Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 57489
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F06 - Pipe External Protection - Wrapped
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 05/10/1909
Capacity Gallons: 6000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

DEC Region: 2
DER Facility ID: 155879
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"11/26/02 - most tank is burried. top of the tank is covered by concrete. oil stains can be found from side of the tank. It's been concluded that tank leaked. Due to the construction situation and utility lines there, it might come DEC to do letter has been sent out to owner. tank 1 is 4,000 gls.5/5/03 - Zhao/DO: Tank was removed by May 1 by Abilene Group. Application is needed for PBS registration. Application form sent.5/6/2003-Vought-Received call from John Thiemer (Abilene-718-372-4210). Tank was removed on 5/1/03 and temporary tanks were set up. Tank was cleaned before removal. Thiemer requested information on tank closure and endpoint samples. Tank will not be placed in location of previous tank. NYSDEC will sample analyticals and site plan and copy of invoice from tank removal. NYSDEC will receive report by 6/15/2003.1/7/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.4/08/04 - Sawyer - Called Mr. Traum of Matthew Adams Properties and asked him to send receipts of the work done with end point samples and disposal manifest. He forwarded all needed documents from AL Eastmond and Abliene. Closed.
Remarks: TANK FAILURE AT ABOVE LOCATION. TANK TO BE DRAINED. CALLER IS REQUESTING TO SPEAK TO DEC REGIONAL OFFICE IN REFERENCE TO SITUATION.

MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 08/12/1993
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA Contractor/Grantee

FINDS:

Registry ID: 110009477155

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reverse phone directory phone number for Stephen is (212) 308-1062.
this number is not working number.Spoke with Mr. Gomez, super at building. as per him building owner is Mr. Joel Berman. Right now owner is in California for two weeks. Super will give my number to owner as he denied giving owner's number. Phone number on report for Mr. Berman is out of service.03/03/06-Hiralkumar Patel. Got Mr. Berman's number (212-583-0005) from super. Left message for Mr. Berman.Received call from Mr. Berman. as per him, they don't have any records on oil spill. and he doesn't know anything. he told me that the building is on solid concrete. as he is from law firm he was talking legal language. he is blaming DEC for harassment.03/08/06-Hiralkumar Patel. spoke with super and property has 3000 gal of tank. they have permit from fire department. got pbs registration certificate from super. PBS# 2-603898. as per PBS certificate, this tank was installed on Nov. 1st 1998 and spill happened on Oct. 7 1998. from PBS registration, mailing address for owner is:General Partner of 115 W 27th Street Co1140 Ave of the Americas 17th FloorNew York, NY 10036From Revese PHone Directory, the address for phone number 212-583-0005 is as follow which was confirmed by Mr. Berman also. send letter at this address:780 Third AveNew York, NY 10017-2024Berman's FAX no.: 212-583-007203/09/06-Hiralkumar Patel. CSL sent out to Berman by mail and by fax. (forgot to send pbs registration form and instruction)03/14/06-Hiralkumar Patel. Received fax from Mr. Berman. "...The company has no record of the petroleum release which we believe was no more than a minor ordinary oil delivery spill which occurred when our supplier/delivery company inadvertently overfilled the tank. the fill port is outside the building and whatever minor amount spilled would have been on the sidewalk. we have no notice of any violation. if you could please supply me with a copy of the

violation, including the name of the delivery/supplier company, it may be helpful in resolving this matter expeditiously"Discussed with Jeff. he is suggesting to take site visit. Left message for Mr. Berman.visited site. spoke with Mr. Gomez, super at site. there is no odor in boiler room as well as in tank vault. tank is partially buried in concrete and tank is enclosed in concrete vault. but concrete vault is opened at one side. water was flowing out from tank vault. few oil stains on concrete floor in boiler room, but very little. poor concrete floor in boiler room. water was standing all over floor. little shine on top of water in sump. no leaking from boiler. suggested following to Mr. Berman afterwards:- repairing of floor in boiler room.- keeping area clean and dry- replacing old corroded pipings to/from tank.- closing tank vault as it is being used as secondary containment. they can keep small window at elevated level to get access to tank. and as this tank in concrete vault, tank test every five years.- updating PBS records with current address, phone number and product information, as PBS records shows #2 oil in use. but as per super they are using #4 oil all the time.- submitting tank test results and copy of invoices for every work done.as i discussed with Mr. Berman, he is agree to all above suggestions. the company who did tank test will replace those pipings. he will submit tank test results and copy of invoices for any work done. i asked him to call me with contractor's name and number who will work to close tank access and repairing of floor.Got copy of work proposal from Petroleum to Owner. Spoke with Joe Ostrowski (718-624-4842) and he told me that the whole system failed in tank test. now they are waiting to get permission from owner for isolation test. Mr. Joe doesn't know how bad the leak was as the person, who did tank test, was not there.Left message for Mr. Berman. Spoke with Mr. Berman. i told him about tank test failure as i spoke with Joe at Petroleum. Mr. Berman was upset as contractor gave test results directly to me without concerning hiring person. i have asked Mr. Berman to work out on further testing of individual parts to find out leaking portion of system. asked him to call back with date on which they plan for isolation test.03/21/06-Hiralkumar Patel. Left message for Mr. Berman. Received call from Mr. Berman. he was blaming me for harrasing him. he told me that Petroleum has done individual test and found problem at vent pipe. i have asked him to send me copy of report. he will call back tomorrow.03/24/06-Hiralkumar Patel. REceived certified mail receipt.04/06/06-Hiralkumar Patel. Received letter from Mr. Berman. received contract copies which was signed by Joe Ostrowski from Petroleum and by Mr. Berman. as per contract copies, petroleum has proposed following work:- will open manhole cover on one 3000 gal fuel oil storage tank- pump out all existing fuel, water and sludge from bottom and sides of tank.- pressure test all lines-suction, return, vent and fill to make sure they are not leaking.- men will enter tank and squeegee clan all remaining sludge and residue- examine tank shell for signs of deterioration and make a full report to person in charge.- if a line fails test, we will then plug up bad lines and perform "tank only" tank test to make sure tank is good.- all sludge will be disposed of to a legal facility- seal tank making a watertight closure.- excavate concrete, remove old fill line and vent line- install 40 ft of new 3" fill line from tank top to outside the building wall.- install 50 ft of new 2" vent line with vent alarm- re-cement area.04/07/06-Hiralkumar Patel. Received letter from Mr. Berman. this includes copy of tank test results. result shows tank only passed in test.04/18/06-Hiralkumar Patel. Spoke with

DEC Memo: Owner: Joel Berman, 780 3rd Ave - 14th Flr, New York, NY 10017
3/21/2006 - Sangesland spoke to PTC. They have been hired to drain
the tank and run an isolation test. This will be done in the next day
or two.4/28/2006 PTC submitted documents saying that the tank was
isolated and passed a "tank only" test. The fill line was replaced
and then the whole system was retested and passed. No contamination
was foundSpill Closed

Remarks: ABOVE LIQUID LEAK

Registry ID: 110008001152

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019578205

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ISOLATE AND RETEST THE TANK, REMOVE FROM SERVICE IMMEDIATELY IF IT DID NOT TEST TIGHT.KEEP THE DEC APPRISED OF THE PROGRESS.1/9/03 Roux env. cleaning tank to observe if there is any additional product. wells have shown no product.// will update DEC when info is gathered9/28/04 tippie called Josh Levine....Clean wells soon, and I would like to witness the last baling next quarter.10/20/05 - Raphael Ketani. I spoke to Joshua Levine at Roux (rooo) Associates ((631) 232-2600)regarding the site. He said Sierra Realty Management is the owner of the property. He said the UST was punctured repeatedly and used as a receptacle for collecting the oil and water. Once it was no longer usefue, it was abandoned in place with foam. A new AST was put in it's place. Mr. Levine will call me back regarding the status of the site. There is no PBS case for the site, even though they abandoned one tank and installed another. I will send them a letter instructing them to register the two tanks and close the abandoned one.10/25/05 - Perry Parker of Sierra Realty called me today to tell me that the 10,000 gal. active tank had been registered and that the 11,200 gal. one had been closed. Mr. Parker sent me the paper work showing the tank closure and registration. The PBS case is #2-045187.12/2/05 - Raphael Ketani. Joshua Levine called to say that the 11,200 gal. tank was abandoned in place and that the owners got a certificate from the FDNY. He wanted to set up a conference call with Perry Parker to discuss what contamination was found and where the owners go from here. He suggested 12/5 at 3 PM. I agreed.12/5/05 - Raphael Ketani. I had the conference call with Joshua Levine and Perry Parker. Mr. Levine gave me a chronological run-down of how the remediation and oil recovery went since the inception of the spill. Mr. Levine mentioned that no product had been seen in the monitoring wells on 6/11/04 and 7/20/04. However, on 10/04 about a foot of product was found and bailed. On 12/04 Roux went back and bailed product. Mr. Levine added that on 11/11/05, about 30 inches of oil was found in well MW-2, which is at the location of the former UST. All of the other wells had been dry or didn't have product. I asked Mr. Levine how much product had been recovered. He said about 500 gals. I told Mr. Levine a system or method has to be used to continue to recover product. He agreed and said he would send me a letter stating how they will recover the remainder of the oil and proceed with the method. 1/23/06 - Raphael Ketani. I called Mr. Levine regarding any progress in finding a redesign that will allow for more oil recovery. He said that they will redrill MW-2 and enlarge it from a 1" diam. well to a 2" diam. well. He said that Zebra Environmental will do the drilling on 1/27/06. 4/3/06 - Raphael Ketani. Today I received a progress report letter dated March 30, 2006, from Roux Associates, Inc. Several inches of #6 oil is still appearing in MW-2A and MW-5. They will try to recover more oil later. 03/21/07 - Spoke with Mr. Levine of Roux. I requested submission of the Final Spill Closure report to evaluate merits of spill closure Mr. Levine is requesting. V. Brevdo 02/01/08 - Mr. Lavine of Roux telephoned and advised that he is sending spill closure work plan and it is dated 02/01/08 which will describe hot spots soil excavation and free product recovery surrounding the closed in place 11,000 gallon No. 6 oil UST. VB08/21/08 Review of the Spill Closure Summary Report prepared by ROUX and dated July 21, 2008 indicates the following:The excavation and offsite disposal of localized petroleum impacted soil and free productadjacent to the abandoned 11,000-gallon No. 6 oil UST within the subbasement of 875 Sixth Avenue, Manhattan, New York has been completed.Excavation sidewall and bottom end-point samples were

