foley from the NYSDEC, who was on site. Samples were analyzed by Ecotest Laboratories, for TPH dielectric fluid (by method 8100) and TCLP benzene (LSN 01-01279). The results are presented in the following table:

Sample location	TPH Conc (ppm)	TCLP Benzene (ppb)
North Excavation, Bottom Mid	6200	<5
North Excavation, East Wall	3400	<5
North Excavation, West Wall	3400	<5

CLEANUP PENDING SAMPLE RESULTS-NO SEWERS OR WATERWAYS AFFECTED.

CON ED #130925

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
e2mis no. 130925:

4 gallons of oil unknown type in manhole 27807. Records show sewer connection, also have open ends of primary cable in manhole #27807 leaking a few drops of dielectric fluid. Spill is distribution dielectric fluid from a 3c primary cable open end. No sample is required cleanup will be treated at 50-499 ppm PCB.

Primary end now sealed by trouble shooter.

DATE AND TIME THE CLEANUP WAS COMPLETED : 04/18/00 , 20:00.

CLEANUP PROCEDURE : OIL AND WATER REMOVED VIA TANKER OVER >50PPM, SHOVEL LEAD CONTAMINATED OILY MUD AND SOLID HAZARDOUS WASTE IN 55 GALLON DRUM'S , FLUSH OPERATIONS USED A HIGH PRESSURE HOSE TO TRIPLE WASHED THE FLOOR AND WALLS WITH BIO-GENESIS SOLUTION (SLIX) , MANHOLE WAS THEN RINSED BY FLUSH TRUCK.

 FOUND CONTAMINATED SOIL

DEC Investigator Remarks:

Sangesland spoke to Jack Caslatte (attorney for owner).

Building is an apartment building which is being renovated. There is an existing 20,000 gal UST buried in a courtyard of the building.

The building will convert to gas heat in June/July 2007 and this large tank will be removed. 4 Borings were taken around the tank and one sample came back with some elevated PAH compounds while another sample came back with an elevated Benzo(a)Pyrene level.

The owner will hire Soil Mechanics Environmental to pull the tank and deal with the contaminated soil/area under the tank.

CSL sent to Owner:

Philip's Park Housing Development Fund Corp.

c/o Mr. Bernard Warren

Webb & Brooker Inc.

2534 Adam Clayton Powell Blvd.

New York, NY 10039

11/23/07 The tank was removed and disposed of as a regulated non hazardous waste. The tank excavation revealed no evidence of petroleum product release into the environment. However, upon physical removal of the tank from the ground, a small volume of heavy fuel oil was observed at the bottom of the tank excavation (pictures provided). All contaminated soil was excavated until visually clean 12" thick concrete slab was encountered at a depth of 12.0' below existing grade. The tank mat was not removed. Six end point samples were collected from the four walls of the remedial excavation. No vocs were detected. SVOCs detected were below the TAGM limit. Fill line has been discontinued, fill line connection has been sealed with concrete so as to prevent use of fill line and the vent line has been removed. Report in edocs. (SR)

Caller Remarks: 20 gallons to paved out door sidewalk/clean up complete 10 gallons to inside basement, clean up underway						

DEC Investigator Remarks:

J&M were making a delivery for Castle Oil. Order was for 1500 gal, at 900 gal over fill shot out the vent line onto cement sidewalk. 20 gal on sidewalk, all contained, no soil impacted, no drains impacted. Sidewalk cleanup completed. J&M along with Castle staff inspected the basement and found 10 gal spilled out the top of the tank onto the floor. The tank was properly closed and the basement floor was also cleaned. No floor drains impacted.

tank overflow and into sump – cleanup in progress

DEC Investigator Remarks:

04/04/14–Hiralkumar Patel.
 3:17 PM:– left message for Rochelle.
 3:23 PM:– received call from Shui–Kei Ng from NYC Transit. he mentioned that during regular maintenance, crew found small amount of diesel in a sump on diesel tank. during investigation, they found minor leak from relief valve on pump located in the sump. leak was fixed and spill was cleaned up.
 case closed.

ANTIFREEZE	OTHER	60.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

Found in sump. investigating.

DEC Investigator Remarks:

03/09/05: As per an e-mail from NYCT on 3/7/05, "As per our conversation the following is a brief explanation of why the anti-freeze sump had product in it. The vendor was delivering Anti-Freeze and after the delivery an alarm sounded for the sump. After inspecting the cause of this, I found that the OPW overfill prevention valve clapper was broken in the closed position, this prevented the product from entering the tank. The pressure from the beginning of filling blew the loose cap from the top of the stick / fill riser causing the product to fill the sump. The product in the sump dropped and became even with the stick / fill riser because the small drain on the clapper for the overfill let the anti-freeze drop to a level at the top of the stick riser. This stick / fill riser has a dual purpose, one for sticking the tank and the other to house the OPW overfill device. A new OPW overfill device was installed and is operational. This tank was not "overfilled", it was a defect in the OPW overfill prevention valve."

Caller Remarks:

during excavation 1 cubic yard of contaminated soil found – spill being treated as 50-499 ppm pcb and will be cleaned up per that protocol – con ed 135334

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"

2/1/01: 1 cubic yard of contaminated soil. Cause of spill is unknown. No sewers or waterways affected. No injuries. No private property affected. No smoke or fire. (MCO)

2/6/01 Met at site with John Tranchina. Directed him to collect samples for TPH df and benzene. Historical contamination related to feeder M51/52. (KMF)

