CERTIFICATION

I, Richard Maxwell, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 211 West 29th Street Site, (NYC VCP Site No. site number, OER Project No. 16EHAN062M). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

<u>Richard Maxwell</u>	<u>April 21, 2016</u>	
Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located in the Chelsea neighborhood in the Borough of Manhattan and is identified as Block 779 and Lot 31 (Figure 1). The Site is located on the north side of 29th Street between 7th and 8th Avenues. The approximately 4,500-square foot Site is comprised of one rectangular parcel measuring 46-feet wide and 100-feet long. The Site is bordered to the north by a twelve-story industrial and manufacturing use building; to the east by a twenty one-story mixed commercial and office use building; to the south by 29th Street beyond which is a six-story mixed use commercial and office building, and to the west by a seven-story mixed use commercial and residential building.

Currently, the Site is used as a fee based parking lot and contains multiple self-contained, hydraulically operated above-ground car stacking lifts. There are five parking lifts with a holding capacity of three cars per lift and approximately 35 parking spaces on the ground. Aside from a small kiosk used by the parking attendant and the above mentioned car lifts, there are no other improvements at the Site.

Summary of Proposed Redevelopment Plan

The proposed development project consists of the construction of a 20 story mixed use building with street level retail/office and residential above. The new building will occupy the entire lot and will include a sub-grade basement. It is anticipated that the depth of the basement slab will be at approximately 14 feet below ground surface (bgs). Excavation will therefore proceed to a maximum depth of approximately 16 feet bgs. The water table elevation varies across the Site, and was encountered at 20 to 22 feet bgs. The depth of bedrock is also variable across the Site, found to be shallower on the east side of the Site (approximately 14 feet bgs) and deeper on the west side of the Site (approximately 30 feet bgs). Where necessary, bedrock will

be removed as part of Site redevelopment construction to accommodate the sub-grade basement. Layout of the proposed Site development is presented as Figure 2.

Summary of Past Uses of Site and Areas of Concern

A Phase I ESA was completed at the Site in August of 2015. The on-site and off-site recognized environmental conditions (RECs) identified as a result of the August 2015 Phase I ESA are as follows:

- Historical onsite uses: The Site was formerly utilized as a furrier, a chemical supply company and as a fee based parking facility. These historical operations include the long-term storage and parking of automobiles and the potential use of chlorinated hydrocarbons and humectants such as glycerine, ethylene glycol or sorbitol solutions may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site.
- Possible Groundwater and Soil Vapor Contamination: The potential impacts from historical use of the surrounding properties include use as furriers. The operations associated with several nearby properties are indicative of the use of benzene, chlorinated hydrocarbons, humectants, or sorbitol solutions.

Although not technically defined as RECs, the following is a list of potential business environmental risks at the Site that could impact potential redevelopment activities the Site:

- There is the potential that the Site is underlain by historic urban fill. This is common in the five boroughs of New York City.
- The Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the Hazardous Materials E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required to be satisfied.

Summary of the Work Performed under the Remedial Investigation

The RI work summarized herein was performed in two phases; an initial investigation which was completed in accordance with a Phase II Work Plan submitted to and approved by NYC OER, and a supplemental investigation completed in accordance with a Supplemental Investigation Work Plan submitted to the New York State Department of Environmental Conservation (NYSDEC) and NYC OER on December 11, 2015 and approved by NYSDEC on December 23, 2015. The supplemental investigation was required to delineate light non-aqueous phase liquid (LNAPL) observed in two monitoring wells (B-1P and B-3P) installed during the initial investigation. Spill Number 15-05845 was assigned to the Site as a result of the LNAPL.

Roux Associates, Inc. (Roux Associates) performed the following scope of work in general accordance with an NYCOER approved Plans:

1. Conducted a Site inspection to identify areas of concern (AOCs) and physical obstructions (i.e., structures, buildings and utilities);
2. Installed six soil borings;
3. Installed five groundwater monitoring wells to establish groundwater flow and collected two groundwater samples for chemical analysis to evaluate environmental quality;
4. Collected 18 soil samples for laboratory analysis, 11 from the soil boring locations, seven from the monitoring well locations to evaluate soil quality;
5. Installed three soil vapor probes and collected three soil vapor samples;
6. Collected one LNAPL sample for fingerprint analysis.

Summary of Environmental Findings

1. Elevation of the Site is approximately 32 feet above mean sea level (amsl).
2. Depth to groundwater varies across the Site, from 20 to 22 feet bgs at the Site.
3. Groundwater flow is generally from south to north beneath the Site.
4. Depth to bedrock varies across the Site, from 14 to 30 feet bgs.
5. The stratigraphy of the Site, from the surface down, consists of 18 feet of urban fill material underlain by 12 feet of silty sand.
6. Soil/fill samples collected during the RI were compared to the NYSDEC Unrestricted Use Soil Cleanup Objectives (SCOs) as presented in NYSDEC Part 375.6. Analytical results indicate that several volatile organic compounds (VOCs) including: acetone (max of 340 micrograms per kilogram [$\mu\text{g}/\text{kg}$]), 1,2,4-Trimethylbenzene (max of 16,000 $\mu\text{g}/\text{kg}$), ethylbenzene (max of 1,100 $\mu\text{g}/\text{kg}$) and xylenes (max of 1,800 $\mu\text{g}/\text{kg}$) were detected above Unrestricted Use SCOs (UUSCOs) in one shallow and four deep samples. Petroleum related VOCs that exceed UUSCOs were detected in an offsite location-sidewalk along 29th Street (MW-1). No VOCs were detected at a concentration above their respective Restricted Residential Use SCOs (RRSCOs) in any of soil borings.

Pesticides including 4,4'-DDT (max of 1,120 $\mu\text{g}/\text{kg}$), 4, 4'-DDD (max of 516 $\mu\text{g}/\text{kg}$) and 4, 4'-DDE (max of 742 $\mu\text{g}/\text{kg}$) were detected above their respective UUSCOs in three shallow samples and three deep samples. No pesticides were detected at a concentration above their respective RRSCOs.

Semivolatile organic compounds (SVOCs) including benzo(a)anthracene (max. of 1,600 $\mu\text{g}/\text{kg}$), benzo(a)pyrene (max. of 1,100 $\mu\text{g}/\text{kg}$), benzo(b)fluoranthene (max. of 1,600 $\mu\text{g}/\text{kg}$), chrysene (max. of 1,300) and indeno(1,2,3-cd)pyrene (max. of 780 $\mu\text{g}/\text{kg}$) were detected above their respective UUSCOs and RRSCOs in one shallow sample (B-6).

Metals including copper (max. of 79 milligrams per kilogram mg/kg), chromium (max of 63 mg/kg), lead (max of 2,000 mg/kg), mercury (max. of 1.2 mg/kg) and zinc (max. of 660 mg/kg) were detected above their respective UUSCOs in a total of four samples; two shallow and two deep. Mercury and Lead were detected above UUSCOs and RRSCOs in one sample (B-6). Total polychlorinated biphenyls (PCBs) were not detected above their respective UUSCOs.

7. Groundwater samples collected during the RI indicated that SVOCs, PCBs and Pesticides were not detected in any samples. 1,2,4-trimethylbenzene (5.4 micrograms per liter ($\mu\text{g/L}$)) was detected above the Ambient Water Quality Standards and Guidance Values (AWQSGVs) in one sample (MW-1) at an offsite location. Naturally occurring metals including manganese (max of 4,343 $\mu\text{g/L}$), and iron (max of 38,700 $\mu\text{g/L}$) were detected above AWQSGVs in all groundwater samples.
8. Soil vapor samples collected during the RI were compared to compounds listed in Table 3.1 Air Guideline Values derived by the NYSDOH located in the New York State Department of Health Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI indicated that petroleum and chlorinated-related VOCs were detected in each of the three samples. Total concentrations of petroleum-related VOCs (benzene, toluene, ethylbenzene and xylenes (BTEX)) ranged from 110.88 $\mu\text{g/m}^3$ to 166.70 $\mu\text{g/m}^3$. Other compounds detected included 2-Butanone (max of 106 $\mu\text{g/m}^3$), acetone (3,590 $\mu\text{g/m}^3$), 1,2,4-Trimethylbenzene (max of 18.5 $\mu\text{g/m}^3$), 4-Ethyltoluene (max of 13.0 $\mu\text{g/m}^3$), 1,3-Butadiene (max of 35.2 $\mu\text{g/m}^3$), 4-Methyl-2-Pentanone (max of 61.5 $\mu\text{g/m}^3$), carbon disulfide (max of 102 $\mu\text{g/m}^3$), cyclohexane (max of 3,040 $\mu\text{g/m}^3$), ethanol (max of 33.2 $\mu\text{g/m}^3$), N-heptane (max of 302 $\mu\text{g/m}^3$), 2,2,4-trimethylpentane (max of 23.5 $\mu\text{g/m}^3$), isopropanol (max of 16.4 $\mu\text{g/m}^3$), n-hexane (max of 652 $\mu\text{g/m}^3$), tert-Butyl Alcohol (max of 27.4 $\mu\text{g/m}^3$), and vinyl chloride (max of 74.9 $\mu\text{g/m}^3$). The NYSDOH Guidance identifies seven chlorinated compounds of concern; chlorinated compounds were identified in all soil vapor samples and included cis-1,2-dichloroethene (max of 31.4 $\mu\text{g/m}^3$), methylene chloride (max of 18.6 $\mu\text{g/m}^3$), and tetrachloroethylene (PCE) with a maximum concentration of 17 $\mu\text{g/m}^3$. Indoor air was not sampled as there are no onsite buildings. Concentrations of all chlorinated compounds were below the monitoring level ranges established by NYSDOH.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

211 Sea Foam Properties has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a site located at 211 West 29th Street in the Chelsea section of Manhattan, New York. Mixed commercial residential use is proposed for the property.

The RI work summarized herein was performed in two phases; an initial investigation which was completed in accordance with a Phase II Work Plan submitted to and approved by NYC OER, and a supplemental investigation completed in accordance with a Supplemental Investigation Work Plan submitted to the NYSDEC and NYC OER on December 11, 2015 and approved by NYSDEC on December 23, 2015. The supplemental investigation was required to delineate LNAPL observed in two monitoring wells (B-1P and B-3P) installed during the initial investigation. Spill Number 15-05845 was assigned to the Site as a result of the LNAPL.

This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 211 West 29th Street in the Chelsea section in Manhattan, New York and is identified as Block 779 and Lot 31 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 4,500-square feet in area and is currently used as a fee-based parking facility and contains multiple hydraulic stacking lifts. There are five parking lifts with a holding capacity of three cars per lift and approximately 35 parking spaces at grade. Aside from a small kiosk used by the parking attendant and the above mentioned car lifts, there are no other improvements at the Site.

1.2 Proposed Redevelopment Plan

The development project consists of a new 20 story mixed use building with street level retail/office and residential above. The new building will occupy the entire lot and will include a sub-grade basement. It is anticipated that the depth of the basement slab will be at approximately 14 feet bgs. Excavation will therefore proceed to a maximum depth of

approximately 16 feet bgs. The water table varies across the Site and was encountered at 20 to 22 feet bgs. The depth of bedrock was variable across the Site, it is shallower on the east side of the Site (approximately 14 feet bgs) and deeper on the west side of the Site (approximately 30 feet bgs). Where necessary, bedrock will be removed to accommodate the sub-grade basement. Layout of the proposed Site development is presented as Figure 2.

The current zoning designation is M1-6D, light manufacturing. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area surrounding the Site consists of urban commercial properties. The Site is bordered to the north by a twelve--story industrial and manufacturing use building; to the east by a twenty one-story mixed commercial and office use building; to the south by 29th Street beyond which is a six-story mixed commercial and office use building, and to the west by a seven-story mixed commercial and residential use building.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

The historical uses of the Site and surrounding properties were researched by examining Certified Sanborn Fire Insurance maps; historical aerial photographs; historical USGS topographic maps; Environmental Lien Search Report; City Directory Abstract; interview conducted with Mr. Juan Sanchez (Key Site Representative); and documentation from NYCDOB BIS and NYCDOF and ACRIS.

A review of the historical sources noted above and the NYCDOB Certificate of Occupancy (C/O) indicate that the Site was developed since at least 1890 with multiple low-rise buildings. By 1962, the Site buildings were demolished, at which time the Site was paved and utilized for parking. Known historical uses of the Site as indicated in the Certified Sanborn Fire Insurance maps include residential use (1911), commercial use (from at least 1930 through 1950) and a parking lot (from 1962 to present). Known historical uses of the Site as indicated in the City Directory Abstract include Edmondston Augustus Packing Boxes (from 1920 through 1923), Schwartzman Sami Furs (1923), Horowitz Chemical & Supply Company and Horowitz & Son Fur Supplies (1942 through 1950), Advance Fur Process Company (1950 through 1958), Klein & Stein Furs Inc. (1963), Picture Perfect Parking (1988), United Parking Corporation (from 2000 through 2006) and Desoto Parking, LLC (2006 to present). The Site was commercial in use and occupied by furriers from 1923 through 1963 as noted in the Certified Sanborn Fire Insurance maps and the City Directory Abstract. The Site is currently owned and operated by Desoto Parking, LLC who has utilized the Site as a fee based parking lot since 2006.

2.2 Previous Investigations

A Phase I ESA was completed at the Site in August of 2015. The Phase I ESA is included in Appendix A. The on-site and off-site RECs are as follows:

- Historical onsite uses: The Site was formerly utilized as a furrier, a chemical supply company and as a fee based parking facility. These historical operations include the long-term storage and parking of automobiles and the potential use of chlorinated hydrocarbons and humectants such as glycerine, ethylene glycol or sorbitol solutions may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site.
- Possible Groundwater and Soil Vapor Contamination: The potential impacts from historical use of the surrounding properties include use as furriers. The operations

associated with several nearby properties are indicative of the use of benzene, chlorinated hydrocarbons, humectants, or sorbitol solutions.