S104782219

collected from two separate excavations. No soil samples exceeded the TAGM 4046 RSCOs for VOCs and only one SVOC, chrysene, was detected in excess of the RSCOs from three of the 10 end-point samples. A total of 45 drums of petroleum-impacted soil and rock was excavated and disposed of offsite as nonhazardous waste. In addition, seven drums of free product/water mixture were disposed offsite as non-hazardous waste. The excavations were backfilled with 6 cubic yards of clean offsite sand. Free-product has been removed to the extent practicable. No free product has returned to the two monitoring wells, MW-2A and MW-5, since the February 2008 excavation and restoration. There is no indication of offsite migration of free product since the historic spill was contained within the bedrock depression directly surrounding the UST. The post-remediation water sample collected from MW-2A contained no exceedances of the AWQSGVs. This Spill Closure Report provides documentation of the remedial activities conducted to close out NYSDEC spill number 0006542. On behalf of Sierra Realty, Roux Associates has requested closure of NYSDEC spill number 0006542. Based upon review of the Spill Closure Summary Report and taking into consideration aforementioned findings, I decided it is appropriate to close spill. Spill is closed on August 21, 2008 (VB)

Remarks:

WILL AWAIT ACTION FROM DEC.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Phone: (212) 675-3200
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 24612
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"6/8/05 - Project transferred to TLGibbons in Central Office, Albany8/16/05 - Spoke with Brenden Keany, Mutual Redevelopment Houses, Inc., (212) 675-3200. Spill reported 5/23/96 by CDM during removal of twelve (12) 20,000 gal. #2 and #6 fuel oil USTs. The large fuel usage was for a cogen plant which generates electricity for ~3,000 people. After removing tanks and cleaning, went to dual fuel system, reinstalling only six 20,000 gal. #2 fuel oil USTs. Spoke with David Marabello (732-225-7000), CDM project manager during spill. He said that they excavated to the lateral and vertical limits possible, using shoring, without compromising structure of building. Southern portion of excavation encountered bedrock. Sixteen post-excavation samples were collected and evaluated for VOCs and SVOCs. All samples greater than 10 feet bgs. Elevated levels of VOCs and SVOCs were encountered in several samples, however, according to 10/2/98 CDM tank closure report, levels not indicative of gross tank failure, rather indicative of chronic spills over time. While some sporadic elevated levels of petroleum remain, everything that was reasonable to be done, was done. Close spill.

Remarks: OLD TANK APPEARED TO HAVE FAILED. TANK IS BEING REMOVED, CONTAMINATED SOIL WAS FOUND DURING REMOVAL PROCESS. INVESTIGATION IS UNDERWAY AT THIS TIME.

Hamptons phone # 212 714 2902 Donald Lee is contact owner is not aware that there was a spill on the property. spill was reported before they bought the building. spill report faxed to them on 10/19/05 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 10/10/14-Hiralkumar Patel. reviewed available information for DEC DeMeo alternate address: 224-232 West 30th Street no other spills found. PBS #: 2-251666. as per PBS record, the site has/had following tanks:- one (1) 5,000 gal #6 oil UST, closed-in-place in Oct. 1998- one (1) 5,000 gal #2 oil AST on saddles, in-service, installed in Oct. 1998 MB Hamptons, LLC. **property owner** 11/28/14 TJD File review. Based upon a review of available documentation the 5K UST associated with reported tank test failure was closed in place in October 1998 - a new 5K Ast was installed at the same time. New owners took possession of the property after reported tank replacement. Business records are required to be maintained for only 7 years - no subsequent spill reports were received at this address. Previous attempts by Department staff to obtain historical information associated with reported tank test failure have been unsuccessful. Spill report is more than 15 years old. Spill is administratively closed.

Remarks: section of tunnel inspected for evidence of gasoline seeps. M.J. Hinton Region 9, on temp assignment to R212/31/2001 Randy Austin reported that the Transit Authority had gotten back to him after doing an inspection earlier this month in the subway tunnel in the area of this property. No problems were found. A letter dated Dec 24, 2001 from Andy Rudko of AKRF described the excavation. A phase 1 report and phase 2 letter were received Dec 26, 2001. A Site Remediation Report was submitted in 1999. Gasoline tanks and associated contam soil were removed from the SW corner of the property in 1999. Contaminated soil was also removed from the north side of the property. The entire site was excavated for construction of a high-rise. The owner is Chelsea Assoc LLC, 1050 Franklin Ave, Garden City, NY 11530. SMM.
PERFORMED AIR PRESSURE TEST, BROKEN FITTING, REPLACED FITTING, RETESTED & STILL FAILED, WILL DIG UP TANK.

DEC Memo: TTF Letter sent - copy in eDocsPiper spoke with PTC. They explained owner wants to do repairs on his own and doesn't want to remove contaminated soil.CSL needs to be sent along with ttf.*****Anil-1204 Broadway LLC.22 west 32nd st. 10000112/01/08-Zhune. I received a letter from 1204, Broadway Manhattan LLC. Enclosed are the letter from Effective Plumbing Corporation, the tightness test results both the failed and the passed test, and the invoices for the work performed. They say in the letter that on 9/3/08 PTC performed test again and tank passed tightness test. Originally on 6/30/08 PTC performed tightnesss test and the tank failed the test, the serviceman gave us recommendation to change fill line lines, which we did. We hired Effective Plumbing Corporation and completed the required work as recommended. there was no contamination or any kind of spill.The letters from Effective Plumbing Corporation say pe our porpoasal we replaced the existing 2" vent line with 60 feet of 2" black pipe. We run the pipe from the tank up to the building side wall. We installed the 2" black pipe with all necessary couping and fittings.Per our proposal we removed the old oil line and replaced the remaining 3" oil fill line from the new pipe coonctions to the oil fill tank. We installed 40 feet of black pipe and (19)-3" fitting. Case Closed

Remarks: Fill line connected to oil tank, as well as the feed line appear to be bad.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"12/2/2002 - Sangesland on Desk Duty got the following info:T&S Trucking was subcontracted by Castle Oil to make this delivery. The original delivery was set for 4,000 gal #4 oil. At the building, no super was found, T&S called Castle, who gave T&S authority to deliver 3,000 gal. At 2,100 gal, oil shot out the vent line. After the spill, further searching of the records at Castle showed this building got a delivery for 3,500 gallons on Friday.According to Jim Carey (718-579-3410) at Castle Oil, approx 20-25 gal shot out the vent line and onto the adjacent building and sidewalk (no dirt, or drains were impacted). In addition, approx 50 gallons spilled from the top of the tank (manway? broken gauge opening?) Spill pooled around the tank in the basement. Area around the tank was filled with boxes of clothing which has absorbed a major portion of the oil. No sump or drains are impacted.11AM- Castle Oil has hired Petroleum Tank Cleaners (718-624-4842) to do the clean up. Issac of PTC will send a crew over ASAP.11:45AM- Sangesland spoke with Felix Silva building super (212-448-9498) He said PTC just pulled up and was unloading gear. "Robert" from Castle Oil is on site and said the spill was only from the vent line. Oil spilled out of

Remarks: the vent line and poured 20-30 gal down an adjacent "gateway" directly into the basement. He said the tank and tank room are separate and did not appear to be impacted. 3PM Issac at PTC says the job is 80% done. All oil was removed from basement floor. Floor was painted cement, so the floor was easy to clean up. PTC will return tomorrow with a steam cleaner to finish up on the sidewalk and the basement wall. 12/3/2002 PTC says all work was done. Spill Closed - OK'd by Vought delivered too much fuel. cleanup crew enroute.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"Notes:by Rorriguezcalled ray lara of petroleum tank cleaners. he stated that there was a overflow of 30 gallons of oil to the address. The tank gauge was not working. Cleaning the spill right now. Ray Zolker from Hess. 800-437-7265. left a message for him to call.12/05/2002 Tipple at od desk was called by Hess to request spill numbers 0209070 and 0209079 (since both numbers were issued for the same incident) be referenced to as one number. Tipple closed out # 0209079 and referenced the spill to 0209070. GAUGE ON TANK NOT WORKING 800-437-7265. 212-964-7712. RAY ZOICKER (HESS).12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. -QA12/21/06: Called Mr. Rubin (Super of Co op building) at (212)242-7191 he said this spill is cleaned up long time ago. He said to call property Manager regarding documents of the spill.Called Ms. Yvonne (Property Manager) at (212)319-5000 and talked about the information of the spill. She said this spill is cleaned since long time ago. She will send me closing confirmation letter to close the spill. -QA01/03/06: Called Ms.Yvonne and said to take end point soil sample to find out the contamination in soil of spill area. -QA02/05/07: Called Ms. Yvonne at (212)319-5000 and reminded her to take soil samples for closing this spill. -QA06/11/07: Mr. Issac Mungra (Eastmond Company) sent me a report of one soil sample on dated May 30, 2007, which he took 2 ft. under the pipe line in the garden. He also sent a diagram in which he has shown the location of the sample. Soil sample is clean. -QA 06/21/07: I visited Spill site, checked fill port, vent line in the garden area and inside the basement. I didn't see any odor or any stain in the area. I have not found any sign of contamination in this area. This spill is clean (see photos in e-doc). After discussion with Mr. Jon Kolleeny (supervisor), I closed this spill. -QA

DEC Memo: 12/06/05: This spill transferred from J.Kolleeny to S.Kraszewski.02/06/06: This spill transferred from S.Kraszewski to Q.Abidi.03/17/06: SK Reviewed Site Assessment Report completed on Nov. 30, 2000 by State Environmental Services, Inc. One 30K tank, which stored #2 Fuel Oil was removed. Six post-excavation samples were taken from the pit and submitted for laboratory analysis. About 900 tons of soil was removed and disposed of.All soil samples were tested for VOCs and SVOCs. None of the samples detected any VOC contaminants. All samples recorded exceedances of the same SVOC compounds: Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(g,h,i)perylene, Chrysene, Dibenzo(a,h)anthracene. The concentrations ranged from 1950 ppb to 498 ppb, which are relatively low. Four of the six samples had SVOC exceedance concentrations of 1000 ppb or less. No samples were taken from the fill lines or fill port. Report lacks a site plan with area of excavation and sample locations. No lab analysis summary table provided either. SK spoke with Chris Sawyer from NYCHA Fuel Oil Remediation. I informed him that they would need to take soil samples from the former fill lines and fill port area. Chris said that Harborview Houses would be included when performed additional soil borings.Sent Chris Email requesting additional soil borings along the fuel lines and next to the fill port. - SK04/04/06: This spill Transferred from Q. Abidi to Koon Tang.07/03/09: J.kann - spill transferred to J.Kann. Site assessment report submitted on 2/5/07. Investigative work plan submitted in March 2009. Additional wells to be installed to evaluate groundwater at the site, which is acceptable. One comment was sent on 7/3/09 to GF "- A second round of groundwater sampling is proposed one month after the initial sampling is performed. What is the reasoning behind this? Typically two or more months is used."09/15/09: J.kann - Sampling to be performed two months after initial sampling. Work Plan approved via email on 7/6/09.2/4/11: J.kann - SAR received on 12/3/10 and edoced.5/24/12: J.Kann - SAR under review. NYCHA requests closure. Will review entire file for Chelsea Houses.6/13/12: J.kann - requested in an email of 5/30 that NYCHA gauge the wells at the site before I present to the closure panel. NYCHA sent well gauging data and photo on 6/12 indicating that a product sheen is present in MW5. A response email was sent to NYCHA on 6/13.10/17/12: J.Kann - requested a follow-up from NYCHA regarding whether or not there is measurable product in MW-5 and/or if a absorbent sock is still present.5/17/13: J.kann -

followed up with NYCHA. They will go out and gauge MW-5 the weeeek of May 20.8/26/13: J.Kann - visited site on July 31st. Observed the removal of sock and gauging of on site wells. No product in all wells. Sock visibly clean (photo). NYCHA indicated that the sock has been clean for several months. Based on observations, the spill will be considered for closure.8/27/13 J.Kann - completed review of file. Spill closed. Following summarizes site:-30,000 gallon UST removed in 8/2000. -890 tons of contaminated soils removed in 2000-investigation done in 2006 along fill lines and by fill port (DEC request)-some PAHs detected in grab groundwater sample in 2006-5 permanent wells installed in 2010-All gw under TOGS with the exception of MW-5 (3 minor VOC compound exceedences)-Slight sheen subsequently detected in MW-5. Absorbant sock placed in well.-Minor impacts on sock in 2012.-No oil detect on absorbant sock in 2013.-Confirmed no product sheen in well during site visit of 7/31/13.NFA. Email sent to NYCHA on 8/27/13 requesting wells be decommissioned.