4/11/03: APPENDIX B SITE NO. 69. SEE SPILL NO. 0010293 FOR ADDITIONAL INFORMATION.

~~~~~  
e2mis no. 135-334:

On February 01, 2001, P. Canty, 77613 of Transmission Operations reported while doing excavation for feeders M51 & M52 he discovered approx. 1 cu yard of contaminated soil. Clean Harbors will be called to remove the contaminated soil. No samples will be taken, treating waste as less that 50ppm, using information from prior reports in same area.

UPDATE

Per P. Canty, Engr. 77613 on February 2, 2001: Clean Harbors started cleanup and a strong odor was noticed. Cleanup was stopped and Chem Lab will be called to take samples. Cleanup will continue pending test results.

Samples were taken in the area of the contaminated soil on February 6, 2001, by a representative from Jacques Whitford. The Jacques Whitford representative noted that there were small (quarter sized) globules of petroleum floating on top of pooled water in the excavation. The contaminants were removed by oil-absorbent pads. Sample locations were selected by Kerry Foley from the NYSDEC, who was on site. Samples were analyzed by Ecotest Laboratories, for TPH dielectric fluid (by method 8100), TCLP benzene, and VOCs (LSN 01-01279). The results are presented in the following table:

| Location             | TPH<br>(ppm) | Benzene<br>(ppb) | VOC<br>(ppm) |
|----------------------|--------------|------------------|--------------|
| North end, East Wall | 4400         | <5               | NS           |
| South end, East Wall | 4100         | <5               | ND           |
| South end Bottom     | 1200         | <5               | ND           |
| North end, West Wall | 59           | <5               | ND           |
| South end, West Wall | 390          | <5               | ND           |
| North end, Bottom    | 590          | <5               | ND           |

Note: The wall samples were taken about a foot off the bottom of the excavation.

Caller Remarks:

WHILE DELIVERING OIL A CAR RAN OVER THE HOSE CAUSING SPILL, SPILL CREW CLEANING UP AND EASTMAN ENROUTE

---

DEC Investigator Remarks:

Broadway & 135th St

During delivery a van drove over the hose and tore a hole in the hose.

Heated #6 oil spilled 150 ft west along curb.

Eastmond cleaned the street & sidewalk. There were 3 cars parked that could not be moved. Eastmond used a power washer to get as much from under these cars as possible.

Castle Oil, Rob Hill, (718) 579-3410

3/1/06 – Raphael Ketani. I spoke to Mr. Hill. He said that 60% of the oil stayed at the fill port area. He said the fill port area is a mess and he is getting A.L. Eastmond & Son to come over and steam clean the area. He said that the rest of the oil ran about 8 cars down the block, but no sewers were affected.

3/2/06 – Raphael Ketani. I visited the site today. There is a black spot 8' X 15' on the sidewalk where fill ports for tanks #1 and #2 are. It was not clear how much staining was still in the street because of the slush all over and the parked cars. There was only a slight perceptible odor. Only a very thin stream of sheen was seen flowing downhill in the street. I called Mr. Hill and told him that the site needs to be cleaned much better. He said that he had called Eastmond several times to get them out to the site. Mr. Hill said that his crew will go out tomorrow to start the cleaning and then he will have Eastmond's crew power wash the sidewalk and elsewhere.

3/15/06 – Raphael Ketani. I called Mr. Hill. He said that he sent one of his crew out there after Eastmond had come out a second time to clean the sidewalk. He said that his crew member reported that the oil hasn't been cleaned up well. Mr. Hill said that he will steam clean the site this Saturday.

3/22/06 – Raphael Ketani. I spoke to Rene (718) 378-3000. He said they couldn't do the power washing last Saturday as the cars were parked against the curb. He said that this Friday they will all be gone and his crew will clean the sidewalk.

5/19/06 – Raphael Ketani. I am closing the case administratively as this was a very small spill and there was nothing in the street and no loose oil on the sidewalk when I made my inspection on 3/2/06.

Caller Remarks:

spill to oil tank room/oil mixed with water

DEC Investigator Remarks:

09/19/12 I spoke with NYC DOH Inspector Mr. Tucker, who indicated that they received a complaint from a tenant of that building regarding petroelum odor in her apartment. Her apartment was directly above the tank room. DOH responded.

I responded to the site and discovered the following:

- Poor housekeeping practices(oil stain) in the boiler room
- Oil spill in the tank room, strong odor. Two big puddles on both end of the tank.Oil stain on the tank manway.Oil water mixture on the tank room floor, odor in the tank room.5,000 gallon AST(thick black oil #4 or #6)
- No PBS registration certificate on site/No tank ID/ No gauge found/No monthly inspection record found.
- PBS 2-195790 expired in 2002.

As per spill # 0603999, Building Management was notified to register the tank and perform a tightness test in 2006,it was not done.

New owner:

Equity Management  
 C/O Barry Singer  
 95 Delancy Street, 2nd floor  
 Delancey Street, NY 10002  
 Ph: 212-254-4374, Super, Geraldo (646)879-7799  
 Fax: 212-353-0564 (sr)

Letter was sent out.(sr)

09/24/12 Spoke with Barry Singer. He told me that they retained a contractor to fix the leaking water pipe and to clean up the

spill.(sr)

07/24/13 Email from Associated Environmental in edocs.AES performed indoor air quality survey and subsurface soil investigation surrounding the tank.As per the report, Six soil borings were drilled within AST vault.Soil samples were taken between 0 to 2 ft below the AST vault floor.No visual or olfactory evidence of soil contamination observed in the collected samples.No STARS VOCs were detected above minimum reporting limit.The results of the indoor air survey found PID readings in the basement ranged from 0.0 PPM to 0.4 PPM in the storage rooms and hallways within the basement of the building. Measurements within the utility (electric water and sewer) rooms immediately adjacent to the AST vault were recorded at between 1.4 PPM and 5.2 PPM. Readings within the boiler room and AST vault were recorded at 23.8 PPM and 32 PPM, respectively.PID readings on the upper floors ranged from 0.3 PPM and 1.1 PPM, with most areas recorded at 0.6 PPM. The walls within the upper floors were posted with "wet paint" signs posted as well as a paint odor was observed indicating the upper floors had been recently painted. The fresh paint would provide a source of the PID readings noted above.

case assigned from DEC Rahman to DEC Patel.

09/09/13–Hiralkumar Patel. received fax from Donna from ABC Tank. they pumped out and cleaned interior of the tank and welded a precut on tank top. replaced two relief valves and three pressure and vacuum gauges. tested tank system on 07/22/13 and found tight.

09/11/13–Hiralkumar Patel.

alternate address: 95–97 Monrningside Ave, 96–98 Morningside Ave, 364 W 123rd Street

PBS #: 2–195790. as per PBS record, the site has one 5,000 gal #6 oil AST in contact with soil. PBS expired on 07/07/2002.

other spill 1206166 was reported on 09/21/12 by Castle Oil due to 50 gal #4 oil spill. case closed and merged with the subject spill.

2:15 PM:– spoke with Ms. Singer at Equity Management. informed her that PBS registration is not renewed yet. informed her that PBS application must be submitted by the end of 09/17/13 or else a notice of violation may be issued.

Caller Remarks:

D. WATTS ALTERNATE # 212-864-1597 FIRE DEPT WAS REQUESTING INSPECTOR TO INVESTIGATE SPILL: SOME KIND OF OIL CALLER LIVES IN APARTMENT # 7 (WATTS)

DEC Investigator Remarks:

07/12/06–Hiralkumar Patel. received during off hours duty on 07/11/06. visited site. spoke with Jeraldo Merejildo (646–879–7799), super of building. property has 5000 gal #6 oil AST. tank is in contact of concrete. as per super, during last oil delivery they had overfill and oil spilled at vent pipe, about a month ago. and little oil came out from top of tank in tank room. they cleaned both oil spills immediately, but left speedy dry at location. when i reached on site, Ms. Watts was not at home. vent pipe is right under Ms. Watts living room window about 2–3 ft below. probably what ever oil soaked in speedy dry, under vent pipe, is getting vaporized due to heat and getting into Ms. Watts apartment. asked super to clean immediately area under vent pipe and clean inside tank room also. asked Ms. Watts to close windows for couple of days. no oil observed or odor in tank room as well as at vent pipe

observed oil stains in tank room as well as in boiler room. little oil on top of water in sump. asked super to clean all stains and sump. mat Andrew Kelly (718–595–4761) from DEP at site. he also observed oil in sump.

Managing agent:

Pan Paragon  
95 Delancey Street  
Manhattan, NY 10002  
Ph. (212) 254–4374  
FAX (212) 353–0564

PBS # 2–195790

PBS registration has expired on 7/7/02.

spoke with Ms. Paragon. they bought this property two years ago.

sent out CSL with tank registration and tank test requirements to Ms. Paragon. faxed to Ms. Paragon.

08/07/06–Hiralkumar Patel. received message from Ms. Watts (212–864–1597). she still receive odor in her apartment.

08/10/06–Hiralkumar Patel. left message for Ms. Paragon. spoke with super at building. he has clean area under vent pipe and painted it. asked him to check Ms. Watts apartment for any odor.

08/16/06–Hiralkumar Patel. left message for Ms. Watts. spoke with Ms. Paragon. she has received letter from the department and is working on it. visited site. found no odor anywhere in building. Ms. Watt was not at home so couldn't check in her apartment.

11/24/06–Hiralkumar Patel. spoke with Ms. Paragon. she found tank registration certificate and will fax it. she hasn't hired anybody for tank test. asked Ms. Paragon to test tank system and to renew expired registration.

case referred to PBS unit as site has unregistered tank.

from site visits, found oil spilled at vent pipe on concrete and no soil/drain affected. super cleaned area under vent pipe. no indication of leak from tank itself. based on observation during previous site visits, case closed.

Caller Remarks:

5 oz spilled. No to the 5 questions. Ref #163175.

DEC Investigator Remarks:

04/17/06 – See e-docs for Con Ed report detailing cleanup and closure.

04/17/06 – See e-docs for Con Ed report detailing cleanup and closure.

163175. March 03, 2006. @ 12:00 Inspector P. Boyer 09630, Contruction Management. Discovered a stain on dirt, approx. 5 oz. of dielectric fluid in MH-58711, located at E/S Manhattan Av N/O 123 St. Mr. Boyer was on location to inspect structure for new ducts. He found a cut feeder, uncapped. Mr. Boyer saw a underground crew working down the block and asked them to seal and cap the feeder, in which, they did. A red wagon runner is enroute to the location to bring Mr. Boyer a yellow tag and 2 jars. No fire/smoke involved. No sewer/waterways affected. No injuries related to the spill. Weather conditions didn't contribute to the spill. Source/cause; a uncapped feeder. Spill on: dirt. No private property affected. No standing water. No sewer connection. No cracks in structure.

March 04, 2006. On 03/03/06 about 16:00 when red wagon runner arrived on location with environmental tag and jars. Inspector, Bayer wasn't on locations. Runner didn't have a ladder with him to go down in the structure place environmental tag and to take lab samples.

Around 19:00 Flush Supv. Tracey Taylor arrived on locations with environmental tag and jars. He discovered a steel plate over the manhole. Next to the manhole is a excavation. T. Haynes 82326

Incident is taken off the 72-hour clock due to no access to structure. T. Haynes

Caller Remarks:

500 gallons of unk oil in 2 gallons of water in a manhole 15' north of St Clairs Place ConEd ref #203955. No to the 5 questions.

DEC Investigator Remarks:

08/18/09 – See eDocs for Con Ed report detailing cleanup and closure.

203955. see edocs.

ConEd reports product tests as No.6 FO. May be related to 0611095.

2/21/07: site visit conducted with Sarah Carlson (DEC Pet. Rem.) and Anthony Drumblings (Con Ed Man EH&S). Oil was found in 2 manholes, both located downgradient of Columbia University spill (see spill no. 0212031). Oil may be residual from spill reported in 2002. Conduits connect these manholes to 2 vaults/manholes up the hill next to the fill line for CU's tanks. The fill line was found to be leaking, and was excavated and repaired. TRC (consultant for CU) installed ORC injection field for remediation. S. Carlson to follow up with CU, TRC. (JHO)

-----  
**Caller Remarks:**

50 gal. of material on 200 gal. of water. Third Party spill just came off of 72hr. clock because of quantity. ConEd#203920 Clean up will take some time because ConEd is using a private contractor. No to the five questions.

-----  
**DEC Investigator Remarks:**

emis no. 203920

1/5/07, 9:30 AM – spoke with Anthony Drummings, Manhattan Electric Ops EH&S. He was at location yesterday with contractor, and they pumped out all free liquid. there is still thick oil on walls. they can't complete cleanup until feeder is made safe. He expects to return tomorrow to power wash and soda balst the manhole. He stated that the material appears to be no. 6 oil even though the oil ID returned as "light fuel oil". The manhole is located in front of a warehouse – he looked for oil fill line but couldn't see any due to pallets on sidewalk. He will get me the address of the building so i can check PBS database. Also, he stated that they had recently cleaned out two service boxes in the immediate vicinity that also had fuel oil – he will check plates to see if they are connected to this manhole. (JHO)

1–8–07. see 0611137. This is a report of 500 gallons of what seems to be No.6 FO in a nearby manhole. conEd report 203955. Breen

2/21/07: site visit conducted with Sarah Carlson (DEC Pet. Rem.) and Anthony Drummings (Con Ed Man EH&S). Oil was found in 2 manholes, both located downgradient of Columbia University spill (see spill no. 0212031). Oil may be residual from spill reported in 2002. Conduits connect these manholes to 2 vaults/manholes up the hill next to the fill line for CU's tanks. The fill line was found to be leaking, and was excavated and repaired. TRC (consultant for CU) installed ORC injection field for remediation. S. Carlson to follow up with CU, TRC. (JHO)

05/23/07 – See e-docs for Con Ed report detailing cleanup and closure.

CALLER REPORTING A SPILL OF UNK MATERIAL CONED#133915 SAMPLES TAKEN CLEAN UP PENDING LAB RESULTS. NO CALLBACK NECESSARY

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
 e2mis Notes:

1 quart of unknown oil and approx 50 gal water in S–47174. Sample taken for PCBs. PCB results returned 0ppm. Analysis indicates the sample is similar to lubricating oil. Oil and water removed via tanker under 50ppm. Used high pressure hose to double wash floor adn walls with bio–genesis solution (slix). Service box was then rinsed by environment operations. Quantity removed from site and type of container's used: generated two palstic bags of non–hazardous waste. Transported to E 110th St Yard, Manhattan. Accumulation 189gal oil and water. KMF 4/3/01.

Caller Remarks:

OVERFILL AND EMPIRE FUEL CLEANING

DEC Investigator Remarks:

Sangesland spoke to Dennis OHagen of Columbia Univ. Facilities Dept.  
 Building is a dorm apartment building. Overfill during delivery out the vent pipe onto cement. No drains or soil impacted.  
 Driver spread speedie dry to contain spill. Building super added more speedie dry. Empire sent their own clean up crew out to the site. As of 11:30AM the Empire crew was "working on it".  
 3PM Mr. OHagan called back to say the cleanup was complete

Caller Remarks:

unk amount spilled on con ed meter and on basement floor – area has been evacuated and ventilated – no clean up

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

Talked with Chris Haas of DEP HAZMAT  
 10/04/99 am

Chris indicated that there was less than a pound spilled. He "wrote " Commisioner's orders to the owner to get the clean up completed. Chris stopped back on Monday and the clean up was completed by Trade Winds. He also has a copy of the manifest if needed. Third party on Con Ed equipment. 10/05/99 CAE said to copy Sam(RCRA).

A third party mercury spill found on gas metere and floor of basement of 2276 12 Ave. plastic was placed over spill and door left open to ventilate same. Dep notified at 10:15. Amount unknown at this time and company personnel will not be allowed to enter. Cig and Ert were notified that the event involved history section will not be filled out due to the unknown amount. Chris hass from Dep on location 11:30

Due to third party spill no material will be filled out. The quantity is unknown. The ERT Shah is aware that no quantity will be associated with this report and tht the material history will not be filled out.

was on the 24hr program - taken off can't clean till after the 24hr

spill is on 100gals of water - ref #148519

**DEC Investigator Remarks:**

E2MIS 148519

5/29 @ 15:21

At 14:59 HRS Diaz # 19010 FOD reoported to me that while working on Feeder 2M35 in M-24608 he discovered approx 1 qt of an unknown oil atop 100 gallons of water. No sewer connection as per Conduit plate 51-D-3. The spill was on the Concrete structure floor. Source and the cause of the spill are unknown at this time. Two (2) samples for PCB and ID will be taken. There are no initial cleanup actions taken at this time.

5/29/03 20:59 Received lab results,

Lab Sequence Number: 03-04494-001

Insufficient amount of sample extracted to perform oil identification.

5/29/03 22:19 Received lab results,

Lab Sequence Number: 03-04495-001 TOTAL PCB 51 ppm

5/30/03 05:14 V. Centamore # 88743 Underground/cleanup supervisor called to report that the cleanup was completed at 04:15. An over 50 tanker removed 500 gallons of liquid from the structure. The structure was double washed with pinicle water base cleaner & degreaser. Supervisor V. Centamore reported that the structure was visually inspected and there were no open or unsealed cable ends. The source is unknown.

**Caller Remarks:**

Contractor discovered impacted soils, soil will be excavated and placed on plastic for disposal.

DEC Investigator Remarks:

10/03/08 Sangesland spoke to Bill Schlageter. He said the contractors are moving quickly on this site. They discovered some contaminated soil during excavation. They staged the contaminated soil on plastic and will have it properly removed with manifests. They already took end point samples from the open excavation and will forward a report to DEC with end point test results.

10/03/08–HRAHMED–Bill Schlageter of Preferred Environmental called. As per him they excavated 20'X25' and 12' deep. At 12' they found shin on groundwater.

10/22/09–HRAHMED–Received email from Bill Schlageter on 10/03/08 outlining the remedial action plan:

The subject property is currently undergoing an entire redevelopment of the property which includes the excavation of soils to 18 feet below grade surface (bgs) and dewatering of the water table an estimated (three to four feet). An existing dewatering system is operating at the property which includes an oil/water separator, etc and discharges to the municipal sewer system. The site is listed as an "E"-designated parcel by the New York City Department of Planning and a Remedial Action Plan was prepared by Impact Environmental, submitted to and approved by the New York City Department of Environmental Protection for the removal of historical fill from the property and dewatering of groundwater.

As part of the process of preparing a RAP to the NYCDEP, Impact collected and analyzed groundwater samples from the property. No petroleum–impacts were identified in the groundwater samples indicative of a petroleum–release at the property. Minor impairments were detected but were contributed by Impact to an upgradient off–site source.

An excavator was utilized to delineate the on–site soil impacts. Impacts were observed to extend to a depth of 12 to 14 feet below grade surface, at which point groundwater was encountered. What appeared to be a slight sheen was observed atop of the groundwater.

As part of the overall site re–development, the area of petroleum–impacted soils will be excavated. Based upon observations, made by Preferred, the following Remedial Activities will be conducted:

1. Petroleum–impacted soils will be excavated, temporarily stockpiled on–site and eventually transported off–site to a licensed/permitted facility;
2. Preferred will collect a series of endpoint soil samples from sidewalls of the excavation. No bottom endpoint sample will be collected as the bottom of the excavation will be in groundwater;
3. As the site is going to be de–watered by three to four feet, and prior groundwater data did not reveal the present of significant petroleum–related groundwater impacts, Preferred does not propose to collect groundwater quality samples; and
4. The results of the endpoint samples will be included in a spill closure report submitted to the NYSDEC for review.

10/25/10–HRAHMED–Received closure report from Bill of preferred Env. As per the report, the whole site was excavated upto 18 ft

below grade. Groundwater level at this was 12 ft. A dewatering system was set up to draw down the water table and allow for deeper excavation. As part of the dewatering system, the groundwater is pumped into a frac tank and through an activated carbon filtration unit before final discharge into the municipal sewer system. Water sample results from effluent and influent was below TAGM limit or not detected. Since the entire site was excavated upto 18 ft no end point soil samples were collected.

Based on the report, the spill case is closed. A SCL was sent to:

Caller Remarks:

Caller reports spill on the south west corner. This is a third party spill. ConEd cleaned up the spill. It was completed at 1400. No to the five questions. #156650.

DEC Investigator Remarks:

01/10/08 – See eDocs for Con Ed report detailing cleanup and closure.

She says someone will be on site at 2:30 today to allow a basement inspection.

12/08/11 Responded to the site on 12/07/11 afternoon. An oil delivery was made on 12/06/11 and spilled unknown quantity of #2 oil from the vent. Fill and vent pipe is located in front of the building, but blocked by metal garbage can. Oil spilled directly to the floor underneath the stairways that goes to the basement. Approx 25-30 gallons on the basement floor, under piled up garbage bags. Building super put down sand on the floor to absorb free oil. Smell was too strong in the basement and on sidewalk IFO the building. There was evidence of oil spill on the sidewalk as well. Tank is vaulted, 3000 gallon, unregistered. No oil spilled in the tank room. I spoke with Property Manager Aisha Rodriguez on site and told her to retain a spill clean up contractor to begin the clean up. I also spoke with the Oil Company that delivered the oil and Mr. Roman (owner) assured me that they will work together to complete the clean up. (sr)

01/13/12 Performed site inspection today. Contamination still exist underneath the stairways. More excavation recommended. In the basement, tank room, boiler room, entrance room appeared to be odor free. No visible contamination observed in those room. (sr)

PBS: \*\* 2-611730 \*\*

06/15/12 ABC tank submitted the closure report. ABC replaced the vent line with an alarm. A petrometer gauge was installed on the 3,000 gallon AST tank. All contaminated debris was removed from the trench area and placed in drums for proper disposal. Disposal manifest attached. Case closed. (sr)

**Caller Remarks:**

Unknown where it is. Somewhere between Yonkers and Manhattan. Does go under the Harlem River. 600-700 Gallons of dielectric fluid in Manhole #62566 at 137th and Broadway in Manhattan.

**DEC Investigator Remarks:**

10/26/13- Spoke to ERT desk. Fluid missing; still investigating where lost. Will update when source/location determined.

Con Ed later reported location was in Region 2, Manhattan.

NFA DT

1/31/14 - Austin - Con Ed submitted final EMIS and I found spill assigned to Region 3 - Had spill transferred to Region 2 for review - 700 gal. dielectric fluid feeder leak found and contained in freeze pit at Broadway and W. 137th St. Manhattan - Con Ed contained and cleaned up the spill; leak found and repaired on 5 inch bypass line - See eDocs files for further information - Spill closed - end

Caller Remarks:

FOUND SPILL AS THEY WERE EXCAVATING FOR GAS SERVICE THEY WILL BE PUTTING CONTAMINATED SOIL IN CONTAINERS AND SHIPPING FOR ANALYSIS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE"  
 CON ED E2MIS NOTES

12/23/05. Based on ConEd report, estimated spilled was one gallon of oil contamination in the soil. No follow-up from DEC at that time. ConEd received NYSDEC Closeout approval on 11/06/2002. See file.

Analysis report indicates the presence of an oily substance similar to a light fuel oil.

Third party spill – transferred to Tibbe.

Caller Remarks:

CALLER STATES THAT THEY GOT TEST RESULTS BACK SHOWING CONTAMINATED SOIL. CLEAN UP STATUS UNK.

DEC Investigator Remarks:

04/22/09–Vought–Duty desk officer. Called and spoke to EEA Sean Martin (516)746–4400x25 cell: 347 527 3246, fax:516–746–4432 and they are working on Phase I and in course of reviewing prior documents found Phase II in 2006 done by Impact Environmental who collected six soil samples around 1000–gallon AST. 3 out of 6 soil samples had xylenes above TAGM 4046. Roux Associates then abandoned AST in May 2007 and AST was emptied and 500 gallons of oil was removed and one 55–gallon drum of sludge removed and work was performed by Brookside Environmental Services and AST was filled with inert foam and fill and vent were cut and sealed. Property was renovated. Reports will be sent to DEC Ahmed upon confirmation by owner. CSL sent with one month due date to owner:

Mr. Hal Cooke  
 HEC Real Estate Group  
 2550 Fredrick Douglas Blvd  
 New York, NY 10030  
 Ph: 212–234–4358

06/10/09–HRAHMED–Started reviewing

Phase I Environmental Site Assessment Report prepared by EEA on 11/21/2006:

As per Ms. Adrienne Collier of HBC Real estate group, the building will undergo significant renovations in the near future. It's a 5–story brick walk–up residential apartment building with a basement, ground floor store front spaces, and an attached 1–story structure used for commercial/retail occupancy. An oil–fired heating system is located in the basement. A fillport and vent were identified outside of the building along W 136 St. A strong petroleum odor was noticed in the basement. Odor was traced to a dirt–filled basement crawl space located in the vicinity of the fillport and vent. There was no record of fuel oil tank in NYC FD database. EEA recommended a Phase II investigation should be performed prior to any building renovation projects to determine the classification of any tank and the extent of contamination that was obvious.

Phase II Environmental Investigation Report by Impact Environmental on Nov 21, 2006:

10/4/09–Vought–Received inquiry from DEC Ahmed as to further action for site as recent sub–slab soil vapor samples show up to 108ug/m<sup>3</sup> PCE and indoor air shows up to 6.5ug/m<sup>3</sup> PCE. Vought discussed site with DEC O'Connell and site will be made a potential P–Site and file review need to aid in site classification. As per notes above, Site is a 5–story brick walk–up residential apartment building with a basement, ground floor store front spaces, and an attached 1–story structure used for commercial/retail occupancy. Vought recommended to DEC Ahmed that consultants sample for full list VOCs and install vapor barrier/SSD as owner is wishing to redevelop soon.

7/19/10–HRAHMED–Received Subslab vapor intrusion investigation. As per the report, in SV2 location the PCE level was 108.56 ug/m<sup>3</sup>. As per the NYS DOH guidance further monitoring is required. Scheduled a site visit.

8/18/10–HRAHMED–Did a site visit. They removed the aboveground tank. Ask them to do two soil boring in two location at least five foot below surface.

1/13/11–HRAHMED–Received Phase II Environmental Subsurface Investigation Report. As per the report, A total of two (2) soil test borings were advanced on the subject property, in the area of a former 1,000 gallon aboveground fuel–oil storage tank. A total of two (2) soil samples were collected from these borings. Soil obtained from borings consisted of fill material ranging from 0–2 feet below grade in

boring B–1 and 0–4 feet below grade in boring B–2. Beneath this fill layer, lays a brown, medium, silty sand with traces of fine gravel. No VOCs or SVOCs were found at levels exceeding NYSDEC TAGM guidelines in boring B–1; however, fifteen (15) VOCs, and two (2) SVOCs [Bis(2–ethylhexyl)phthalate and Pyrene], were detected at levels above laboratory method detection limits. Furthermore, soil obtained from the 4–5 foot section of boring B–1, contained a strong fuel–oil odor and readings as high as 220 parts per million (ppm) on the PID. No VOCs or SVOCs were found at levels exceeding NYSDEC TAGM guidelines in boring B–2; however, one VOC (Methylene Chloride) and one SVOC (Pyrene) were detected at levels exceeding laboratory method detection limits. In addition, a fuel oil odor and PID readings between 10–15 ppm, were obtained on soil from boring B–2.

It should be noted that no chlorinated solvents were detected in soil samples obtained during this Phase II Subsurface Investigation. In B1 location xylene was detected at 600 ppd which is above CP51 guidance value. No PCE or TCE was detected.

3/1/11–HRAHMED–Discussed the results with RSE Austin. Based on the discussion, Department sent a requirement to take subslab, indoor, ambient vapor samples in SV2 location to evaluate the current condition.

5/5/11–HRAHMED–Received additional round of subslab, indoor and ambient air sample results for SV2 location. As per the report, TCE concentration was 16.96 ug/m<sup>3</sup> in subslab and PCE was not detected.

5/17/11–HRAHMED–Discussed the results with RSE Austin. Based upon the discussion, with only one VOC component (Xylene 600 ppd) over CP51 value and comparing the air sampling results with NYS DOH decision matrix table (which suggests no further action), this case is closable.

5/24/11–HRAHMED–Discussed the results with Remediation Section A Chief Jane O’Connell. As per her, if petroleum contamination is cleaned up for the case the case can be closed. As ask to send the investigation reports to her to see if any further action is required for vapor intrusion.

6/14/11–HRAHMED–Based upon the document review, this case is closed.

COMPLETE E–DOCS FILE REVIEW BY INTERN IBEH ON 8/25/11.