Although not technically defined as RECs, the following is a list of potential business environmental risks at the Site that could impact potential redevelopment activities the Site:

- There is the potential that the Site is underlain by historic urban fill. This is common in the five boroughs of New York City. It is recommended that subsurface soil be fully characterized.
- The Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the Hazardous Materials E-Designation, site investigation guidelines provided by the NYCOER, the governing agency overseeing New York City's E-Designation program, are required.

2.3 Site Inspection

A Site inspection was performed on May 21, 2015 by Julie Moriarity of Roux Associates to identify features of environmental significance that defines AOC.

2.4 Areas of Concern

The AOCs identified for this site include:

1. Site historical and current use: The Site was formerly utilized as a furrier and chemical supply company. The Site currently operates as a fee based parking facility and has operated as such since 1962. Hydraulic lifts are utilized to stack cars vertically. Components of the hydraulic system are located underground and could not be inspected for integrity.
2. Groundwater/soil vapor concern from properties located upgradient of the Site.
3. The Site is likely underlain by historic fill.
4. The Site is identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations, and Air Quality Protocol.

The Phase 1 Report is provided in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Richard Maxwell.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements, and the site-specific Health and Safety Plan (HASP) prepared by Roux Associates. A copy of the Site specific HASP is included as Appendix B.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

On behalf of 211 Sea Foam Properties LLC, Roux Associates completed the RI in two phases; an initial investigation which was completed in accordance with a Phase II Work Plan submitted to and approved by NYC OER, and a supplemental investigation completed in accordance with a Supplemental Investigation Work Plan submitted to the NYSDEC on December 11, 2015 and approved by NYSDEC on December 23, 2015. The supplemental investigation was required to delineate LNAPL observed in two monitoring wells (B-1P and B-3P) installed during the initial investigation. Spill Number 15-05845 was assigned to the Site as a result of the LNAPL.

As part of the initial and Supplemental Investigations Roux Associates performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Installed six soil borings;
3. Installed five groundwater monitoring wells to establish groundwater flow and collected 2 groundwater samples for chemical analysis to evaluate environmental quality;
4. Collected 18 soil samples for laboratory analysis, 11 from the soil boring locations, seven from the monitoring well locations to evaluate soil quality and address AOCs.
5. Installed three soil vapor probes and collected three soil vapor samples;
6. Collected one LNAPL sample for fingerprint analysis.

4.1 Geophysical Investigation

A geophysical survey was not conducted as part of this investigation.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

Initial Investigation

Under Roux Associates oversight, Aquifer Drilling & Testing (ADT) installed five soil borings (B-1P through B-5) from August 31, 2015 through September 1, 2015. A geologist screened the soil samples during borehole advancement for organic vapors with a photo-ionization detector (PID) and evaluated for visual and olfactory impacts prior to collecting environmental samples. All field work was recorded in a field log book. A Sonic drill rig was used to complete the initial investigation. Borings were advanced to depths ranging from 14 to

18 feet bgs. In accordance with the Phase II Work Plan, two soil samples were collected from each soil boring; a surface (0 to 2 feet bgs) sample and a subsurface sample. Poor recovery prevented the collection of a surface sample at B-5; therefore the 5-7 foot interval was submitted for laboratory analysis instead. The subsurface samples were collected from the two-foot interval below the maximum expected excavation depth (16-feet bgs) from borings B-1P, B-3P, B-4 and B-5. Drilling refusal was encountered at boring B-2 at a depth of 16 feet bgs; as such, the 14-16 foot interval was collected for laboratory analysis.

Borings B-3P and B-1P were converted to one-inch diameter monitoring wells. Details are provided in the following subsections.

Supplemental Investigation

Roux Associates subcontracted Zebra Technical Services, LLC (Zebra) and observed the installation of five soil borings (MW-1, MW-2, MW-3, MW-4 and B-6), from January 12, 2016 to January 15, 2016. A geologist screened the soil samples during borehole advancement for organic vapors with a PID and evaluated for visual and olfactory impacts prior to collecting environmental samples. All field work was recorded in a field log book. A Geoprobe was used to complete the Supplemental Investigation. Borings were advanced to depths ranging from 14 to 30 feet bgs. In accordance with the Supplemental Investigation Work Plan, a sample was collected from the two-foot interval that exhibited the highest degree of impacts and from the two-foot interval above the water table. Due to the absence of evidence of impacts in MW-2, only the soil sample from the two-foot interval above the water table was collected. Drilling refusal was encountered at MW-4 at a depth of 23 feet bgs and groundwater was not encountered; as such, the 21-23 foot bgs interval was collected for laboratory analysis. Drilling refusal was encountered at boring B-6 at a depth of 14 feet bgs; as such, the 12-14 foot interval was collected for laboratory analysis. Due to the possible presence of electrical equipment contained within a vault beneath the original proposed MW-2 location, boring MW-2 was relocated from the sidewalk to the southeastern corner of the Site.

Borings MW-1, MW-2, and MW-3 were converted to two-inch monitoring wells. Details are provided in the following subsections.

Boring logs were prepared by a geologist and are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 3.

Groundwater Monitoring Well Construction

Initial Investigation

Two of the five soil borings installed during the initial investigation were converted to monitoring wells (B-3P and B-1P). Monitoring well B-3P was proposed in the Phase II Work Plan. It was decided during the investigation to convert soil boring B-1P to a monitoring well subsequent to observing LNAPL in monitoring well B-3P. Each of the two monitoring wells was constructed of one-inch diameter schedule 40 PVC with 10-feet of 0.02 inch screen.

Supplemental Investigation

Three soil borings were converted to monitoring wells during the supplemental investigation (MW-1, MW-2, and MW-3). A monitoring well was initially proposed at location MW-4, however a well was not constructed at this location since refusal (likely bedrock) was encountered in the unsaturated zone. Each of the three monitoring wells installed during the supplemental investigation is constructed of two-inch diameter schedule 40 PVC with 10-feet of 0.02 inch screen.

At all five monitoring wells clean sand (Morie #2) was used to fill the annulus around the well screen and a two-foot layer of bentonite clay as placed above the sand pack to seal the well. Well construction was completed with a flush-mount, protective steel manhole cover.

Monitoring well locations are shown in Figure 3.

Survey

The monitoring wells were surveyed for relative elevation to establish groundwater flow.

Water Level Measurement

Water level measurements were conducted with the use of an interface probe. Water level data was measured from land surface. Biweekly gauging and bailing events were initiated due to the presence of LNAPL in B-1P and B-3P. Approximately 0.02 gallons of LNAPL is recovered on a biweekly basis and an estimated 0.35 gallons has been recovered since September 2015. A groundwater flow map based on measured depth to water is included as Figure 4.

Water level data is included in Table 2.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Sampling equipment was decontaminated by using water and detergent solution between soil boring locations to avoid cross-contamination. All soil samples were stored on ice in a cooler and transported under chain of custody procedures to the laboratory. During the RI, Alpha Analytical (Alpha) was used. Alpha is a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory.

Eighteen soil samples, 11 from the soil boring locations, 7 from the monitoring well locations, were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 3 through 7. Figure 3 shows the location of samples collected during this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Groundwater sampling during the RI was performed using a peristaltic pump and dedicated tubing. Sampling equipment was decontaminated by using water and detergent solution to clean the pump between well locations. All groundwater samples were stored on ice in a cooler and transported under chain of custody procedures to Alpha.

Two groundwater samples were collected for chemical analysis during this RI. Groundwater samples were not collected from monitoring wells B-1P and B-3P due to the presence of NAPL. Additionally, a groundwater sample could not be collected from monitoring well MW-2 due to inadequate sample volume. Groundwater sample collection data is reported in Tables 8 through

12. Sampling logs with information on purging and sampling of groundwater monitor wells are included in Appendix D. Figure 3 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

During the initial investigation, three soil vapor points (B-1P, B-4 and B-5) were installed by ADT with a Sonic rig. Soil vapor sample B-1P was collected from a depth of 16 feet bgs, soil vapor sample B-4 was collected from a depth of 17 feet bgs and soil vapor sample B-5 was collected from a depth of 14 feet bgs. Down-hole drilling equipment was decontaminated between borings with Alconox and water. A steel soil vapor probe attached to polyethylene tubing was inserted at each soil vapor sample location and the annulus around the probe/tubing was filled with sand to a few inches above the probe. Bentonite slurry was then applied to the top of the sand pack to grade surface to isolate the sampling points from ambient air. Sampling occurred for two hours. Samples were collected in Summa canisters that were batch certified by the laboratory. A tracer gas was used in accordance with NYSDOH protocols to serve as QA/QC device to verify the integrity of the soil vapor probe seal. All soil vapor samples were transported under chain of custody procedures to Alpha. Soil vapor sampling locations are shown in Figure 3. Soil vapor sample collection data is reported in Table 13. Methodologies used for soil vapor assessment conform to the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006.

LNAPL Analysis

One LNAPL sample was collected from B-3P for chemical analysis during this RI. Approximately 20 milliliters of LNAPL was collected for sample analysis. The sample was transported under chain of custody procedures to Accutest Laboratories. Sample collection data is reported in Table 2. Laboratories and analytical methods are shown below.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Richard Maxwell.

Factor	Description
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI are NYS ELAP certified and were Alpha Analytical and Accutest Laboratories.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>LNAPL analytical methods:</p> <ul style="list-style-type: none"> • Fingerprint by EPA Method 8015M <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater , soil vapor and LNAPL are summarized in Table 2 through 13, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix E, F, G and H.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Historic urban fill material, predominantly consisting of brown, fine to course sand containing various amounts of gravel and brick were identified at the Site. The fill layer was present from grade to approximately 18 feet deep. Beneath the fill material was light to dark brown fine to course sand with a trace to some silt, ranging in thickness from approximately 6 to 15 feet thick underlain by bedrock. Bedrock, generally consisting of gray mica schist, varies in depth across the Site. It is shallower on the east side of the Site (approximately 14 feet bgs) and deeper on the west side of the Site (approximately 30 feet bgs).

Hydrogeology

A table of water level data for all monitor wells is included in Table 2. Depth to groundwater varies across the Site and was encountered at 20 to 22 feet bgs and the range in depth is 20 feet to 22 feet bgs. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 4. Groundwater flow is from south to north beneath the Site.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 3 through 7. Figure 5 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 UUSCOs. The majority of the soil will be excavated to approximately 16 feet bgs, where possible.

Soil/fill samples collected during the RI were compared to the NYSDEC UUSCOs as presented in NYSDEC Part 375.6. Analytical results indicate that several VOCs including: acetone (max of 340 µg/kg), 1,2,4-Trimethylbenzene (max of 16,000 µg/kg), ethylbenzene (max of 1,100 µg/kg) and xylenes (max of 1,800 µg/kg) were detected above UUSCOs in one shallow and four deep samples. Petroleum related VOCs that exceed UUSCOs were detected in an offsite location (MW-1). The presence of acetone is likely a laboratory contaminant. No VOCS were detected at a concentration above their respective RRSCOs.

Pesticides including P,P'-DDT (max of 1,120,522 µg/kg), P,P'-DDD (max of 516 µg/kg) and P,P'-DDE (max of 742 µg/kg) were detected above their respective UUSCOs in three

shallow samples and three deep samples. No pesticides were detected at a concentration above their respective RRSCO.

SVOCs including benzo(a)anthracene (max. of 1,600 µg/kg), benzo(a)pyrene (max. of 1,100 µg/kg), benzo(b)fluoranthene (max. of 1,600 µg/kg), chrysene (max. of 1,300) and indeno(1,2,3-cd)pyrene (max. of 780 µg/kg) were detected above their respective UUSCOs and RRSCOs in one shallow sample (B-6).

Metals including copper (max. of 79 (mg/kg), chromium (max of 63 mg/kg), lead (max of 2,000 mg/kg), mercury (max. of 1.2 mg/kg) and zinc (max. of 660 mg/kg) were detected above their respective UUSCOs in a total of four samples; two shallow and two deep. Mercury was detected above UUSCOs and RRSCOs in one shallow sample, B-6.

PCBs were not detected above their respective UUSCOs.

As part of the redevelopment of the Site, soil excavation will proceed to approximately 16 feet below grade to accommodate a sub-grade basement. Because the depth to bedrock ranges from 14 to 30 feet bgs, in some areas of the Site the excavation will extend to bedrock and beyond. Based on the laboratory analytical results noted above, only SVOCs and mercury were detected above their respective RRSCOs in one shallow sample, boring B-6. Due to their shallow depth, those impacts will be removed during Site redevelopment.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 8 through 12. Exceedances of applicable groundwater standards are shown in bold. Figure 6 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

Groundwater samples collected during the RI indicated that SVOCs, PCBs and Pesticides were not detected in any samples. 1,2,4-trimethylbenzene (5.4 µg/L) was detected above the AWQSGVs in one sample (MW-1) at an offsite location. Naturally occurring metals including manganese (max of 4,343 µg/L), and iron (max of 38,700 µg/L) were detected above AWQSGVs.

VOCs above their respective AMQSGVs were detected at an offsite location. Iron and manganese were detected at concentrations greater than their respective AWQSGVs and appear to be representative of regional groundwater quality.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 13.

Figure number 3 shows the location and posts the values for soil vapor samples with detected concentrations.