Remarks: will isolate and retest

DEC Memo:

Contact- Walter H 212-685-3389 There is a crack in the fill line, there is a sidewalk bridge over the fill line. There will be no more fills using the cracked line, PTC to conduct cleanup once the site is secure. 1/5/05 tippie sent letter requiring action. 1/6/04 tippie informed that Eastmond will be doing the fill line replacement only at this time. 08/03/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. called Mr. Mark Salamick at (917)559-5519 he said he will find out information about the spill and he will call me back. Mr. Mark salamick called me back and said he has never done this job he said to contact FM Ring Management Company. Called Ms. Reeba at (212)765-1655 she said, she is working on it she will find the status of the spill and she will call me back. -QA08/04/06: Recieved fax from Ms. Reba Dickstein (F.M. Ring Associates). Called Ms. Reba she said there was a minor problem Gauge messed up so Eastmond company changed the gauge. Therefore, the problem cured. -QA08/10/06: Recieved a closing confirmation letter by fax from Ms. Reba Dickstein (F.M. Ring associates, INC.). She mentioned in her letter that oil fill line was replaced by Eastmond company. That is a freestanding line at the ceiling of the basement. Floor of the basement is concrete floor that is in good condition and without cracks. Therefore, According to the letter of Ms. Reba Dickstein this spill is closed. -QA

DEC Region: 2
DER Facility ID: 245272
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"2/5/99 Spoke to Joe Ostrowski from Eastman. They recovered a total of 1100 gallons - 300 gallon on floor and 800 gallon still in tank. As per Joe, tank is wrapped in concrete and oil is probably still between steel and concrete. Sump immediately next to tank - unk if oil discharged to sewer. Eastman set up temp tank. Three manholes on sidewalk of 24th Street open right to the boiler room. Building is located between 6th and 7th Avenues and spans the block between 23rd and 24th Streets. 2/10/99 Met Ralph (super) and Rudy Sorocco (Bob Sussman's associate) at the site. Oil was fairly well cleaned up. Very faint odor. They are collecting bids to remove old tank and install a new tank. They will keep me apprised of tank closure scheduling. Tank probably installed in the 20's. Sump pump is directly south of the failed tank. Sheening on standing water in sump. According to Ralph, the sump pump only goes on when the slop sink (located within 5 ft of the sump) is used. Areas of concern: There is a trench across the entire floor that appears to have a soil bottom and behind the tank seems to be soil where the leak was first detected. Told Rudy Sorocco that borings will be required to determine the impact to the subsurface and that this can be done in conjunction with the tank replacement.2/12/99Spoke to Robert Sussman. Sent him letter with requirements as well as contractors list.3/22/99On site, couldn't observe floor, standing water, little product (1/4abpad). As per Niel, eastman, he surmised that the tank rotted out from the bottom since there was no saddle or dunnage, He will break through in area of tank and grab soil sample, and clean out trench and grab compo soil sample and 8021 8270.3/29/99Spoke to Niel, he said they brought a hammer drill with a 12" reach to collect samples through the concrete floor and trench. He said the concrete floor was more than 12" thick and was clean. He said the trench was 12" of clean brick. He will submit a narrative of Eastman's findings and submit it to my attention. 01/26/04Reassigned from Rommel to Austin02/17/04: Reassigned from AUSTIN to KRIMGOLD.5/7/04. J.Krimgold spoke to AL Edmond. They have no records saved regarding this site. However, confirmed that no contamination was found during floor drilling. NFA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN"6/30/97: sent letter8/3/98 :CALL BACK TO CHARLES MULLIGAN, IVI ENVIRONMENTAL. (914) 694-9600 x 259. DOING PHASE I FOR THE PROPERTY OWNER.06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang.3/10/2010 Sangesland received a letter from Anthony Lara from Riteway Tank (718-855-7272) He said he remembers this tank and what happened at the site.His letter (attached in eDocs) says the tank initially failed the tank test because the manhole gasket was damaged. Replacement of the gasket resulted in a passing tank test. No contamination was found. 2 years later (1997) this tank was removed and replaced with a new tank. No contamination was found during this period either. Spill closed.

DEC Memo: 9/19/07 Called 212-593-9100 (# on FIR) and left message for Scott Ross (contact on FIR). Mr. Ross returned my call and left a message. I called him back and he said the tank was not tested. He confirmed that the tank is 2K (consistent with registration) and is not 5K as in the spill report. He said that the tank is a concrete wrapped tank. I called Mark Salamack of Petroleum Tank Cleaners (they did the test). I left a message and requested that he call me back. M. Salamack called me back and said the technician believes the failure

is in the fill line. Also he told me the address was incorrect on the Spill Report. The address is 312 NOT 12. Sent ttf letter to: lvy SteeleChelsea London Co.c/o Buchbinder & WarrenOne Union Square WestNew York, NY 10003Attn: Eva MatosCalled Ms. Steele at 212-243-6722 and left message to call me back. Eva Matos called me back and told me the line failed and that PTC will be making the repairs. She also told me to send letter to her attention. I confirmed the mailing address with her. bf10/9/07 Received fax from Eva Matos Letter included an invoice from PTC showing that the tank was retested and passed. Also, the fill line and vent line were replaced. No mention of contamination. I called Ms. Matos back and left a message on her voice mail. I stated that a letter is needed from PTC regarding any contamination found. Phone: 646-637-9019. bf10/11/07 On 10/10/07, I received a letter by fax from Mark Salamack. Letter states that the failure was caused by a broken vent line. The fill line was compromised, but not broken. Both were replaced and no contamination was encountered. Tank was tightness tested on 9/27/07 and passed. NFA. bf10/15/07 On 10/12/07, received message from Eva. She requested a call back regarding whether or not I received letter from PTC. I called her back (646-637-9019) and told her that I received the letter. bf

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" Sent TTF letter to consultant: Maria Ramirez, GZA, 65 Willowbrook Blvd, Wayne, NJ 07470 11/5/2003 Sangesland spoke with Maria Ramirez at GZA. She says the building is converting to natural gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated. 12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03. 12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam. 12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the

BASEMENT OF (Continued)

S104502515

water for VOC and SVOC. GZA said they would also test for Floride and Clorine to determine if this water is city tap water or groundwater.If the water samples come back clean, then GZA will prepare an arguement that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number.3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride & Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure.11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed.

Remarks: failed a tightness test but could not isolate a specific pipe - testwas performed as part of a closure.

DEC Region: 2
DER Facility ID: 322544
DEC Memo: 10/31/06 - Raphael Ketani. I went to the site today. The building houses offices of various companies and some wholesale stores. There were no odors in the lobby, which is directly above the tank room. I went down the stairs to the maintenance office where the tank room and boiler room are. This was the basement. I didn't smell any odors until I was at the bottom of the stairs. There was a slight odor and the basement was warm. The vapors measured about 1100 ppb with the PID meter. The boiler room was clean and had only a few very small spots from where the oil filters are changed. As I walked to the tank room the vapors got stronger. They were about 1300 ppb to 1400 ppb. I met the super, Frank Gutierrez (718) 497-3000. He let me into the tank room. Petroleum Tank Cleaners (718) 624-4842 had already emptied the tank and had been inside. There was oil on the floor and most of it was covered with absorbent. I estimated about 300 gallons of #6 oil had spilled. I did not see any drains or sumps in the room as I walked around the tank. There was no oil outside of the tank room in any direction. The floors outside of the tank room were solid with no cracks at all. Perhaps the floor in the tank room was the same way. The vapors in the tank room were 32 ppm. I told Mr. Gutierrez to keep the tank room door closed to keep the vapors to a minimum in the basement. He said he would do this. The people from PTC had come back. They were starting to set up temporary piping for the temporary 275 gallon tanks. The PBS case is #2-240419 and shows a 3,000 gal. tank with #6 oil. 11/13/06 - Raphael Ketani. I returned a message from John Benvegna (bin-ve~na) of Legget Brashers and Graham (914) 694-5711. He said he saw the tank room just recently and the tank had been removed, the absorbent cleaned up, and the vapors were low. He asked what DEC wanted in the way of an investigation and cleanup. I told him that if he can see the tank room floor and it looks to be in as good condition as the floor outside the tank room, then no investigation will be needed. I added that all the DEC would want is power washing of the floor, good ventilation, a small report describing the cleanup and incident, and a revised PBS form. He said he will do this. 3/1/07 - Raphael Ketani. I called up Frank Cassano of Ace Atlas (718) 497-3003/(917) 376-5416 to inquire as to the status of the cleanup and remediation, but could only leave a message. 3/6/07 - Raphael Ketani. I called up Mr. Benvegna and asked him about the cleanup. He said that LBG was not involved as they worked for the insurance company and the insurance company determined that Ace Atlas was not covered. He told me to contact Carmine Casale, the building manager from, Bernstein Real Estate(212) 594-1414, ext 413. I tried calling Mr. Casale, but could only leave a message. 3/7/07 - Raphael Ketani. Mr. Cassano called me back. He said he had spoken to Mr. Salamack and had been informed that the documentation regarding the cleanup had already been sent to DEC. I told him that we had nothing in our records. He said he would get back in touch with Mr. Salamack. 3/22/07 - Raphael Ketani. I received a FAXed closure report from Mr. Salamack. The report contained the cover letter describing the problem and cleanup, diagrams of the tank and the room, site map, plot plan, manifests for soil and tank removal, and end-point sample analytical results. I reviewed the closure report. There were 5 sets