11/21/06. Letter from EEA Inc (Lucchese) to Ms. Adrienne Collier (HBC Real Estate Group 2471 Frederick Douglass Boulevard, Suite 6, New York 10027)attaching Phase I ESA. No on–site potable water supply wells were noted within the basement of the building or on exterior portions of the property. No monitoring wells were observed on exterior portions of the property, or imbedded within adjacent sidewalk areas at the time of site visit. Sanborn Fire Insurance Maps depict building as a 5–story residential apartment building with a basement, ground floor storefronts, and an attached 1–story structure used for commercial/retail occupancy. A fillport and vent, normally associated with the presence of fuel oil storage tanks, were identified outside near the northeast corner of the subject building along West 136th Street but no storage tanks noted in the area. Records searches returned no RCRA TSD sites, hazardous waste generators or other toxic release records for the property. 258 NYSDEC spill incidents were identified within an approximate 1/2–mile radius of the property, of which 219 have been "closed" by NYSDEC. The remaining 39 spill incidents were listed as "active" within Spills Log database.

11/21/06. Letter from Impact Environmental to Ms. Collier re: Phase II ESA. That Impact installed 6 soil probes on 10/20/06, SP1–SP6 and determined that the tank onsite was an AST enclosed in an aboveground tank vault within building basement. SP1–SP4 were installedproximal to the location of the existing AST running from east to west along southern side of tank. SP5 and SP6 were installed in the remaining portion of the nasement floor. Hydrocarbons were detected in all soil samples collected from the probes and one sample from each of the six probes was sent for analysis.

6/11/07. Letter from Roux Associates ot Ms. Collier re: AST Closure. That Roux has completed the closure of a 1,000–gallon heating oil AST at the property and that bassed on the lack of soil staining or free product in soil samples, as well as lack of SVOCs and only 1 VOC above regulatory criteria, it did not appear that AST had leaked or impacted soil to the extent requiring remediation. Approximately 500 gallons of oil ad one 55–gallon drum of sludge were removed from the tank on 5/14/07 by Brookside Environmental Services. The tank was then filled with inert foam with the fill and vent ports cut and sealed. Tank was also cleaned and sprayed to eliminate residual odor.

4/22/09. Letter from DEC Ahmed to Hal Cooke of address below:

HEC Real Estate Group  
2550 Fredrick Douglas Blvd  
New York, NY 10030  
Ph: 212–234–4358

That on date above, the DEC was notified of a petroleum release on the above–mentioned address and Mr. Cooke was required to "promptly clean up and remove the discharge". Also, a letter report was to be submitted to the department no latter than one month from the date of this letter.

4/27/09. Phase I ESA Report from EEA Inc to Hal Cooke for 3 properties viz:

- a) 2479 Frederick Douglass Blvd, Blk 1958, Lot 32 (ESA-08298)
- b) 270 W136th Str, Blk 1941, Lot 61 (ESA-08299)
- c) 2014-2016 Adam Clayton Powell Blvd, Blk 1926, Lots 33&34 (ESA- 08300).

Previous investigations conducted were found and are summarised as thus. A previous Phase I ESA of 8/2006 performed by EEA on the subject property was discovered and it noted that a fillport and vent line, indicative of an onsite fuel oil tank, were found outside the subject building on the sidewalk fronting 136th street. Petroleum odor was noted in building basement indicative of a leak but the tank could not be located during the inspection. As a result, a Phase II was recommended to locate tank and determine potential contamination. An 11/2006 Phase II ESA was conducted and the tank was located and identified as an AST fuel oil tank containing 1,000 gallons of oil. 6 soil samples were taken around the AST and 3 of these samples showed elevated Xylene concentrations above state guidelines thus further action was recommended.

Subject property is ~2,490ft<sup>2</sup>, is relatively flat and is improved with a five-storey residential apartment building with a basement. Subject building has 2 apartment units, 6 of which were occupied at the time. According to historical information, subject property was constructed pre-1909 as residential apartment building with a basement and commercial storefront. No evidence for recognized environmental conditions that could have affected subsurface soils. No fillports or vent lines indicative of storage tanks were found within the building or on exterior portions of it as of EEA's 11/2008 site visit and it was concluded that the storage tank was likely removed from the basement during total gut rehabilitation of the site. An NYC FD search request confirmed the tank-1,080-gallon fuel oil tank- as being sealed and removed from the property. A search in the DEC's Inactive Hazardous Waste Disposal Site Registry lists 1 property within a 1 mile radius of subject property: New York City Public School No. 141, 2350 Fifth Avenue, New York(NYSDEC Facility ID 231004). Subject property was not identified in this Registry. Spills log did not identify property but 302 spill incidents were identified within a half-mile radius of subject property.

10/9/09. Letter from DEC Ahmed to Hal Cooke. Stating that the Department requires delineation of soil and groundwater contamination via determination of groundwater flow direction, submission of surrounding area site map and former/current locations of all USTs, remote fill ports and dispenser islands and performance of indoor air monitoring.

01/2011. Phase II Environmental Subsurface Investigation prepared for NY Residential Works, 347 Lenox Ave, NY, 10027 by EEA Inc. 2 soil test borings were advanced in the area of the former AST and 2 samples were collected using a hand auger as basement area was inaccessible to Geoprobe and drill rigs. PID screenings conducted and samples taken from depth exhibiting the highest PID reading or 5ft bgs. No VOCs or SVOCs were found at levels exceeding NYSDEC TAGM guidelines in boring B-1; however, 15 VOCs, and 2 SVOCs [Bis(2-ethylhexyl)phthalate and Pyrene], were detected at levels above laboratory method detection limits. Furthermore, soil obtained from the 4-5 foot section of boring B-1, contained a strong fuel-oil odor and readings as high as 220 parts per million (ppm) on the PID. No VOCs or SVOCs were found at levels exceeding NYSDEC TAGM guidelines in boring B-2; however, one VOC (Methylene Chloride) and one SVOC (Pyrene) were detected at levels exceeding laboratory method detection limits. In addition, a fuel oil odor and PID readings between 10-15 ppm, were obtained on soil from boring B-2. No chlorinated solvents detected at this point.

04/2011. Phase II Soil Vapor Intrusion Monitoring Program prepared for NY Residential Works by EEA Inc.- Previous soil vapor intrusion investigation conducted in June 2010 (by EEA) found PCE concentrations in subslab that required further monitoring in sample location-SV-2. DEC contacted property owner for another round of soil vapor intrusion investigation as well as another sample from SV-2. Fuel odor present upon entrance to basement. 1 indoor air, 1 outdoor air and 1 sub-slab soil vapor (SV-2) sample were collected from property basement. Results- VOCs detected in sub-slab, indoor and outdoor air samples at concentrations

exceeding method detection limits. TCE concentrations were below lab detection limits for sub-slab, indoor and outdoor air samples; PCE concentrations were 16.963ugm-3 for sub-slab vapor sample and below detection limits for indoor and outdoor air and according to NYSDOH Indoor Air Matrix 2, "no further action" required for PCE.

DEC requires:

1) Clarification of 4/2011 Site Map for soil vapor. SV-1 put in legend and in Table of Analytical Results but SV-2 indicated inside storage room on Map.

 E2MIS 146512

R . Allen # 10800 of manhattan fod reported to J.Moran 01182 that 05:15 hrs at the location of M57772 @ n/w/c W 135 St & 12 Ave working on feeder 2m28 found approx 1 gal of unknown substance with 400 gallons of water. The source and the cause are unknown.

There was no fire or smoke involved. There were no injuries related to the spill. Weather conditions did not contribute to the hazard of the spill. There is no evidence of release to sewer or waterways. There is standing water but no visual movement. Spill tag # 33499 was installed. Two liquid samples were taken one for PCB and one for oil I.D. on a priority E basis. Chain of custody form # BB06962 was used. The spill is contained.

Account# f3243 is being used. Cleanup pending Chem. Lab results since it is an unknown substance.

C.I.G A.Morris #85791 notified @ 07:02

Caller Remarks:

2 PINTS OF MATERIAL ON A GALLON OF WATER. MATERIAL IS ALL CONTAINED IN A MANHOLE # 24716. SOURCE IS BELIEVED TO BE FROM AN AUTOBODY SHOP. CON ED #156621

DEC Investigator Remarks:

e2mis 156621

Sean Henihan #16850, #9, reported at 15:57 hrs. that he found approx. 2 pints of possible antifreeze and 1 gallon of water in service box SB24716 located in front 1592 Amsterdam Ave & West 138th Street. The source of the antifreeze is an Auto Body Shop adjacent to the service box and the cause is unknown. This is a possible third party spill. There was no fire involved, but there was smoke involved due to the burnouts in the structure. There was no sewer or waterway affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. No private property was affected. There is no oil filled equipment in the structure, no sewer connection, no concrete sump, no visual water movement, no sump pump and no substantial cracks. There is standing water but no movement of the water. Liquid samples will be taken on a priority "E" basis from the spill by Sean Henihan #16850 for PCB and ID for antifreeze. No initial cleanup action was taken. Cleanup is pending lab results since a vendor may have to perform the cleanup.

Update: 12/16/04 @ 17:33 hrs. Sean Henihan #16850 reported at 17:30 hrs. that he installed Environmental Spill Tag #00663 and issued Chain of Custody #AA21643 for the samples.

Dec. 17. 2004

Lab Sequence Number: 04-10489-001 MATRIX: LIQUID GRAB Antifreeze Contamination Present

Update: 2/15/05

Manhattan Environmental Desk made arrangements with Allstate PowerVac to clean this structure on 2/3/05.

>>>>INSERT 2/15/05 >>>>>>>>

Eddie Cox #18594, Operating Supervisor UG North, reported at 09:30 hrs. on 2/3/05 that this service box is in front of an autoparts store. He stated that this is the possible source of the antifreeze.

Update: 2/15/05 @ 16:29 hrs.

Eddie Cox #18594, Oper. Supervisor UG North, reported at 11:38 hrs. on 2/3/05 that the cleanup was completed. No solids were

removed. Approx. 100 gallons of water and antifreeze mixed was removed by the Vactor truck from Allstate PowerVac. The structure was double washed with Citrus Clean. The cleanup was performed by Allstate PowerVac. Environmental tag #00663 was removed. The source of the spill was identified as possibly the autoparts store in front of the service box. The cleanup was completed at 10:45 hours on 2/3/05.

**Caller Remarks:**

contaminated soil found at old gas station

**DEC Investigator Remarks:**

Sangesland spoke to Pete Chen of city DEP. He said they were called to the site by complaints of petroleum odor. Area was fenced off, but there was a large puddle of oil in the center of the lot. Property owner is MOTIVA ENTERPRISES LLC Motiva Environmental manager: John Sexton 713-241-1507 Cross Ref PBS#2-190810

6/3/2010 Sangesland heard back from John Sexton at Motiva(Shell). He said they pulled tanks from the site within the last year and had an argument with the property owner. They believe someone opened the gates and dumped petroleum on the surface to create a new problem at the site. Motiva has hired a company to come in and dig out the contaminated soil. New end point samples were taken and a complete new closure report will be submitted when the results come back.  
 Site contact for Motiva is: Robe Rule 540-943-8468

07/02/10-Hiralkumar Patel. found case assigned to me. letter has not been sent out yet.

07/06/10-Hiralkumar Patel.

2:03 PM:- spoke with Mr. Rule. he mentioned that report was submitted to DEC Piper under spill #: 0702470.  
 received report from DEC Piper. surface spill was found in May. site developer hired contractor to remove soil. excavated 8 ft by 8 ft area to 3 ft depth. collected two endpoint samples. no contamination in endpoint samples.

based on submitted report, case closed.

\*\*refer to spill #: 0702470.\*\*

Based on the information provided by the consultant Charles Sosik (Environmental Business Consultants) this spill was reopened.

Caller Remarks:

DURING TANK WORK FOUND CONTAMINATED SOIL: UNTOP OF UNLEADED REGULAR TANK:

---

DEC Investigator Remarks:

DEC Piper spoke W. Dawn Vought. They are currently relining and retesting the tank and came accross cont. soil. Piper sent CSL.

8/3/07 – Austin – Transferred from Vought to Piper for further review and action – end

10/26/07– DEC Piper received and reviewed closure request. Since the soils uncovered were only pea gravel no soil sample was submitted. GES proposed to collect gw samples from the three existing mw's. Though there were slight exceedances in a few VOC's, Motiva under CO, will be removing the tank within 27 months. This spill closed. See e-docs if warranted.

5/10/2010– DECPiper received and reviewed Tank Abandonment Assessment Report. According of the report, GES abandoned the three (3) 4,000 gallon ust's in place and removed product piping and dispensers. Soil sampling of the the propduct lines revealed results below RSCO's. Additionally, the 280 gal waste oil AST and 280 gal fuel oil AST were removed. Investigation incomplete as no samples were collected from tank field. DEC Piper spoke with DEC Caruso regarding additional requirements. Report in edocs.

5/11/2010– Spill 1001594 was called into the hotline. Potential buyer performed geotechnical work on site. Stock pile of soil was left containing petroleum odor. Shell was notified. GES was contracted to remove stockpile, digout any additional contamiation, and collect endpoint samples. Endpoints below TAGM, 1001594 spill closed. See edocs.

7/23/2010– DECPiper received SIR dated 7/21/10. Three borings were conducted around former tank field. MW-6, SB-7, MW-8. As per soil analytical all VOC's below TAGM and all SVOC's below TAGM EXCEPT for benzo(a)anthracene and benzo(b)fluoranthene at MW-6. Existing wells 1-5 and newly installed wells 6 & 8 were sampled. VOC's were non detect in MW 1-4, 6 & 8. MW-5 had total VOC at 80 ppb. Isopropyl Benzene- 25ppb, 1,3,5 trimethylbenzene- 24ppb, n-propylbenzene- 25ppb, sec-Butylbenzene- 6ppb. SVOC's were non detect at all well locations. Based on work to date and analytical, nfa is granted. Spill remains closed. see edocs if warranted.

9/2010– DECPiper received call from tennant (Samantha Deutch- 646-732-9717) of neighboring property. She indicated that gasoline was present in the building. I responded to site. I inspected the basement and saw no indication of gasoline. PID readings were 0.0 ppm. I spoke with caller and she indicated to me it was in the stairwell on the first floor. I inspected area and found the area to be above grade. The staining on the painted brick surface appears to be oxidation of some sort and not benzene as indicated by caller. Case remains closed.

**Caller Remarks:**

CONTAMINATED SOIL CAME BACK:

**DEC Investigator Remarks:**

contaminated soil letter (csl) sent 1/28/2005 to Motiva

3/23/05 – reassigned to Randy Austin per today meeting. HEating oil spill only. KST

Reassigned to Ed Rossan temporarily, until decsion made about permanent reassignment. no action will be taken until that is done

2/2/06 Reassigned from Rossan to Foley. Reviewed UST closure report for one 550gal heating oil tank(2/10/05, Northeast Environmental Solutions) and followup groundwater sampling data(3/31/05, NES). Elevated SVOCs were detected in post-excavation soil samples. North wall had highest concentrations but all were above RSCOs for at least seven compounds.

Groundwater samples were collected in 1/05 from existing MWs. No impacts to groundwater were detected. Contaminated soils remain in place around the former 550gal heating oil tank located east of the on-site building.

Caller Remarks:

Caller reports a spill in the basement of the apt building. Unknown cause at this time. Caller had no further information.

DEC Investigator Remarks:

12/14/05-Sharif// I responded to the site this morning after I received the call.About 200 gallons #6 oil spilled on the boiler room floor due to an unclosed valve that was kept open by the super after he had cleaned the filter on oil line to the boiler. Northeast Environmental,Joe Ostrowski,914-777-1930) has been hired to clean up the spill and do remediation if it has impacted the soil.The tank is 5000 gallons capacity UST and spill has not impacted the tank room.  
 03/21/06 Sharif Rahman- Joe Ostrowski no longer works for North East. I spoke with Dwayne Monaco,914-777-1930 of North East- he is looking for the files and will get back to DEC soon.  
 03/28/06 Sharif Rahman- Rec'd a clean up statement from North East Environmental.Documents are not sufficient to close out the case. I spoke with Mr. Costanja and asked to provide DEC subsurface investigation report in the boiler room. A letter was sent to Chestnut Holding  
 5676 Riverdale Avenue-Suite # 307  
 Bronx, NY 10471  
 Attn: Jerry Costanja,Fax:(718)543-8600.  
 04/20/06 Sharif Rahman- Rec'd invoice, bill and photographs of the cleaned site.NFA required.

Caller Remarks:

2 qts on 150 gals of water - sample taken for pcb & id - clean up pending lab results  
 con ed #134964 - no private property - no fire or smoke

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

CON ED E2MIS REPORT 3-01-01

Approx. 2qts. of unknown oil and approx. 150 gals. of water found in MH 44873. Source and cause unknown. There was standing water but no visual movement. Conduit plate verified no sewer connection. Samples for PCB & ID were taken. Tried to diaper the oil using oil absorbent pads but there was too much oil.

LSN 01-00045

Arcolor none;PCb ,1.00ppm

Analysis indicates the sample is similar to lubricating fluid.

Cleanup completed at 18:00 on 1-04-01

Type: <50

Solid Amount: 4 barrels PPE & solid waste

Double washed with degreaser, scrubbed & debris taken out, tanker took about 3900 gals. of water & about 2gals. of oil from an unknown source.

Spill source : unknown

**CLOSED STATUS HAZARDOUS SPILLS – MISC. SPILL CAUSES – EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM AND STORMS – WITHIN 1/2 MILE SEARCH RADIUS.**  
 All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: \* – Compass directions can vary substantially for sites located very close to the subject property address.

Caller Remarks:

BROKEN LINE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE"

01/31/06: See also 9904206 & 9905017. Three spills called in about leaking hydraulic lift systems. The depot had three lifts with resevoir tanks; each resevoir tank was contained in a concrete vault and each lift had a concrete pit under it. All piping associated with these lifts were contained in the vault or the pits. NYCT had no information about this secific spills. A site visit was performed on 07/26/05. Product, water and sediment was discovered in the pits and the vaults. NYCT was directed to clean the pits and the vaults and to determine if they were completely concrete. This work was performed in September and October of 2005. Revisited the site on 12/28/05. Pits and vaults were cleaned and the concrete appeared to be competent.

| #2 FUEL OIL      | PETROLEUM      | 0                | GALLONS | 0                  | GALLONS | SEWER                |

Caller Remarks:

DELIVERY WAS MADE TO THE WRONG TANK WITHIN THE DEPOT. POSSIBLY 1 HUNDRED GALLONS OR MORE. ENTERED THE CITY SEWER SYSTEM. DELAY IN THE SPILL REPORTING DUE TO NO CONFIRMATION OF THE SPILL UNTIL NOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIBBE"  
 2/22/99 mmm:FAXED TO ECS AND SPOKE WITH PRAVIN PATEL. RAY- NYC TRANSIT CONTRACTOR ON BOARD ALLSTATE. LESS THAN 100 GLS. SOME INTO OWS, CONTRACTOR ARRIVED 2 HOURS AGO, FILLED 4k AST- OVERFILLED- PRODUCT WENT INTO CONTAINMENT AREA, ONTO FLOOR AND INTO THROUGH.

2/22/99 mmm: ON SITE AT 16:30 INTERVIEWED MIKE NELSON, MTA.

CASTLE OIL CAME TO SITE ON 2/20 WITH FULL LOAD TO DELIVER. TA LINE SUPERVISOR AT THE TIME DIRECTED CASTLE TO HOOK UP AND DELIVER TO 4,000 GALLON AERO AST. FILL PORT LOCATED NEXT TO DIESEL ASTS AND TANKS WERE LOCATED NEXT TO THE BUS WASH AREA IN THE CENTER REAR PORTION OF THE GARAGE. ACCORDING TO A COPY OF CASTLE DELIVERY TICKET # 38996 DATED 2/20/99, TRUCK #105, DRIVER JM, DELIVERED 5,557 GALLONS OF #4 FUEL OIL TO THE 4,000 GALLON AST. TA LINE SUPERVISOR THOUGHT THAT THE AST STILL HAD A CONNECTION TO A 15,000 GALLON FUEL OIL TANK IN THE BASEMENT OF THE FACILITY. THE LINE WAS DISCONNECTED WHEN A NEW FILL FOR THE 15,000 GALLON TANK WAS PUT INTO SERVICE. AS A RESULT, THE 4,000 GALLON TANK WAS OVERFILLED BY 1557 GALLONS. TA LINE SUPERVISOR CHECKED TANK IN BASEMENT AND DID NOT SEE ANY RISE IN OIL LEVEL. MTA CONTROL CENTER CONTACTED AT 14:00 HOURS ON 2/20 OF A FIVE GALLON RELEASE. TANK HAD 4" OERVHEAD FILL LINE AND 2" VENT LINE, INDICATING THAT TANK MAY HAVE BEEN PRESSURIZED WHEN OVERFILLED. SEAMS ON TANK STAINED. PRIMARY TANK HAD SIPHON CONNECTION TO SECONDARY CONTAINMENT FROM END MANWAY. SIPHON MOVED MOST OF OVERFILL INTO SECONDARY CONTAINMENT HOWEVER, OIL WAS SEEPING OUT FROM UNDER SECONDARY CONTAINMENT, WHICH MAY HAVE STARTED LEAKING DUE TO PRESSURIZATION DURING OVERFILL. SEEPAGE MADE ITS WAY INTO FLOORDRAINS BUT WAS CONTAINED WITH SORBENT SAUSAGE (PIGS). TA IN PROCESS OF DRAINING OIL FROM SECONDARY CONTAINMENT AND PRIMARY TANK AND PLACING IT INTO 15,000 GALLON TANK IN BASEMENT. ALLSTATE

WILL CONTINUE CLEANUP OF DRAINAGE SYSTEM TOMORROW. MTA TOLD THAT THE TANK MUST BE TESTED AND RECERTIFIED IF THEY WISH TO CONTINUE TO USE IT. GAUGES ON THE #4 OIL AST, AND THE 2x4,000 GALLON DIESEL TANKS ARE ALL BROKEN, AND TANKS ARE GAUGED BY USING STICK READINGS.

\*\*\*\*\* LATE NOTIFICATION AND ERRORS IN REPORTING \*\*\*\*\*

11/3/03 – AUSTIN – REASSIGNED FROM MULQUEEN TO NYCTA MONITOR (TIBBE) – END

According to NYCT, Allstate completed the cleanup. Tank was subsequently taken out of service and eventually removed on 03/2001.

Caller Remarks:

defective gauge

DEC Investigator Remarks:

04/07/06 Sharif Rahman- I spoke to Millie Lopez,(718)579-3413 and she said spill occurred due to faulty gauge. Approx. 7 gallons came out of the top of the tank and approx. 8 gallons spilled on side walk near ventline. Castle oil crews on site, doing clean up.  
 04/20/06 Sharif Rahman- I spoke with Ryeben,(212)866-7816 and he confirmed me they cleaned the spill very good. NFA required.

ruptured line on equipment caused 50 gal of oil to leak--some material was confined to a platform -- but some did get into the sewer system

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIBBE" TRANSFERED FROM COMENALE TO TIBBE ON 4/11/01.

11/30/04 -- A wall hose ruptured spilling 50 gallons of motor oil on the depot floor and street. Area contained by Depot maintenance. NYCT has no further information about this spill.

Caller Remarks:

CALLER STATES THAT DUE TO AN OVERFILL ABOUT 5 GALLONS SPILLED TO A TANK ROOM WHICH IS VAULTED AND ENCASED WITH CINDERBLOCKS. PRODUCT IS SEEPING UNDER THE BLOCKS AND INTO THE BASEMENT. CLEAN UP PENDING.

DEC Investigator Remarks:

Sangesland spoke to Millie at Castle. She said the tank overflowed during a fill and oil went down the side of the tank behind the cinderblock "wrap". Oil is coming out on the basement floor. Castle is working with the building property manager to repair/replace the gaskets at the top of the tank and open up the cinderblock to finish the cleanup. Castle needs to submit documentation on repairs/cleanup.

06/09/09–Vought–Site visit by Vought. Vought met owners representative (Andy cell:917–731–3475 office:212–925–4840). Two spills occurred at site (one during this spill report date) and another approximately one month ago as per Andy and super (Mr. De LaCruz).

This spill: 0902648. Spill out of manyway of top of tank (tank is a 1500–gallon)cement wrapped tank with no weepholes. Contact between concrete grave and wall pulled away as well as contact between grave and floor and no signs of seepage out of tank grave indicating that this spill requires no further action.

Old Spill: Approximately one month ago: As per onsite super (De LaCruz) spill occurred one month ago. Oil company was Castle Oil. De LaCruz indicated that spill was overfill of onsite (1500–gallon) UST and resulting spill came out of vent pipe and impacted window box to basement super residence. Window box covered with debris so unsure if underlain by concrete or soil. Resulting spill came through basement window and also seeped through foundation wall under window and ran through basement. As per De LaCruz the driver at time of spill indicated that 700–gallons of #2 fuel was delivered however later when he spoke to Castle Office they indicated that 200 gallons was delivered (unknown spill amount). Impacted window box and foundation wall is located in the tankroom which is also used as kitchen (has refrigerator and stove) by super and his family (including 4 year old son). Vought observed weathered fuel oil seeping through wall, impacted concrete under lineoleum floor and strong fuel vapors. DeLaCruz indicated that at time of spill, driver and crew cleaned basement with absorbent pads however did not powerwash floor (suggesting that they were fully aware of spill and never reported it to DEC. Vought later spoke with Castle Oil (Rob Hill) and required below. Hill noted that on 3/31 approximately 700–gallons was delivered by Crystal Transportation (sub of Castle Oil). Hill would send someone out to site and return call to Rahman.

DEC possibly requires CSL with (to be determined by DEC Rahman):

- 1)submission of old delivery receipt
- 2)PBS registration of UST
- 3)removal of contaminated debris and possibly soil from fill pipe in windowbox (possible endpoint collection)
- 4)possible enforcement for failure to report
- 5)sealing of basement foundation wall
- 6)removal of lineoleum from basement floor and subsequent powerwash

06/11/09 Rec'd call from Rob Hill of Castle Oil. Rob Hill inspected the site and indicated that Castle Oil will do the clean up/power wash and epoxy painting of the wall next week.

Spill clean up letter was sent to

Morningside Realty Associate  
507 W 186th Street#A4  
New York, NY 10033

Castle Oil

290 Locust Avenue  
Bronx, NY 10454  
Attn: Rob Hill

I called Rob Hill to tell him that the letter went out today and they are required to clean up the spill immediately. Rob indicated that the bed in the basement has been removed and nobody is living in the basement now.(sr)

09/04/09 No response rec'd from the management. Spoke with Erle Thomas from Morningside Realty Associate and faxed him over the csl@(212)927-0698. He told me that he would reply to our letter in one week.(sr)

11/25/09 Pictures of cleaned site in edocs. Castle Oil responded to clean up the spill. Floor and wall was pressure washed. Stained tiles were also removed. The grated area underneath the vent is free of product and oil contaminated debris was removed. Case closed.(sr)

Caller Remarks:

LEAK IN LINE CAUSED SPILL.CONTAINED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIPPLE"

2/28/01 AFTER EXTENSIVE DISCUSSIONS WITH REPRESENTATIVES FROM BOTH THE CONTRACTOR, THE SCHOOL MAINTENANCE PERSONS AS WELL AS SCHOOL BOILER PERSONNEL. MR AMBROSE, THE PERSON IN CHARGE OF THE EVERYDAY BOILER FUNCTION FOR THE NYC SCHOOL SYSTEM, SAID THAT HIS PERSONNEL DID THE ACTUAL CUTTING OF THE SEVERED SUCTION LINE THAT CONSTITUTED THE HOLE IN THE TANK THE OIL SPILL FLOWED FROM.

THIS SPILL WAS CAUSED BY A SERIES OF MISCOMMUNICATIONS WITHIN THE NYC SCHOOL SYSTEM. THE 7500 GAL TANK (#2) HAD NOT BEEN USED FOR APPROXIMATELY THREE YEARS, IT HAD NEVER BEEN REGISTERED AS BEING OUT OF SERVICE, OR RE-REGISTERED AS BEING PUT BACK INTO SERVICE. THE PETROMETERS FOR BOTH TANKS #1 AND #2 DO NOT FUNCTION PROPERLY.

PETROLEUM TANK CLEANERS INC. WAS HIRED BY THE BOARD OF EDUCATION TO CLEAN THE OVERFILL. THEY HAVE BEEN INSTRUCTED TO VAC UP THE PRODUCT AND POWER WASH THE TANK ROOM BEFORE THE STUDENTS RETRN THURSDAY. IF THE SMELL PERSISTS, THEY ARE TO EPOXY SEAL THE TANK ROOM.

THE SCHOOL MUST COMPLETE THE FOLLOWING:

1. CAP THE LINE, AND COMPLETE THE PLUMBING WORK
2. FIX OR REPLACE THE PETROMETERS
3. TEST THE WHISTLE

03/08/01 Spoke with Frank CARDELLO, THE LINE WAS CAPPED, THE CLEANUP AND EPOXY COATING HAS BEEN COMPLETED.

THERE IS AN ORDER FOR REPAIR OR REPLACEMENT OF THE PETROMETERS

03/27/01 SPOKE WITH FRANK CARDELLO, THE PETROMETERS HAVE BEEN REPAIRED AND THE PLUMBING WORK HAS BEEN COMPLETED

| HYDRAULIC OIL    | PETROLEUM      | 100.00           | GALLONS | 0.00               | GALLONS | SOIL                 |

**Caller Remarks:**

Caller advised aprx 55gal of oil spilled onto soil due to a hose bursting from equipment. Clean up is pending.

-----  
02/10/2014 @ 16:08 – Caller called back to change time and amount spilled from 55 to 100 gals.

**DEC Investigator Remarks:**

1/10/14: Mahat

T/C : DEC Mahat contacted Mr. Jeff Passman (Brinkerhoff Environmental @ 732.223.2225)inquiring more information about the spill. He notified DEC that around 100 gallon on hydraulic fluid was spill on the ground. It was mostly contained on the concrete and soil.

1/11/14: Mahat

T/C : Mr. Tyler Martz(Field Supervisor @732.425.7238)confirmed that excavation of the site is ongoing. Mr. Martz has taken before and after pictures. He will proves pictures with narrative cleanup process to DEC.

1/12/14: Mahat

Mr. Passman supplied pictures and narrative cleanup/excavation procedure. As per our last phonce conversation with Mr. Passman, he will provide analytical report (EPA 8270) from each sample those are collected from three excavations. He will also provide manifest of the contamination soils from excavations.

Pictures are uploaded on edcos.

3/11/14: Mahat

E/C: Mr. Passman provided a analytical report on the sample he collected from the site including manifest. The report is uploaded on edcos. Based on the report and manifest , further investigation is not required by the department.

\*\* Case Closed \*\*

DEC Requires :

1. Pictures
2. Narrative clean up process.
3. Manifest

Caller Remarks:

A TRANSMISSION LINE IS LEAKING AT THE RATE OF 15 GALLONS OER HOUR SOMEWHERE BETWEEN TUCKAHO RD IN YONKERS AND MANHATTEN – LEAK

HAS NOT BEEN FOUND YET

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

2/13/97: John Hegerty – believed to be in area of 135th St in Manhattan based on tracer searching.

2/19/97: John Hegerty – still looking. Tracer was unsuccessful. Now on 3rd freeze. Loss of 1000 to 1200 gallons so far.

2/20/97: J. Hegerty – Con Ed said leaked at 15 gph for 3 days, then down to 10 gph (3 x 24 x 15) + (5.25 x 24 x 10) = 2340 gallons estimate. John said he would do inventory today to confirm estimate.

2/20/97, 1530 hrs: Ed Kalinowski – in charge of corrosion group. Inspecting pipe north of leak. Jerry Matterazzo – in charge of pipe repair and oil removal. MEG on scene – vac truck, supply truck. Jerry M. said only a sheen of oil in adjacent manhole. Dirt in excavation looks fairly dry. Sal from MEG (supervising MEG workers). About 20 yards of soil/debris removed from 2 excavations and debris from manhole. Excavation around leak is ~9' x 7' x 8–10' deep.

Corrosion team was inspecting pipe north of leak. Inspector said it was in bad shape and a "future leak". Ed K. said that portion of the pipe would be repaired with a barrel. Acc'd to Ed K., leak occurred where corrosion resistant coating was lifting from the pipe and water got underneath. Pipe runs adjacent to elevated train.

11/17/04: APPENDIX B SITE 69.