Soil vapor samples collected were compared to the compounds listed in the Vapor Intrusion Matrices in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion. Petroleum and chlorinated-related VOCs were detected in each of the three samples. Soil vapor samples collected indicated chlorinated and petroleum related compounds at elevated concentrations. Total concentrations of petroleum-related VOCs (BTEX) ranged from 110.88 $\mu\text{g}/\text{m}^3$ to 166.70 $\mu\text{g}/\text{m}^3$. Other compounds detected at elevated levels included 2-Butanone (max of 106 $\mu\text{g}/\text{m}^3$), acetone (3,590 $\mu\text{g}/\text{m}^3$), 1,2,4-Trimethylbenzene (max of 18.5 $\mu\text{g}/\text{m}^3$), 4-Ethyltoluene (max of 13.0 $\mu\text{g}/\text{m}^3$), 1,3-Butadiene (max of 35.2 $\mu\text{g}/\text{m}^3$), 4-Methyl-2-Pentanone (max of 61.5 $\mu\text{g}/\text{m}^3$), carbon disulfide (max of 102 $\mu\text{g}/\text{m}^3$), cyclohexane (max of 3,040 $\mu\text{g}/\text{m}^3$), ethanol (max of 33.2 $\mu\text{g}/\text{m}^3$), N-heptane (max of 302 $\mu\text{g}/\text{m}^3$), 2,2,4-trimethylpentane (max of 23.5 $\mu\text{g}/\text{m}^3$), isopropanol (max of 16.4 $\mu\text{g}/\text{m}^3$), n-hexane (max of 652 $\mu\text{g}/\text{m}^3$), tert-Butyl Alcohol (max of 27.4 $\mu\text{g}/\text{m}^3$), and vinyl chloride (max of 74.9 $\mu\text{g}/\text{m}^3$). There are seven chlorinated compounds of concern included in the NYSDOH Guidance; chlorinated compounds were identified in all soil vapor samples and included cis-1,2-dichloroethene (max of 31.4 $\mu\text{g}/\text{m}^3$), methylene chloride (max of 18.6 $\mu\text{g}/\text{m}^3$), and tetrachloroethylene (PCE) with a maximum concentration of 17 $\mu\text{g}/\text{m}^3$. Indoor air was not sampled as there are no buildings onsite.

Regulatory guidance on soil vapor and indoor air quality is presented in Matrix 1 and Matrix 2 from the NYSDOH Center for Environmental Health (CEH) Bureau of Environmental Exposure Investigation (BEEI) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. The matrices establish the conditions that require a response (i.e., monitoring, mitigation, or source identification) based on an evaluation of indoor air concentrations and sub-slab vapor concentrations. It is anticipated that the depth of the basement slab will be at approximately 14 feet below grade surface (bgs). Excavation will therefore proceed to a maximum depth of approximately 16 feet bgs. Where necessary, bedrock will be removed to accommodate the sub-grade basement. In addition, the proposed redevelopment

plans include a vapor barrier; as such, there will be no opportunity for sub-slab soil vapor to enter the building.

5.5 LNAPL

LNAPL was observed in two locations, B-1P and B-3P, on the western side of the Site. LNAPL was measured at an initial thickness of 0.03 feet in both locations. Biweekly gauging events have shown that LNAPL thickness varies at location B-3P. LNAPL was only observed during one additional gauging event at location B-1P, at a thickness of 0.01 feet and has not been detected since November 25, 2015 at B-1P.

LNAPL fingerprinting analysis results identified diesel fuels and No. 2 fuel oils; however, the identification could not differentiate between those two fuel types. No evidence of any other petroleum signature was noted. The low abundance of paraffins relative to isoparaffins indicated that the fuel had undergone substantial environmental weathering and was not recently released to the environment.

Considering that available documentation indicates that neither diesel and/or fuel oil have been stored or used at the Site and B-3Ps' upgradient location, it is likely that the presence of LNAPL is due to an offsite source. The LNAPL observed in B-1P is likely the result of its downgradient location relative to B-3P.

5.6 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.7 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

6.0 CONCLUSIONS

- Groundwater elevation varies across the Site and was encountered at 20 to 22 feet bgs and flows south to north beneath the Site.
- The Site is underlain by historic urban fill. The fill layer was present from grade to approximately 18 feet deep. Beneath the fill material was light to dark brown fine to coarse sand with trace to some silt, ranging in thickness from approximately 6 to 15 feet thick underlain by bedrock. Bedrock, generally consisting of gray mica schist, and varies in depth across the Site. It is shallower on the east side of the Site (approximately 14 feet bgs) and deeper on the west side of the Site (approximately 30 feet bgs).
- VOCs and pesticides were not detected in soil samples above RRSCOs. SVOCs and mercury were detected in one shallow sample, B-6, above RRSCOs. As part of the redevelopment of the Site, soil excavation will proceed to approximately 16 feet bgs which will result in the removal of all historic fill and any onsite potential source material that exhibited impacts above RRSCOs.
- VOCs above AWQSGVs were detected at an offsite location. The onsite groundwater sample detected iron and manganese at concentrations greater than their respective AWQSGVs and appear to be representative of regional groundwater quality.
- Chlorinated compounds were identified in all soil vapor samples and included cis-1,2-dichloroethene (max of 31.4 $\mu\text{g}/\text{m}^3$), methylene chloride (max of 18.6 $\mu\text{g}/\text{m}^3$), and tetrachloroethylene (PCE) with a maximum concentration of 17 $\mu\text{g}/\text{m}^3$. Because the proposed redevelopment plans include a vapor barrier, there will be no opportunity for sub-slab soil vapor to enter the building.
- LNAPL fingerprinting analysis results identified weathered diesel fuels and No. 2 fuel oils, no evidence of any other petroleum signature were noted. Considering that available documentation indicates that neither diesel and/or fuel oil have been stored or used at the Site and B-3Ps' upgradient location, it is likely that the presence of LNAPL is due to an offsite source. The LNAPL observed in B-1P is likely the result of its downgradient location relative to B-3P. On average, just 0.02 gallons of LNAPL are removed per biweekly gauge and bail event.

An evaluation of potential remedial alternatives to address the LNAPL and the recommended course of action will be presented in the Remedial Action Plan (RAP). Because of the limited occurrence of LNAPL at the Site (one monitoring well) and because the LNAPL recovery is so poor (0.02 gallons per event) Roux Associates recommends that biweekly gauging and bailing events be conducted on a quarterly basis until the start implementation of the RAP.

EXECUTIVE SUMMARY

At the request of Bernstein Real Estate (User), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the property located at 211 West 29th Street, and occupying Tax Lot 31 of Tax Block 779 in the Borough of Manhattan, City and State of New York (Site) (Figure 1). The Phase I ESA is intended to define the historical uses of the Site and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The approximately 4,500 square foot Site consists of a fee based parking lot containing multiple hydraulic car stacking lifts. One car is positioned at ground level while one additional car is held in the lift. There are five parking lifts with a holding capacity of three cars per lift and approximately 35 parking spaces on the ground. A review of historical sources including historical aerial photographs, Certified Sanborn Fire Insurance maps and a City Directory Abstract indicate that the Site was developed since at least 1890 with multiple low-rise buildings. By 1962, the Site buildings were demolished, at which time the Site was paved and utilized for parking. Known historical uses of the Site as indicated in the Certified Sanborn Fire Insurance maps include residential use (1911), commercial use (from at least 1930 through 1950) and a parking lot (from 1962 to present). Known historical uses of the Site as indicated in the City Directory Abstract include Edmondston Augustus Packing Boxes (from 1920 through 1923), Schwartzman Sami Furs (1923), Horowitz Chemical & Supply Company and Horowitz & Son Fur Supplies (1942 through 1950), Advance Fur Process Company (1950 through 1958), Klein & Stein Furs Inc. (1963), Picture Perfect Parking (1988), United Parking Corporation (from 2000 through 2006) and Desoto Parking, LLC (2006 to present). The Site's current tenant is Desoto Parking, LLC, which uses the Site as a fee based parking lot containing multiple hydraulic car stacking lifts. The areas surrounding the Site are urban and developed with commercial and residential buildings.

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following RECs in connection with the Site:

- Historical onsite uses: The Site was formerly utilized as a furrier, a chemical supply company and as a fee based parking facility. These historical operations include the long-term storage and parking of automobiles and the potential use of chlorinated

hydrocarbons and humectants such as glycerine, ethylene glycol or sorbitol solutions may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site.

- Possible Groundwater and Soil Vapor Contamination: The potential impacts from historical use of the surrounding properties include use as furriers. The operations associated with several nearby properties are indicative of the use of benzene, chlorinated hydrocarbons, humectants, or sorbitol solutions.

Although not technically defined as RECs, the following is a list of potential business environmental risks at the Site that could impact potential redevelopment activities the Site:

- There is the potential that the Site is underlain by historic urban fill. This is common in the five boroughs of New York City. It is recommended that subsurface soil be fully characterized, if future redevelopment activities require excavation.
- The Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the Hazardous Materials E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affected the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Awaiting responses to Freedom of Information Act (FOIA) requests from United States Environmental Protection Agency (USEPA) and New York City Fire Department (FDNY). If any additional pertinent information is obtained, Roux Associates will prepare a letter of addendum summarizing these findings.

1.0 INTRODUCTION

At the request of Bernstein Real Estate (User), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of the property located at 211 West 29th Street, and occupying Tax Lot 31 of Tax Block 779 in the Borough of Manhattan, City and State of New York (Site) (Figure 1). The Phase I ESA is intended to define the historical uses of the Site and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and Bernstein Real Estate dated May 19, 2015, and in general accordance with the American Society of Testing and Materials' (ASTM) International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments), consistent with the USEPA Standards and Practices for All Appropriate Inquiries (AAI) Rule (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule¹). The preamble for the AAI Rule states:

In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.²

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the

¹ Final Rule and information available at www.epa.gov/swerosps/bf/regneg.htm#final_rule, and <https://federalregister.gov/a/2013-31112>.

² Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.

ASTM E1527-13 “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.” EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.³

The purpose of the Phase I ESA was to identify, to the extent feasible, Recognized Environmental Conditions (RECs) in connection with the Site. ASTM Standard Practice E1527-13 defines RECs as:

the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

ASTM Standard Practice E1527-13 provides that identified RECs can be evaluated and classified into Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental Conditions (HRECs) based on the following definitions. ASTM Standard Practice E1527-13 defines a CREC as:

a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

ASTM Standard Practice E1527-13 defines a HREC as:

a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

³ Federal Register: December 30, 2013 (Volume 78, Number 250).

In order to assess the potential for RECs associated with the Site, Roux Associates utilized a variety of information sources to perform the Phase I ESA, including a radial information search from federal, state, and local regulatory agency databases; Freedom of Information Act (FOIA)/public records responses from federal, state, and local regulatory agencies; and readily available information from the following sources: historical aerial photographs, historical topographic maps, Certified Sanborn Fire Insurance maps, and a City Directory Abstract. The historical research and interviews were conducted in order to develop an understanding of the following:

- Current and past uses of the Site;
- Current and past uses of hazardous substances and/or petroleum at the Site, if any;
- Waste management and disposal practices that might have potentially caused releases or threatened releases of hazardous substances and/or petroleum products at the Site;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances and/or petroleum products at the Site, if any;
- The existence of any engineering and/or institutional controls recorded for the Site; and
- Current and past uses of adjoining properties that could have resulted in releases or threatened releases of hazardous substances and/or petroleum products to the Site.

Mr. Joseph Duminuco and Ms. Julie Moriarity served as the Environmental Professionals who conducted this Phase I ESA. As the Environmental Professionals, Mr. Duminuco and Ms. Moriarity possess sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (as defined in §312.1(c) on, at, in, or to a Site, sufficient to meet the objectives and performance factors in §312.20(e) and (f)). Mr. Duminuco's and Ms. Moriarity's professional profiles are provided in Appendix A.

2.0 METHODS OF INVESTIGATION

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Site include:

- Review of federal, state, and local environmental regulatory agency databases provided by Environmental Data Resources (EDR), Inc. of Milford, Connecticut indicating locations of environmental concern within specified radii from the Site (Appendix B);
- Submission of FOIA/public records requests and inquiries to federal, state, and local regulatory agencies (Appendix C);
- Review of historical information for the Site and surrounding area;
- Reconnaissance of the Site and surrounding area; and
- Interview with Mr. Juan Sanchez (Key Site Representative).

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux Associates to date include the following:

- EDR Radius Map with GeoCheck, dated May 19, 2015, (EDR report) (Appendix B);
- Certified Sanborn Fire Insurance maps dated 1890, 1899, 1911, 1919, 1930, 1950, 1976, 1979, 1980, 1982, 1985, 1987, 1988, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005 (Appendix D);
- Historical aerial photographs dated 1924, 1940, 1943, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009 and 2011 (Appendix E);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Staten Island Quadrangle dated 1891, 1897 and 1900; 30 Minute Topographic Maps, Passaic Quadrangle dated 1900 and 1905; 15 Minute Topographic Maps, Passaic Quadrangle dated 1903 and 1925; 7.5 Minute Topographic Maps, Weehawken Quadrangle dated 1940, 1947, 1967, 1981 and 1995; 7.5 Minute Topographic Maps, Jersey City Quadrangle dated 1947, 1955 and 1981; 7.5 Minute Topographic Maps, Paterson and Vicinity dated 1955; 7.5 Minute Topographic Maps, Central Park Quadrangle dated 1956, 1966, 1979 and 1995; 15 Minute Topographic Maps, Brooklyn Quadrangle dated 1900 and 1924; 7.5 Minute Topographic Maps, Brooklyn Quadrangle dated 1947, 1956, 1967, 1979 and 1995; (Appendix F);
- Environmental Lien Search (Appendix G); and

- A search of the City Directory Abstract conducted by EDR (Appendix H).

Pursuant to ASTM E1527-13, Roux Associates also contacted and reviewed additional environmental record sources, as noted below:

Agency	Status
United States Environmental Protection Agency (USEPA)	Acknowledgement received, response pending.
New York State Department of Environmental Conservation (NYSDEC)	Response received.
New York City Department of Environmental Protection (NYCDEP)	Response received.
New York City Fire Department (FDNY)	Response Pending
New York City Department of Buildings Building Information System (NYCDOB BIS)	Records accessed; discussed in report.
New York City Department of Finance Automated City Register Information System (NYCDOF ACRIS)	Records accessed; discussed in report.