S108298747

of sample data. All of the VOCs, except for one hit of naphthalene, were non-detect. Each set had many SVOC hits and some exceedences, specifically those of the benzo series and chrysene. The exceedences were typically several times the TAGM limit, but were still low concentrations. These low exceedences are more likely the result of ash and cinders that are mixed in with the fill soil that was originally in place. Based upon this closure report, I am closing the spill case.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"SEE ALSO 91-10075 & 92-13026.12/1/05- DEC Piper spoke w/ property manger. Charlie Reed, 499 Fashion Tower, LLC. 212.471.4351 in regards to status of the spill. I had discussed this with Mark Tibbe. Mark had informed me that the spill file has been transferred to Albany. Piper had e-mailed DEC lead as to phone call from property manager.7/7/06 - Spoke with Charlie Reed concerning status of spill in which Reed indicated that the oil spill had been cleaned and signed off by the building managers. The spill case itself was due to a report of a oil vapor spreading into a subway line. However, since then no further reports have been made. Reed indicated he needed to gather his files and speak with current property manager Peter Nichols at 212-471-4351 concerning possibly closing the site. Johnathan Antonizio, NYSDEC8/9/06 - Additional steps needed to attempt to close site: Call Charlie Reed and/or Peter Nichols to gather files together. Would like to see documents to confirm oil spill cleanup. Since no reports of vapor smell since the time of the spill, site can be closed when documents are available. Johnathan Antonizio, NYSDEC-Albany10/29/10 - Austin - Reassigned from Antonizio in Albany to Patel in Region 2 for following up and closing - end12/07/10-Hiralkumar Patel.3:30 PM:- visited site. met Steve Corbo, building super. he is working on-site since 2007. site has one 7,500 gal #4 oil AST on saddles. tank is located inside a tank vault with access. tank vault is under the sidewalk of W 37th Street. during inspection, found monitoring well inside the boiler room, near the sump. Steve doesn't know purpose of well inside building.alternate addresses: 491-499 7th Ave, 154 W 37th StreetPBS #: 2-404861, 2-404888other spills: 9110075, 9213026spill #: 9110075 was reported on 12/22/1991 due to 1,000 gal #6 oil spill. case closed and referred to this open spill case.spill #: 9213026 was reported on 02/21/1993 due to tank overflow. case closed and referred to this open spill case.as per PBS #: 2-404861, site has one 3,000 gal #2 oil UST installed in Jan. 1925. tank was tested on 10/13/06.as per PBS #: 2-404888, site has/had following tanks:- one 7,500 gal #2 oil AST in contact with soil which was removed in Jan. 2002- one 7,500 gal #6 oil AST on saddles which was installed in Jan. 2002as per permit dated 11/21/96, permit was filed to replace two boilers and two oil burners with one boiler and one oil burner. changed oil grade from #6 to #4 and antisiphon valve was installed on oil supply line.as per permit dated 01/19/2000, permit was filed to install additional boiler.as per permit dated 11/26/2001, permit was filed to replace a 7,500 gal tank.Steve Corbo **building super**PH. boiler room near the elevator shaft area. found dry oil stains on southern foundation wall- both in tank room (closer to elevator shaft area) as well as elevator shaft. met Robert Facciola (212-967-8797) in south tower. Robert is working on-site since 1996. he mentioned that building was using #6 oil and then switched to #4 oil. also, tanks in both north and south towers are no longer connected. as per Robert, tank/boiler room and elevator shaft are the two lowest points in entire basement. they stopped monitoring the site about four years ago as no more oil found in wells. he also mentioned that MTA cleans out their vents every two years to prevent drain plugs which cause water flooding in the south tower. Robert did not get any complaints from MTA for long time. found vent pipe in foundation wall towards the next door alley and fill port on sidewalk near the building foundation wall, on north side of the south tower entrance (on other side from the alleyway). alley is about 4.5 ft wide. after reviewing available information, changed address in spill report from 499 7th ave to 491 7th Ave. discussed with DEC Austin. based on available information, Austin asked for monitoring and sampling from existing wells in both towers and soil and groundwater investigation in alley at building 485. he also asked to find out location of pipe which was connecting two tanks in past. alternate addresses for building 485: 481-489 7th Ave, 155-163 West 36th Street. no spill reports found at building 485. PBS for building 485: 2-606511. as per the PBS record, building 485 has one 10,000 gal #6 oil AST on legs. tank was installed in Oct. 1981. 3:32 PM:- left message for Robert Kelly, super of building 485. Robert Kelly **super of building 485**PH. (917) 295-2958 Gedula 26, LLC. and 485 Shur LLC. **owners of building 485**c/o Eretz Group **management company**485 7th Avenue, Suite 717 New York, NY Attn.: Danny Talass Ph. (212) 714-2270 (212) 971-4000 email: jrose@eretzgroup.com 12/13/10-Hiralkumar Patel. 11:55 AM:- visited site. met Mr. Kelly at building 485. building 485 has one 10,000 gal #6 oil AST on legs. tank is in secondary containment. tank is location along 7th ave and almost in middle of basement. tank at building 485 is away from alley between the building 485 and building 491. as per Mr. Kelly, the tank is about 28 years old and he is working in the building for about 26 years. Mr. Kelly never observed any oil leak into the building from alley side. all the lines for tank are aboveground. fill box for the tank at the building 485 is in middle of the sidewalk, close to E 36th street. 12:11 PM:- left message for Mr. Robustelli. 12/14/10-Hiralkumar Patel. 11:55 AM:- left message for Mr. Robustelli. 12:28 PM:- received message from Mr. Robustelli. 12:31 PM:- spoke with Mr. Robustelli and informed him that based on available information, the Department requires further investigation in alleyway and monitoring/sampling of wells. 12:45 PM:- left message for Mr. Talass, property manager for building 485. 12:51 PM:- spoke with Mr. Kelly, super of building 485. he mentioned that the alley between two buildings is the community alley and serves five building in total. he mentioned that the alley doesn't belong to any particular building, but a combined property. 12/17/10-Hiralkumar Patel. 9:10 AM:- visited site. met Robert Facciola. Robert showed old pipe which was connecting tanks in both tower. old connecting pipe was running aboveground along ceiling. piece of old pipe found in northern wall of the boiler room, no top of the 3,000 gal tank. during visit, Robert opened valve on pipe installed in southern wall of the boiler room and this pipe goes under the alleyway. no oil or water came out of this pipe. Robert mentioned that they open this valve every six months. sometimes they get water, but no oil observed

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MILLER"DEC SIGONA REASSIGNED TO MILLER ON 1/23/983/5/10 - Austin - Reassigned as TTF to Jake Krimgold for further investigation. - end08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo8/24/12 TJDSpill cross-referenced to PBS#.10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo.site name: West 30th Street HeliportPBS #: 2-342211. as per PBS record, the site has/had following tanks:- one (1) 8,000 gal other product AST on saddles, in-service, installed in Apr. 1997- one (1) 8,000 gal other product AST on soil, converted to non-regulated use, installed in Apr. 1997 (this could be same tank as above)10/27/14 TJDFile review - based upon above information obtained from Patel.- eleven (11) 550 gal other product USTs, closed-in-place, in Apr. 1997- five (5) 550 gal other product USTs, closed prior to Mar. 1991other spills #: 8804707, 8901091, 9504121spill # 8804707 was reported on 08/29/1988 by USCG due to petroleum patch. case closed.spill # 8901091 was reported on 05/04/1989 due to tank test failure for eight (8) 550 gal jet fuel tanks. case closed.spill # 9504121 was reported on 07/06/1995 by USCG due to 40 gal jet fuel spill result of collision between two helicopters. case closed.reviewed documents on e-docs for PBS:- 12/18/1988: tanks 9 to 16 (550 gal jet A fuel) were passed- 12/07/1991: tanks 1 to 8 (550 gal jet A fuel) were passed- 06/11/2007: N. D. Eryou sent letter to DEC Falvey. he mentioned that the eleven (11) 550 gal USTs owned by Port Authority and they were conveyed with the land lease to NYS DOT (Aviation Division). he was not present during tanks abandonment in 1997, but believed that NYSDOT was going to remove the USTs as part of the stormwater upgrades that were underway as part of the immeidate adjacent Route 9 upgrades.10/27/14 TJDFile review. Based upon summarized review discussed above - (8) 550 gallon UST's passed tightness tests (Tanks 9 to 16) prior to reported spill (1988). Remaining (8) 550 gallon UST's (Tanks 1 to 8) passed a tighness test subsequent to reported spill (1991). As per PBS inspection 1/9/07 (Falvey) all UST's have been permanently closed on site. New 8K AST's are currently in operation at this facility. A total of (3) spill reports have been reported and closed at this facility since initial TTF report. Unknown what tank # failed the tighness test, however, all UST's are reported out of service. Due to proximity of the failure to the Hudson River if a significant petroleum discharge had occurred impacts to the adjacent surface waters would have been

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" Sangesland responded to the site of a reported contaminated soil location. Owner of the site is excavating what was a parking lot in order to install footings for a new building. Upon excavation, the southwest corner of the property at 160 west 22nd St was found to have petroleum contaminated soil. After contacting DEC rep Mark Tibbe, it was determined that the property directly to the south (161 west 21st st) was a taxi company with an ongoing state PIN cleanup project. Mr. Tibbe stated that the parking lot at 160 west 22nd st did have 3 monitoring wells associated with the ongoing clean up. AKRF rep Mimi Sotiriou (212-340-9790) stated that all contaminated soil would be dug out, sorted, and shipped out with manifest for proper disposal. Since the contamination was only in the extreme southwest corner of 160 west 22nd st, directly adjacent to the property line of the taxi company and within 15 feet of the remediation equipment, it was clear where the source of the contamination was from. 11/1/2000 AKRF sent a letter to DEC stating that 228.75 tons of contaminated soil was removed from the site. AKRF stated that "Petroleum contaminated soil was removed from along the southwest border of the property until no petroleum-like odors were

DEC Memo: 10/10/95: This is additional information about material spilled from the translation of the old spill file: GASOLINE ODOR.see also 8701176, 8701597 (SP97155), 9400302, 9403442, 0006798. (also addresses 160 W 22nd St, 166 W 22nd St)3/18/04 Received phonecall from Kevin Kleaka, Impact Environmental. Excavation is planned for next Tuesday, 3/23. RAP was previously approved by M. Tibbe. DEC had requested 5day notification. Requested project manager return phonecall (631-269-8800 or cell 516-805-8892) when reassigned.(KMF)3/22/04Transferred from Tibbe to Foley. Rommel3/23/04 Spoke to K. Kleaka, Impact Env. Excavation to begin tomorrow. Tanks have been out since approx 1992-1994.3/31/05 Spoke to Scott Underhill, URS (518-378-8766). He was hired by Bank of NY to conduct a third party peer review. The bank is putting up funding for the development of the property.4/5/05 Received update from K. Kleaka, Impact Env. In 3/04, they excavated 340tons of gasoline impacted soil. On 2/14/05, endpoint sampling from 8 locations was conducted and analyzed by 8021. On 3/15/05, additional endpoints were collected from 3 locations and analyzed by 8021. Additional excavation to mitigate residual soil contamination on the northwestern portion of the site will be conducted in 4/05. Construction of building is now to include a second sub-level which will require removing 3-5 feet of bedrock (bedrock is at 17'bgs). GW is at 11-14'bgs. 4/13/05 Spoke to K. Kleaka, Impact Env. They have excavated down to bedrock across most of the site. Not much water is accumulating and have not had to dewater. Will schedule site visit and discuss possible modifications to the RAP.5/17/05 Site visit conducted with owner, Impact, URS and Bank of America. Currently chipping away at bedrock which is about