~~~~~  
e2mis no. 104113:

11-FEB-1997 11:00:00 SHIFTY MGR GIANGRANDE #99751 REPORT LEAK ON FDR M52. LOCATION OF LEAK UNKNOWN, APPROX 350 GAL LOSS TO DATE; 15 GAL HR . SHIFT SUP HEGARTY #97964 CONTACTED, LEAK DISCOVERED THROUGH TREND ANALYSIS. ALL GROUPS ALERTED LEAK SEARCH IN PROGRESS. LEAK ON FDR BETWEEN WEST SPRAINBROOK S/S AND MAN 49ST. S/S.

12-FEB-1997 Miller Environmental Group Inc. cleaned out manhole. Manifest NO. CT F 0540894. Temp EPA NYP004005328. There was 3800 gals of water and 50 gals of oil. No leaks were found.
Results of Analysis: Aroclor: 1242 Results: 9 ppm.

Category: Known petroleum or hazardous material release with minimal potential for fire/explosion (indoors or outdoors), drinking water contamination, or releases to surface waters.

Class: Willing RP – No DEC Field Response – Corrective Action Initiated or Completed by RP or Other Agency

Spill Date	Date Cleanup Ceased	Cause of Spill	Meets Cleanup Standards		Penalty Recommended	
01/15/2008		EQUIPMENT FAILURE	NO		NO	
Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
DIELECTRIC FLUID	PETROLEUM	200.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

STARTING AT SPRAINBROK SUBSTATION GOING WEST 49TH STREET , ON FEEDER M51 AND DECLARED AND LOOKING AT THIS TIME AND LEAKING 1.5 GALLONS PER HOUR AND GOES UNDER HARLEM RIVER.

209483

DEC Investigator Remarks:

1/16/08. Anthony Buda reports that the leak rate has been recalculated to one gallon per hour and the loss recalculated to 170 gallons. PFT trucks have a hit at Bway & LaSalle St. ConEd will be probing there.

209483. see eDocs

1/17/08. Anthony Delgado reports that a clamp eight feet long was required because of the worn condition of this feeder. 333 gallons are estimated to have leaked out.

1/17/08. Mike Pillig reports that the clamp on the pipe is leaking a bit, so ConEd put a pail underneath and has a vac truck on site to empty the pail periodically. The plan is to weld a barrel over the clamp w/o bothering to stop this drip. The barrel will go on during second shift today. The clamp stopped the impact to the environment, which Mike puts at 180 gallons to the soil beneath the feeder. The hole is at the bottom. Fluid seems to have gone straight down. Mike will dig straight down in a 8 X 10 foot area with the hole of recovering it all.

1-23-08: George, Here are two pics and the updated EMIS report for the subject leak. We excavated to bedrock, sampled the sidewalls and are waiting for the results.

Michael Pillig
Transmission Operations, EHS
(718) 204-4256
(347) 386-5506

1-24-08. Mike Pillig reports ConEd has excavated to bedrock and taken samples for analysis. He says this section of feeder has been cathodically protected via impressed current with rectifiers. Nevertheless, there seems to be holidays in the coverage based on the corrosion that was found when the section between 108 St and 123 St was inspected and refurbished.

1-24-08. George,
Here are the sample results from the excavation at Broadway and Tiemann,
(M51 leak). I think you will agree that our remediation efforts were
sufficient to close the subject spill. Please review at your
convenience and let me know what you think. Thanks for your help.

Mike

2-07-08. George,
Here is a sketch of the excavation and sample locations. I am closing
the spill in our database as per Jane's last note.

-----Original Message-----

From: Jane O'Connell [mailto:jhoconne@gw.dec.state.ny.us]

Sent: Thursday, January 31, 2008 9:40 AM

To: Pillig, Michael E.

Subject: Re: FW: Incident # 209483, Broadway and Tieman – DEC 0710894

Send to George and copy me. He will close spill when he gets the sketch.

Jane H. O'Connell
 Engineering Geologist 2
 NYSDEC Div. of Environmental Remediation ph. (718) 482-4973 fax (718) 482-4043

>>> "Pillig, Michael E." <PilligM@coned.com> 01/31/08 9:37 AM >>>
 Ok. Thanks. Will get you a sketch today or tomorrow.

 Sent from my BlackBerry Wireless Device

DEC Investigator Remarks:

07/14/12– Zhune spoke to Ryan Manderbach from Langan. he said one of the hydraulic line from a crane failed and spilled 200 galons of hydraulic oil. Spill was cleanedup.

09/24/12– Ryan Manderbach from Langan Engineering sent the following email:

The spill site is located within the Columbia University Manhattanville Development. On-going development activities at the Site include infrastructure improvements, building demolition, construction of a slurry wall, and excavation of soil for below-grade construction. The proposed Site development plan calls for the excavation of the Site to an average depth of approximately 40 to 60 feet below ground surface. The spill occurred during routine excavation activities associated with the development of the Site.

Specifically, the spill occurred during excavation of one of the foundation elements (load-bearing elements) using a hydro-mill (drilling machine). A hydraulic motor on the hydro-mill blew and released approximately 50 gallons of hydraulic oil to the controlled load-bearing element excavation approximately 265 feet below the working grade. The excavation for the load-bearing element is kept open using bentonite and/or polymer slurry. Initially absorbent pads were used to soak up any floating oil at the top of slurry in the excavation. The absorbent pads were then contained in plastic bags and placed into waste oil drums for proper disposal. Standing water, slurry, and hydraulic oil at the top of the excavation was piped to a containment tank for proper off-site disposal and was replaced with clean slurry. The load-bearing element excavation is self-contained and no contact with soil or groundwater is expected to have occurred. Spill Closed.

Caller Remarks:

material contained in slurrywall container – sub surface spill – cleanup done –

DEC Investigator Remarks:

Sangesland left a voicemail with Langan asking for a writeup:
 Langan response:

The spill site is located within the Columbia University Manhattanville Development. On-going development activities at the Site include infrastructure improvements, building demolition, construction of a slurry wall, and excavation of soil for below-grade construction. The proposed Site development plan calls for the excavation of the Site to an average depth of approximately 40 to 60 feet below ground surface. The spill occurred during routine excavation activities associated with the development of the Site.

Specifically, the spill occurred during excavation of one of the slurry wall panels using a hydro-mill. A hydraulic hose running to the hydro-mill broke and released approximately 100-150 gallons of hydraulic oil (Chevron ATF DEXRON iii) to the controlled slurry wall excavation. Initially absorbent pads were used to soak up any floating oil at the top of slurry in the excavation. The absorbent pads were then contained in plastic bags and placed into waste oil drums for proper disposal. Standing water, slurry, and hydraulic oil at the top of the slurry wall was piped to a containment tank for proper off-site disposal and was

replaced with clean slurry. The slurry wall excavation is self-contained and no contact with soil or groundwater is expected to have occurred.

Please let us know if you have any questions.

Thanks

Most of spill was absorbed. Remaining impacted area is going to be excavated down to 40-60 ft depth. Based on this summary, DEC is closing this case.

Caller Remarks:

Caller reports driver overfilled an inground tank to an apt building. Spill was onto land and did get into the sewer system. Mystic Carriers will be doing the cleanup.

DEC Investigator Remarks:

Sharif Rahman responded to the site.
 02/27/06 Sharif Rahman– On 02/26/06 Sunday I responded to the site. The oilman made delivery to the wrong tank which was almost half full. Approx. 200 gallon came out of the vent line and spreaded over the parking lot and travelled down the street.Mystic was doing the clean up. I suggested to take samples from the vent area. Sewer was impanted. NYC DEP/Sanitation(Mr. Johnson,Shiel#3134) were at the site.Mystic supervisor Michael Heydweiller,(800)635–3855 x211 was coordinating the clean up.Building super is Verny Delao,(212)865–3631,(212)222–1568.
 03/16/06 Sharif Rahman– I called the building management office and spoke with Maintenance Director Mr. Matt Gengile,(212)865–3631x204,(201)726–9091. He indicated they did a pretty good clean up– he would convey DEC’s concerns regarding the report to Mystic.
 06/19/06 Sharif Rahman–EnviroTrac was retained to remove the oil contaminated soil from the vent area. End point samples were taken and analyzed to be clean.NFA required.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
APPENDIX B SITE NO. 56.

This spill records a feeder leak between the West 132 Street PURS and another substation. The leak is not on the West 132 street site.

01/28/2008: Site Investigation Report (SIR) received by NYSDEC from Con. Edison. See eDocs(MA, 03/2/08)

3/06/08: The Department sent comments letter to Con Ed in response to the SIR. Details in eDocs. (MA)

4/14/08: Langan's response letter on behalf of Con Ed has been received by the Department. Details in eDocs.(MA)

12/15/11 – met at the facility on 12/5/11 with Con Edison Remediation, Substation Operations and consultant (Langan); discussed areas from which release could have occurred, based on description, it is at one of two possible locations; see edocs for the various reports/documents which describe the spill incident and the investigation/remediation efforts that have occurred. Spill closed. (JOC)

DIELECTRIC FLUID	PETROLEUM	1000	GALLONS	0	GALLONS	

Caller Remarks:

1000 gallons of dielectric fluid spilled , no water ways or drains effected. 630 west 132 st Bronx. UPDATE 1754 5 gallons went onto soil.

DEC Investigator Remarks:

10/22/09–HRAHMED–Responded to the scene. Spill occurred due to high pressure in the feeder line M52 from the rupture disc of the substation, which is the engineered weak point. Mostly contained in the concrete moat. Some dielectric fluid seeped through the seam of metal plate and concrete into the soil. ConEd will start cleaning the moat and then start digging the contaminated soil. They will take end point samples to confirm the cleanup.

10/23/09–HRAHMED–Spoke to Chad Pfeiffer (646 235 0196). As per him they have completed initial powerwash inside the PURS unit and excavated as much as possible around the unit. All gross contamination resulting from the spill was recovered from the blue stone/soil. At that excavation depth they hit historic contamination that was previously discovered during excavation in 2007. Any additional excavation might compromise the unit foundation. They lined the excavation with plastic sheeting and absorbent pads to catch any additional oil which might seeps out of the seam on the PURS foundation. ConEd will powerwash inside the PURS unit next week to clean out any residual oil in the moats. Chad forwarded a copy of the work plan submitted to DEC in 2008 to deal with the historic contamination.

10/29/09–HRAHMED–Discussed this with Randall Austin and Jacob Krimgold. As per them since all the gross contamination resulting from the spill is cleaned, this spill case should be closed and the historic contamination should be remediated under earlier spill case 0203037 or as APENDIX B sites.

As per the discussion with Randall Austin and Jacob Krimgold, this spill is closed.

7/21/10 – Austin – Received EMIS for this project – Con Ed’s notes reflect what has been stated above – EMIS entered into eDocs – end

Caller Remarks:

spilled onto blue stone: clean up is in progress

DEC Investigator Remarks:

e2mis no. 156200:

On 11/9 at 20:30 Edwards # 03829 reported that while at 630 W 132 st Purs at Pre-cooler #1 on Feeder 51, he discovered a spill a burst of Dielectric fluid from a ruptured disk. Approx one gallon of dielectric hit the Bluestone. The base of the bluestone is sand. Environmental tag # 000400 was hung. No samples were take due to Generator knowledge of Non-PCB. The Bluesone is being shoveled up and a 5-gallon containment pan is being placed under the Blow-down pipe to catch any further spillage. The unit is not leaking now because the original leak was precipitated by a burst of oil buildup.

11/23/04

Operator Mike McGroarty reported to me on 11/18/2004, that this leak has been repaired and can be closed out. The rupture disc on the 51 s precoolers has been replaced. The soiled stone has been removed.

Caller Remarks:

hole in bottom of 275gal tank/loss of 275gals oil to basement floor/clean up underway

DEC Investigator Remarks:

01/12/10-HRAHMED-Responded to the site. Met with the homeowner, Brent Edwards (212 281 7475) and his wife. Eastmond was onsite cleaning up the spill with a vac truck. The spill happened due to a leak in one of the two 275 gal AST on the basement floor. Eastmond put speedy dry on the floor, emptied the leaking tank to 55 gal drums. Noticed petroleum odors in the basement. Suggested the home owner to close 2nd & 3rd floor windows to stop oil odor. Eastmond will fix the fill line to the 2nd tank to make it workable. The house will get heat from the 2nd tank.

01/15/10-HRAHMED-Spoke to Ms Edwards. As per her, Eastmond cleaned up the speedy dry and took away all extra oil from the basement. The basement floor was in good condition. No sewer was affected. There is no petroleum odor in the basement.

This case is closed.

09/19/08 – See eDocs for Con Ed report detailing cleanup and closure.

11-11-04 @ 06:20 A Figuerio #84445 reports that while working on feeder 2m23 in m44896, located @ sec w 128 St & 7 Ave, he discovered 1/2 gallon of dielectric fluid that had leaked from a 3w1w joint on the feeder he was working on and also discovered 1/2 gallon of unknown oil coming from a duct on the south wall of the structure. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. The source of one leak is a joint and the other is possibly the cable. Spill is on concrete. No private property affected. Environmental yellow tag 41246 was applied. As per conduit plate 53-g-1 there is a sewer connection to this structure. Three samples were taken by A Figuerio #84445 from the spills, 1 for pcb from the joint and 1 for id and pcb from the duct. Chain of custody # dd20572. Sample priority "e". D-fault sign 01378 was placed in the structure due to the possibility that the leak from the duct is coming from cable. Cleanup is pending safe access. CIG P Didonato # 01669 notified bt R Pagano @ 06:32...J Moran #01182

MAP LOCATION INFORMATION

Site location mapped by: PARCEL MAPPING – LARGE SITE
Approximate distance from property: 655 feet to the NNW

ADDRESS CHANGE INFORMATION

Revised street: 549 WEST 126TH ST
Revised zip code: 10027

CDS-ID: 00066 NED-ID: None Given EPA-ID: NYD980234652 FINDS-ID: NYD980234652
Plant Phone #1: None Given Plant Phone #2: None Given
Operating Status: OPERATING
EPA Classification:
State Classification: POTENTIAL EMISSIONS ARE BELOW ALL APPLICABLE MAJOR SOURCE THRESHOLDS IF AND ONLY IF SOURCE COMPLIES WITH FEDERALLY ENFORCEABLE REGULATIONS OR LIMITATIONS
EPA Plant Compliance Status:
State Plant Compliance Status: IN COMPLIANCE – CERTIFICATION

AIR PROGRAM INFORMATION

Regulatory Air Program: SIP SOURCE

Program Status: OPERATING

POLLUTANT INFORMATION

Pollutant: DEFAULT POLLUTANT FROM CDS

State Pollutant Compliance for this pollutant: IN COMPLIANCE – CERTIFICATION

NO CIVIL & ADMINISTRATIVE ENFORCEMENT DOCKET FACILITIES IDENTIFIED WITHIN THE 1/8 MILE SEARCH RADIUS

NYC ENVIRONMENTAL QUALITY REVIEW REQUIREMENTS – "E" DESIGNATION SITES IDENTIFIED WITHIN 250 FT SEARCH RADIUS

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

- B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.
- D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
- D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
- D006 Cadmium
- D008 Lead
- D009 Mercury
- F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)
- U114 Ethylenebisdithiocarbamic acid, salts & esters
- X726

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

or Manual Mapping

or Site Visit

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup**: Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹
Data attributes updated from: 4/17/2014. Data obtained by Toxics Targeting: 4/17/2014.
New Facilities updated through: 4/17/2014. Data obtained by Toxics Targeting: 4/17/2014.

2) **Inactive Hazardous Waste Disposal Site Registry**: New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry. ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.²
Data attributes updated through: 3/28/2014. Data obtained by Toxics Targeting: 3/28/2014.
New Facilities updated to: 3/28/2014. Data obtained by Toxics Targeting: 3/28/2014.

3) **Corrective Action Activity (CORRACTS)**: U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency¹
Data attributes updated through: 3/11/2014. Data obtained by Toxics Targeting: 3/20/2014.
New facilities updated through: 3/11/2014. Data obtained by Toxics Targeting: 3/20/2014.

4) **CERCLIS**: Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹
Data attributes updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/7/2014.
New Facilities updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/7/2014.

5) **Brownfield Programs**: NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination. ASTM required.* Source: New York State Department of Environmental Conservation.²
Data attributes updated through: 3/28/2014. Data obtained by Toxics Targeting: 3/28/2014.
New Facilities updated to: 3/28/2014. Data obtained by Toxics Targeting: 3/28/2014.

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

Hudson River - Between Hudson Falls and the Battery in New York City

NPL LISTING HISTORY

Proposed Date: 9/8/1983

Final Date: 9/21/1984

Site Description

The Hudson River PCBs site includes the approximately 200-mile stretch of the Hudson River from Hudson Falls to the Battery in New York City. The Upper Hudson River, an approximately 40-mile reach of the river from Hudson Falls to Troy, in Washington, Saratoga and Rensselaer Counties, is the reach that has been selected for remediation. The General Electric Company discharged between 209,000 and 1.3 million pounds of polychlorinated biphenyls (PCBs) into the river from two capacitor manufacturing plants located in Hudson Falls and Fort Edward. The PCBs from these discharges contaminated the sediments of the Upper Hudson River. Also included in the site are five remnant deposits, which are river sediments that were exposed when the level of the river was lowered due to the removal of the Fort Edward Dam, in 1973.