2.3 Site and Surrounding Area Reconnaissance

Pursuant to ASTM Standard Practice E1527-13, Roux Associates conducted a reconnaissance of the Site and surrounding area on May 21, 2015, to identify, investigate, and assess potential RECs and other potential environmental concerns. The reconnaissance included observation of the Site, including all structures and buildings, and surrounding area to determine the current use and condition of the Site, indications of past uses of the Site, and current uses of adjoining properties and the surrounding area. During the Site reconnaissance, Roux Associates placed particular emphasis on identifying the following features, if present, in accordance with ASTM E1527-13:

- Hazardous substances and petroleum products in connection with identified uses;
- Storage tanks;
- Odors;
- Pools of liquid;

- Drums;
- Hazardous substances and petroleum products containers;
- Unidentified substance containers;
- Polychlorinated biphenyls (PCBs);
- Heating and cooling systems;
- Stains or corrosion;
- Drains and sumps;
- Pits, ponds, or lagoons;
- Stained soil or pavement;
- Stressed vegetation;
- Solid waste;
- Wastewater;
- Wells; and
- Septic systems.

In addition, observation of the general topographic setting of the Site was made, and inquiry was made into the source of potable water for the Site and other utilities, as presented in Section 6. Photographs from the Site reconnaissance are presented in Appendix I.

3.0 PROPERTY DESCRIPTION

Descriptions of the Site and surrounding properties are included in the following sections. The location of the Site is presented in Figure 1. The Site and surrounding properties are presented in Figure 2.

3.1 Property Location and Description

The Site is located on 29th Street, between 7th Avenue and 28th Street, in the Borough of Manhattan, City and State of New York. The Site is comprised of one rectangular parcel (Tax Lot 31 of Tax Block 779) measuring 46-feet wide and 100-feet long. The Site is bordered to the north by a twelve--story industrial and manufacturing use building; to the east by a twenty one-story mixed commercial and office use building; to the south by 29th Street beyond which is a six-story mixed commercial and office use building, and to the west by a seven-story mixed commercial and residential use building (Figure 2).

The approximately 4,500 square foot Site, consists of a fee based parking lot containing multiple hydraulic car stacking lifts. One car is positioned at ground level while one additional car is held in the lift. There are five parking lifts with a holding capacity of three cars per lift and approximately 35 parking spaces on the ground. Aside from a small kiosk used by the parking attendant and the above mentioned car lifts, there are no other improvements at the Site. At the time of the Site reconnaissance, the Site was occupied by Desoto Parking, LLC and utilized as a fee based parking lot. The building and surrounding area were inspected during the Site reconnaissance. The findings of the Site reconnaissance are summarized in Section 6.0.

3.2 Current Surrounding Property Usage

The area surrounding the Site consists of urban commercial properties. Table 1.1 below provides details on surrounding property usage adjacent to the Site.

Table 1.1 Surrounding Property Uses	
North	Twelve-story industrial and manufacturing use building
South	29 th Street, six-story commercial and office use building

Table 1.1 Surrounding Property Uses	
East	Twenty one-story commercial and office use building
West	Seven-story commercial and residential use building

3.3 Topographic and Hydrogeologic Setting

The elevation of the Site is approximately 32 feet above mean sea level, as shown in the USGS 7.5 Minute Series Topographic Map – Central Park Quadrangle (Appendix F). According to the EDR report, the Site is not located in, or adjacent to, regulated wetlands. The nearest surface water body is the Hudson River, which is located approximately nine-tenths of a mile to the west of the Site. The Site is not located in a 100 or 500-year flood zone.

The direction of groundwater flow in the area of the Site is assumed to flow west toward the Hudson River.

4.0 SITE HISTORY

The historical uses of the Site are discussed below.

4.1 Historical Site and Surrounding Property Usage

The historical uses of the Site and surrounding properties were researched by examining Certified Sanborn Fire Insurance maps (Appendix D); historical aerial photographs (Appendix E); historical USGS topographic maps, (Appendix F); Environmental Lien Search Report (Appendix G); City Directory Abstract (Appendix H); interview conducted with Mr. Juan Sanchez (Key Site Representative); and documentation from NYCDOB BIS and NYCDOF and ACRIS.

A review of the historical sources noted above and the NYCDOB Certificate of Occupancy (C/O) indicate that the Site was developed since at least 1890 with multiple low-rise buildings. By 1962, the Site buildings were demolished, at which time the Site was paved and utilized for parking. Known historical uses of the Site as indicated in the Certified Sanborn Fire Insurance maps include residential use (1911), commercial use (from at least 1930 through 1950) and a parking lot (from 1962 to present). Known historical uses of the Site as indicated in the City Directory Abstract include Edmondston Augustus Packing Boxes (from 1920 through 1923), Schwartzman Sami Furs (1923), Horowitz Chemical & Supply Company and Horowitz & Son Fur Supplies (1942 through 1950), Advance Fur Process Company (1950 through 1958), Klein & Stein Furs Inc. (1963), Picture Perfect Parking (1988), United Parking Corporation (from 2000 through 2006) and Desoto Parking, LLC (2006 to present). The Site was commercial in use and occupied by furriers from 1923 through 1963 as noted in the Certified Sanborn Fire Insurance maps and the City Directory Abstract. The Site is currently owned and operated by Desoto Parking, LLC who has utilized the Site as a fee based parking lot since 2006.

4.2 Certified Sanborn Fire Insurance Maps

Roux Associates reviewed historical Certified Sanborn Fire Insurance maps for the Site (Appendix D). Table 2.1 is a summary of the Site and surrounding area from 1890 to 2005, as determined from the Certified Sanborn Fire Insurance maps:

Table 2.1	
Certified Sanborn Fire Insurance Maps	
Date	Description
1890	The Site is depicted as developed with two four-story buildings located in the southernmost portion of the Site and two three-story buildings in the northernmost portion of the Site. No descriptions of the property usage are depicted. The adjoining property to the north is depicted as developed with multiple low-rise buildings. The adjoining property to the south is depicted as developed with a six-story paper hangings manufacturer. The adjoining property to the east is depicted as developed with multiple low-rise buildings. The adjoining property to the west is depicted as developed with multiple low-rise buildings.
1899	The Site appears similar to the previous map. The adjoining property to the west is depicted as improved with a five-story building. The adjoining properties to the north, south and west appear similar to the previous map.
1911	The Site appears similar to the previous map and the buildings are depicted as residential in use. The adjoining properties to the north, east and west are similar to the previous map and are depicted as residential in use. The adjoining property to the south is similar to the previous map.
1919	Due to poor resolution, the map is not discernible (for Site and adjoining properties to the north, east and west). The adjoining property to the south is depicted as "Furniture Warehouse". Two underground gasoline storage tanks, one 7,500 gallon and one 10,000 gallon are depicted.
1930	The Site appears similar to the previous map except the four-story building in the southernmost portion is depicted as five-stories and occupied for commercial use. The three-story building located in the northernmost portion of the Site is depicted as vacant. The adjoining property to the west appears similar to the 1911 except that the building is depicted as seven-stories and occupied for commercial use. The adjoining property to the north is depicted as improved with a twelve-story building with a basement, occupied for commercial use and constructed in 1924. Two underground gasoline storage tanks, one 7,500 and one 10,000 gallon are depicted. The adjoining property to the east is depicted as improved with multiple low to mid-rise buildings. Three underground gasoline storage tanks, one 2,500 and two 6,000 gallon are depicted.
1950	The Site appears similar to the previous map except that the three-story vacant building located in the northernmost portion of the property is no longer depicted and appears to have been demolished. The adjoining property to the west appears similar to the previous map except that the three-story vacant building located in the northernmost portion of the property is no longer depicted and appears to have been demolished. The adjoining properties to the north, south and east appear similar to the previous map.

Table 2.1	
Certified Sanborn Fire Insurance Maps	
Date	Description
1976	The remaining Site building appears to have been demolished and the Site is depicted as “Parking”. The adjoining properties to the north, south, west and east are not discernible due to poor resolution.
1979	The Site appears similar to the previous map. The adjoining property to the west is depicted as commercial and residential in use. The adjoining properties to the north, south and east appear similar to the 1950 map.
1980, 1982, 1985, 1987	The Site appears similar to the previous map. The adjoining properties to the north, south, east and west appear similar to the previous map.
1988	Due to poor resolution, the map is not discernible.
1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005	The Site appears similar to the previous map. The adjoining properties to the north, south, east and west appear similar to the previous map.

4.3 Historical Aerial Photographs

Historical aerial photography may indicate past activities at a property that may not have been documented by other means, or observed during a reconnaissance visit. Aerial photographs are presented in Appendix E.

According to a review of the historical aerial photographs, the Site appears to be developed with multiple low-rise buildings in the 1924 aerial photograph. The surrounding areas to the north, south, east and west also appear to be developed in the 1924 aerial photograph. Based on the historical aerial photographs, the Site buildings were demolished between 1961 and 1966. The general site layout and building structures appear generally consistent with the current Site configuration since 1966.

4.4 Historical Topographic Maps

Historical topographic maps of the Site were obtained from EDR, and they are provided in Appendix F. The topographic maps corroborate the reported general development timeline of the Site and surrounding area, as shown in the historical aerial photographs and Certified Sanborn Fire Insurance maps. These maps did not indicate any environmentally significant

topographical features such as wetlands or environmentally significant Site uses such as landfills on or adjacent to the Site, nor did they indicate radical elevation changes consistent with filling operations.

4.5 Lien Search and Activity Use Limitations

EDR performed an environmental lien search and search for recorded activity use limitations (AULs) at the Site. No recorded environmental liens or AULs were found. Documentation concerning this request is included in Appendix G.

4.6 City Directory Abstract

A City Directory Abstract of the Site was obtained from EDR and is presented in Appendix H. Records reviewed for the time period 1920 to 2013 were sourced from the Hill-Donnelly Information Services, Cole Information Services, NYNEX Telephone, NYNEX, New York Telephone, R.L. Polk & Company Manhattan and Bronx Directory. Noted operators/tenants of the Site included Edmondston Augustus Packing Boxes, Schwartzman Sami Furs, Advance Fur Process Company, Horowitz Chemical & Supply Company, Horowitz & Son Fur Supplies, Klein & Stein Furs Inc., Picture Perfect Parking and Desoto Parking, LLC. The past and current use of the Site includes commercial entities such as fee based parking lots, fur merchants and cleaners and chemical supply companies. Based on information reviewed in the City Directory Abstract, the historical and current use of the property is considered a REC.

The City Directory Abstract also includes listings for the surrounding properties. Nearby offsite properties include commercial entities such as fee based parking lots, fur merchants and cleaners, and textile manufacturing. Based on information reviewed in the City Directory Abstract, the historical uses of the surrounding properties are considered a REC.

5.0 RECORDS REVIEW

This section summarizes the information regarding the Site and adjacent or nearby properties that is contained in the standard and additional environmental record sources reviewed by Roux Associates in accordance with ASTM Standard Practice E1527-13.

5.1 Environmental Database Review

Roux Associates used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of potential environmental concern within a maximum of one mile radius of the Site (211 West 29th Street). A total of 106 environmental databases were reviewed as part of this Phase I ESA. Appendix B contains a complete copy of the EDR Radius Map Report with GeoCheck. A summary of the pertinent results is provided in Table 3.1. Table 3.1 tabulates all of the search results with at least one environmental database entry.

Database	Site	<1/8 mile	1/8-1/4 mile	1/4-1/2 mile	1/2-1 mile	Total

The Site is identified in one of the searched environmental databases.

- NY E-Designation database: According to information contained within the EDR report, the Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.
- Based on information contained within the EDR report, the identification of the Site as an E-Designation is considered a potential business environmental risk.

Offsite properties that meet the criteria presented below are discussed in this report:

- Facilities located immediately adjacent to the Site are examined due to their close proximity to the Site and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater or soil vapor.
- Facilities located topographically or hydraulically upgradient to the Site.

For the purposes of this assessment, groundwater has been assumed to flow west toward the Hudson River. Facilities that are located downgradient or cross gradient to the Site—but not immediately adjacent to the Site—are not discussed in this report because these facilities are considered to pose a low potential environmental concern to the Site. In addition, certain facilities that may be hydraulically upgradient—but involve conditions that are considered

de minimis (i.e., small quantities of releases, contained releases, or releases that are cleaned up in such a manner that does not pose a threat to human health or the environment)—are not generally discussed in this report unless further clarification was warranted to rule out the potential for these properties to impact the Site.

Although not considered environmental concerns in relation to the Site, the following properties are located adjacent to the Site and were identified in the searched databases:

- The property identified as Miranda Realty Associates, located at 215 West 29th Street (adjacent, immediately hydraulically crossgradient to the north) is listed on the following databases:
 - Aboveground Storage Tank (AST) database: one 5,000 gallon #2 fuel oil AST is registered, as active, to the property under NYSDEC Petroleum Bulk Storage (PBS) #2-275409.
 - Historical AST database: one 5,000 gallon #2 fuel oil AST is registered, as active, to the property under NYSDEC PBS #2-275409.
 - NY Spills database: A spill was reported to the NYSDEC; Spill #9812703 was assigned due to a release of 75 gallons of #4 fuel oil. The spill was closed to the satisfaction of the NYSDEC on February 19, 2003.
- The property identified as 350 7th Avenue Building, located at 350 7th Avenue (adjacent, immediately hydraulically upgradient to the east) is listed on the following databases:
 - AST database: one 5,000 gallon #2 fuel oil AST is registered, as active, to the property under NYSDEC PBS #2-097926.
- The property identified as 207 West 28th Street, located at 207 West 28th Street (adjacent, immediately hydraulically crossgradient to the south) is listed on the following databases:
 - E-Designation database: according to information contained within the EDR report, the Site has been identified as an E-Designation (E-276) for Air Quality protocol. #2 or #4 fuel oil or natural gas for HVAC systems is consumed onsite. In order to address the E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.
- The property identified as 208 West 29th Street, located at 207 West 28th Street (adjacent, immediately hydraulically crossgradient to the south) is listed on the following databases:
 - Resource Conservation Recovery Act (RCRA) Non-generator (Non-Gen) database: non-generators do not currently generate hazardous waste.