17'bgs. All soil removed. Almost no groundwater infiltration which is surprising since perched GW was detected at 11-14'bgs. Requested a water sample from the puddle in the NW corner of property. They are contemplating an ORC application. I recommended that if the GW was clean from the bedrock surface, that they not go ahead with ORC. If it is contaminated, they will do ORC pour and will need to monitor effectiveness. Well locations possible along W 21st. Inspected backyard of 166 W 22nd St which is about 8'bgs. Access for equipment, especially for bedrock drilling, would be very difficult but may be able to obtain perched gw samples. 6/6/05 Received results for three grab samples taken from the standing water on site, collected on 5/18/05. BTEX ranged from ND to 2005ppb and MTBE from 128ppb to 1080ppb. Owner requested that the ORC application be eliminated from the RAP. 6/8/05 Email to K. Kleaka and K. Lalezarian. Required that the ORC application be completed along with effectiveness monitoring. Impact to submit revised RAP.9/9/05 Received revised RAP via email. During the period from 3/24/05 to 5/20/05, 3983 tons of petroleum impacted soil was excavated. It is expected that removal of all source materials will reduce the concentrations found on the perched watertable. However, to address the residual impacts, Impact Env. proposed ORC for bio-enhancement. It will be spread as a dry mixture and the natural formation will provide the water to activate the release. A 6mil vapor barrier and passive vent system will be installed. A MW will be installed along W 21st St. GW samples will be collected before and after the application, analyzed for VOCs and taking field measurements for DTW, pH and DO. Due to physical constraints, no wells are to be installed at 166 W 22nd St.9/9/05 Approved revised RAP. As discussed with K. Kleaka, the ORC will be applied in a slurry in dry areas and directly mixed with accumulated water in the wet areas.5/18/06 K. Kleaka, Impact Env, indicates a closure report will be submitted next week.5/25/06 Reviewed site closure report. The remediation activities completed on the site included the removal and disposal of 3,982.92 tons of petroleum impacted soil and construction fill, confirmatory endpoint soil sampling, certified laboratory analysis, bio-remediation of perched groundwater, and the installation of a vapor barrier in conjunction with a passive subslab ventilation system. After detecting contaminants in soil, all soils were removed to the bedrock surface. 450lbs of ORC was introduced following the detection of VOCs on the perched groundwater. Concentrations of total VOCs in perched water ranged from 165ppb to 3556ppb. MW-1 was installed in order to monitor the effectiveness of the bio-remediation. However, the well did not produce any water and therefore could not be sampled. It appears that the actions taken are protective of human health and the environment. PARKING LOT HAS UNDERGR. STOR. TANKS AT 155 WEST 21ST - POSS. COMING FROM THERE WOULD LIKE A CALL A.S.A.P.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was

"TIPPLE"9/20/2004 Sangesland spoke to John Leddy to find out if this case could be closed out. Leddy said he was subcontracted to do the testing. He has NOT done any repairs and has NOT been hired to retest the tanks again.Sangesland called "Angel"(building super???) and got no answer07/14/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Contacted to John Leddy he said he will find the data and he will send it to me. -QA07/19/06: Contacted Mr. Jerry William of Controlled Combustion Company. He said there is not any waste Manifest record and no soil sampling. They removed older tank and they have put in a new tank. He will fax me the supporting documents to close the spill. -QA07/20/06: Reviewed letter from Mr. Jerry William (General Operational Manager), Controlled Combustion Co. Inc. They removed the old oil tank and they installed a brand new 10,000 gallon oil tank. He mentioned in his letter that there were only very small oil stains on the floor, which were cleaned up. The letter also included a copy of the tank test failure report, and documents indicating that the old tank had been removed and replaced with a new tank. Based on the information provided by Mr. Jerry William, this spill is closed. -QA

Remarks: TEST METHOD WAS EZ THREE LOCATOR PLUS. TNAK IS ON LEGS, 95% VISABLE. THE DELAY IN REPORTING WAS DUE TO CONFUSSION DUE TO WHO WAS GOING TO REPORT IT.

DEC Memo: 12/14/05: This spill transferred from J.Kolleeny to S.Kraszewski.9/22/06: Spill transferred from Kraszewski to Kann.1/19/10: J.Kann - revised work plan received 11/17/09. WP approved 1/19/10.9/23/10: J.kann - Quarterly Report recieved 9/01/10.5/11/12: J.Kann - quarterly report recieved on 5/9/12.9/6/12: J.kann - quarterly report received on 8/21/12.1/16/13 : J.kann - 10/24/12 QR rcvd on 1/16/13.5/21/14: J.Kann - email sent to NYCHA today stating:The Department understands that a recovery system is operating, that monthly VEFR is being performed and that quarterly monitoring is currently being done at the following five sites: Amsterdam HousesElliott HousesManhattanville HousesMelrose HousesBaruch Houses Since wells at these five sites have consistently (based on quarterly reports received over the past year) had no product, a sheen or <0.08 inch of product in their wells, the Department would like NYCHA to temporarily cease operation of the systems and VEFR at these sites. For the next 4 months, the wells must be monitored to determine if any significant recharge of product occurs. Accurate readings of product thickness must be made, which may require using the gauging method used at South Jamaica Houses on May 19, 2014. In addition, during this 4 month time period, no absorbent socks should be placed in the wells. Data from this monitoring, along with recommendations, must be included in the 2014 3rd quarter monitoring report for these sites, which is due to the Department by October 1, 2014. In the event that a significant recharge is noticed in any of the wells during these 4 months, the Department must be contacted immediately (within 72 hours of gauging).

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"TYREE REMOVED A 550-GALLON STEEL SINGLE-WALLED EMERGENCY GENERATOR DIESEL TANK. SOIL HAD PETROLEUM ODOR AND SHEEN. CONTAMINATED SOIL WAS OVER-EXCAVATED AND STOCKPILED; POST-EXCAVATION SAMPLES WERE TAKEN. J. KOLLEENY OF DEC SPOKE WITH LAURIE JODICE OF TYREE ON 4/12/01; SHE WILL FORWARD COPY OF CLOSURE REPORT WHEN AVAILABLE. ACCORDING TO LJ, MOST CONTAMINATION WAS REMOVED AND THE SOIL LEFT IN THE PIT WAS RELATIVELY CLEAN. THE TANK LOCATION WAS VERY CLOSE TO WHERE O'BRIEN-KREITZBERG IS INSTALLING AN SVE SYSTEM TO REMEDIATE GASOLINE CONTAMINATION. KOLLEENY WILL FOLLOW UP TO ENSURE THAT RESIDUAL CONTAMINATION FROM THE EMERG. GEN. TANK (IF ANY) IS ADDRESSED, EITHER BY THE SVE SYSTEM OR IN SOME OTHER WAY.This spill is referred to spill # 9512583 and is closed today by II (01/10/05).
Remarks: WHEN TANK WAS REMOVED THERE WAS AN ODOR OF PETROLEUM. [SEE DEC NOTES.]

occurred in March '07 when gasoline was found in tank sump and nearby monitoring well. According to URS's system performance reports, Franklin Co. determined that tank's fill line was damaged, and they installed direct fill to tank to bypass damaged line. Do you know if Franklin plugged up old fill port when they installed direct fill? It appears that fuel deliveries continue to be made to old fill line, and product keeps showing up in tank sump and monitoring wells. On May 23rd, spill 0702185 was reported by NYPD because sump was filled with gasoline and Veeder Root alarm was going off. Today, another spill was called in (0705553) because of product in sump. Please take necessary steps to have old fill port blocked so it cannot be used anymore (or repaired so it won't leak) as soon as possible, and please also check out entire tank system to make certain it is damaged fill line that's problem, and that there are no other leaks in system. Please get back to me on this and let me know what actions have been taken to address this situation." Afterwards, spoke again with Ryan Piper, who suggested tank be taken out of service and emptied until problem is solved. Sent email to Afsar Samani of DDC, cc's to Jane Staten & Harvey Roberts of URS: "In light of ongoing problems with gasoline UST at Midtown South Precinct, I strongly suggest that tank be taken out of service and emptied until problem(s) with tank and piping has/have been addressed. If this is not practical because police have no alternative location to fuel their vehicles, then please take whatever steps are necessary to immediately rectify problem(s) with tank system. NYCDDC is conducting remediation at this site using SVE and groundwater extraction & treatment systems, and these ongoing spills of fresh gasoline to subsurface will set back remedial efforts for months, or more likely, years, so it is in DDC's interest to resolve this situation promptly. In addition, these releases are a violation of Environmental Conservation Law, as you are aware, and if they continue to occur, our spill responders may be inclined to call Environmental Conservation Officers to site to issue summons." On 8/16/07, received email from Afsar Samani of DDC: "Harvey informed me that vac-truck is scheduled to remove product from sump today. Also, NYPD subcontractor is going to be scheduled to repair fill line. URS is looking into this and will make all necessary action to make sure tank and fill port is tight." Then, received email from Jane Staten of URS: "I just spoke with Lt. Pete Polanco for an update on problems with gasoline tank at Midtown South Precinct. According to Lt. Polanco, NYPD tank contractor inspected fuel fill line this morning and found no problems with integrity of line. Therefore, Lt. Polanco believes that product in tank sump was caused by fuel delivery vendor. NYPD are expecting fuel delivery vendor at site this afternoon to discuss problem and also to remove gasoline currently in sump. I will keep you posted." I then sent email to Afsar Samani, with cc's to Jane Staten & Harvey Roberts of URS, Jerry Aliberti of DDC and Lt. Peter Polanco of NYPD: "Thank you for your response. Please be advised that no fuel deliveries should be made to gasoline tank at Midtown South until tank system has been tested to insure integrity of all elements of system. Documentation of tightness test results, and of any repairs made to fill line since problem was discovered in March 2007, must be submitted to NYSDEC before fuel deliveries can resume. This situation is high priority and NYPD should arrange for tightness testing immediately." Then, received phone call from Lt. Polanco of NYPD, who said repairs to damaged fill line were done in June and fill line was tightness tested and passed, and he believes current