In 1976, because of the concern over the bioaccumulation of PCBs in fish and other aquatic organisms and their subsequent consumption by people, the State of New York banned fishing in the Upper Hudson River and commercial fishing of striped bass, and several other species, in the Lower Hudson. In August 1995, the Upper Hudson was re-opened to fishing, but only on a catch and release basis.

Albany, the largest city in the basin, has a population of more than 100,000 people; the Town of Fort Edward has a population of 6,480. Land uses in the Hudson River Basin include agriculture, service, and manufacturing, in addition to residential. The Hudson River is an important source of hydroelectric power, public water supplies, transportation, and recreation. The Cities of Waterford, Poughkeepsie, and Rhinebeck, as well as the Highland and Port Ewen Water Districts obtain their water supplies directly from the Hudson River. In addition, a water intake near Chelsea, which is north of Beacon, may be used to supplement New York City's water supply during periods of drought. The Town of Waterford and Town of Halfmoon obtain water from the Upper Hudson River, and are the only municipal water supply intakes below Fort Edward and above the Troy Dam.

The Hudson River has been designated an American Heritage River because of its important role in American history and culture.

Site Responsibility: This site is being addressed through a combination of Federal and potential responsible party actions

Threat and Contaminants

Fish in the Hudson River have been contaminated with PCBs, and eating contaminated fish has been found to present an unacceptable risk (i.e., could affect the health of individuals.) Other exposure pathways to PCBs in the river do not generally exceed acceptable risk levels, such as drinking water, volatilization, or recreational exposure to sediment or water. Concerns related to possible exposure of residents and ecological receptors to PCB contamination in the floodplains are being further evaluated concurrent with the design phase of this project.

Cleanup Approach

The site is being addressed in three stages: immediate actions and two long-term remedial phases (Remnant Deposits and River Sediments) directed at cleanup of the Upper Hudson River. A floodplains evaluation is also in progress.

Response Action Status

Immediate Actions: In 1977 and 1978, an estimated 180,000 cubic yards of contaminated sediments were dredged from the east channel at Fort Edward to clear the navigational channel. These dredged sediments, along with approximately 14,000 cubic yards of highly contaminated sediments from one of the remnant areas, were placed in a clay-lined containment cell. A 40-mile stretch of the Upper Hudson River is open only to catch and release fishing, and the Lower Hudson River has a commercial fishing ban and consumption advisories on striped bass and several other species.

In 1991, investigations at Bakers Falls, in the vicinity of the General Electric Hudson Falls facility (a separate New York State listed hazardous waste site) showed elevated PCB concentrations in the water column. General Electric signed a consent agreement with the State of New York to further investigate this area and to conduct interim remedial measures to prevent PCB contamination from this source from entering the river. Numerous measures have been implemented, including: preventing flow of river water through seep areas in an abandoned mill building, installation of seep collection systems, removal of contaminated sediment from the mill building, pressure grouting of bedrock in areas where seeps were observed in the riverbed, and oil phase PCB collection wells. The State of New York selected a long term remedy for the facility in March 2004. Construction of this long term remedy was initiated in the Spring of 2007. Information collected for the Hudson Falls Plant site investigation was incorporated into the EPA's decision for addressing the contaminated river sediments.

A removal action was also performed on Rogers Island. Information generated by New York State in the early 1990's along with development activities on the southern portion of the island raised concerns regarding potential exposure to PCBs by current residents and potential future users of Rogers Island. EPA decided it was necessary to remove PCB and lead contaminated soils from properties on the northern (residential) area of the island. Removal of the contaminated soil was

completed in December 1999.

Long-Term Remedial Phases:

Remnant Deposits: General Electric, under a Consent Decree with EPA, conducted an interim cleanup of the remnant deposits, selected in the 1984 Record of Decision for the site. The remedy chosen for this portion of the site was in-place containment of shoreline remnant deposits. This includes covering the affected areas with a geosynthetic clay liner and a 2-foot layer of soil, followed by grading and revegetating to minimize erosion. The river banks were stabilized with rock to prevent scouring. Cap construction and the erection of gates to limit site access were completed in 1991.

River Sediments: In the 1984 Record of Decision (ROD) for the site, EPA selected an interim "no-action" decision for the contaminated river sediments. After conducting a comprehensive reassessment of the earlier decision, EPA decided in February 2002 that it is appropriate to remediate the Upper Hudson River. The remedy selected in the 2002 ROD includes the dredging of approximately 2.65 million cubic yards of PCB-contaminated sediments from the Upper Hudson River, which was estimated to contain 70,000 kg (about 150,000 lbs) of total PCBs (approximately 65% of the total PCB mass present within the Upper Hudson River). The selected remedy assumes that a separate source control action would be implemented at the GE Hudson Falls plant. The major components of the selected remedy include:

- Removal of sediments based primarily on a mass per unit area (MPA) of 3 g/m² Tri+ PCBs or greater (approximately 1.56 million cubic yards of sediments) from River Section 1;
- Removal of sediments based primarily on an MPA of 10 g/m² Tri+ PCBs or greater (approximately 0.58 million cubic yards of sediments) from River Section 2;
- Removal of selected sediments with high concentrations of PCBs and high erosional potential (NYSDEC Hot Spots 36, 37, and the southern portion of 39) (approximately 0.51 million cubic yards) from River Section 3;
- Dredging of the navigation channel, as necessary, to implement the remedy and to avoid hindering canal traffic during implementation. Approximately 341,000 cubic yards of sediments will be removed from the navigation channel (included in volume estimates in the first three components, above);
- Removal of all PCB-contaminated sediments within areas targeted for remediation, with an anticipated residual of approximately 1 mg/kg Tri+ PCBs (prior to backfilling);
- Performance standards for air quality and noise are included in this ROD consistent with state and federal law;
- Other performance standards (including but not necessarily limited to resuspension rates during dredging, production rates during dredging, and residuals after dredging) will be developed during the design with input from the public and in consultation with the state and federal natural resource trustees. These performance standards will be enforceable, and based on objective environmental and scientific criteria. The standards will promote accountability and ensure that the cleanup meets the human health and environmental protection objectives of the ROD.
- Independent external peer review of the dredging resuspension, PCB residuals, and production rate performance standards and the attendant monitoring program, as well as the report prepared at the end of the first phase of dredging that will evaluate the dredging with respect to these performance standards;
- Performance of the dredging in two phases whereby remedial dredging will occur at a reduced rate during the first year of dredging. This will allow comparison of operations with pre-established performance standards and evaluation of necessary adjustments to dredging operations in the succeeding phase or to the standards. Beginning in phase 1 and continuing throughout the life of the project, EPA will conduct an extensive monitoring program. The data EPA gathers, as well as the Agency's ongoing evaluation of the work with respect to the performance standards, will be made available to the public in a timely manner and will be used to evaluate the project to determine whether it is achieving its human health and environmental protection objectives;
- Backfill of dredged areas with approximately one foot of clean material to isolate residual PCB contamination and to expedite habitat recovery, where appropriate;

- Use of rail and/or barge for transportation of clean backfill materials within the Upper Hudson River area;
 - Monitored Natural Attenuation (MNA) of PCB contamination that remains in the river after dredging;
 - Use of environmental dredging techniques to minimize and control resuspension of sediments during dredging;
 - Transport of dredged sediments via barge or pipeline to sediment processing/transfer facilities for dewatering and, as needed, stabilization;
 - Rail and/or barge transport of dewatered, stabilized sediments to an appropriate licensed off-site landfill(s) for disposal. If a beneficial use of some portion of the dredged material is arranged, then an appropriate transportation method will be determined (rail, truck, or barge);
 - Monitoring of fish, water and sediment to determine when Remediation Goals are reached, and also monitoring the restoration of aquatic vegetation; and,
 - Implementation (or modification) of appropriate institutional controls such as fish consumption advisories and fishing restrictions by the responsible authorities, until relevant Remediation Goals are met.
- The targeting of Hot Spots 36, 37 and the southern portion of 39, was based on available data showing that those areas have high PCB concentrations, and potential for loss to the water column or uptake by biota. Additional sampling is being conducted during remedial design to determine whether other areas in River Section 3 have these characteristics and therefore need to be remediated as part of the selected remedy.

Remedial dredging will be conducted in two phases. The first phase will be the first construction season of remedial dredging. The dredging during that year will be implemented initially at less than full scale operation. It will include an extensive monitoring program of all operations. An independent external peer review of the dredging resuspension, PCB residuals, and production rate performance standards will be conducted as part of the Phase 1 program; modifications to the standards or the project design for Phase 2 will be made based upon the findings of the peer review and Phase 1 outcomes. The second phase will be the remainder of the dredging operation, which will be conducted at full-scale. During the full-scale remedial dredging, EPA will continue to monitor, evaluate performance data and make necessary adjustments.

The ROD also noted that sampling of the floodplains would be performed during the remedial design phase of the river sediments remedy. Sampling of the floodplains has been initiated. As a result of the initial phase of sampling, several floodplain areas were targeted for a removal action in 2007. This work was performed by GE. More extensive sampling for a remedial investigation is currently planned for 2008.

Enforcement Status:

EPA has entered into two Administrative Orders on Consent (AOCs) with General Electric Company (GE). Under the July 2002 AOC the company agreed to conduct the extensive sediment sampling needed to identify areas to be dredged; under the August 2003 AOC the company agreed to design both Phase 1 and Phase 2 of the project. EPA and GE reached agreement on a Consent Decree (CD) for under which GE would implement the first phase of the dredging remedy, slated to begin in the spring of 2009, and which would allow for a seamless transition for the Company to perform the remainder of the remedy. The proposed CD was lodged with the Federal District Court in Albany, New York on October 6, 2005. Comments on the CD were accepted through December 14, 2005. EPA and DOJ prepared responses to comments and filed them with the Court on May 16, 2006. In June 2006 the Town of Fort Edward filed a motion to intervene with the Court. On November 2, 2006, the court approved a Consent Decree (CD) and rejected the Town's motion to intervene. The Town appealed the Court's decision; this appeal was rejected in January 2008.

Under the agreements, EPA has already received approximately \$37 million from GE for past site costs. The CD calls for GE to pay EPA an additional \$78 million for the Agency's past and future costs if GE takes on Phase 2 of the dredging program pursuant to the CD; if GE only conducts the first phase of the dredging program the additional payment would amount to approximately \$43 million. Additionally, the agreement contains a provision to help ensure that there is no delay in the

transition between Phase 1 and Phase 2 of the project. It requires GE to spend up to \$5 million between the end of the Phase 1 dredging and the date of GE's decision whether or not to conduct Phase 2, to prepare for the initiation of the second phase of dredging. If GE does not agree to conduct the Phase 2 dredging, EPA fully reserved all of its enforcement authorities, including its right to direct the company to perform the dredging and/or sue in district court to require GE to perform Phase 2 or to reimburse EPA for its costs if the Agency conducts Phase 2 using government funds.

Under an earlier agreement GE agreed to implement the in-place containment remedy for the remnant deposits and to reimburse EPA for any costs incurred for that portion of the site remedy.

GE also signed on to a floodplains removal agreement AOC in 2007. EPA is currently negotiating an additional AOC with GE for floodplains remedial investigation/feasibility study. Negotiations on the remedial investigation are not expected to be complete before the summer/fall of 2009. However, GE entered into an AOC in September of 2008 to conduct additional investigatory work in the floodplains. The investigation was completed in the December of 2008 and a report is expected in the Spring of 2009.

Cleanup Progress

River Sediments; 2002 Record of Decision (ROD) for the Hudson River PCBs Site: EPA has made significant progress on the sediment remedy since the ROD was issued, reaching milestones that include the collection and analysis of more than approximately 50,000 samples from the river bottom for PCB analysis, the completion of strict engineering and quality of life performance standards to protect public health and minimize impacts on Hudson River communities, the siting of the needed sediment transfer/processing facility in Fort Edward, New York, and the approval of several portions of the Final Design for Phase 1 of the project. Construction of a major component of the project, the sediment processing and transfer facility, began in the Spring of 2007. The 110-acre facility is expected to take approximately 18 to 24 months to complete. The construction of this multi-million dollar facility is a major undertaking that will include: the widening of the Champlain Canal for a wharf for unloading barges; a rail yard with five miles of rail to facilitate the loading and transport of sediments by rail to a landfill outside New York State; a two mile access road that will alleviate project traffic on the Town of Fort Edward; a two million gallon per day treatment plant; a dewatering plant capable of processing more than 5000 cubic yards of sediment per day. Substantial construction of the facility has been completed. The Phase 1 design was finalized in January 2008. Dredging will begin in late Spring 2009.

A water line to serve two of the downstream communities (Waterford and Halfmoon) in the event of resuspension of PCBs is 60% complete and on schedule to be completed before the start of dredging. A filter system is being designed for a third community (Stillwater) and is expected to be completed by the start of dredging as well.

The Phase 2 Intermediate Design Report was submitted in May of 2008 and is under review.

Remnant Deposits: Cap construction was completed at the remnant deposits area of the Hudson River PCBs site in 1991, which prevents exposure to contaminants by direct contact or inhalation. In addition, the capping along with bank stabilization should minimize the amount of PCBs entering the river from the remnant deposits. Further studies to evaluate alternatives to address the river sediments are underway.

Hudson Falls Plant Site: After the implementation of interim remedial measures at the Hudson Falls Plant site, PCB concentrations in the water-column decreased to levels which are below those measured before the 1991 peak PCB levels. Additional studies were conducted to evaluate if additional control measures could further reduce contributions to the water column from the Hudson Falls Plant site. New York State selected additional remedial measures for the facility in March 2004. The construction of the remainder of the remedy dealing with the migration of PCB oil and contaminated groundwater began in the Spring of 2007, and are expected to be completed in 2009. Design of the remedy for the

contaminated overburden soils is ongoing.

Ft. Edward Plant Site: New York State issued a Record of Decision on Jan. 28, 2000 for the Ft. Edward plant site dealing with enhancements to the groundwater and PCB oil recovery systems in the main manufacturing area, and PCB-contaminated soils and sediments at the plant outfall. The work at the facility is substantially complete and a groundwater treatment system is operational, although New York State and GE have an agreement for the conduct of a remedial investigation of contaminated bedrock seeps discovered during the remediation of the plant outfall. This investigation is currently underway.

SITE DESCRIPTION:

Site Location:

This site includes the nearly 200-mile stretch of the Hudson River that extends from Hudson Falls in Washington County to the Battery in New York City. The river is part of the Champlain Canal between Fort Edward and Waterford.

Site Features:

The site includes the main stem of the Hudson River, as well as the associated flood plains, river banks, riverene fringing wetlands, and backwater areas.

Current zoning / uses:

The river is currently used for recreation, transportation, and as a source of water for drinking and other purposes. The river floodplain areas include all types of land uses, from passive / recreational to residential to commercial / industrial.

Historical uses:

The General Electric Company (GE) discharged PCBs into the river from two capacitor manufacturing plants located in Hudson Falls and Fort Edward starting sometime in 1946.

Previous investigations identified 40 areas or 'hot spots' in the upper Hudson that had sediments contaminated with greater than 50 ppm of PCBs. Also included in the definition of this site are five Remnant Deposits or river sediment areas that were exposed when the level of the river was lowered when the Fort Edward Dam was removed in 1973.

EPA issued a Record of Decision (ROD) for this National Priorities List site on September 25, 1984 which included: in-place containment of the Remnant Deposits; evaluation of downstream domestic water quality at Waterford, New York; and interim "No Action" as to the PCB-contaminated river sediment. The 1984 ROD indicated that both the No Action decision for the river sediments and the containment remedy for the Remnant Deposits might be reexamined by EPA in the future. The containment remedy for the Remnant Deposits was performed by GE under a 1990 Consent Decree with EPA. In addition, in 1990, NYSDEC completed the evaluation of downstream domestic water quality at Waterford, New York, which concluded that PCB concentrations were below

analytical detection limits after treatment and met standards applicable to public water supplies.

In December 1989, EPA announced its decision to initiate a detailed Reassessment Remedial Investigation/Feasibility Study (RI/FS) of the September 1984 decision concerning the PCB contaminated Hudson River sediments. The Reassessment culminated with EPA's issuance of a second ROD for the site in February 2002 which included the dredging of an estimated 2.65 million cubic yards of PCB contaminated sediments from the Upper Hudson River (between Fort Edward and Troy), which was estimated in the ROD to contain about 66,300 kilograms of total PCBs (approximately 65% of the total PCB mass estimated to be present within the Upper Hudson River). The ROD also identified further evaluation of PCB contamination in the flood plains concurrent with the design phase of the project.

EPA issued a series of Orders to GE for performance of the engineering design for the project. Project design has been completed for Phase 1 (the first year) of the dredging program, and is ongoing for the remainder of the project. Phase 1 dredging commenced in May 2009, and was completed in October 2009. As a result of supplemental investigations during design, the estimates of sediment volume and PCB mass to be removed have been revised to a lower volume of sediment (~1.8 million cubic yards) and a higher PCB mass (~113,000 kilograms) to be removed as a result of the project.

After completion of Phase 1, EPA reviewed the environmental monitoring and operational data to determine the changes to the project standards and to project design specifications for Phase 2.

The changes to the project for Phase 2 were provided to GE in December 2010. GE, in accordance with the Consent Decree for the site, opted to implement Phase 2 of the remedy on 12/31/10.

Phase 2 of the remedial project started in 2011, and is anticipated to take five to seven years.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
LEAD	UNKNOWN
CADMIUM	UNKNOWN
PCB-AROCLOR 1016	UNKNOWN
PCB-AROCLOR 1242	UNKNOWN
PCB-AROCLOR 1254	UNKNOWN
POLYCHLORINATED BIPHENYLS (PCB)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and extent of contamination:

Contaminants:

The primary constituent of concern is PCBs, discharged from two GE capacitor plants in Hudson Falls and Fort Edward. The upstream extent of contamination is the portion of the river immediately above the Bakers Falls Dam at the GE Hudson Falls plant site. The downstream extent of contamination is the Atlantic Ocean.

The commercial mixtures of PCBs discharged from the two GE plant sites changed over time; initially aroclor 1254, changing to aroclor 1242 and then to aroclor 1016.

Contaminant Concentrations:

PCBs have been found in excess of standards, criteria and guidance concentrations (SCGs) in sediments, surface water, biota, air, and soils at the Hudson River PCBs site. The primary sources at the plant sites have been almost completely abated through remedial work at the plant sites; as a result, the primary source of PCB to the surface water and biota of the river are the contaminated sediments in the river south of the plant sites.

PCB concentrations in sediment range from non-detect to greater than one percent PCB (> 10,000 parts per million). In surface water typically concentrations range from 2 nanograms per liter (ng/l or parts per trillion) to 100 ng/l, except at times of high flow when scour-driven remobilization of contaminated sediments can cause much higher concentrations in excess of 1 microgram per liter (1 ug/l or part per billion).

Investigations are underway to determine the extent of floodplain impacts. To date, PCB concentrations in excess of 500 milligrams per kilogram (mg/kg or part per million) have been found in limited areas. The nature and extent of floodplain soil contamination has not yet been established.

Significant threat:

PCB contamination in the Hudson River sediments pose a significant threat to human health and/or the environment. Concentrations in PCBs in biota directly attributable to the waste disposal at the site have led the Department of Health to recommend that human consumption of biota be limited over a substantial portion of the Hudson River between Hudson Falls and the Battery in New York City. In the upper Hudson, the fishery is catch and release only, and the NYSDOH advisory is to eat none.

The disposal of PCB into the Hudson River has also led to significant environmental damage as defined in 6 NYCRR Part 375.

This site has been included in the Federal National Priorities List (NPL).

ASSESSMENT OF HEALTH PROBLEMS:

Consumption of fish is the major potential route of human exposure to PCBs from this site. Because of site impacts, most fish from the Hudson River downstream of Hudson Falls have elevated PCB levels, particularly near the GE Fort Edward Plant site and the GE Hudson Falls site. Fishing is restricted to catch and release from Hudson Falls to Troy. In addition, there are advisories ("eat none" or "eat no more than 1 meal per month") on consumption of several fish species caught from the Hudson River below the Troy Dam to New York Harbor. There are two downstream public drinking water supply intakes within the Upper Hudson River located in Halfmoon and in Waterford. Plans to protect these public water supplies during dredging are under development. In addition, GE under USEPA oversight will take actions at several properties along the Hudson River in 2007 to address PCB contaminated floodplain soils. These actions vary from deploying signs to installing various covers and are intended to reduce exposures to PCBs in floodplain soils until a permanent remedy is developed. Additionally, plans for further floodplain soil investigations in the Upper Hudson River Floodplain are under development.

SITE DESCRIPTION

The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River.

The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973.

The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie.

The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation

(NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented.

PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans.

Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River.

During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg).

Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream.

EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988.

In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c).

The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record

of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD.

As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site.

A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984.

A Record of Decision addressing OU 2 was completed in February 2002.