- RCRA Conditionally Exempt Small Quantity Generator (CESQG) database: CESQG generate 100 kilograms or less per month of hazardous waste. According to information contained within the EDR report, no violations were found.

5.2 Freedom of Information Act Letter Responses

FOIA letters were submitted to the USEPA, NYCDEP, FDNY, and NYSDEC. In addition, the NYCDOB BIS and NYCDOF ACRIS Internet Databases were consulted in reference to the Site. Responses were received from NYCDEP and NYSDEC. An acknowledgment of the FOIA request was received from USEPA and their response is pending. A response from FDNY is pending. If any additional pertinent environmental information is received from the FOIA requests following the issuance of this report, Roux Associates will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIA responses is included as Appendix C.

NYCDEP

A response from NYCDEP was received. No records could be located.

NYSDEC

A response from NYSDEC was received. No records could be located.

USEPA

An acknowledgement from USEPA was received, response is pending.

FDNY

A response from FDNY is pending.NYCDOB BIS and NYCDOF ACRIS

The NYCDOF ACRIS and NYCDOB BIS Internet databases were reviewed for the Site in reference to property transfers or other pertinent information regarding the Site.

The NYCDOF ACRIS reportedly lists federal liens for a property, if any exist; no federal liens were listed for the Site. No additional pertinent environmental information was found during the NYCDOF ACRIS database review.

According to the review of the NYCDOB BIS, three Certificates of Occupancy (C/Os) were available for review. The first C/O was issued on April 25, 1921 and describes the property as a four-story building with a basement occupied for industrial use, with a basement for storage, a store on the first floor and a factory on the second, third and fourth floor. The second C/O was issued on November 2, 1923 and describes the property as a four-story building with a cellar and a basement, occupied for commercial use, with storage in the cellar, stores in the basement, a store and factory on the first floor and a factory on the second, third and fourth floor. The third C/O was issued on July 17, 1962 and describes the property as occupied for commercial use as a public parking lot for less than one hundred spaces.

The NYCDOB BIS also contained information on past actions (e.g, permits and violations) executed at the Site. No open violations were noted.

6.0 SITE RECONNAISSANCE

The findings of the Site reconnaissance conducted on May 21, 2015 are discussed below. At the time of Site reconnaissance, the Site was occupied by Desoto Parking, LLC as fee based parking lot containing multiple hydraulic operated car stacking lifts and a small kiosk used by the parking attendant. Aside from the kiosk and the above mentioned car lifts, there are no other improvements at the Site.

6.1 Utilities

Electrical service is supplied to the Site by Con Edison.

6.2 Hazardous Substances

A five gallon container of lubricating oil, used to lubricate gears of the car lift system, was noted on-site.

No other hazardous substances were observed.

6.3 Storage Tanks

No storage tanks were observed during the Site reconnaissance.

6.4 Polychlorinated Biphenyls

No evidence of aboveground or subsurface electric utility transformers, vaults or manholes that may have PCB-containing equipment were observed.

6.5 Staining and Stressed Vegetation

De minimis staining was noted under parked cars; however, the asphalt in these areas was in good condition and did not allow a pathway to the subsurface.

No vegetation or soils were present at the Site.

6.6 Drains and Sumps

Two circular storm drains were observed at the Site. The drains are reportedly connected to the municipal sewer.

6.7 Solid Waste

Solid waste generated at the Site appeared to be limited to conventional waste and is picked up by an outside contractor.

6.8 Wastewater

Sanitary wastewater is not generated at the Site.

6.9 Wells

No wells were observed at the Site.

7.0 INTERVIEWS AND USER PROVIDED INFORMATION

Roux Associates incorporated interviews and a completed questionnaire provided by the User to complete this Phase I ESA. Information obtained from these sources was detailed throughout this report in various sections, as appropriate. Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews

Roux Associates contacted the following individual regarding the Site during the completion of this Phase I ESA:

- Interview conducted on May 21, 2015 with Mr. Juan Sanchez, Site Manager at Desoto Parking, LLC.

Findings from the interview were summarized in appropriate sections of this document.

7.2 User Questionnaire

Roux Associates provided a questionnaire to Mr. Andrew Hirsch (User) of Bernstein Real Estate on May 19, 2015, regarding information for the Site. Roux Associates received the completed questionnaire on May 19, 2015. Based on the information provided in the questionnaire, Roux Associates did not identify Recognized Environmental Conditions at the Site. The completed questionnaire is provided in Appendix J.

8.0 FINDINGS AND RECOMMENDATIONS

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following RECs in connection with the Site:

- Historical onsite uses: The Site was formerly utilized as a furrier, a chemical supply company and as a fee based parking facility. These historical operations include the long-term storage and parking of automobiles and the potential use of chlorinated hydrocarbons and humectants such as glycerine, ethylene glycol or sorbitol solutions may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site.
- Possible Groundwater and Soil Vapor Contamination: The potential impacts from historical use of the surrounding properties include use as furriers. The operations associated with several nearby properties are indicative of the use of benzene, chlorinated hydrocarbons, humectants, or sorbitol solutions.

Although not technically defined as RECs, the following is a list of potential business environmental risks at the Site that could impact potential redevelopment activities the Site:

- There is the potential that the Site is underlain by historic urban fill. This is common in the five boroughs of New York City. It is recommended that subsurface soil be fully characterized, if future redevelopment activities require excavation.
- The Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the Hazardous Materials E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affected the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Awaiting responses to Freedom of Information Act (FOIA) requests from United States Environmental Protection Agency (USEPA) and New York City Fire Department (FDNY). If any additional pertinent information is obtained, Roux Associates will prepare a letter of addendum summarizing these findings.

9.0 REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux Associates' initial investigation to identify the potential presence of RECs involving or affecting the Site in accordance with ASTM Standard Practice E1527-13. This Phase I ESA was conducted by Roux Associates in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

“In today’s final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-13 (entitled “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”) and recognizing the E1527-13 standard as consistent with today’s final rule. The Agency determined that this voluntary consensus standard is consistent with today’s final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-13 standard to comply with today’s final rule.”⁴

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter “Prospective Purchaser”) defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. Bernstein Real Estate has acknowledged that, under the AAI Rule, Roux Associates’ performance of the Phase I ESA in accordance with ASTM E1527-13 will not alone result in Bernstein Real Estate satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

Bernstein Real Estate has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX ASSOCIATES MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS**

⁴ Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

PHASE I ESA WILL IN FACT QUALIFY THE CLIENT FOR A DEFENSE TO CERCLA LIABILITY.

Roux Associates has performed this Phase I ESA in a professional manner using the degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux Associates.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

Bernstein Real Estate has agreed that Roux Associates shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux Associates has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the site conditions and conclusions regarding the data gaps.

It should be noted that Roux Associates has not conducted any intrusive activities on the Site and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux Associates does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Site. Bernstein Real Estate has agreed that Roux Associates shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Site.

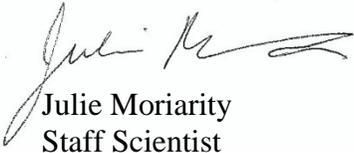

The Phase I ESA Report has been prepared for the exclusive use of Bernstein Real Estate for specific application to the Site covered by the Phase I ESA Report. Bernstein Real Estate has agreed that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of Bernstein Real Estate.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

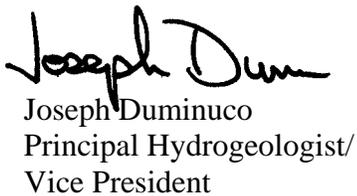

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully submitted,

ROUX ASSOCIATES, INC.

APPENDIX A

Professional Profiles

Julie A. Moriarity

Staff Scientist

Technical Specialties:

Field Management for large-scale soil excavation projects, including site assessment, remediation implementation and construction activities. Performance of sampling for the following media: soil, groundwater, surface water, soil vapor, and sediment. Excavation sampling and oversight and waste tracking; Phase I / Phase II Environmental Site.

Experience Summary:

Five years' experience including Staff Scientist at Roux Associates, Project Scientist at Enviroscience Consultants, Project Manager and Estimator for Water Treatment at Philip Ross Industries, and Laboratory Technician at EcoTest Laboratories.

Credentials:

Binghamton University, State University of New York

Bachelor of Science, Environmental Sciences, December 2009

OSHA 40-hour HAZWOPER Training

LIRR Track Safety Training

AMTRAK Contractor Safety and Security Training

Key Projects

- Performed numerous Phase I Environmental Site Assessments for due diligence in connection with property transfers for the Metro New York Area. A majority of properties included commercial properties, former retail gasoline stations, and office buildings.
- Staff Scientist/Field Manager for underground storage tank (UST) discovery, inventory, and removal. Field responsibilities involved subcontractor oversight for excavation and removal of UST, tank cleaning and waste management.
- Staff Scientist responsible for implementation of CAMP and SWPPP. Intrusive activities included soil and sediment excavation and trucking. In addition to CAMP activities, assisted project manager and construction manager with contractor oversight, material review, health and safety oversight, and daily reporting.

- Staff Scientist responsible for Phase II Site Assessment and preparation of investigation reports for soil boring installation, monitoring well installation and corresponding soil, soil vapor and groundwater sampling.
- Staff Scientist responsible for bi-annual soil vapor monitoring program for a former petroleum refinery and terminal in Brooklyn, New York. Field work included the sampling and screening of over 100 permanent soil vapor monitoring points for soil vapor intrusion monitoring.
- Field Manager for the completion of quarterly groundwater investigations for a former asphalt facility in Medford, New York.
- Experience in municipal projects which entailed major scheduling, purchasing, on-site work coordination, RFIs, change orders, knowledge of the construction process, and the equipment used in the water treatment industry. Projects include Bethpage Water District – Construction of New Pump Station; Hicksville Water District – Wellhead Treatment for VOC Removal; Roslyn Water District – VOC Treatment; Garden City Park – VOC Treatment

Joseph D. Duminuco Vice President/Principal Hydrogeologist

Specialties:

Investigation and remediation of soil, groundwater, and soil vapor at commercial and industrial sites focusing on the use of innovative solutions. Providing environmental consulting services and strategic planning to the real estate industry focused on Brownfield Redevelopment projects. Significant railroad and transit experience (over 100 sites).

Experience Summary:

Twenty-eight years of experience: Brownfields/Real Estate Services Practice Area Leader, Vice President/National Client Manager, Office Manager, Principal, Senior and Project Hydrogeologist at Roux Associates; Staff Hydrogeologist at Geraghty & Miller; and Geologist at Mueser Rutledge Consulting Engineers.

Credentials:

M.S. in Geology, Wright State University, 1990
B.S. in Geology, Hofstra University, 1983

Presentations:

Environmental Law in Real Estate Transactions – Working With Technical Professionals; Hofstra University Law School, January 13, 2013

Duminuco J., Coyle F. Property Redevelopment and Brownfield Sites. Proceedings of the 11th Annual Environmental Law Conference; ISBA Conference; 2012 May

Duminuco J. Transactions and the Environment: Contaminated Property Issues in Real Estate and Corporate Matters; New York State Bar Association; Tarrytown, NY; 2006 June

Key Projects:

- Principal-in-Charge of a Brownfield redevelopment of a property adjacent to a dry cleaning solvent distribution facility in Brooklyn, New York. The site was previously a warehouse built on a former freight railyard that serviced the dry cleaning solvent facility. Offloading spillage on site and migration from the offsite facility resulted in significant soil, groundwater, and vapor contamination with chlorinated VOCs. The site is being developed into multifamily with first floor retail use and the remedy consisted of soil hot spot removal, a physical barrier to limit on site migration, a permeable reactive wall to eliminate off site migration, hot-spot *in situ* injections and a sub slab depressurization system.
- Principal-in-charge for a Brownfield Redevelopment project that also requires a RCRA compliant facility closure. The site is a former paint factory located in Queens, New York. Due diligence environmental investigations determined historical site operations adversely impacted the subsurface including a LNAPL plume in addition to petroleum hydrocarbon impacts to the soil and groundwater. Roux Associates has provided environmental consulting services for this project including multiple meetings and discussions with NYSDEC; preparation of: multiple IRM work plans, RCRA Sampling Plan, RIWP, HASP, CAMP, and RCRA Facility Closure Plan. Roux Associates also completed a RI at the site which characterized the nature and extent of the impacts. Preparation of a RAWP is underway and will include implementation of a HVDPE remediation system. In addition, bulkhead replacement will be a component of the remedy.
- Principal-in-charge of a Brownfield redevelopment of a former MGP site into a Big Box retail site in Brooklyn, New York. Project consisted of negotiations with NYSDEC and

Roux limited remediation to former gasholders filled with coal tar, soil hot spots with mobile coal tar and perimeter containment of coal tar. All the remaining soil at the site was impacted with MGP waste and most of the site was underlain by liquid coal tar. Roux negotiated use of institutional/engineering controls to allow significant contamination to remain in place. A sub slab depressurization system and vapor barrier was installed to address the mobile coal tar left below the retail building.