S105054624

problem is due to fuel delivery vendor not hooking up vapor recovery line (truck is parked in street long distance from fill port, so there's long length of delivery hose). He said product will be removed from sump and fill line will be tested again. I asked him to submit documentation of repair work and tightness testing, and sent him email with my address. Then, I was cc'd on email from Afsar Samani of DDC to Lt. Polanco of NYPD: "We were informed by following correspondence from NYSDEC that gasoline tank over at Midtown South Police Precinct should not receive any more deliveries until a tightness test has been scheduled. Please let DDC know when you can arrange for your subcontractor to perform a tightness test on this tank. This is very crucial to remedial effort that URS is performing to clean up site on behalf of DDC." - J. Kolleeny08/21/07: Received fax on 8/20/07 from Lt. Polanco of NYPD fuel control unit, with letter from Energy Tank & Environmental Services dated 7/16/07 describing repairs to and pressure testing of fill line to gasoline UST (in eDocs). Sent same-day email response to Lt. Polanco, cc's to Afsar Samani & Jerry Aliberti (DDC), Jane Staten & Harvey Roberts (URS): "Thank you for faxed description of repair work to fill line of gasoline UST at Midtown South and diagram of site, tank and fill port, provided by Energy Tank & Environmental Services, Inc. However, these items do not completely satisfy my request for documentation of tank repairs and testing of fill line, and they raise additional questions. Page that describes repairs and subsequent pressure testing of line is dated 7/16/07. Is that date when repairs were done? I would like to see dated invoice for repair work in addition to this description. Description states that problem was with primary fill line, and that secondary line was intact, which allowed product to go into containment sump and not into ground. However, in March when this problem was first discovered, URS field personnel reported 5 feet of fresh gasoline in groundwater extraction well that had never had gasoline in it before, so somehow product did get into ground. If repairs were done on 7/16/07, why was gasoline again reported in containment sump on top of tank on August 15th (spill number 0705553)? You mentioned that this was caused by delivery person not hooking up vapor recovery line, yet our Petroleum Bulk Storage staff say this would not result in product appearing in sump. I would greatly appreciate it if you could provide additional documentation of repair work, and if NYPD would schedule a tightness test of all lines going into and out of tank, as well as a hydrostatic test of tank's containment sump. I would like to be informed in advance when these tests have been scheduled, so that I can attend." - J. Kolleeny 09/14/07: Visited site 9/10/07 to observe hydrostatic test of tank sump and tightness test of fill line. Mike Suppe of Fenley & Nichol on hand, said sump held water, more or less (slight drip along electric conduit extending from this sump to next sump at end of tank), for over 2 hours. He said no way to test fill line (it's about 2-3 feet long from "remote" fill port) without physically removing it, but he will test entire tank system. In discussions of how product could turn up in sump, I mentioned that Lt. Polanco said it had to do with delivery person not hooking up vapor recovery line. Mike wasn't clear on how that would cause product to appear in sump. I called Lt. Polanco, who said by not hooking up vapor recovery during delivery, excessive back pressure was created, so when delivery hose was disconnected, product would back up and spill into overflow bucket, then drain to sump. Mike Suppe said this isn't possible, since any fuel spilled into spill

POLICE PRECINCT (Continued)

S105054624

bucket would drain back into fill line, then into tank (not sump). Mike suggested that temporary fill, which was used while remote fill line was awaiting repair, had not been properly capped once NYPD switched back to using remote fill, and poor threading on top of direct fill extension cylinder and improperly screwed-on cap for this extension, may have resulted in product spilling out capped off temporary fill, again related to back pressure from not hooking up vapor recovery (see photos in eDocs image folder). NYPD now has on-site a long hose to be used for vapor recovery, and reportedly there have not been any more problems with product appearing in sump after deliveries. Spoke with Mike Suppe on 9/11/07, who said tank system passed test. I discussed whole situation with Jane Staten of URS, who forwarded to me email from Harvey Roberts of URS (in eDocs) indicating temporary direct fill was installed by NYPD, not Franklin Co. as stated in URS's system performance reports for site. While this may explain why product was appearing in sump, none of this adequately explains how product escaped into ground and turned up in groundwater extraction wells and monitoring wells (for site cleanup under spill no. 9512583). Mike Suppe indicated if damaged fill line was unknown for a long time, sump could've filled up with gas during deliveries and overtopped inner rim of sump, and from there it could seep into ground. URS will continue to gauge nearby wells for product levels, and see if they continue to decrease. Harvey Roberts email also calls into question when exactly NYPD had repairs done to fill line. I contact Lt. Polanco again and asked for more detailed documentation of repair work, indicating date(s) and nature of work done. He said he would work on getting me that info. - J. Kolleeny09/17/07: Received fax from Lt. Polanco, a revised version of earlier fax with statement by Energy Tank & Environmental Services regarding repair work on fuel fill line. Statement is still dated 7/16/07; it now states that they uncovered line on 7/5/07, reconnected and tested line on 7/6/07, reporting that line held pressure during backfilling, they then witnessed a fuel delivery on 7/9/07 with no leaks observed, so they re-surfaced area. - J. Kolleeny01/04/08: On 12/19/07, sent email to Jane Staten of URS: "I recently asked you to ask your field personnel to check if gasoline is still showing up in tank-top sump after fuel deliveries at this site. Do you know if they've checked on this?" On 12/26/07, received email reply from Jane: "Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of gasoline." Based on no new reports of gasoline appearing in tank top sump, it appears problem(s) that caused this and related spills has (have) been addressed; OK to close spill. - J. Kolleeny

DEC Memo: 05/23/07-Vought-Duty desk officer. Vought spoke to Bob Laga(Fax 718-359-7865) and SVE and three groundwater wells onsite with SpillBusters installed and Franklin geologist performing weekly inspections of well and system. Franklin was contacted by NYPD that sump of UST was full of product and alarm for Veeder Root was going off. Franklin performed site visit and approximately 20-50 gallons of gasoline present in sump. Vacuum truck estimated time of arrival in two hours to recover gasoline. As per Franklin field geologist level of product in sump has remained constant (may indicate no loss to subsurface). No product in groundwater monitoring well immediately adjacent to tank with product in sump. Vought discussed site with DEC Krimgold and tightness test letter prepared by Vought and submitted to DEC Falvey for signature.Letter sent with one month due date to owner on PBS and cc to Franklin:NYCPDBuilding Maintenance Section59-06 Brooklyn Queens ExpresswayQueens, NY 1137705/29/07-Vought-See also new closed spill #0702402 for spill caused by delivery to broken fill despite instructions by Franklin to not deliver until fill was repaired. Vought called Franklin and spoke to Bill. Franklin reiterated requirement for no more deliveries. Klein still seeking bids for work.07/08/08: This spill case transferred from J. Vought to J. Contact Phone: (718) 726-5200
 DEC Memo: This site is already an active longterm remediation site - Spill #9512583As part of this remediation effort, there are existing monitoring wells on the site that are tested periodically. Today, the geologist found 4 ft of gasoline product floating on the water table in a well that previously had nothing. The manway was checked and found to be full of gasoline as well. This was clearly an overfill from a recent delivery. Franklin and/or URS is working the long term cleanup of the site and has arranged for a vac truck to clear out whatever is possible right now. On a long term basis, the existing remediation system will be used to skim the free product from the water table and remove it from the site. This problem will now be addressed by the contractor through the existing long term spill number on file.

Hertz, Extell Group. 212.712.0633. He knows nothing and will have previous owner get info. Galden Frankel performed Phase I and II on property. Left message at GF requesting call back.1/18/06- DEC Piper spoke w/ property manager, Rob Scharf 212.712.6111. Stewart Dean Co. -212.695.3180. He will fax info. DEC Piper to review and inform Rob of additional work if warranted.2/6/06- DEC Piper spoke w/ Rob S. I explained to him that he was still in violation of PBS code. I have received analytical suggesting that there was no release at the site. The tank test results indicated a dry ullage leak. The tank is empty and still needs to be removed or closed in place. As per Rob, he will be sending in the new application this week. I instructed him to include a line item that that due to the razing of the building, that they will remove the tank when the activities have been completed. Afterwards, he will need to update the PBS records to insicate that the tank has been removed. Upon review of a limited phase II investigation of the site performed by Galden Frankel, of the six soil samples taken from various locations throughout the site, no elevated constituents were detected. However, three GW samples were collected. The results indicate 1,040 ppb of MTBE and slightly elevated levels of PERC and its byproducts. 5/15/06- DEC Piper. Referred to Remediation.5/31/06 - reviewed file: MTBE was detected without other VOCs usually present in a petroleum release. The MTBE is likely the leading edge of an off-site impact. Low level of CVOCs are also detected. These CVOCs are only detected in GW with no soil contamination or other sources on site. Spill is closed, no NFA issued since no remediation was ever conducted at site. - KST they are going to abandoned the tank

DEC Memo:

Sangesland spoke to a "Co-manager" of the building trying to get more information on the spill and repairs. She didn't know anything and she said she would "Try" to get Richard Werner to call back "soon". - 09/24/12.10/02/12-Hiralkumar Patel.1:24 PM:- spoke with Mr. Werner. he mentioned that about 5 gal #6 oil spilled onto boiler room concrete floor from a faulty transfer pump. the pump is located on a 1-2" high concrete pad on boiler room floor. leak was stopped and cleanup completed. no soil/drain impacted.case closed.

Remarks: Pump for heating unit leaking into catch pan which sits on concrete floor in the basement. Cleanup is in progress. Repairs being scheduled.

HW Code: 231073
Record Add: 09/22/2010
Record Upd: 01/09/2012
Updated By: RXSCHICK

Site Description: Location: The site is located at 27-35 West 24th Street in the Borough of New York, New York. It is located on the northern side of West 24th Street. The site is designated as Block 826, Lot 19. Site Features: The site is a rectangular shaped parcel of land which measures approximately 9,000 square feet and is improved with one 11-story building with a basement. Current Zoning/ Uses: The building on site is used for office space and a restaurant/ bar on the first floor and part of the basement. The site has a zoning code of M1-6, which allows industrial and manufacturing. The current use of the site complies with the zoning code. Historic Uses: A former dry cleaning facility occupied restaurant/ bar space until approximately 1990. The former dry cleaning operations may have contributed to the known contamination found in soil and soil vapor. Site Geology and Hydrogeology: The subsurface lithology was homogenous throughout the site. The subsurface soil was noted to consist of urban fill material and brown coarse grain sand. No site-specific hydrogeological information is available concerning groundwater depth and flow direction. However, based upon data for sites in the surrounding area groundwater is anticipated to be encountered at 30 feet below the surface and is likely to flow in a westerly direction.

Env Problem: Nature and Extent of Contamination: Chlorinated volatile organic compounds (VOCs) such as tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE) were detected in soil samples in two separate sampling events. TCE and PCE were detected in both sub-slab and indoor air samples during vapor intrusion sampling. No groundwater data is available. The presence of chlorinated VOCs in soil and soil vapor is most likely due to former operation of the dry cleaner, which commonly used chlorinated solvents for dry cleaning purposes. Previous investigations included a Phase I Environmental Assessment, a Phase II Subsurface Investigation, a Supplemental Phase II Investigation- Vapor Intrusion Sampling, as well as a Supplemental Phase II Investigation and Conceptual Design. Soil-A total of nine borings (SP-1 through SP-9) in a radial pattern extending from the sump were installed. Chlorinated VOCs were detected in soil samples collected from 0 to 4 feet. The maximum concentrations were as follows: PCE 5,990 ppm; TCE 94 ppm; and DCE 69 ppm. Soil Vapor-A vapor intrusion investigation was performed and included one indoor air quality sample (IA-01) and four sub-slab samples (SS-01 through SS-04) in the existing building. One ambient background sample (OA-01) was also collected to consider background influence. The sub-slab concentrations were as follows: TCE 760 ug/m³ and PCE 6600 ug/m³. The NYSDOH guidance recommends mitigation based on these elevated detections. Significant Threat: NYSDEC and NYSDOH have not made a decision yet as to whether this site poses a significant threat to environment and human health.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

**2/26/13 TJD File review. Tank failed tightness test on 9/8/12 - initially reported as a wet leak. Tank was uncovered and corrosion was identified at tank top fittings and associated piping. Repairs were performed and a tank only (isolation test) was performed on 10/2/12 which passed. A complete system tightness test was then performed on 10/11/12, also with passing results. Contractor has provided the following statement in their closure report, "Throughout excavation operations, close inspections indicated neither visual nor olfactory evidence of petroleum contamination, confirming that there was no loss of product into the subsurface." all required closure documentation has been submitted and uploaded to EDOCS. No further action is required at this time.