311 Government Information
and Services for NYC

July 31, 2008

Robert Dobruskin
Director, Environmental Assessment and Review
New York City Department of City Planning
22 Reade Street, Room 4E
New York, NY 10007

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the May 2008 Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) prepared by AKRF for the above referenced project site. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 5 and 6. The project site is located in Manhattan Community District 10.

The RAP and CHASP are acceptable as long as the following comments and recommendations are incorporated into a final/revised RAP and CHASP.

- Clean fill text, page 10 of the RAP - Two (2) feet of certified clean fill/top soil must be imported from an approved facility/source and graded across all landscaped/grass covered areas of the site not capped with concrete/asphalt. The certified clean fill/top soil must be segregated at the source/facility, have qualified environmental personnel collect representative samples at a frequency of one (1) sample for every 250 cubic yards, analyze the samples for Target Compound List (TCL) volatile organic compounds, semi-volatile organic compounds, pesticides/PCBs and Target Analyte List (TAL) metals by a New York State Department of Health Environmental Laboratories Approval Program-certified laboratory, compare to New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum 4046 Recommended Soil Clean-up Objectives, and receive DEP written approval to use the clean fill/top soil. Upon receipt of DEP's written approval, the clean fill/top soil may be transported to the site for grading. The clean fill/top soil should not be comprised of any construction and demolition debris. A highly visible demarcation barrier

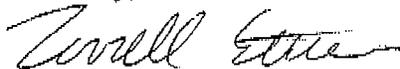

DEPT OF CITY PLANNING
RECEIVED
2008 AUG -6 PM 3:00
ENVIRONMENTAL REVIEW DIV.

(i.e., orange plastic construction fence or equivalent) must be installed below the 2 foot certified clean fill/top soil cap;

- The vapor barrier must be 15-mil in thickness (not 10-mil as proposed). A specific vapor barrier manufacturer, type, sample, and chemical resistance information fact sheet(s) for the identified on-site contaminants must be included in the RAP;
- Upon completion of all DEP requested remedial requirements, a P.E.-certified Remedial Closure Report should be submitted to DEP. This report should demonstrate that all remedial activities have been properly implemented. At a minimum, the report should include all transportation manifests, soil disposal/recycling certificates, proof of importing and grading certified clean fill/top soil for all landscaped areas as well as all pre-approved soil analytical testing results for the imported fill/top soil, proof of vapor barrier installation beneath all slabs (including photographs), etc;
- The EAS should describe the remedial measures necessary to avoid significant adverse hazardous materials impacts consistent with the RAP and CHASP;
- Due to the identified site conditions and required remedial measures, a Restrictive Declaration that would be binding on the property's successors and assigns is necessary to prevent future exposure to either construction workers or future occupants. The Restrictive Declaration must be designed to restrict the manner in which the property may be developed or redeveloped, by requiring that additional testing or remediation measures, if required, serve as a condition precedent to any change of use or sub-surface excavation conducted as part of any future development or redevelopment of the property. The Restrictive Declaration should be drafted for review and approval by DEP prior to being executed and recorded.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact me at (718) 595-4473.

Sincerely,

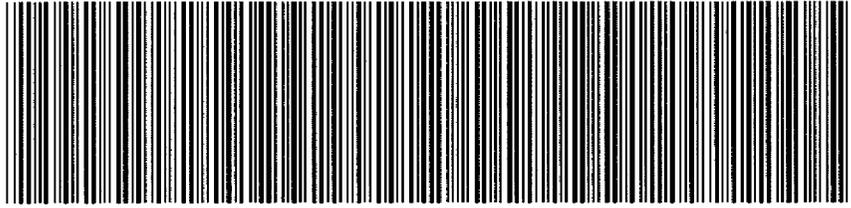

Terrell Estes
Director, Office of City Project Review

PARTIES

PARTY 1:

WEST 129TH STREET REALTY II, LLC
161 SUFFOLK STREET
NEW YORK, NY 10002

DECLARATION

This DECLARATION made as of the 21st day of April, 2008, by West 129th Street Realty I, LLC having an office located at 161 Suffolk Street, New York, NY 10002 and West 129th Street Realty II, LLC having an office located at 161 Suffolk Street, New York, NY 10002 (hereinafter referred to collectively as the "Declarants");

WITNESSETH

WHEREAS, the Declarants are the fee owner of certain real property located in the County of New York, City and State of New York, designated for real property tax purposes as Lot 6 of Tax Block 1969 commonly known by the street address as 487 West 129th Street (the "Subject Property") and is more particularly described in Exhibit A, annexed hereto and made part hereof; and

WHEREAS, Lawyers Title Insurance Corporation has issued a Certification of Parties in Interest, annexed hereto as Exhibit B and made a part hereof, that as of the 17th, day of March, 2008, the Declarants, herein after also referred to as the ("Party(ies)-in-Interest"), are the only Party(ies)-in-Interest (as defined in subdivision (d) of the definition of "zoning lot" set forth in Section 12-10 of the Zoning Resolution of the City of New York) in the Subject Property; and

WHEREAS, all Parties-in-Interest to the Subject Property have executed this Declaration; and

WHEREAS, Declarants have proposed to rezone the Subject Property from M1-1 to R7A and has submitted an application numbered 080039ZMM (the "Application") for review by the New York City Department of City Planning (the "DCP") under the Uniform Land Use Review Procedure (the "ULURP") as set forth in the New York City Charter, sections 197-c, 197-d, 200 and 201 and the procedures set forth in the paragraph immediately following; and

WHEREAS, an environmental assessment of the Subject Property pursuant to the State Environmental Quality Review Act (the "SEQRA") and the City Environmental Quality Review (the "CEQR") is under review in connection with the Application (CEQR # 07DCP076M) and, pursuant to the SEQRA and CEQR, the Department of Environmental Protection (the "DEP") has reviewed the environmental assessment, including the historic land use of the Subject Property; and

WHEREAS, the results of such review as documented in DEP's April 16, 2008 attached hereto as Exhibit C and made a part hereof, indicate the potential presence of hazardous materials; and

WHEREAS, the Declarants desire to identify the existence of any potential hazardous materials and remediate any such hazardous materials found in connection with the development or redevelopment of the Subject Property and has agreed to submit a hazardous materials sampling protocol prepared by a qualified consultant and including a health and safety plan, (as approved

by DEP the "Sampling Protocol"), which shall be submitted for the approval of DEP and to test and identify any potential hazardous materials pursuant to the approved Sampling Protocol and, if such hazardous materials are found, to submit a hazardous materials remediation plan, including a health and safety plan, (as approved by DEP the "Remediation Plan") and upon the approval of the Remediation Plan by DEP, the Declarants shall provide for the remediation of such hazardous materials; and

WHEREAS, the Declarants agree to implement the Sampling Protocol and all hazardous material remediation required by the Remediation Plan, if any, and desires to restrict the manner in which the Subject Property may be developed or redeveloped by having the implementation of the Sampling Protocol and Remediation Plan, if any, performed to the satisfaction of DEP, as evidenced by a writing as set forth herein, be a condition precedent to any change of use or soil disturbance for any such development or redevelopment; and

WHEREAS, the Declarants intend this Declaration to be binding upon all successors and assigns; and

WHEREAS, the Declarants intend this Declaration to benefit all land owners and tenants including the City of New York ("the City") without consenting to the enforcement of this Declaration by any party or entity other than the City.

NOW, THEREFORE, the Declarants hereby declare and agree that the Subject Property shall be held, sold, transferred, and conveyed, subject to the restrictions and obligations which are for the purpose of protecting the value and desirability of the Subject Property and which shall run with the land, binding the successors and assigns of the Declarants so long as they have any right, title or interest in the Subject Property or any part thereof:

1. (a) Declarants covenant and agree that no application for grading, excavation, foundation, alteration, building or other permit respecting the Subject Property which permits soil disturbance shall be submitted to or accepted from the Department of Buildings (the "DOB") by the Declarants until DEP has issued to DOB, as applicable, either a Notice of No Objection as set forth in Paragraph 2(a), a Notice to Proceed as set forth in Paragraph 2(b), a Notice of Satisfaction as set forth in Paragraph 2(c) or a Final Notice of Satisfaction as set forth in Paragraph 2(d). Declarants shall submit a copy of the Notice of No Objection, Notice to Proceed, Notice of Satisfaction or Final Notice of Satisfaction to the DOB at the time of filing of any application set forth in this Paragraph 1(a).

(b) Declarants further covenant and agree that no application for a temporary or permanent Certificate of Occupancy that reflects a change in use group respecting the Subject Property shall be submitted to or accepted from DOB by the Declarants until DEP has issued to DOB, as applicable, either a Notice of No Objection as set forth in Paragraph 2(a), a Notice of Satisfaction as set forth in Paragraph 2(c) or a Final Notice of Satisfaction as set forth in Paragraph 2(d). Declarants shall submit a copy of the Notice of No Objection, Notice of

Satisfaction or Final Notice of Satisfaction to the DOB at the time of filing of any application set forth in this Paragraph 1(b).

2. (a) Notice of No Objection - DEP shall issue a Notice of No Objection after the Declarants have completed the work set forth in the DEP approved Sampling Protocol and DEP has determined in writing that the results of such sampling demonstrate that no hazardous materials remediation is required for the proposed project.

(b) Notice to Proceed - DEP shall issue a Notice to Proceed after it determines that: (i) the Remediation Plan has been approved by DEP and (ii) the permit(s) respecting the Subject Property that permit grading, excavation, foundation, alteration, building or other permit respecting the Subject Property which permits soil disturbance or construction of the superstructure are necessary to further the implementation of the DEP approved Remediation Plan.

(c) Notice of Satisfaction - DEP shall issue a Notice of Satisfaction after the Remediation Plan has been prepared and accepted by DEP and DEP has determined in writing that the Remediation Plan has been completed to the satisfaction of DEP.

(d) Final Notice of Satisfaction - DEP shall issue a Final Notice of Satisfaction after the Remediation Plan has been prepared and accepted by DEP and DEP has set forth in writing, that the Remediation Plan has been completed to the satisfaction of DEP and all potential hazardous materials have been removed or remediated and no further hazardous remediation is required on the Subject Property as determined by DEP.

3. Declarants represent and warrant with respect to the Subject Property, that no restrictions of record, nor any present or presently existing estate or interest in the Subject Property nor any lien, encumbrance, obligation, covenant of any kind preclude, presently or potentially, the imposition of the obligations and agreements of this Declaration.

4. Declarants acknowledge that the City is an interested party to this Declaration and consents to the enforcement of this Declaration solely by the City, administratively or at law or at equity, of the obligations, restrictions and agreements pursuant to this Declaration.

5. The provisions of this Declaration shall inure to the benefit of and be binding upon the respective successors and assigns of the Declarants, and references to the Declarants shall be deemed to include such successors and assigns as well as successors to their interest in the Subject Property. References in this Declaration to agencies or instrumentalities of the City shall be deemed to include agencies or instrumentalities succeeding to the jurisdiction thereof.

6. Declarants shall be liable in the performance of any term, provision, or covenant in this Declaration, subject to the following provisions:

The City and any other party relying on this Declaration will look solely to the fee estate interest of the Declarants in the Subject Property for the collection of any money judgment recovered against Declarants, and no other property of the Declarants shall be subject to levy, execution, or other enforcement procedure for the satisfaction of the remedies of the City or any other person or entity with respect to this Declaration. The Declarants, including its officers, managers and members, shall have no personal liability under this Declaration.

7. The obligations, restrictions and agreements herein shall be binding on the Declarants or other parties in interest only for the period during which the Declarants and any such Party-in-Interest holds an interest in the Subject Property; provided, however, that the obligations, restrictions and agreements contained in this Declaration may not be enforced against the holder of any mortgage unless and until such holder succeeds to the fee interest of the Declarants by way of foreclosure or deed in lieu of foreclosure.

8. Declarants shall indemnify the City, its respective officers, employees and agents from all claims, actions, or judgments for loss, damage or injury, including death or property damage of whatsoever kind or nature, arising from Declarants' obligations under this Declaration, including without limitation, the negligence or carelessness of the Declarants, its agents, servants or employees in undertaking such obligations; provided, however, that should such a claim be made or action brought, Declarants shall have the right to defend such claim or action with attorneys reasonably acceptable to the City and no such claim or action shall be settled without the written consent of the City.

9. If Declarants are found by a court of competent jurisdiction to have been in default in the performance of its obligations under this Declaration, and such finding is upheld on a final appeal by a court of competent jurisdiction or by other proceeding or the time for further review of such finding or appeal has lapsed, Declarants shall indemnify and hold harmless the City from and against all reasonable legal and administrative expenses arising out of or in connection with the enforcement of Declarants' obligations under this Declaration as well as any reasonable legal and administrative expenses arising out of or in connection with the enforcement of any judgment obtained against the Declarants, including but not limited to the cost of undertaking the Remediation Plan, if any.

10. Declarants shall cause every individual or entity that between the date hereof and the date of recordation of this Declaration, becomes a Party-in-Interest (as defined in subdivision (c) of the definition of "zoning lot" set forth in Section 12-10 of the Zoning Resolution of the City of New York) to all or a portion of the Subject Property to waive its right to execute this Declaration and subordinate its interest in the Subject Property to this Declaration. Any mortgage or other lien encumbering the Subject Property in effect after the recording date of this Declaration shall be subject and subordinate hereto as provided herein. Such waivers and subordination shall be attached to this Declaration as Exhibits and recorded in the Office of the County or City Register.

11. This Declaration and the provisions hereof shall become effective as of the date of this Declaration. Within five (5) business days of the date hereof, Declarants shall submit this Declaration for recording or shall cause this Declaration to be submitted for recording in the Office of the County or City Register, where it will be indexed against the Subject Property. Declarants shall promptly deliver to the DEP and the Department of City Planning proof of recording in the form of an affidavit of recording attaching the filing receipt and a copy of the Declaration as submitted for recording. Declarants shall also provide a certified copy of this Declaration as recorded to DEP and DCP as soon as a certified copy is available.

12. This Declaration may be amended or modified by Declarants only with the approval of DEP or the agency succeeding to its jurisdiction and no other approval or consent shall be required from any other public body, private person or legal entity of any kind. A statement signed by the Deputy Commissioner of the Bureau of Environmental Planning and Assessment of DEP, or such person as authorized by the Deputy Commissioner, certifying approval of an amendment or modification of this Declaration shall be annexed to any instrument embodying such amendment or modification.

13. Any submittals necessary under this Declaration from Declarants to DEP shall be addressed to the Deputy Commissioner of the Bureau of Environmental Planning and Assessment of DEP, or such person as authorized by the Deputy Commissioner. As of the date of this Declaration DEP's address is:

New York City Department of Environmental Protection
59-17 Junction Blvd
Flushing, New York 11373

14. Declarants expressly acknowledge that this Declaration is an essential element of the SEQRA review conducted in connection with the Application and as such the filing and recordation of this Declaration may be a precondition to the determination of significance pursuant to the SEQRA Regulations, Title 6 New York Code of Rules and Regulations ("NYCRR") Part 617.7.

15. Declarants acknowledge that the satisfaction of the obligations set forth in this Declaration does not relieve Declarants of any additional requirements imposed by Federal, State or Local laws.

16. This Declaration shall be governed by and construed in accordance with the laws of the State of New York.

17. Wherever in this Declaration, the certification, consent, approval, notice or other action of Declarants, DEP or the City is required or permitted, such certification, consent, approval, notice or other action shall not be unreasonably withheld or delayed.

18. In the event that any provision of this Declaration is deemed, decreed, adjudged or determined to be invalid or unlawful by a court of competent jurisdiction, such provision shall be severable and the remainder of this Declaration shall continue to be in full force and effect.

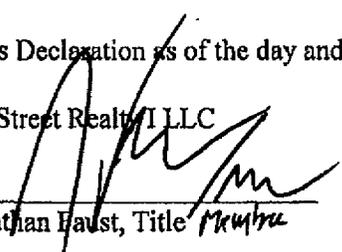

19. This Declaration and its obligations and agreements are in contemplation of Declarants receiving approvals or modified approvals of the Application. In the event that the Declarants withdraws the Application before a final determination or the Application is not approved, the obligations and agreements pursuant to this Declaration shall have no force and effect and this Declaration shall be cancelled.

20. Notice of Cancellation - Declarants may request that DEP issue a Notice of Cancellation upon the occurrence of the following steps: (i) Declarants has withdrawn the Application in writing before a final determination on the Application; (ii) the Application was not approved by the DCP; or (iii) DEP has issued a Final Notice of Satisfaction indicating that all potential hazardous materials have been removed or remediated and no further hazardous remediation is required on the Subject Property. Upon such request, DEP shall issue a Notice of Cancellation after it has determined to DEP's own satisfaction that the above referenced steps, as applicable, have occurred. Upon receipt of a Notice of Cancellation from DEP, Declarants shall cause such Notice to be recorded in the same manner as the Declaration herein, thus rendering this Restrictive Declaration null and void. Declarants shall promptly deliver to DEP and the DCP a certified copy of such Notice of Cancellation as recorded.

IN WITNESS WHEREOF, Declarants have executed this Declaration as of the day and year first above written.

EXHIBIT A

**LEGAL DESCRIPTION OF SUBJECT PROPERTY
Tax Block 1969, Lot 6**

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of West 130th Street (as now open and in use, 60 feet wide) distant 154 feet 7 inches easterly from the corner formed by the intersection of the said southerly side of West 130th Street and the easterly side of Amsterdam Avenue (as now open and in use, 100 feet wide);

RUNNING THENCE easterly along the southerly side of West 130th Street, 95 feet 5 inches;

THENCE southerly along a line at right angles with the southerly side of West 130th Street, a distance of 198 feet 8-3/4 inches to an angle point (survey) 198 feet 7 inches (deed)

(Tax Map shows 198 feet 8 inches to the northerly side of West 129th Street)

THENCE southeasterly along a line forming an interior angle of 242 degrees 03 minutes 10 seconds with the last mentioned line 2 feet 4-1/4 inches to a point on the northerly side of West 129th Street;

THENCE westerly along the northerly side of West 129th Street a distance of 97 feet 6 inches;

THENCE northerly along a line at right angles with the northerly side of West 129th Street, 199 feet 10 inches to the point or place of **BEGINNING**.

EXHIBIT B

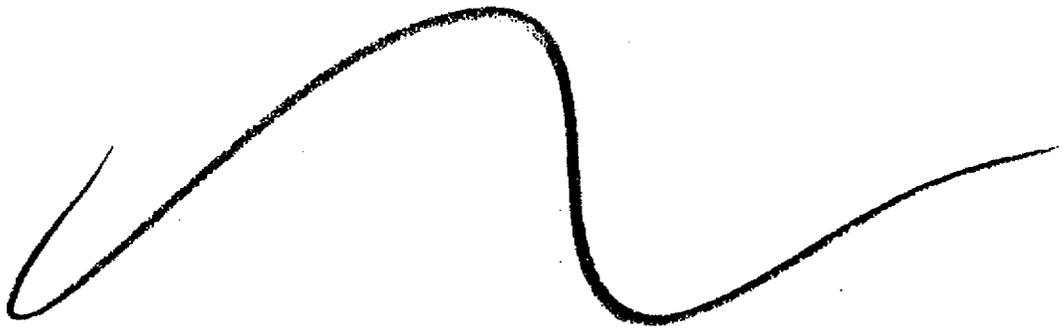

EXHIBIT "II"

**CERTIFICATION PURSUANT TO ZONING LOT
SUBDIVISION D OF SECTION 12 - 10
OF THE ZONING RESOLUTION OF DECEMBER 15, 1961
OF THE CITY OF NEW YORK - AS AMENDED
EFFECTIVE AUGUST 18, 1977**

LAWYERS TITLE INSURANCE CORPORATION, a Title Insurance Company licensed to do business in the State of New York and having its principal office at 140 East 45th Street, New York, New York, hereby certifies that as to the land hereafter described being a tract of land, either unsplit or consisting of two or more lots of record, contiguous for a minimum of ten linear feet, located within a single block, that all the parties in interest constituting a party as defined in Section 12 - 10, subdivision (d) of the Zoning Resolution of the City of New York, effective December 15, 1961, as amended, are the following:

<u>NAME/ADDRESS</u>	<u>NATURE OF INTEREST</u>	<u>DECLARATION OR WAIVER</u>
1. West 129th Street Realty I, LLC 161 Suffolk Street New York, NY 10002	Fee owner (Tenant-in-common)	
2. West 129th Street Realty II, LLC 161 Suffolk Street New York, NY 10002	Fee owner (Tenant-in-common)	

The subject tract of land with respect to which the foregoing parties are the parties in interest as aforesaid, is known as Tax Lot Number 6 in Block 1969 on the Tax Map of the City of New York, New York County and more particularly described as follows:

SEE ATTACHED SCHEDULE "A"

SCHEDULE A

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Manhattan, City, County and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of West 130th Street (as now open and in use, 60 feet wide) distant 154 feet 7 inches easterly from the corner formed by the intersection of the said southerly side of West 130th Street and the easterly side of Amsterdam Avenue (as now open and in use, 100 feet wide);

RUNNING THENCE easterly along the southerly side of West 130th Street, 95 feet 5 inches;

THENCE southerly along a line at right angles with the southerly side of West 130th Street, a distance of 198 feet 8-3/4 inches to an angle point (survey) 198 feet 7 inches (deed)

(Tax Map shows 198 feet 8 inches to the northerly side of West 129th Street)

THENCE southeasterly along a line forming an interior angle of 242 degrees 03 minutes 10 seconds with the last mentioned line 2 feet 4-1/4 inches to a point on the northerly side of West 129th Street;

THENCE westerly along the northerly side of West 129th Street a distance of 97 feet 6 inches;

THENCE northerly along a line at right angles with the northerly side of West 129th Street, 199 feet 10 inches to the point or place of **BEGINNING**.