- Principal-in-Charge for a Brownfield redevelopment project at a site in White Plains, New York, which consists of 16 separate parcels spanning 4.5 acres, has a variety of former uses including automotive service/repair and multiple dry cleaners. Due diligence environmental investigations determined the site has both chlorinated and petroleum hydrocarbon impacts to the soil and groundwater. Roux Associates prepared the BCP Pre-Application Worksheets and the BCP Application which were required for entry into the BCP after which, Roux Associates prepared the CPP, RIWP, HASP, and CAMP. Implementation of the RIWP was completed and preparation of a RAWP is underway that will consist of soil hot spot removals, *in situ* chemical oxidation for groundwater contamination and installation of a sub slab depressurization system.
- Principal-in-Charge of a mixed-use (public school and residential) Brownfield redevelopment in lower Manhattan, New York. Project consisted of a Phase I and a Phase II ESA to satisfy NYCDEP requirements. Due to the presence of contaminated historic fill Roux performed *in situ* waste characterization to assist in the development of NYCDEP-required plans. In addition, Roux provided oversight of the waste removal, completion of waste manifests, and full-time CAMP during all soil moving activities. Roux provided support to excavation contractor when two previously unknown USTs were discovered during excavation activities.
- Principal-in-Charge of a multi-phased Brownfield investigation for the redevelopment of a former Defense Site to water front, upscale housing in Long Island, New York. This investigation included determining the nature and extent of chlorinated VOCs in soil, groundwater and vapor- phase contamination onsite and offsite. Utilized a risk assessment to argue the level of residual contamination allowed to remain onsite with an intended residential future use. Remedial alternatives were selected in accordance with future development plans and institutional/engineering controls were proposed to limit cleanup costs. Successfully argued the technical impracticability of remediation of the heavily contaminated deeper aquifer beneath the site and offsite.
- Principal-in-Charge of a retail/commercial redevelopment in the Bronx, New York. The site contained a NYCDEP E-Designation due to a previous onsite service station UST release. In addition, a previous Phase I and Phase II ESA identified a former dry cleaner with a chlorinated VOC release. Roux performed a focused Phase II ESA at the dry cleaner and determined the chlorinated solvent release was not a hazard. Roux obtained closure under the NYSDEC Spills group and the site was redeveloped with a restaurant, a pharmacy, and re-use of a former supermarket.

Joseph D. Duminuco Vice President/Principal Hydrogeologist

- Principal-in-Charge of the redevelopment and expansion of an automobile dealer/service center in New York, New York into the US Flagship dealer for a major European luxury car manufacturer. Supported client and legal team during lease negotiations. Worked closely with NYCOER to address NYCDEP "E" designation. Coordination with NYCOER to implement remedial investigation and develop a site materials management plan as part of the expansion. Also worked closely with NYSDEC to address an on-site spill as well as coordinate efforts to evaluate if a 19,000 gallon dielectric fluid release by others impacted the site.
- Principal-in-Charge for the completion of Phase I and Phase II Environmental Site Assessment activities associated with a proposed mixed use redevelopment located in Westchester, New York waterfront. Work included management of subsurface investigation activities to characterize soil conditions, and working closely with client's architects and construction contractors to integrate the proposed site remediation into the project development plan (including evaluating multiple potential disposal scenarios). Site contaminants included hydrocarbons (including free-product plume from former USTs), and historic fill constituents.
- Principal-in-Charge of an 80-acre redevelopment in Yonkers, New York. Work included Phase I and Phase II investigations, asbestos surveys and abatement support and response to a free product impact from an adjacent landowner. Coordinated with NYSDEC and responsible party to address contamination issue and not impact client's construction schedule.
- Principal-in-Charge for the redevelopment of a property in Brooklyn, New York into supportive housing. Worked closely with NYCOER to address NYCDEP "E" designation. Coordination with NYCOER to implement remedial investigation and develop RAP/CHASP as part of the NYC VCP.
- Principal-in-Charge for the redevelopment of a property in the Bronx, New York into supportive housing. Worked closely with NYCDEP to address "E" designation. Coordination with NYCDEP to implement remedial investigation and develop RAP/CHASP as part of the redevelopment. Also performed an ASTM VEC to address vapor concerns.
- Principal-in-Charge of a Brownfield redevelopment in Brooklyn, New York at a mixed use multifamily housing/neighborhood retail complex with an onsite dry cleaner. There is soil, groundwater and vapor contamination from chlorinated VOCs from the former onsite dry cleaner as well as groundwater contamination from offsite dry cleaners. The remedy will consist of hot spot soil removal, SVE, *in situ* groundwater treatment and a negative pressure approach for vapor mitigation in the existing buildings.
- Principal-in-Charge of a Brownfield Redevelopment for a large vacant parcel (460 acres) on Long Island. The project involved an extensive investigation, UST and PCB remediation; removal and proper disposal of numerous tanks, drums, abandoned vehicles and transformers; and participation in contentious public meetings. The site was redeveloped into a golf course and a senior care facility.
- Principal-in-Charge for a property transfer support project at a heavily contaminated (chlorinated volatile organic compounds from an adjacent dry cleaner and on site MGP waste) distribution facility in the Bronx, New York. The site was a former MGP being handled under the VCP in addition to an open petroleum spill under the regional spills group. Roux performed a Phase I for the buyer, a Phase II and remedial cost estimate for the owner and negotiated with the buyer's consultant and NYSDEC to limit the scope of the investigation and cleanup.
- Principal-in-Charge of investigation and remediation of a catastrophic heating oil release for a commercial office building in Brooklyn, New York. All work was performed under the oversight of the NYSDEC Spills Group and time was of the essence for the initial response as the heating season was fast approaching. Roux performed free product delineation and remediation and indoor air monitoring at adjacent buildings. Site closure was obtained from NYSDEC.
- Principal-in-Charge of a mixed-use (residential, retail, commercial) Brownfield redevelopment in the Bronx, New York. Project consisted of a Phase I and Phase II ESA to satisfy NYCDEP requirements. The media investigated included soil, groundwater, soil vapor, and building materials. During the Phase II ESA, Roux performed preliminary *in situ* waste characterization.
- Principal-in-Charge of an interior Brownfield Redevelopment of a PCB, metals, and hydrocarbon contaminated wire manufacturing facility in Westchester County, New York into use as a movie studio. Activities included delineation and characterization of building surfaces, design of a remediation program and interim cleanups to allow studio use as the project progressed.
- Principal-in-Charge of multiple phases of Brownfield Project for construction of a cogeneration facility in Brooklyn, New York. Project consisted of: construction oversight; environmental compliance monitoring; asbestos and lead paint abatement oversight; data evaluation and report preparation; soil, offshore sediment, and sewer effluent sampling; PCB-contaminated material remediation; preparation of a waste handling and disposal plan; and permitting.
- Principal-in-Charge of the investigation and remediation of a self-storage complex in Staten Island, New York through the NYCOER Brownfields Program. Activities include a remedial investigation, preparation of a remedial action plan and installation of a sub slab depressurization system to address chlorinated VOCs.
- Principal-in-Charge of multiple retail developments in Harlem, New York. Work included Phase I and Phase II investigations to satisfy NYCDEP and lender requirements. Lead based paint and asbestos surveys were performed as part of due diligence. Extensive asbestos issues were identified in building materials and soil backfill. Worked with asbestos contractors to determine best abatement approaches for the redevelopments.
- Principal-in-Charge of a Brownfield Redevelopment under the Voluntary Cleanup Program at a commercial property in Queens, New York, where buyer was about to terminate the deal since high concentrations of chlorinated VOCs were detected in groundwater beneath the site. Based on data evaluation convinced NYSDEC to investigate adjacent property as likely source of groundwater contamination. NYSDEC agreed that no further action was warranted by our client and deal was completed.

Joseph D. Duminuco Vice President/Principal Hydrogeologist

- Principal-in-Charge for the installation of an active sub-slab venting system at a dry cleaner in Oceanside, New York. This system was required to mitigate elevated chlorinated VOCs present in soil vapor beneath the dry cleaner and neighboring stores. This work was conducted under NYSDEC and NYSDOH oversight. Official regulatory closure of the site was achieved.
- Principal-in-Charge of a fast-paced property transfer environmental assessment at an electronics manufacturing facility contaminated with metals and solvents in Bridgeport, Connecticut. Project consisted of the development and implementation of a detailed field sampling plan within a one-week time frame; indoor and outdoor soil sampling and monitoring well installation; groundwater and sewer effluent sampling; asbestos survey and asbestos sampling; and a tidal influence assessment. Data was evaluated and a summary report was prepared within one week and a remedial alternatives evaluation and cost estimate was prepared in less than one week.
- Principal-in-Charge of a multi-phase RI/FS at a PCB and diesel-fuel contaminated railroad yard in New York City. The Site is on the state superfund list because PCBs were detected in soil, groundwater, hydrocarbon plume, sewer water and sewer sediment. Responsibilities include: preparation of work plans; delineation of PCB hot spots with immunoassays; sewer investigation including pumpouts, monitoring, flow measurements and video surveys prior to abandonment; investigation and remediation of numerous USTs including gasoline, solvents and fuel oils; support of construction activities; report preparation; negotiations with the NYSDEC/NYSDOH; participation in public meetings; and implementation of interim remedial measures to mitigate the PCB-contaminated hydrocarbon plume; interim remedial measures to mitigate PCB, PAH and lead contaminated soil hot spots; and agency acceptance of alternate cleanup levels for site soils that resulted in savings of over \$80 million.
- Project Coordinator of multi-year environmental consulting contracts with Amtrak and New Jersey Transit. Responsibilities include contract negotiations, workload/resource distribution, compliance with contract requirements including utilization of M/WBE contractors, client-staff liaison, adherence to budgets and schedules, and overall quality assurance.
- Principal-in-Charge of project to support the construction of a high speed rail program. Performed Phase I and II Environmental Site Assessments as part of due diligence at three major railyards. Prepared reports and presentations regarding environmental conditions to regulatory agencies and the design-build consortium. Performed pre-construction sampling and hot spot remediation programs. Also, prepared environmental contingency plans for construction contractors to follow.
- Principal-in-Charge of an investigation at a PCB and solvent-contaminated transformer manufacturing/repair facility in North Carolina. Responsibilities include preparation of a work plan and oversight of the project which consists of soil borings and sampling, immunoassay testing, monitoring well installation, groundwater sampling, report preparation, and remedial alternatives evaluation.
- Principal-in-Charge of an NPL Superfund Site in Delaware. Responsibilities include: the on-going performance monitoring of a groundwater extraction system. The remedial system was installed to capture a chlorinated solvent plume emanating from a former PVC manufacturing facility. In addition, prepared and implemented an RI work plan for a USEPA-required off-site investigation of adjacent chemical manufacturing facilities and a large petroleum refinery. Also included DNAPL investigation and deep aquifer study.
- Principal-in-Charge of a NJDEP-ECRA/ISRA investigation and cleanup involving groundwater and soil contamination at a pesticide formulation and distribution facility in New Jersey. Responsibilities include: delineating the nature and extent of the off-site contaminant plume; determining groundwater flow patterns in a two-aquifer system; using a three-dimensional computer model to determine proper location for extraction and injection wells; and preparing work plans and summary reports for NJDEP-required additional delineation of the nature and extent of on-site soil contamination.
- Project Director of all UST investigative and remedial work performed at service station sites in New England for a major oil company. Responsibilities included: preparation and negotiation of work orders; coordination of monitoring and sampling; communication with client, regulator and site owner contacts; management of technical aspects of all projects; strategy evaluation with client; administration of all contracts and operation and maintenance of remediation systems to mitigate UST releases which included groundwater pump and treat, product recovery, and soil venting systems.
- Project Manager of an RI/FS at a former electronics manufacturing facility in an industrial area of Long Island. Metals and solvents (plating wastes) were detected in on-site leach pools and in soil and groundwater. Responsibilities include reviewing and revising the work plan and providing technical oversight of the project, including: Geoprobe® drilling; soil sampling; soil-gas surveys; leach pool sediment sampling; monitoring well installation; groundwater sampling; geophysical mapping; report preparation; and negotiations with NYSDEC. Convinced NYSDEC that groundwater remediation was inappropriate in an industrialized area. Focused remediation to a few soil hot spots only.
- Principal-in-Charge of a multi-year quarterly monitoring and reporting program at a municipal landfill complex on Long Island, New York. The complex consists of multiple landfills, leachate containment systems and leachate holding tanks. Project involves collection of water level and water-quality data from dozens of monitoring wells, sampling of leachate containment systems, coordination with contract laboratory, data validation, data evaluation and report preparation.
- Provided litigation support for an industrial property owner where a tenant's manufacturing operations had resulted in contamination of the building in addition to soil and groundwater. Without prior notification or consent from the owner, the tenant had conducted a Phase II investigation and remediation activities to address metals and VOCs. Reviewed technical reports and prepared a work plan to address areas for further investigation and perform confirmatory sampling in support of the owner of the property. Provided deposition testimony in connection with the case.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<i>HUDSON RIVER PCBS</i>	<i>NO STREET APPLICABLE</i>	<i>WNW 1/2 - 1 (0.870 mi.)</i>	<i>0</i>	<i>8</i>

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 6

EXECUTIVE SUMMARY

RCRA-LQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 12 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 03/25/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/19/2015 has revealed that there are 132 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/30/2015 has revealed that there are 3 NY TANKS sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/19/2015 has revealed that there are 53 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 105 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 01/23/2015 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

HUDSON RIVER PCBS	NO STREET APPLICABLE	WNW 1/2 - 1 (0.870 mi.)	0	8

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2015 has revealed that there are 219 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 03/17/2015 has revealed that there are 41 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - WEST 18	WEST 16TH - WEST 20T	WSW 1/2 - 1 (0.711 mi.)	718	1605

CON EDISON - WEST 42	WEST 41ST - WEST 42N	NNW 1/2 - 1 (0.879 mi.)	721	1606

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 37 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 28 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive

MAP FINDINGS

HUDSON RIVER PCBs (Continued)

1000384273

cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie

MAP FINDINGS

HUDSON RIVER PCBs (Continued)

1000384273

adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"Con Ed e2mis #138151:7/11/01 11:10 HRS.Bob Mahoney #97417, Field Operator, Field Operations Dept., reported at 10:29 hrs. that he found at 10:15 hrs. approx. 20 gallons of unknown fluid (dark color) mixed with approx. 40 gallons of water in vault V4466 located at 204 West 30 Street between 7th & 8th Ave. He was performing a vault inspection when he discovered the spill. This unknown substance or fluid was found mixed with the water in the concrete vault. Samples were taken by Bob Mahoney #97417 for PCB and Oil ID on a priority "E" basis. Samples will be taken to Astoria for analysis. Chain of Custody form will be delivered to site by the field supervisor. Initial cleanup action taken by placing absorbent pads down.UPDATE @ 18:26 hrs.Joe Cumberbatch, I&A Supervisor, reported at 15:36 hrs. that he arrived on location at 15:10 hrs. He also reported that Mr.