DEC Memo: Tank Test Failure - small spill - 4 gal out of tank wrap. Tank is being drained now, cleanup will be done today (5/28)8/9/10 - Sangesland spoke to Rene at Eastmond. He said the tank was not wrapped. It was in a vault structure with a cement lid. Tank was corroded on the bottom and leaked to the vault floor. Vault was tight with no cracks. Oil was absorbed into about 1 yard of sand in vault floor. Tank was cut out and removed. Oil sand was removed. Vault was cleaned. No leak beyond the vault structure.
Remarks: 3000 gal wrapped in concrete - approx 600 remains in the tank - spill of approx 4 gal outside tank. cleanup in progress

DEC Memo: 09/25/95: PIN-4169 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES.10/6/03
See also PIN 4169, spill #s 8605682, 8606807, 9410208, 9410209.1/8/04
Reassigned from Tomasello to K Foley.06/20/06: Re-assigned from Foley
to Yau. (Yau)06/22/06: Prepared and sent an old spill letter to
property owner through certified mail. A site investigation report
(SIR) is expected to be due on 07/22/06. (Yau)06/27/06: Owner called
to inquire about the spill. Stated that he brought the property
recently (around 2002) and had no idea where is the spill was. Told
him that DEC will look into it and call him back with the exact
location of the spill. (Yau)08/02/06: Owner called to request an
update to the site. Told him that a review is underway. Found that
DEC had a PIN job for this site. Unsure whether the cleanup is
complete. If the cleanup is incomplete, the owner might have to re-do
the cleanup. Will call owner back as soon as review is completed.
(Yau)10/16/06 Reassign from Yau to Chanda
(Chanda)12/12/06-Vought-Spill reassigned from DEC Chanda to DEC
Vought.03/20/07-Vought-File review by Vought:See also open spill
#0603967 at same location. Videotape-unknown date (circa 19884)-tape
showing well being bailed with free product thickness of
1".Registered CSL Letter sent by DEC Yau to Tenth Gas Inc (address as
per Property Shark).FOIL request from Brinkerhoff-8/18/06.Vought
called AG Bechard for status of PIN case. PIN case assigned to AG
John Nyhoff. Vought called Nyhoff and left message to return
call.3/20/07-Vought-See also closed spill numbers: 8605682, 9410208,
9410209 and 8302630(Open pin #). Vought spoke to DEC Krimgold who is
preparing Consent Order for PBS violations and requested to add
remedial requirements. Conference call with DEC Urda, AG Nyoff and AG
Riggi showed that approximately 354K still owed to AG for past
cleanup costs. Due to same ownership (Citigas) prior costs may be
included in Consent Order. Vought submitted CAP for below
requirements to DEC Urda. Riggi and Nyhoff also approved submission
of Final ISR and closure of spill as any new funds spent by the DEC
need a new PIN number since settlement already reached with old
responsible party. Vought called Snyder, summarized consent order and
left message to return call. 03/21/07-Vought-Left message for AG
Nyhoff to call Vought with status of PIN. Vought and DEC Urda spoke
with AG Nyoff and as per Nyoff default judgement was made against

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"1/21/2003 - Spill was found by managing office by 13:00. USA Tanks Inc was hired for clean up and crew arrived on site by 15:00. Spill Hotline was notified at 18:24. DLE was notified immediately. Zhao and ECO Russell Ritzel were responded to scene.- Evidence from the room wall can be found that #4 oil Spill floating in the boiler room was about 1.5" high and in the elevator pit about 5-8" high.- About 200 gallons free product was collected from boiler room and about 1.5" high free product still remaining in the elevator pit for collecting at the time of DEC arrival.- Tank had a tightness test last Friday (3 days ago) and it was failed. DEC was notified (Spill No. 0210483).- By Friday 1/17/03, product remained in tank was 2429 gallons during the test. After accident occur, there was a 950 gal oil remaining in the tank for a stable condition. In addition that about 100 gal consume per day. From there it was found that it's about 1200 gal oil release from the event.-Manifests for waste disposal has been requested. Further investigation is needed.2/7/2003 - Zhao called and spoke with Property manager Harlan Berger this morning since the requested documents has not been received. Zhao was informed that Langan Engineering and Environmental Services has been hired as consultant for this case. At 13:30pm, Zhao received work plan from Langan. At 2:00pm, Zhao explained the spill event and possible release to the environment and water systems to the consulting firm John Rhyner (212)479-5423 who work with joel Landes (212)479-5404, the manager, and has requested to perform a fully investigation including daily oil consumption(frequecy oil deliver receipts for December and January is requested by DEC), manifests for the initial clean up and follow ups, and conduct a floor condition inspection and soil boirings other than the work plan stated.5/12/2003 - Tank was removed last week. Landes will take GW samples today from both sumps.5/15/2003 - From Langen's investigation, tank room has been cleanned nicely, elevator's pump pump out water from the sump once per day. About one feet water accumulated in elevator. No sheen there. Inspection has been set up this friday moring. 5/27/2003 - Zhao and ECO Russell inspected this morning. Clean up is acceptable. One boring is required by DEC with soil samples and water sample.11/12/2003 - Final report received and reviewed. No further action is required except that PBS application for sub Mod. must be submitted before closing the spill.12/31/2003 - PBS sub. mod. application received.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Number of Days to Update: 32	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2014
Date Data Arrived at EDR: 12/29/2014
Date Made Active in Reports: 01/29/2015
Number of Days to Update: 31

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/18/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/19/2014	Telephone: 703-603-0695
Date Made Active in Reports: 10/20/2014	Last EDR Contact: 02/26/2015
Number of Days to Update: 31	Next Scheduled EDR Contact: 06/15/2015
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 09/18/2014	Source: Environmental Protection Agency

	Data Release Frequency: Semi-Annually

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 03/19/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 03/19/2015	Telephone: 518-402-9549
Date Made Active in Reports: 03/26/2015	Last EDR Contact: 03/19/2015
Number of Days to Update: 7	Next Scheduled EDR Contact: 06/01/2015
	Data Release Frequency: Varies

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

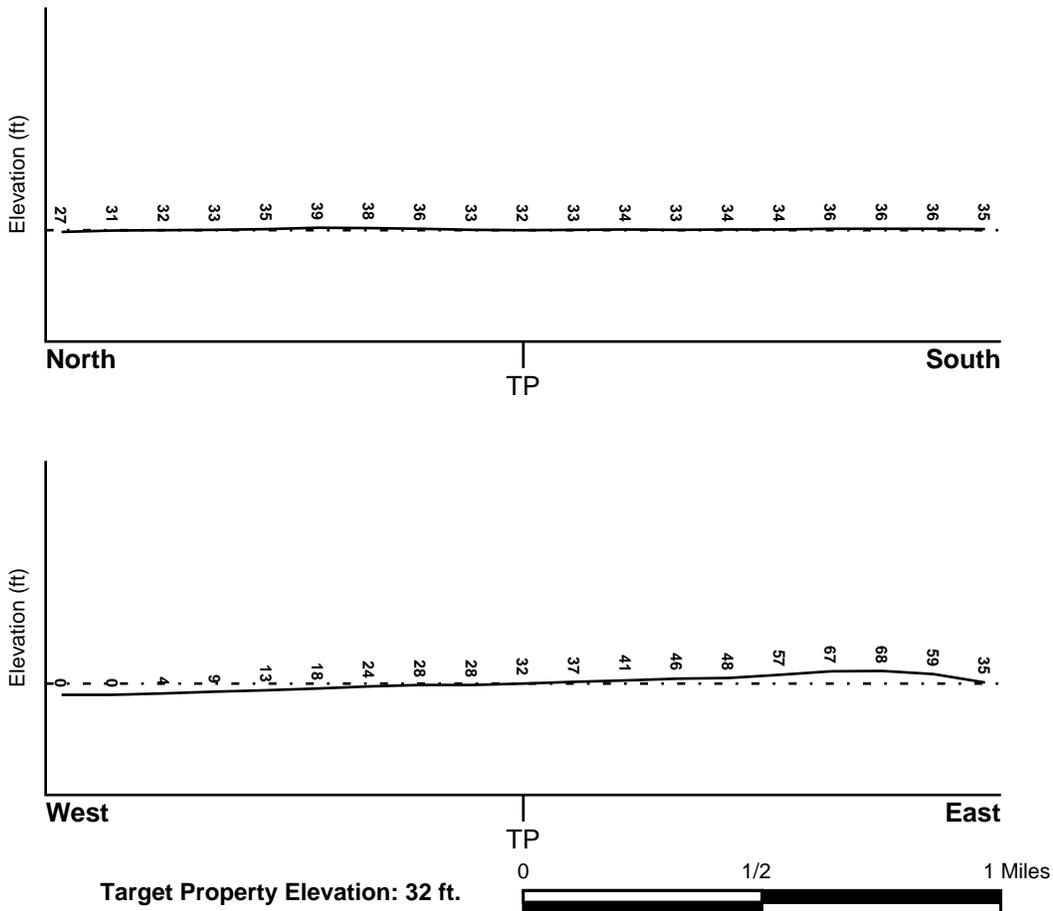

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WNW
Site Name:	MANHATTAN GENERAL MAIL FACILITY
Site EPA ID Number:	NY6180000352
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	not available. Saturated layers impacted by salt water intrusion are present in the overburden. It is generally inferred that the depth to the uppermost 'aquifer' is greater than 70 feet at the surface of the bedrock/sediment interface.
Hydraulic Connection:	Detailed hydraulic connection information is not available. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit at the site. The surface elevation of bedrock decreases to the southwest of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Lower Ordovician and Cambrian carbonate rocks
Code: OC (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Michael Gilsean
Assistant Commissioner
Environmental Compliance

59-17 Junction Boulevard
Flushing, NY 11373

Dear Ms. Moriarty:

In response to your Freedom of Information Law information request of 5/19/2015, the Division of Air/Noise Enforcement and Policy has searched its files for records pertaining to 211 West 29 Street and:

Has located and enclosed the requested documents.

A total of _____ pages of materials have been located, for which we are required to charge a fee of \$.25 per page. Please send your check, in the amount of \$_____, to:

Records Access Officer
NYC Department of Environmental Protection
59-17 Junction Boulevard, 19th Floor
Flushing, NY 11373

The check should be made payable to **The City of New York** and include the Log # noted below.

Upon receipt of the check, copies of these records will be sent to you.