The said premises are known as and by street address 487 West 129 Street, New York, NY as shown on the following DIAGRAM:

EXHIBIT C

DEP letter dated April 16, 2008 to follow

April 16, 2008

Robert Dobruskin
Director, Environmental Assessment and Review
New York City Department of City Planning
22 Reade Street, Room 4E
New York, NY 10007

**Re: West 129th Street Rezoning
Block 1969, Lots 1 - 6, 12, 19, 65, 66, 68, 78 - 81 & 104
07DCP076M/ 08DEPTECH069M**

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection Bureau of Environmental Planning and Analysis (DEP) has reviewed the March 2008 Phase II Subsurface Investigation prepared by AKRF for the above referenced project site. It is our understanding that the applicant is seeking to rezone Block 1969 from the existing manufacturing M1-1 and R7-2 zones to a R7A zone. The C1-4 overlay along Amsterdam Avenue would remain. The rezoning would permit development at a floor area ratio of 4.0 and would facilitate construction of a 9-story residential building with approximately 130 units and 63 accessory parking spaces on Lots 6. The project site is located in Manhattan Community District 10.

The Phase II concluded that soil disposal requirements for the proposed development project/excavation activities may require hazardous waste disposal/recycling options if future disposal analysis reveals significant contaminant concentrations.

Based upon our review of the submitted documents, DEP has the following comments:

- As a result of Phase II findings, a Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) for Lot 6 should be submitted for DEP review and approval.
- An adequate sub-slab vapor barrier must be installed during the proposed construction project to reduce/eliminate potential on-site/off-site groundwater contamination from impacting the proposed site/structure.
- Due to the elevated concentration levels of volatile organic compounds detected on-site which are associated with an off-site spill and the engineering controls (vapor barrier) necessary to avoid significant hazardous materials impacts, the applicant should enter into a Restrictive Declaration for Lot 6 with DEP to ensure all remediation activities are completed prior to or during construction of the proposed development. The Restrictive Declaration

DIAL
EST

must be designed to restrict the manner in which the property may be developed or redeveloped, by requiring that additional testing or remediation measures, if required, serve as a condition precedent to any change of use or sub-surface excavation conducted as part of any future development or redevelopment of the property. All other development sites should receive Hazardous Materials "E" designations.

- Please note that the February 2008 Site Investigation was completed without DEP's written Workplan/HASP approval.
- Please note, as previously indicated in our March 21, 2008 correspondence, that based on the results of the Phase I Investigation, all development sites which are not controlled by the applicant should receive an "E" designation for hazardous materials to ensure that the appropriate level of investigation and, if necessary, remediation be conducted to the satisfaction of DEP prior to development of those sites.

Please include DEP tracking number 08DEPTECH069M on all future correspondence and submittals related to this project. If you have any questions, please contact Gosia Pawluszko at (718) 595-6450.

Sincerely,

Terrell Estes
Director, Office of City Project Review

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

ALPHA ANALYTICAL
NARRATIVE REPORT

Laboratory Job Number: L0802902

The samples were received in accordance with the chain of custody and no significant deviations were encountered during preparation or analysis unless otherwise noted below.

Sample Receipt

At the client's request, the analysis of sample "FD-1" was placed on hold.

With the client's authorization, the following compounds are not reported on the Volatile Organics list: p-Diethylbenzene, 4-Ethyltoluene, and 1,2,4,5-Tetramethylbenzene.

Total Metals

The samples were re-analyzed on dilution in order to quantitate the samples within the dynamic linear range for Calcium and Iron. The dilutions are as follows:

L0802902-03: 10x for Iron

L0802902-05: 10x for Calcium and Iron

L0802902-09: 10x for Calcium

The WG313283-1 laboratory duplicate RPD for Arsenic is above method acceptance criteria due to sample non-homogeneity.

The WG313460-1 laboratory duplicate RPD for Calcium is above method acceptance criteria, however, the sample and duplicate results are less than 5 times the reporting limit, therefore, the RPD is valid.

The WG313283-2 MS % recoveries for Aluminum, Calcium, Iron, Magnesium, Manganese, and Potassium are invalid because the sample concentration is greater than four times the spike amount added. The MS % recovery for Antimony is below method acceptance criteria. A post-digestion spike was performed with an acceptable recovery of 92%. The MS % recovery for Sodium is above method acceptance criteria due to the concentration (below reporting limit) of this element in the spiked sample.

Calcium is present in the WG313283-3 method blank, however, all associated sample results are greater than 10x the amount detected in the blank.

Volatile Organics

L0802907-04 has elevated detection limits due to the 200x dilution required by the elevated concentrations of non-target compounds in the sample.

The surrogate % recovery for 1,2-Dichloroethane-d4 is above method acceptance criteria on L0802902-05. Re-analysis achieved similar results. The results of both analyses are reported.

ALPHA ANALYTICAL
NARRATIVE REPORT

Laboratory Job Number: L0802902

Continued

The surrogate % recovery for 4-Bromofluorobenzene is above method acceptance criteria on L0802902-07. The sample is non-detect for all target compounds.

Semivolatile Organics

L0802902-03 has elevated detection limits due to the 5x dilution required by the sample matrix.

L0802902-05, -06, and -07 have elevated detection limits due to the 5x dilutions required by the matrix interferences encountered during the concentration of the samples and the 5x dilutions required by the matrix of the samples (total dilutions 25x). The surrogates could not be recovered due to the dilutions required to quantitate the samples.

L0802902-09 has elevated detection limits due to the 10x dilution required by the elevated concentrations of non-target compounds in the sample.

The WG313384-2 LCS % recovery for 2,4-Dinitrotoluene is above, and the LCS % recovery for 2,4-Dinitrophenol is below, method acceptance criteria. The MS/MSD % recoveries are acceptable.

The WG313384-3/4 MS % recoveries for Fluoranthene and Pyrene are above method acceptance criteria due to the presence of these compounds in the spiked sample. The LCS % recoveries are acceptable.

WG313450: An LCS/LCSD was performed in lieu of an MS/MSD due to limited sample volume available for analysis.

The WG313450-2/3 LCS/LCSD RPDs are above method acceptance criteria for 1,2,4-Trichlorobenzene, 1,2-Dichlorobenzene, 1,4-Dichlorobenzene, and 2-Chlorophenol.

PCB

L0802902-05 has elevated detection limits due to the 2x dilution required by the matrix interferences encountered during the concentration of the sample.

Pesticides

L0802902-05 has elevated detection limits due to the 5x dilution required by the sample matrix.

WG313451: An LCS/LCSD was performed in lieu of an MS/MSD due to insufficient sample volume available for analysis.

GLOSSARY OF TERMS AND SYMBOLS

REF	Reference number in which test method may be found.
METHOD	Method number by which analysis was performed.
ID	Initials of the analyst.
ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.
H	The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1423865
Report Date: 10/16/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Lab Number: L1423865
Report Date: 10/16/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1423865-07: The water-preserved VOA vials for Volatile Organics Low-Level analysis were frozen beyond the 48 hour holding time. The client was notified and the results of the analysis are reported.

Volatile Organics

L1423865-07: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (47%) was outside the acceptance criteria; however, re-analysis achieved similar results: 1,4-dichlorobenzene-d4 (48%) and the surrogate recovery for 4-bromofluorobenzene (156%). The results of both analyses are reported.

L1423865-07: A discrepancy was observed between the results of the original analysis and the re-analysis. This was attributed to the sample matrix.

L1423865-08 has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

Semivolatile Organics by SIM

L1423865-07: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol, phenol-d6, nitrobenzene-d5, 2-fluorobiphenyl, 2,4,6-tribromophenol, and 4-terphenyl-d14 (all at 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

PCBs

L1423865-01 through -04 have elevated detection limits due to limited sample volumes available for analysis.

Pesticides

The WG730226-2 LCS recoveries, associated with L1423865-01 through -04, were outside the acceptance

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1423865
Report Date: 10/16/14

Case Narrative (continued)

criteria for individual target compounds; however, re-extraction could not be performed due to lack of additional sample. The results of the original analyses are reported.

Total Metals

L1423865-05 through -12 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

The WG730094-4 MS recoveries for aluminum (497%), iron (1100%), and manganese (199%), performed on L1423865-05, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG730094-4 MS recovery, performed on L1423865-05, is outside the acceptance criteria for antimony (64%). A post digestion spike was performed and yielded an unacceptable recovery of 78%. This has been attributed to sample matrix.

Dissolved Metals

The WG731583-4 MS recovery for sodium (60%), performed on L1423865-01, does not apply because the sample concentration is greater than four times the spike amount added.

The WG731583-4 MS recoveries, performed on L1423865-01, are outside the acceptance criteria for magnesium (225%) and potassium (169%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Cristin Walker

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1423865
Report Date: 10/16/14

SAMPLE RESULTS

Lab ID: L1423865-12
 Client ID: WC-4 26'-28'
 Sample Location: NEW YORK, NY
 Matrix: Soil
 Percent Solids: 81%

Date Collected: 10/07/14 17:25
 Date Received: 10/09/14
 Field Prep: Not Specified

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: DU Report with 'J' Qualifiers

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1423865
Report Date: 10/16/14

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1423865

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F,**

EPA 353.2: Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4,**

SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

Report Date: 10/20/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on October 3, 2014. The canister certification results are provided as an addendum.

Samples L1424052-01 and -02 have elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the samples.

Sample L1424052-01 results for Acetone should be considered estimated due to co-elution with a non-target peak.

Sample L1424052-02 The presence of Acetone could not be determined in this sample due to a non-target compound interfering with the identification and quantification of this compound.

Samples L1424052-03 and -05 results for Acetone should be considered estimated due to co-elution with a non-target peak.

The WG731961-3 LCS recoveries for Vinyl Acetate (146%) and Benzyl Chloride (131%) are above the upper 130% acceptance limit. The response for these compounds was elevated however they were not detected in any of the associated samples therefore no further action was taken.

Laboratory Duplicate WG731961-5; the relative percent difference for Dichlorodifluoromethane (35%) and Vinyl Chloride (27%) are above the RPD limit of 25%. These compounds represented less than 10% of the compounds detected, therefore no further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: Data Usability Report

Project Name: 487 W. 129TH ST.
Project Number: 10825

Lab Number: L1424052
Report Date: 10/20/14

Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA 2540D: TSS

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

ARCHITECTURAL SURVEY

REF. NO. M1969-6

NOTES
ELEVATIONS SHOWN ARE REFERENCED TO THE NAD 83 DATUM WHICH IS 1.10 FEET ABOVE MEAN SEA LEVEL AT SANDY HOOK AS ESTABLISHED BY THE U.S. COAST AND GEODETIC SURVEY AND IS 1.85 FEET BELOW MANHATTAN DATUM. MANHATTAN DATUM IS 2.70' ABOVE MEAN SEA LEVEL AT SANDY HOOK AS ESTABLISHED BY THE U.S. COAST AND GEODETIC SURVEY. 10.00 (MD)=11.85 (NAV08S).

INVERT ELEVATION ARE DERIVED FROM CITY AGENCY RECORDS WHEN NOT AVAILABLE BY FIELD SURVEY.

ONLY SEWER AND WATER UTILITIES ARE SHOWN. CONSULT WITH APPROPRIATE UTILITY COMPANIES AND/OR AGENCIES PRIOR TO DESIGNING IMPROVEMENTS.

SUBSURFACE UTILITIES SHOWN ARE TAKEN FROM RECORDS OF GOVERNMENTAL AGENCIES AND UTILITY COMPANIES UNLESS OTHERWISE SHOWN.

COVER OR DEPTH OF UTILITIES IS NOT SHOWN AND MUST BE VERIFIED WITH PROPER AGENCIES PRIOR TO CONSTRUCTION OF PROJECT.

UNDERGROUND, OVERHEAD AND GROUND LEVEL UTILITIES ARE NOT GUARANTEED AS TO ACCURACY, EXACT LOCATION, TYPE OR USE, ACTIVE OR INACTIVE. VERIFICATION IS MANDATORY WITH MUNICIPAL AGENCIES, PUBLIC AND PRIVATE UTILITY COMPANIES PRIOR TO TAKING TITLE AND/OR DESIGN WORK. BOUNDARIES ARE NOT GUARANTEED UNLESS SO NOTED.

UNDERGROUND UTILITIES MUST BE VERIFIED AND MARKED OUT BEFORE CONSTRUCTION. ALL APPROPRIATE UTILITY COMPANIES AND/OR AGENCIES MUST BE NOTIFIED AT LEAST 72 HOURS PRIOR TO ANY CONSTRUCTION, EXCAVATION OR DEMOLITION AT OR NEAR THE PROPERTY IN ACCORDANCE WITH NYS CODE RULE 753.

ALL OPERATIONS OF UNDERGROUND FACILITIES AND ALL EXCAVATORS ARE OBLIGATED TO COMPLY WITH ARTICLE 35 OF THE GENERAL BUSINESS LAW AND WITH PROVISIONS OF INDUSTRIAL CODE PART (RULE NO. 35) BEFORE ANY EXCAVATION OR DEMOLITION IS COMMENCED. EVERY EXCAVATOR IS REQUIRED BY THESE LAWS TO GIVE ADVANCE NOTICE TO EVERY OPERATOR OF UNDERGROUND FACILITIES OF HIS INTENT TO PERFORM EXCAVATION OR DEMOLITION WORK IN THE SPECIFIED AREA.

EMPIRE STATE LAND SURVEYOR, P.C. AND FRANK GALLUZZO, PLS MAKES NO CLAIM AND DOES NOT GUARANTEE THAT THE 'SHOWS' SHOWN HEREON ARE PUBLIC AND THAT THE LOT OR LOTS DEPICTED ON THIS SURVEY WILL BE ABLE TO CONNECT TO SAME.

A THOROUGH INVESTIGATION BY THE OWNER, DEVELOPER AND/OR THE ARCHITECT MUST BE MADE WITH THE NEW YORK CITY SEWER DEPARTMENT ON THE FEASIBILITY TO CONNECT TO THE EXISTING SEWER LINES BEFORE PURCHASING AND/OR DESIGNING.

THIS SURVEY WAS PREPARED IN A ELECTRONIC MEDIA FORMAT. IT IS UNDERSTOOD AND AGREED THAT EMPIRE STATE LAND SURVEYOR, P.C. AND FRANK GALLUZZO, PLS UPON RELEASE OF THESE ELECTRONIC FILES NO LONGER MAINTAINS CONTROL OF ITS USE, REUSE OR MODIFICATION. ONLY THE DIMENSIONS SHOWN ON THE HARD COPY ORIGINAL RECORD SIGNED AND SEALED DOCUMENTS PREPARED BY THIS OFFICE WILL BE CERTIFIED FOR ACCURACY. THE USER OF THIS ELECTRONIC MEDIA ACCEPTS FULL RESPONSIBILITY AND LIABILITY FOR ANY CONSEQUENCES ARISING OUT OF USE OF THIS DATA.

PROPERTY LINE DIMENSIONS SHOWN ARE DERIVED FROM DEEDS AND TAX MAPS. THIS SURVEY WAS PREPARED WITHOUT THE BENEFIT OF AN ABSTRACT OF TITLE AND IS SUBJECT TO ANY STATE OF FACTS THAT MAY BE REVEALED BY AN EXAMINATION OF SUCH.

THIS IS TO CERTIFY THAT THERE ARE NO VISIBLE STREAMS OR NATURAL WATER COURSES ON THE PROPERTY EXCEPT AS SHOWN ON THIS SURVEY.

THE USE OF ANY INFORMATION ON THIS SURVEY CONSTITUTES AN AGREEMENT TO ALL OF THE ABOVE.

1.	JUNE 30, 2014	ARCHITECTURAL SURVEY
NO.	DATE	REVISION
MAP OF PROPERTY SITUATED IN MANHATTAN NEW YORK COUNTY, N.Y. TAX SECT.: 7 TAX BLOCK: 1969 TAX LOT(S): 6 Empire State Land Surveyor, P.C. Frank I. Galluzzo Professional Land Surveyor Records of Albert A. Bianco Stephen J. Reid - M. Berry Carman - G. W. Haviland Vandewater & Lapp - Robert E. Carlin - William J. Daly 1005 Glen Cove Avenue, Glen Head, NY, 11545 (516)-244-6901		
SURVEYED: JUNE 5, 2014		

GENERAL NOTES:

1. ALL FILL USED BELOW SLABS UNDER BUILDINGS AND IN PAVED AREAS SHALL BE QUALITY SANDY MATERIAL AND SHALL BE COMPACTED IN 12" LAYERS TO 95% DENSITY TO PREVENT SETTLEMENT AS PER ASTM D1557, METHOD C.
2. CONTRACTOR MUST ALSO FOLLOW ALL REQUIREMENTS FOR PREPARATION, CLEARING, PROOF ROLLING, AND FILL REPLACEMENT RECOMMENDED BY A REPORT ON SOIL AND FOUNDATION INVESTIGATION.
3. ALL FILL SHALL BE COMPACTED WITH SOIL COMPACTION EQUIPMENT RATHER THAN BY HAND TAMPING (EXCEPT AROUND PIPES, ETC.)
4. THE THICKNESS OF FILL LAYERS PLACED SHALL BE COMPATIBLE WITH THE TYPE OF COMPACTION EQUIPMENT USED.
5. THE ATTAINMENT OF SPECIFIED DENSITIES SHALL BE VERIFIED BY FIELD DENSITY TESTS MADE BY AN INDEPENDENT TESTING LABORATORY ON EACH LAYER OF MATERIAL COMPACTED, ONE TEST PER 5000 SQ. FT. OF SURFACE AREA SHALL BE MADE ON EACH LAYER WITHIN THE BUILDING.

EROSION AND SEDIMENT CONTROL PLAN - CONSTRUCTION SEQUENCE

1. ALL EROSION AND SEDIMENT CONTROL MEASURES, EXCLUDING CATCH-BASIN MEASURES, SHALL BE IN PLACE PRIOR TO ANY GRADING OPERATIONS AND INSTALLATION OF PROPOSED STRUCTURES AND OR UTILITIES.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL REMAIN IN PLACE AND BE MAINTAINED UNTIL CONSTRUCTION IS COMPLETED AND/OR STABILIZED.
3. INSTALL STABILIZED CONSTRUCTION ENTRANCE AS INDICATED ON PLAN.
4. INSTALL SILT FENCE AND/OR HAY BALE BARRIERS DOWN SLOPE OF ALL AREAS TO BE DISTURBED AND DOWN SLOPE OF ALL AREAS DESIGNATED FOR TOPSOIL STOCKPILING.
5. CONSTRUCT BERMS, TEMPORARY SWALES AND PIPES AS NECESSARY TO DIRECT RUNOFF TO TEMPORARY SEDIMENTATION ENTRAPMENT AREAS.
6. CLEAR EXISTING TREES, VEGETATION AND EXISTING STRUCTURES FROM AREAS TO BE FILLED OR EXCAVATED. STRIP AND STOCKPILE TOPSOIL FROM ALL AREAS TO BE DISTURBED. SEED STOCKPILED TOPSOIL WITH TEMPORARY RYE GRASS COVER.
7. PERFORM EXCAVATION AND FILL TO BRING LAND TO DESIRED GRADE. ANY DISTURBED AREAS TO REMAIN BARE SHOULD BE SEEDED WITH TEMPORARY RYE GRASS.
8. INSTALL UNDERGROUND UTILITIES, MANHOLES AND CATCH BASINS. GRATES OF CURB AND FIELD INLETS SHOULD BE LEFT AT ELEVATIONS WHICH PERMIT PROPER COLLECTION OF SURFACE RUNOFF.
9. INSTALL HAY BALE RINGS AROUND ALL CURB AND FIELD INLETS EXCEPT FOR THE BASINS LOCATED AT THE ANTI TRACKING PAD. BASINS AT THE PAD SHALL BE TREATED WITH THE CATCH BASIN-FILTER FABRIC DETAIL.
10. CONSTRUCT CURBS AND INSTALL BASE AND BINDER COURSES OF PAVED AREAS. RAISE GRATES OF CURB AND FIELD INLETS ACCORDINGLY.
11. COMPLETE FINE GRADINGS.
12. RAISE GRATES OF CURB AND FIELD INLETS TO FINAL ELEVATIONS. INSTALL SURFACE COURSE OF PAVEMENT.
13. UPON COMPLETION OF CONSTRUCTION, ALL DISTURBED AREAS ARE TO BE SEEDED. REFER TO LANDSCAPING PLAN FOR PERMANENT SEEDING SPECIFICATIONS. ALL TEMPORARY DEVICES SHALL BE REMOVED AND THE AFFECTED AREAS RE-GRADED, PLANTED OR TREATED IN ACCORDANCE WITH THE APPROVED SITE PLANS.