Wong of the DEP left the site at 15:26 hrs. Mr. Cumberbatch inspected the vault and checked the capacity of the transformer, which he said was 362 gallons. The level was at 25 deg. C and apparently full. He stated that the unit would have to be pressure tested to verify no leaks. He inspected the vault and the oil level is good and there is no visual leaks. The substance appears to be cooking oil or restaurant waste. He also reported that the drain is clogged. Mr. Wong of the DEP observed that the drain was clogged. Prior PCB historical data indicates 9 ppm PCB.UPDATE 7/11/2001 @ 21:27 HRSLab results for Lab Sequence # 01-07229-001, <1ppm PCBUPDATE 7/11/2001 @ 21:45 HRSCleanup completed @ 20:30 HRS on 7/11/2001.Oil & water of approx 150 gallons picked up by Tanker and 1 bag of Industrial waste taken out. The structure was double washed and flushed using "Slix". The Environmental Tag # 20747 was removed. The Unit was pressure tested and found not to leak.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 DEC Memo:

Case started as a TTF on March 13, 2012 On May 30, 2012 Sangesland spoke to property manager (Pedro Martin 212-868-3888). He said there is a 5,000 gal #6 tank that has some contamination issues (he didn't know details). Owner hired Riteway Tank to deal with the problems. Sangesland sent an e-mail to both David at Riteway and Veronica Zhune to ask them to work together on this site. Unknown if tank is being repaired or closed/removed? 5/29/2012 Sangesland got an e-mail from David Chan at Riteway. He said they just got a signed proposal back from the owner. They will move forward with additional sampling and work in the next few weeks. 7/6/2012 Sangesland received an e-mail from Riteway: Sampling was performed this past Monday we core drilled through the bottom of the tank to retrieve samples. The samples returned dirty (verified onsite via PID). Ground water is at the tank, as soon as we core drilled through the bottom, water rushed in. We are currently writing an action plan for Veronica. We propose to IMMEDIATELY cut/install perforations on the interior of the tank of various sizes and at various heights to minimize the spreading of the contamination and to aid in the migration of loose product back into the tank. We are working on a delineation proposal for the client. Due to the location of the tank (buried in the basement), To perform

S111738872

an accurate delineation may be extremely difficult, if not near impossible. Access to the area is limited, especially when trying to get "geo probe" equipment onsite.7/27/2012 - Sangesland sent this message to Riteway today after a site visit:Earlier today I inspected the basement of 245 West 29th St and discussed the project with Joe Ostrowski.Based on the inspection and discussion, the NYSDEC is requiring two tasks to be completed before the tank can be closed in place.1) The NYSDEC requests that several additional holes be drilled in the sidewall of the buried tank to allow groundwater (and petroleum) to freely flow back into the tank.This liquid should be pumped out weekly for a period of 4-6 weeks. An inspection should be made of this liquid to determine what percentage is petroleum. 2) Two additional soil borings need to be drilled through the basement floor at a location approx 8 feet North of the buried tank and another 8 feet South of the buried tank down below the Groundwater level in the area. A soil sample should be taken at the Groundwater interface level and tested for VOC's and SVOC's per Methods 8260 & 8270.Based on the results of these two tasks, the NYSDEC may require additional work, or may close the case out and allow the existing tank to be closed in place.Please provide a short writeup of the results of this investigation.Thanks,

SS*****

***** 10/26/2012 Sangesland spoke to David Chan at Riteway. He tried to take soil borings around the tank as requested. He hit refusal at about 6ft. He got minor "hits" on some VOCs. Slots were cut in the buried tank and they have pumped out several hundred gallons of water from the tank about 6 times over the last 1-2 months. Visual inspection of this water shows no oil. Riteway will return one more time to take a water sample and do a "sniff" test. If the sample smells at all, a sample will be sent to the lab.

*****11/27/2012

Sangesland spoke to David Chan at Riteway. He said they put slots in the existing buried tank and have pumped out groundwater from the tank several times over the last month. The water appears clean and there is no oil mixed in. Based on this information, DEC has approved closing the spill case and allowing the property owners to go ahead with closing this tank and constructing a new tank.

Remarks:

test failure, no loss of product, tank has been pumped

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks: SCHOOL IS LOCATED IN THE BASEMENT OF THE BUILDING. SHE WAS TOLD BY A FRIEND THAT SPILLS REGULARLY OCCUR THERE, AND THAT THEY'RE NOT PROPERLY CLEANED UP. THE LAST SPILL THAT SHE'S AWARE OF OCCURRED IN APRIL. SHE CALLED TODAY BECAUSE THE SCHOOL STILL HAS NOT TAKEN CARE OF THE PROBLEM. SHE'S ALSO CALLED THE EPA.

tank are aboveground, except part of fill line (about 12 ft long in L-shape) under the sidewalk. there is a sub-grade area between the sidewalk and building's foundation wall. the fill port is located at curb line and approx. 8 ft from the sub-grade area. Mr. Oddo mentioned that oil was noted into sub-grade area, below the fill line. Riteway exposed the fill line and removed contaminated soil to approx. 5 ft bg. a new fill line installed in secondary containment. Frank Oddo **building super** Ph. (212) 216-939104/11/13-Hiralkumar Patel. alternate address: 229-239 West 28th Street no other spills noted. PBS #: 2-248851. site has one 3,000 gal #2 oil AST in contact with soil and one 3,500 gal #6 oil AST in contact with soil. PBS registration expired on 12/16/07. 2:21 PM:- spoke with Mr. Oddo regarding number of tanks at the site. Mr. Oddo mentioned that they have two tanks: one is for #6 oil and another for #4 oil. Mr. Oddo mentioned that the #4 oil tank has some oil in it, but the tank is not in service. informed Mr. Oddo about expired PBS registration. 229 West 28th Owner LLC. c/o Winoker Realty Company 462 7th Avenue #12 New York, NY 10018 Attn.: James Doherty Ph. (212) 519-2000 Ext. 315 email: jdoherty@winokerrealty.com 3:03 PM:- left message for Rob. 4:35 PM:- received message from David from Riteway. he will submit report tomorrow. 04/15/13-Hiralkumar Patel. received email from David (at 3:11 PM on 04/12/13) including cleanup report. three endpoint samples were collected from excavation. no contamination found in endpoint samples. based on available information, case closed.

Remarks: broken fill line. Cleanup crew is on site. No resources.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Air emission issue. Buildings in NYC that burn #6 oil have no limits on emissions for the first 15 minutes of boiler startup. Black smoke is common and legal. Incomplete combustion until the boiler is hot.

Remarks: We received the following email concern(I will forward the attached pictures in another email)Hello,I would like to report that the building at the corner of 7th avenue and 28th street (North East corner) in Manhattan (New York City) was emitting very black smoke from its chimney form about 7-7:30 am this morning. The same thing happened yesterday morning at the same time. I believe that the black smoke shows a massive pollution and a problem with the exhaust system for that building. I have attached a few pictures. Thank you for investigating this issue. Let me know if you need any additional information.I look forward to hearing back from you.Thank you.Best regards,Olivier ANDRE, Esq.

DEC Memo:	01/10/07-Hiralkumar Patel. visited site. met building super Ramon Vargas. site has 6000 gal #6 tank in concrete vault with access. could not see bottom of tank as tank sides are close to tank room wall and tank room has access from top. smelled heavy odors inside tank vault, in basement and little odor upstairs. oil stain on tank room walls.PBS #: 2-099309as per Mr. Vargas, about two years ago, there was water leak in one of store upstairs which flooded basement and entire tank vault. and water went inside tank from manhole and pushed oil out of tank. this cause spill at that time and Eastmond responded and did cleanup. since then tank room has speedy dry, water and oil mixed around tank. Castle oil delivers oil at site and last oil delivery was on 12/29 for 2302 gallons. no oil stains found on wall, inside boiler room, which separating tank room and boiler room. there are 94 units in building.PTC was removing oil/dirt from area around tank. they haven't done any tank test yet. spoke with building manager Tim Smith. asked Mr. Smith to do tank system test immediately to check any leak in tank system. if leak found, need isolation test and if found any wet leak, oil has to be removed from tank immediately. Mr. Smith will contact PTC for immediate tank test.Ramon Vargas, Super of buildingPh. (212) 645-8042 (O) (646) 262-0856

(C)Timothy D. Smith Fashion Place Management Corp. 1 Main Street North Bennington, VT 05257 Ph. (802) 442-5077 Fax (802) 442-5241 received call from Mark from PTC. he will finish tank test and will send test result by tomorrow noon. tank is located in such a way that no soil boring possible inside tank room. if required, can do soil boring outside tank room (in other part of basement). 01/11/07-Hiralkumar Patel. received call from Mark from PTC. they did tank system test and found wet leak. supply and return lines runs aboveground from tank to boiler room crossing wall in between. Mark told that he will empty out tank tomorrow morning. spoke with DEC Jacob. he suggested that as tank has #6 oil, it is ok if they empty that tank tomorrow, but it has to be empty out tomorrow. left message for Mr. Smith. received call from Mr. Smith. explained him that as tank system has wet leak, oil has to be removed from tank. Mr. Smith wants to run isolation test to check if lines has any problem. told Mr. Smith that test has to be done tomorrow and if any leak found in tank, tank has to be emptied out by end of tomorrow. no later than tomorrow. he will call Mark and check when they do isolation test. 01/12/07-Hiralkumar Patel. received call from Mark. he explained situation to Mr. Smith and now Mr. Smith agreed to empty out tank. tank will be empty by end of today. sent out letter to Mr. Smith requiring tank test, soil/groundwater delineation, endpoint samples and vapor barrier installation. letter faxed to Mr. Smith and to Mark at PTC. 1/11/07 - Austin - Temporarily assigned to Sangeland, in Patel's absence 1/26/2007 Sangeland spoke to Ray at PTC. He said the tank was tested and failed. The tank was emptied and a temp tank set up. PTC is still working on cleaning out the vault. They have NOT yet started any work below the vault floor, but they have been approved to do this work. 02/12/07-Hiralkumar Patel. received call from Mark. he took three soil samples through bottom of tank. based on test results, he is planning to abandoned tank and tank room. asked Mark to fax soil results with site plan. received sample analyticals. no contamination found in sample. spoke with Mark. he told that concrete under tank is about 9 inch thick. he doesn't know which part of tank was failed in test. they removed most of contaminated materials from tank top. but due to very small space between tank and room wall, it is impossible to remove remaining material without removing tank. no space to drill for soil samples on side of tank. tank is located in tank vault in sub-basement. so instead of taking out tank, Mark was suggesting to close this tank and tank vault with cement/foam. asked Mark to submit investigation report with all details before closing tank and tank room. 02/20/07-Hiralkumar Patel. received report from Mark. PTC removed contaminated debris from around tank and has emptied out tank as tank failed in isolation test. they took three soil samples through bottom of tank. during sampling, found concrete floor under tank of about 10 inch thick. samples taken at about one foot depth below concrete floor. no contamination found in samples. as per Mark, there is not enough space around tank to clean everything. based on tank location, no more cleanup is possible. no oil stains observed on wall, between tank and boiler room, in boiler room. no contamination found in soil sample. leftover contamination, if any, be considered as contained. no soil/groundwater affected. 02/21/07-Hiralkumar Patel. received call from Mark. he asked about what material should use to abandon tank as well as tank room. discussed with DEC Jacob. he told that it is not required to fill tank with any inert material if tank is aboveground, to avoid putting more load on foundation. but tank has to be cleaned out and vapor free. he suggested to cut open tank

from side and clean it. tank has to be stamped with closure date as required by law. left message for Mark with these suggestions and requirements. also mentioned him to notify DEC prior to closure and to register new tank which will be installed soon.spoke with Mr. Smith, property manager. he mentioned that they will not installing any new tank as they are switching to gas heating system. they will leave tank room and tank empty with door sealed and stamp of closing date on it. asked Mr. Smith to correct PBS record as record shows use of #2 oil while site was using #6 oil. also asked him to put closing date and send form to PBS unit.case closed. NFA sent to Mr. Smith with PBS Correction form. letter faxed to Mr. Smith and Mark at PTC.

DEC Memo:

Amtrak dug up the cement basement floor in the sub sub basement and found a pool of 5 or 6 gallons of petroleum. This was sucked out and cleaned. Next day they found 1 gal. They will install a well at the site and refinish the cement floor. They will periodically inspect this well to see if there is any further oil.10/27/11 - Austin - Spill Transferred from Ahmed to Vought - end
Remarks: 4 stories below ground - building renovation contractor discovered - cleanup is ongoing

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 900.4

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 900.4

Waste code: D007

Waste name: CHROMIUM

Amount (Lbs): 81056.1

Waste code: D008

Waste name: LEAD

Amount (Lbs): 30500

Facility Has Received Notices of Violations:

Regulation violated: Not reported
Area of violation: Universal Waste - Small Quantity Handlers
Date violation determined: 10/14/2010
Date achieved compliance: 10/15/2010

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

no other spill record found for the site.PBS #: 2-304883, 2-309664.PBS #
2-304883 is administratively closed. as per PBS record, the site had
five (5) 4,000 gal gasoline USTs, which are administratively
closed.as per PBS # 2-309664, the site has one 5,000 gal #2 oil AST
in vault with access. the registration expired on 10/15/2007.Thirty
One Company **property owner**c/o Winoker Realty Co.462 7th Avenue, #
12ANew York, NY 10018Attn.: Linda LucerinoPh. (212)
519-2000/2021email: llucerino@evo-re.comVictor **building super**PH.
(212) 736-90893:23 PM:- spoke with Rob. he mentioned that about 50-70
gal of #2 oil spill noted inside the tank room, due to leaking fill
line. crew noted oil stain on wall where fill line comes in building.
Riteway is doing cleanup in tank room.3:25 PM:- spoke with Victor,
building super. he confirmed no petroleum odors in building and spill
is in tank room.3:51 PM:- sent letter to Ms. Lucerino requiring
investigation for contamination, endpoint samples, tank system
tightness test, cleanup report and renewal of PBS registration. asked
her to submit PBS registration immediately and report by the end of
04/30/14. letter emailed to Ms. Lucerino and Rob.03/07/14-Hiralkumar
Patel.12:01 PM:- received email from Rob. he mentioned that Riteway
has removed and replaced the fill line, removed all contaminated soil
found in fill line area and cleaned the oil which spilled in the
basement. endpoint samples were collected and sent to lab on
03/03/14. will submit closure report, once sample results are
available.04/30/14-Hiralkumar Patel.4:04 PM:- spoke with Ms.
Lucerino. she mentioned that they hired Ace Atlas to handle all
required paperwork. she will call back after discussing with Ace
Atlas.05/01/14-Hiralkumar Patel.4:06 PM:- received email from David
Chan from Riteway, including cleanup report. the old fill line was
running through an old coal chute. no contamination was noted under
the sidewalk. the leaking fill line was replaced. three endpoint soil
samples were collected. no contamination noted in endpoint
samples.05/02/14-Hiralkumar Patel.2:26 PM:- spoke with Ms. Lucerino
and informed her about pending tank system test and PBS renewal.
informed her that tank system test result and copy of PBS renewal
application must be submitted by the end of
05/09/14.05/09/14-Hiralkumar Patel. received email from John Cassano
(at 8:41 AM on 05/08/14) including copy of PBS application.received
email from Rob (at 12:15 PM on 05/08/14) from Riteway including tank
system test result.based on available information, case closed.

"RODRIGUEZ"E2MIS NOTES 143557 On 6/24 @ 01:26 HRS R Oravec # 15482 of FOD, reported to me that @ 01:15 HRS he discovered approx. 8 gallons of unknown oil and no water in V-5843. He was "shooting trouble" on feeder 13M45. Sewer/waterways cannot be determined to be affected, but there is a sump and according to Conduit plate 22-G-1 there is a connection through M-60881 which V-5483 has a connection to. There were no injuries related to this spill and weather conditions did not contribute to this spill. The source and cause of the spill are unknown at this time. No private property was affected. There is dielectric-filled feeder(s) in this structure. There were no substantial cracks observed in this structure. Two samples will be taken for PCB and ID. The Chain of Custody form used is # AA 27677. An Environmental Tag #33569 will be hung in the structure. No other cleanup action will be taken at this time. No standing except Trks loading/unloading Mon to Fri. 6/25/2002 @ 02:06 HRS Notified CIG, spoke to McCarthy # 06416 @ 02:05 HRS 6/25/2002 & 03:30 HRS J. Liguori # 14084. operating Supervisor of I&A south reported to me that he condemned the Unit in question because it would not hold pressure and removal will be pending. 6/25/2002 EPA # NYP 004 099 479 Transportation was faxed information and called to request an "OVER 50" tanker for partial cleanup and draining of Transformer in V-5843 on 6/25/02 @ 07:00 HRS 6/25/2002 06:34 OS Ligouri I/A South reports additional adjacent vault 5661 13m49 will also be cleaned. The spill went through the weepholes into the adjacent vault. Mr. Ligouri determined that no additional samples will be required as this came from the original spill for which samples have already been taken. Update: 06/25/02 Mr. Cumberbatch # 10660 Reports that at 11:25 hour's approx. 300 gallons of oil and water mixed was pumped into tanker from V-5843. Also reports that unit in V-5843 unit was drained and it was dry. (No oil in transformer) Total capacity of this unit is 396 gallons. He also reports that oil and water migrated via weep holes into adjacent V-5661, and down drain to V-1331 and out of sump, and into sewer. At 12:10 E/V desk was told that approx. 25 gallons went into sewer as per Mr. Cumberbatch. But after further investigation he reports that approx. 300 gallons went into sewer from V-1331. At 13:30 hours Mr. Cumberbatch informed Mr. Duke Of E.R.T of this information as well. As of 15:30 hours partial clean up has started in V-1331, next to be done will V-5661 also partial clean up. In V-5843 unit will have to be removed to do full clean up. 6/25/02 19:54 J. Cumberbatch # 10660 I&A (cleanup) supervisor reported that a tanker removed 200 gallons of water/oil mixture from the floor of vaults-5661, 1331. There was 4 drums of solid waste removed which contained oil soaked leaves and cleanup debris. A partial cleanup was done on these 2 vaults. They were double washed with riptide & rinsed with a flush truck. The reason being it was only a partial cleanup is that they can not get behind the units while they are in place. He is not sure when they will be able to remove the units to clean behind them because they are online. The cleanup crew was M Reiter # 27277, E. Mignone # 36975, M. Prystupa # 02394, J. Adorno # 19496, R. Ciulla # 8838906/27/02 03:47 E. Higgins # 18537 cable (cleanup) supervisor Reported that the cleanup was complete 100% at 03:15. All the debris was removed with the flush truck. The structure was double washed with slix & rinsed down with the flush truck. The cleanup crew was: J. Rotondi # 11602, G. Rosario # 11464, Platt # 13218. The spill tag # 33569 was removed.

minder in the vault and pump has been disconnected. Spill tag # 38581 was installed. Account # H3282 is being used. Two samples were taken one for PCB and one for OIL ID on a priority " E" basis. At this time he is awaiting supervisor for chain of custody form. Initial cleanup action taken by placing pads and hanging spill tag. Cleanup pending removal of transformer.05/07/03 10:45 hrs UPDATET Lynch reports that the unit capacity is 285 gallons. J Gnull will take a measurement to determine amount of oil in unit. An over 50 tanker was ordered and is on its way to drain unit.UPDATE05/07/03 13:30 hrsS Mahoney of ERT reported to N Muldoon #18723 that after checking the unit it was discovered approx 100 gallons of oil was missing from the unit.Update: 05/07/03 @ 20:50 hrsLab Sequence Number: 03-03759-001Analysis indicates the presence of a substance similar to a dielectric fluid.Update: May 07,2003 @ 21:35 hrsTransformerLab Sequence Number: 03-03758-001TOTAL PCB 31 ppmLab Sequence Number: 03-03758-002Soil grabTOTAL PCB 6 ppm5/8/2003 @ 16:32Upon speaking to Dave Duke # 88158 of ERT @ 16:25, after further investigation, this spill can be down-graded to have lost only the original amount of two(2) gallons of Transformer oil.UPDATE05/09/03 12:05 hrsE Hulser # 39723 Operating Supervisor Manhattan Cable Dept reported to N Muldoon #18723 that the cleanup was 100% complete at 11:30 hrs. The structure was double washed with slix and all liquid and solids were removed by the vactor truck and the unit was removed. Spill tag # 38581 was also removed.

Remarks: no to the five questions, spill in in vault #1798. Cleanup will be completed as soon as the transformer is replaced

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN"PTC IS DOING CLEANUP. 2 AST'S ON DIRT FLOOR LEAKED. WILL REMOVE TANKS AND CONTAMINATED SOIL, AND CONSTRUCT NEW TANKS IN PLACE.OIL SKIMMER INSTALLED IN GW SUMP BY BOILERS TO REMOVE PRODUCT. OIL EVIDENT AS FAR SOUTH AS 2ND BOILER. ORDERED 3 WELLS TO DETERMINE EXTENT OF FREE PRODUCT CONTAMINATION. ASKED FOR REPORT.02/23/99 mmm:CALLED ED MALONE, LEFT MESSAGE WITH SECRETARY ASKING FOR UPDATE ON SPILL.06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang.10/24/06 PTC, Tony Lara called and advised DEC that owner would like to file closure petition. Ace Atlas, Joh Cassano may call to discuss what DEC needs to close out the case. _ KST12/06/06-Hiralkumar Patel. received message from Bill (631-293-4992) from ACT. spoke with Bill and asked him to call DEC Vadim.12/21/06 - Vadim Brevdo spoke with Mr. Lara, who informed me he will be submitting spill closure report/package for DEC's review. I explained Mr. Lara that I want to see a "Conclusions/Recommendations" section in the report which would summarize why spill no longer poses threat to human health and the environment. Mr. Lara agreed to include such "Conclusions/Recommendations" section in the spill closure report. 01/30/07 - Petroleum Tank Cleaners submitted letter report dated January 25, 2007. Letter states the following: "Petroleum Tank was contacted on Oct. 24, 1996 by Ace Atlas, the buuilding's boiler maintenance company in regards to a leaking #6 fuel oil tank. . . The areas was cleaned, the old tank was removed and a new tank was installed. It recently came to lights that the spill number was never closed out. . . .Efforts were made to drill through the floor to obtain soil samples from under the tank room and the area adjacent to the tank room. For this purpose a drill bit sixteen inches was utilized. Upon drilling the full length of the drill bit, the concrete was not penetrated. . . At the time of the

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Contact: ANTHONY MILANESE
Spiller Phone: (718) 402-5107
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 422874
DEC Memo: 9/6/12-Vought-Primary off-hours responder. Called Anthony Milanese (East Coast Petroleum Ph:(718)402-5107) Fax:(718)402-4336) and left message to return call to Vought. Vought received call back from and spoke to Milanese and tank is a 20,000-gallon #2 AST. Vought spoke to John and leak was dry leak and tank was emptied and potential source was removed. No visible signs of oil. Entire system failed test and failure was due to faulty manwway gasket and gasket and inspected and possibly repaired and tank retested. Milanese will callback with owner info for TTF letter and PBS# as no PBS registration in database and building may have alternate address. Vought received callback from Milanese who noted that AST was in contact with the concrete as well and that the fillport was capped to prevent deliveries until repair is completed. Milanese also noted that site was registered under PBS #2-056227 and that mailing address on PBS Registration was correct address for owner. Spill assigned to DEC Demeo as site is TTF for PBS site. Vought prepared TTF letter with cc to East Coast for signature by Demeo and mailing address of letter was:Penn Tower, LLC132 West 31st StreetNew York, NY 10001Attn: Toby TenenbaumPh:(212)564-1521Demeo signed letter and Vought added to E-docs, sent to East Coast via Fax and original mail to Penn Tower. Spill assigned to DEC Demeo as TTF at PBS site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

will be sent to DEC.10.06.05 //Sharif- rec'd tank test failure report from Eastmond and Sons Boiler. The fillline and the return line failed. Apparently, oil leaked through the pipeline and contaminated the surrounding environment. Needs subsurface investigation around the tank. Tried to contact Mr. John Wellmann of Andrews Corp.212-529-5688* 276. He is on vacation. 12/21/05 Sharif//I spoke with Rene Lewis of EastMond. He said they pumped out the tank, cleaned it and later on they found oil water mix coming into the tank. So they installed a monitoring well to identify if any oil has escaped from the tank to the surrounding environment. They checked the well again and found only water coming into the well, a sample was taken from the well. Contaminated soil around the return line was removed and manifest will be sent to DEC along with closure report.03/15/06 Sharif Rahman- Rec'd waste disposal manifest, analytical result for the water sample from the well.VOC/SVOC non detect. Spill is closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

28 ft.**

Site ID: 65132
Spill Number/Closed Date: 9813015 / 5/20/2004
Spill Date: 1/22/1999
Spill Cause: Tank Overfill
Spill Source: Commercial/Industrial
Spill Class: Known release that creates potential for fire or hazard. DEC Response.
Willing Responsible Party. Corrective action taken.
Cleanup Ceased: Not reported
Cleanup Meets Standard: False
SWIS: 3101
Investigator: CESAWYER
Referred To: Not reported
Reported to Dept: 1/22/1999
CID: 382
Water Affected: Not reported
Spill Notifier: Other
Last Inspection: Not reported
Recommended Penalty: False
UST Involvement: False
Remediation Phase: 0
Date Entered In Computer: 1/22/1999
Spill Record Last Update: 5/20/2004
Spiller Name: GARY SPINDLER
Spiller Company: HAG REALTY
Spiller Address: 250 WEST 26TH ST
Spiller City,St,Zip: MANHATTAN, NY
Spiller County: 001
Spiller Contact: GARY SPINDLER
Spiller Phone: (212) 233-0924
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 62614
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"3/11/03 - SAMUEL- File available in active unassigned spill files.10/16/03 1231 Hrs - Sawyer - Received a fax from the management company a Gary Spindler of Park It Management but it only included an estimate to do the work.11/25/03 - Sawyer - Called Gary again and ask for the manifest for disposal or some other receipt or ticket to show that the work was done.4/14/03 - Sawyer - Talked to Ray at PTC and he said they were there only to pump out and clean the tank, but I know from O'Dowd notes that they also did initial cleanu up of the tank room.Also talked to a Danny at DC Environmental about work done at the address.5/20/04 - Sawyer - Danny at Don Carlo forwarded the documentation on the removal of one 3000 gallon fuel oil AST. No

Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

owner**c/o Hoffman Management300 West 55th Street, Suite 2SNew York, NY 10019Attn.: Mark HoffmanPH. (212) 247-4975email: mhoffman@hoffmgt.com11/06/14-Hiralkumar Patel.9:20 AM:- spoke with Chris at All Boro. the tank was emptied out and cleaned as part of grade conversion from #6 to #2 oil. prior to filling up the tank with #2 oil, tank system was tested which failed. immediately, technician conducted an isolation test of tank only and it failed. technician found crack in epoxy coating inside the tank. All Boro will do further investigation. Chris mentioned that 15% of the tank is in contact with surface. 9:42 AM:- sent TTF letter to Mr. Hoffman requiring report submission by the end of 12/19/14. letter emailed to Mr. Hoffman and Chris.12/18/14-Hiralkumar Patel.2:18 PM:- spoke with Chris. he will call back.3:22 PM:- received call from Chris. currently the tank is empty and owner has decided to remove the tank system once a new natural gas heating system is installed. the new gas system may be installed by the end of Jan. 2015.3:50 PM:- received email from Chris including above discussion about gas system installation and tank system removal.**report due on 12/19/14.**