ZONING MAP
The information on this map is subject to change. For the most up-to-date zoning information for this map, visit the zoning website at www.aufgang.com/zoning or contact the Zoning Information Desk at (917) 604-5834.

Major Zoning Classifications:
R - RESIDENTIAL DISTRICT
C - COMMERCIAL DISTRICT
M - MANUFACTURING DISTRICT

SPECIAL PURPOSE DISTRICT
The special purpose district (SPD) is a zoning district that is established to regulate the use of land in a specific area. SPDs are established by the Board of Zoning Adjustments (BZA) and are subject to the same rules and regulations as other zoning districts.

Effective Date(s) of Rezoning:
12-09-2009 C 080339 ZMM

Special Requirements:
For a list of lots subject to CEQR environmental requirements, see APPENDIX C.
For a list of lots subject to "D" residential restrictions, see APPENDIX D.
For "Involuntary" Housing designated areas on this map, see APPENDIX E.

Updated FEMA Flood Hazard Data
FEMA flood hazard data currently available for coastal areas of New York and New Jersey is provided below to help you understand the current flood risk to your property and to guide recovery and rebuilding efforts.
Note: This tool provides Flood Zone and Base Flood Elevation (BFE) information for areas affected by coastal flood risk. However, riverine flood zone information will also be revealed by the tool in communities where preliminary FEMA's have been released.

Effective Flood Insurance Data
This information is from the effective Flood Insurance Rate Map for your community. It is used to determine who must buy flood insurance and how much it costs. It may also be used by your community to regulate development in flood prone areas.

Attribute Name | **Attribute Value**

What is the most recent FEMA flood hazard data source available for this location?
FEMA Flood Insurance Rate Map (FIRM) | N/A

What is my property's Base Flood Elevation (BFE)?
If you do know, the flood depth will be shown instead of an elevation. For N/A results, please contact your local floodplain administrator for more information. | N/A

What is my property's Flood Zone?
For N/A results, please contact your local floodplain administrator for more information. | N/A

What is the estimated annual elevation in this location?
See licensed surveyor for exact elevation of your building. | N/A

What does my FEMA Flood Hazard Map Panel Look Like?
Link to Preliminary FIRM | N/A
Link to Map Tool | N/A

View your property on our Interactive Web Tool
Link to Preliminary FIRM | N/A
Link to FEMA Flood Hazard Map Panel | N/A

Where can I get the GIS data for my property area?
Link to Preliminary FIRM | N/A
Link to FEMA Flood Hazard Map Panel | N/A

AUFANG ARCHITECTS

- WALL TYPE LEGEND**
NON-RATED
- 1-1 TYPICAL PARTITION - (1) LAYER 5/8" TYPE "X" GYPSUM BOARD ON EACH SIDE OF 2-1/2" METAL STUDS @ 16" O.C.
 - 1-2 BATHROOM CHASE WALL PARTITION - (1) LAYER 5/8" TYPE "X" WATER RESISTANT GYPSUM BOARD ONE SIDE OF 2-1/2" METAL STUDS @ 16" O.C.
 - 1-3 2" RIGID INSULATION
- 1 HOUR RATED**
- 1-1 1 HOUR RATED TENANT SEPARATION PARTITION - (1) LAYER OF 5/8" TYPE "X" GYPSUM BOARD ON EACH SIDE OF 3-5/8" METAL STUDS @ 16" O.C. WITH 5-1/2" SOUND ATTENUATION INSULATION. EXTEND STUDS & GYPSUM BOARD UP TO UNDERSIDE OF CONCRETE DECK & SEAL TIGHT TO UNDERSIDE OF CONCRETE DECK AND/OR ROOF DECK W/ CONT. FIRESTOP SEALANT WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #1906).
 - 1-2 1 HOUR RATED CHASE WALL - (1) LAYER 5/8" TYPE "X" GYPSUM BOARD ON ONE SIDE OF 2-1/2" METAL STUDS @ 24" O.C. EXTEND GYPSUM BOARD & STUDS UP TO UNDERSIDE OF FLOOR DECK OR ROOF DECK. SEAL TIGHT TO UNDERSIDE OF FLOOR DECK W/ CONT. FIRESTOP SEALANT (UL #419) (STC 51).
 - 1-3 1 HOUR RATED EXTERIOR PARTITION - (2) LAYERS OF 5/8" TYPE "X" GYPSUM BOARD. EXTERIOR FINISHING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE DECK OR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND PRESFARING INSULATION WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #1906).
 - 1-4 1 HOUR RATED EXTERIOR PARTITION (FURRING) - SIM. TO 1-3 WITH INTERIOR FURRING AS REQ'D TO ALIGN WITH INTERIOR PARTITION.
 - 2-1 2 HOUR RATED CMU WALL - CMU WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE DECK OR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND PRESFARING INSULATION WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #1906).
 - 2-2 2 HOUR RATED CMU WALL (FURRING) - 2.2 SIM. WITH FURRING (1) LAYER 5/8" TYPE "X" GYPSUM BOARD OVER 1/2" METAL CHANNELS @ 16" O.C.
 - 2-3 2 HOUR RATED INTERIOR BEARING PARTITION - (2) LAYERS 5/8" TYPE "X" GYPSUM BOARD ON EACH SIDE 6" METAL STUDS @ 16" O.C. WITH 5-1/2" SOUND ATTENUATION INSULATION. EXTEND GYPSUM BOARD & STUDS UP TO UNDERSIDE OF FLOOR DECK OR ROOF DECK. SEAL TIGHT TO DECK W/ CONT. FIRESTOP SEALANT & PRESFARING. (GA FILE IWP-1522 STC 55-59).
 - 2-4 2 HOUR RATED INTERIOR NON-BEARING PARTITION - (2) LAYERS 5/8" TYPE "X" GYPSUM BOARD ON EACH SIDE 6" METAL STUDS @ 16" O.C. WITH 5-1/2" SOUND ATTENUATION INSULATION. EXTEND GYPSUM BOARD & STUDS UP TO UNDERSIDE OF FLOOR DECK OR ROOF DECK. SEAL TIGHT TO DECK W/ CONT. FIRESTOP SEALANT & PRESFARING. (GA FILE IWP-1522 STC 55-59).
 - 2-5 2 HOUR RATED EXTERIOR CMU WALL - CMU WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE DECK OR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND PRESFARING INSULATION WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #1906).
 - 2-6 2 HOUR RATED EXTERIOR CMU WALL (3-5/8" FURRING) - 2.5 SIM. WITH FURRING (1) LAYER 5/8" TYPE "X" GYPSUM BOARD ON 3-5/8" GALV. METAL STUDS @ 16" O.C. WITH 3/16" (R-15) BATT INSULATION UNFACED.
 - 2-7 2 HOUR RATED INTERIOR CMU WALL (2" FURRING) - CMU WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE DECK OR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND PRESFARING INSULATION WHERE GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF DECK (UL #1906).
 - 2-8 2 HOUR RATED INTERIOR CMU WALL (1 1/2" FURRING) - 2" SIM. WITH FURRING (1) LAYER 5/8" TYPE "X" GYPSUM BOARD OVER 1 1/2" METAL CHANNELS @ 16" O.C.
 - 2-9 2 HOUR RATED INTERIOR BEARING WALL (FURRING) - SIM. TO 2-3 WITH INTERIOR FURRING AS REQ'D TO ALIGN WITH EXTERIOR WALL.
- 3 HOUR RATED**
- 3-1 3 HOUR RATED WALL - (1) LAYER 5/8" TYPE "X" GYPSUM BOARD OVER 7/8" METAL CHANNELS @ 24" O.C. OVER 2 HR RATED CONCRETE WALL WITH CONT. GALVANIZED HORIZONTAL TRUSS TYPE REINFORCING AT ALTERNATE BLOCK COURSES. SEAL TOP OF CONCRETE BLOCK WALL TIGHT TO UNDERSIDE OF CONCRETE FLOOR DECK ABOVE WITH CONT. FIRESTOP SEALANT AND PRESFARING INSULATION WHERE A GAP EXISTS BETWEEN TOP OF WALL AND BOTTOM OF CONCRETE DECK (UL #1914). PROVIDE STC RATINGS OF 50-54 COMPACTOR CHUTE FOR SHAFT ADJACENT TO DWELLING UNITS).

NYC DOB NUMBER:

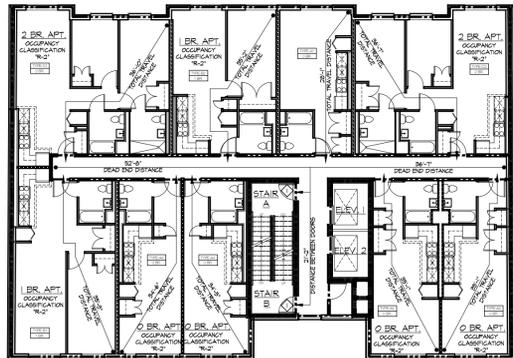

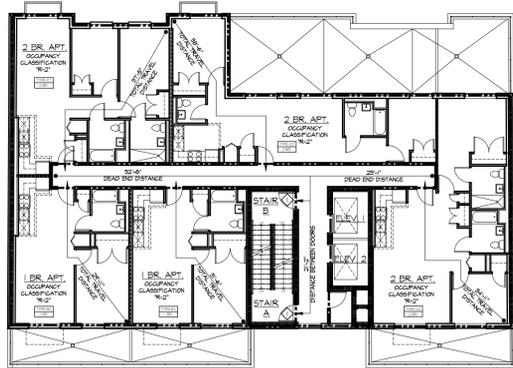

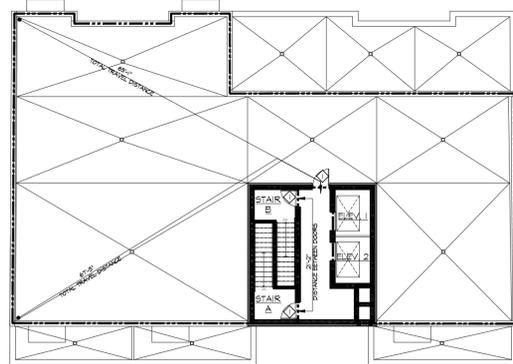

FIRE PROTECTION:
 BUILDING IS FULLY SPRINKLERED AND EQUIPPED WITH AN ALTERNATIVE FIRE EXTINGUISHING SYSTEM, A STAND PIPE SYSTEM, SMOKE VENTS, A FIRE ALARM AND DETECTION SYSTEM & A FIRE COMMAND CENTER, IN COMPLIANCE WITH THE NYC BUILDING CODE, NYC FIRE CODE & LOCAL FIRE DEPARTMENT REQUIREMENTS.

EGRESS NOTES: CHAPTER 10

1. MEANS OF EGRESS SHALL HAVE A CEILING HEIGHT NOT LESS THAN 7'-6" (BC 1003).
2. OCCUPANT LOAD AS DETERMINED ON TABLE 1004.1.2
3. EXIT AND ACCESS REQUIREMENTS ARE TO BE CALCULATED AS PER TABLE 1005.1 AS PER SECTION BC 1005.
4. EXITS, EXIT DISCHARGES AND PUBLIC CORRIDORS SHALL BE ILLUMINATED AT ALL TIMES, AS PER BC 1006.
- 4.A. PUBLIC CORRIDORS AND EXITS SHALL BE PROVIDED WITH ARTIFICIAL LIGHT FIXTURES SUPPLYING AT LEAST TWO FOOT CANDLES MEASURED AT THE FLOOR LEVEL, TO BE MAINTAINED CONTINUOUSLY THROUGHOUT EXITS AND THEIR ACCESS FACILITIES FOR THEIR FULL LENGTH (BC 1006.2).
- 4.B. EXIT LIGHTINGS, EXIT SIGNS & THE PORTION OF THE EXTERIOR EXIT DISCHARGE IMMEDIATELY ADJACENT TO EXIT DISCHARGE DOORWAYS SHALL BE CONNECTED TO AN EMERGENCY POWER SYSTEM FOR A DURATION NOT LESS THAN 90 MINUTES & SHALL CONSIST OF STORAGE BATTERIES, UNIT EQUIPMENT OR AN ON-SITE GENERATOR. (BC 1006.3).
5. ALL EXITS SHALL BE KEPT READILY ACCESSIBLE AND UNOBSTRUCTED AT ALL TIMES AS PER SECTION BC 1007.
6. DOORS ARE TO COMPLY WITH ALL APPLICABLE REQUIREMENTS OF SECTION BC 1008 INCLUDING, BUT NOT LIMITED TO THE FOLLOWING:
 - 6.A. CLEAR OPENING OF 32"(MIN) IS REQUIRED AND SHALL BE MEASURED BETWEEN THE FACE OF THE DOOR AND THE STOP, WITH THE DOOR OPEN 90 DEGREES. (SECTION BC 1008.1.1).
 - 6.B. DOOR HEIGHT NOT TO BE LESS THAN 6'-8" (BC 1008.1.1.3).
 - 6.C. ALL EXIT DOORS ARE TO OPEN IN THE DIRECTION OF EGRESS (1008.1.2) FLOOR LEVELS ON BOTH SIDES OF ALL EXIT AND CORRIDOR DOORS ARE TO BE LEVEL AND AT THE SAME ELEVATION FOR A DISTANCE AT LEAST EQUAL TO THE WIDTH OF THE DOOR (1008.1.4).
 - 6.D. EXIT DOORS SHALL BE READILY OPENABLE AT ALL TIMES FROM THE SIDE FROM WHICH EGRESS IS TO BE MADE. DOORS OPENING ONTO INTERIOR ENCLOSED STAIRS SHALL NOT BE LOCKED FROM EITHER SIDE EXCEPT THAT DOORS MAY BE LOCKED TO PREVENT ACCESS TO THE STAIR FROM THE OUTSIDE AT STREET LEVEL AS PER SECTION 1008.1.8.
 - 6.E. PANIC AND FIRE EXIT HARDWARE SHALL BE INSTALLED ON ALL EGRESS DOORS FROM OCCUPANCY GROUP 'A' OR 'E' HAVING AN OCCUPANT LOAD OF 15 PEOPLE OR MORE AS PER SECTION 1008.1.9.
 - 6.F. REQUIRED EXITS & SMOKE DOORS ARE TO BE SELF-CLOSING (BC 715.3.1) WITH A 1-1/2 HOUR FIRE PROTECTION RATINGS (TABLE 715.3) EXCEPT IN THE FIRST STORY OF EXTERIOR WALLS FACING A STREET THAT HAVE A FIRE SEPARATION DISTANCE OF GREATER THAN 15'-0" (BC 704.8.2) THEN DOORS NEED NOT TO BE RATED.
7. STAIRWAYS SHALL COMPLY WITH ALL APPLICABLE REQUIREMENTS STATED IN SECTIONS BC 1009 & 1019 INCLUDING, BUT NOT LIMITED TO THE FOLLOWING:
 - 7.A. STAIR WIDTH SHALL BE DETERMINED AS SPECIFIED IN SECTION 1005.1, BUT SLUG WIDTH SHALL NOT BE LESS THAN 44" (BC 1009.1) OR 36" (BC 1009.1.2).
 - 7.B. AREA OF RESCUE ASSISTANCE SHALL BE 30' x 48' FOR EACH 200 OCCUPANTS, AS PER SECTION 1007.6.1.
 - 7.C. THE CLEAR HEADROOM SHALL BE AT LEAST 6'-8" MINIMUM, AS SPECIFIED IN SECTION 1009.1.1 (R-2 OCCUPANCY).
 - 7.D. LANDINGS AND PLATFORMS PROVIDED AT THE HEAD AND FOOT OF EACH FLIGHT OF STAIRS SHALL HAVE A MINIMUM WIDTH PERPENDICULAR TO THE DIRECTION OF TRAVEL OF AT LEAST THE WIDTH OF THE STAIR. IN STRAIGHT RUN STAIRS, THE DISTANCE BETWEEN STAIRS WITHIN THE RUN SHALL NOT BE MORE THAN 48". NO DOOR SHALL SWING ONTO A LANDING AND REDUCE THE EGRESS REQUIRED CLEAR WIDTH OF THE STAIR OR STAIR PLATFORM TO BE LESS THAN 75% OF THE REQUIRED WIDTH, OR WHEN FULLY OPEN, THE DOOR SHALL NOT PROJECT MORE THAN 1" INTO THE LANDING AS PER SECTION 1009.4.
 - 7.E. RISERS, TREADS, STRINGERS, LANDINGS, PLATFORMS AND GUARDS EXCLUSIVE OF HANDRAILS, SHALL BE BUILT OF NONCOMBUSTIBLE MATERIALS. WHEN TWO STAIRS ARE CONTAINED WITHIN THE SAME ENCLOSURE, EACH STAIR SHALL BE SEPARATED FROM THE OTHER BY NONCOMBUSTIBLE CONSTRUCTION HAVING A FIRE RESISTANCE RATING EQUAL TO THAT REQUIRED FOR THE STAIR ENCLOSURE (BC 1009.5).
 - 7.F. STAIRS SHALL HAVE HANDRAILS ON EACH SIDE (EXCEPT STAIRS LESS THAN 44" IN WIDTH) HAVING FINGER CLEARANCE OF 1-1/2" MIN, PROJECTING NOT MORE THAN 4-1/2" INTO THE REQUIRED STAIR WIDTH. HEIGHT OF HANDRAIL SHALL BE UNIFORM, NOT LESS THAN 34" AND NOT MORE THAN 38" MEASURED ABOVE THE STAIR TREAD NOSING. HANDRAILS SHALL BE DESIGNED IN COMPLIANCE WITH SECTION 1009.11.
 - 7.G. THE MAXIMUM VERTICAL RISE OF A SINGLE FLIGHT OF STAIRS BETWEEN FLOORS IS NOT TO EXCEED 12' EXCEPT IN OCCUPANCY GROUP A AND I WHERE THE VERTICAL RISE IS NOT TO EXCEED 8'-0" (SECTION 1009.6).
 - 7.H. ALL INTERIOR STAIRS SHALL EXTEND UP TO THE ROOF (BC 1009.12.1).
 - 7.I. INTERIOR REQUIRED STAIRS EXTENDING TO THE ROOF SHALL BE VENTED AS PER THE REQUIREMENTS OF SECTION 910.5.
 - 7.J. STAIR EXIT DOORS SHALL BE PLACED A DISTANCE APART EQUAL TO NO LESS THAN 15'-0" IN R2 OCCUPANCY (SECTION 1014.2.1.3).
8. EGRESS CORRIDORS SHALL COMPLY WITH ALL APPLICABLE REQUIREMENTS STATED IN SECTIONS BC 1011, 1019 THRU 1019, 1020 THRU 1023, 1024 & 1026 INCLUDING BUT NOT LIMITED TO THE FOLLOWING:
 - 8.A. PROTRUDING OBJECTS ARE PERMITTED TO EXTEND BELOW THE MIN. CEILING HEIGHT REQUIRED PROVIDED THAT A MIN. HEADROOM OF 7'-0" IN HEIGHT IS REQUIRED OVER ANY WALKING SURFACE NOT MORE THAN 50% OF THE CEILING AREA CAN BE REDUCED IN HEIGHT BY PROTRUDING OBJECTS SO AS TO OBSTRUCT FULL VIEW OF EXIT SIGNS. (SECTION 1003.3.1).
 - 8.B. CORRIDOR WIDTH SHALL BE DETERMINED AS PER SECTION 1005.1, BUT NOT LESS THAN 44".
 - 8.C. DEAD END CORRIDORS SHALL NOT EXCEED 80'-0" IN LENGTH (BC 1016.3).
 - 8.D. DOORS WHEN THEY FULLY OPEN & HANDRAILS SHALL NOT REDUCE THE REQUIRED WIDTH BY MORE THAN 1". DOORS IN ANY POSITION SHALL NOT REDUCE THE REQUIRED WIDTH BY MORE THAN 1/2. OTHER NONSTRUCTURAL PROJECTIONS ARE PERMITTED TO PROJECT INTO THE REQUIRED WIDTH 1/2" ON EACH SIDE (BC 1020.2).
 - 8.E. THE FINISHES IN ALL EXITS SHALL BE OF NONCOMBUSTIBLE MATERIALS AS PER CHAPTER 8 AND SUB-SECTION 1003.4 OF SECTION BC 1003.
 - 8.F. THE LOCATION OF EVERY EXIT ON EVERY FLOOR SHALL BE CLEARLY INDICATED BY EXIT SIGNS (SECTION BC 1011). EXIT SIGN SHALL BE PLACED APART, SO THAT NO POINT IN THE EXIT CORRIDOR IS MORE THAN 100'-0"