Does not have the requested documents.

Sincerely,

Geraldine Kelpin
Director, Air/Noise Enforcement &
Policy

Log # 135410

From: dec.sm.r2foil.foil
To: [Julie Moriarity](mailto:jmoriarity@rouxinc.com)
Subject: R2-15-1708-no records
Date: Tuesday, June 02, 2015 11:15:38 AM

R2-15-1708	Julie Moriarity jmoriarity@rouxinc.com	211 West 29th Street, New York, NY: N1, N2
------------	---	---

Dear Ms. /Mr.:

NYSDEC/Region 2 has reviewed your request for the above referenced records under New York State's Freedom of Information Law (FOIL). Please note that most of our records are filed by number under the names of individuals or corporations. We have no way of locating or retrieving records if they are filed under names or addresses other than those you have provided.

If no records have been located, this does not necessarily mean, and should not be interpreted to mean that there have never been any violations, complaints, claims, investigations or inquiries involving those names or addresses. We cannot make any representations as to whether there are or have been any such violations, complaints, Claims, investigations or inquiries.

after a diligent search of Region 2 available files, no records could be located for the names and/or addresses you provided.

Please email your future FOILs to Region directly to the following email address: r2foil.foil@dec.ny.gov

Thank you for your request. If additional information is needed, please call Gloria Silva/FOIL Secretary at (718) 482-4507, or email me at: r2foil.foil@dec.ny.gov

Sincerely yours,
Fawzy I. Abdelsadek, Ph.D., P.E.
Regional Enforcement Coordinator

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

KB EQUITIES LLC
C/O ROBERT KANTOR, 55 FIFTH AVENUE, 15TH
FLOOR
NEW YORK, NY 10003

BARGAIN AND SALE DEED

as of

THIS INDENTURE, made November 14, 2005, MHK Group, LLC, having an address at c/o Kossoff & Unger, 217 Broadway, Suite 401, New York NY 10007, having an undivided 32.24% interest in each of the properties described and being transferred herein; P. Xenopoulos Realty, LLC, having an address at 1776 Broadway, New York NY 10019, having an undivided 6.66% interest in each of the properties described and being transferred herein; and KB Equities LLC, having an address at c/o Robert Kantor, 55 Fifth Avenue, New York NY 10003, having an undivided 11.10% interest in each of the properties described and being transferred herein, collectively the "Grantors", and

MBK GROUP, LLC, having an address at c/o Kossoff & Unger, 217 Broadway, New York, New York 10007 ("Grantee").

WITNESSETH, that Grantors, in consideration of Ten Dollars and other valuable consideration, the receipt and sufficiency of which hereby are acknowledged, does hereby grant and release unto Grantee and the heirs, executors, administrators, legal representatives, successors and assigns of Grantee forever,

ALL those certain plots, pieces or parcels of land, with the buildings and improvements thereon erected, situate, lying and being in The City, County and State of New York located at 161 Eighth Avenue, 453 West 36th Street, 49-51 Prince Street, 9 Eldridge Street, 19 Eldridge Street, 336 West 17th Street, 434 West 38th Street, 407 Eighth Avenue, 300 Eighth Avenue, 225-227 West 28th Street, 311 West 21st Street and 211 West 21st Street, being more particularly described in Schedule A attached hereto and made a part hereof,

TOGETHER with all right, title and interest, if any, of Grantor in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of Grantor in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto Grantee and the heirs, executors, administrators, legal representatives, successors and assigns of Grantee forever.

Said premises are not located in an agricultural district.

Grantors covenants that Grantors have not done or suffered anything whereby said premises have been encumbered in any way whatever, except as set forth herein.

Grantors, in compliance with Section 13 of the Lien Law, covenant that Grantors will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement before using any part of the total of the same for any other purpose.

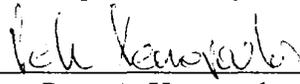

IN WITNESS WHEREOF Grantors have duly executed this deed on the date first above written.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Phase I Environmental Site Assessment
211 West 29th Street, Manhattan, New York

APPENDIX J

**User Provided Information and
Previous Environmental Investigations**

ASTM E 1527-13 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E 1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: 211 West 29th Street

Person Interviewed/Title: Andrew Hirsch, G.C. - Dir. Operations Date: 5/19/2015

If known, when was the property initially developed? N/A

If different, when were the current building(s) on the property constructed? N/A

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes No If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes No If you answer yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ___ No If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes ___ No ___ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Not Applicable

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes No ___

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes ___ No

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes ___ No

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes ___ No

If you answered yes to any of the questions above, please include an explanation in the space provided below:

Parking lot

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ___ No If you answer yes, please include an explanation in the space provided below:

Please provide the following property contact information:

Property Owner: Hardwell Aquisition LLC Phone Number: 212-554-1417
Key Site Personnel: Jeff Cohen, MGR Phone Number: 646-201-1425
Past Owner: _____ Phone Number: _____

1.0 INTRODUCTION

This site-specific Health and Safety Plan (HASP) has been prepared in accordance with 29 CFR 1910.120 Occupational Safety and Health Act (OSHA) Hazardous Waste Operations and Roux Associates, Inc. (Roux Associates) Standard Operating Procedures (SOPs). It addresses all the activities described below that are associated with the property located at 211 West 29th Street in the City and State of New York (the Site, Figure 1) and will be implemented by the designated Site Health and Safety Officer (SHSO) during Site work. When activities are to be conducted which are not specifically addressed by this HASP, appropriate SOPs and Job Safety Analyses (JSAs) will be reviewed to determine the appropriate work approach and associated levels of health and safety required. If a JSA for the specific activity does not exist, one will be prepared by the field work team, reviewed for completeness by the Project Manager, and implemented as required by the JSA (see Section 6.3 and Appendix A).

Compliance with this HASP is required for all Roux Associates personnel and subcontractors contracted directly by Roux Associates. Assistance in implementing this HASP can be obtained from the Roux Associates Office Health and Safety Manager (OHSM). The content of this HASP may undergo revision based upon additional information made available. Any changes proposed to this HASP must be reviewed and approved by the OHSM or his/her designee [and the Client contact, if applicable].

All Site operations are under the direction of 211 Sea Foam Properties, LLC (Client) and any operations or activities covered under this safety plan, which are also addressed by the Client's procedures and protocols will be performed in compliance with their requirements. Specifically, routine operations or activities performed at the Site that commonly require adherence to Clients procedures and protocols include confined space entry, welding, other "hot work" operations, lock-out/tag-out and the use of personal protective equipment/clothing. These requirements were incorporated into Section 8.2 of this HASP and, at a minimum, include the use of high visibility clothing, hardhats, steel toe boots/shoes, work gloves, and safety glasses.

Prior to performing work each task should be evaluated to determine the appropriate procedures that need to be followed.

Responsibility	Name	Telephone Number
<u>Roux Associates Contacts</u>		
Project Principal	Robert Kovacs	631-232-2600
Project Manager	Richard Maxwell	631-232-2600
Site Health and Safety Officer	Ron Lombino	631-960-2010
<u>Client Contacts</u>		
Client Contact	Andrew Hirsch	646-454-2903
Site Supervisor	Lance Howard	646-734-0738

Scope of Work:

The scope of work will vary depending on the tasks planned for each geographic area of the Site (Figure 2). In general, the tasks will include the following:

- Investigation of soil, sediment, surface-water and ground-water quality to develop data on environmental conditions;
- Implementation of remedial measures to recover free product and remediate contaminated soil, ground water and surface water (installation and operation of remedial equipment including product, ground water, and soil vapor recovery equipment); and
- Oversight of excavation activities and other facility construction and demolition activities.

Detailed scopes of work for these activities will be prepared prior to implementation of the tasks.

Emergency Information

Multiple emergency services may be obtained by calling 911. More specific numbers for local services are listed below but should not be used until after 911 is alerted.

Type	Name	Telephone Numbers
Police	NYPD	911
Fire	FDNY	911
Urgent Care Facility (map attached)	City MD	(646) 596-9267####
Hospital (map attached)	Bellevue Hospital Center	(212) 562-4141

Environmental Emergency

(e.g., release or spill)

Type	Name	Telephone Numbers
Corporate Health and Safety Manager	Joseph Gentile	(856) 832-3768 (Office) (610) 844-6911 (Cell)
Office Health and Safety Manager	Ray Fitzpatrick	(631) 232-2600 (Office) (631) 484-1168 (Cell)
Site Health and Safety Officer	Ron Lombino	(631) 960-2010 (Cell)
Project Manager	Richard Maxwell	(631) 921-9531 (Cell)
Project Principal	Robert Kovacs	(516) 250-0359 (Cell)

2.0 PERSONNEL DESIGNATIONS

Project Manager

The Project Manager (PM) is responsible for coordination of subcontractors and tasks related to accomplishment of the scope of work. The PM for this project is Richard Maxwell.

Site Manager

The Site Manager (SM) is responsible for committing to a goal of ZERO environmental, health and safety incidents. The SM is also responsible for making certain that personnel receive and are aware of the provisions of this HASP, are instructed in the work practices necessary to ensure safety and are familiar with planned procedures for dealing with emergencies. The SM assures that personnel are aware of the potential hazards associated with site operations and correcting any work practices or conditions that may result in injury or exposure to hazardous substances. The SM ensures that at least one person on site, prior to assignment, is trained and certified by the American Red Cross or equivalent and is responsible for rendering first aid. These individuals will be identified by job function and will be recertified per the certifying agency's time schedule. Blood borne Pathogens training will be conducted concurrently and will be provided annually. Potential exposure to blood borne pathogens will be determined without regard for personal protective equipment. When rendering first aid or CPR universal precautions will be observed. Labels and signs will be used to serve as warnings of infectious materials. Employees will also have a copy of the site-specific exposure control plan. The use of PPE/PPC provides for work practice controls. This PPE/PPC will be provided at no cost to employees. Where PPE is provided to minimize exposure to lead, gloves, hats, vented goggles, shoes or disposable shoe covers are provided. Protective clothing shall be in clean and dry condition at least weekly. Protective clothing shall be cleaned, laundered, properly disposed and repaired or replaced as necessary. Any blood soaked bandages, etc., will be placed in leak proof bags for handling, storage and transport. After contact with blood or other potentially infectious material, all equipment and surfaces shall be cleaned and decontaminated. Hepatitis B vaccine is made available to all employees that have occupational exposure to BBP at no cost. The SM assures that all field personnel are in compliance with the hazardous waste worker health and safety training and medical surveillance requirements of 29 CFR 1910.120 and all other applicable regulations. The SM for this project is Ron Lombino.

Corporate Health and Safety Manager

The Corporate Health and Safety Manager (CHSM) is responsible for assuring that the appropriate monitoring and safety equipment and other resources necessary to perform Site activities safely are addressed in the HASP. The CHSM provides consultation to Site personnel on all questions related to health and safety. The CHSM also provides HAZWOPER training based on his extensive industrial experience and technical background (i.e., CIH). The CHSM for Roux Associates is Mr. Joseph Gentile.

Site Health and Safety Officer

The Site Health and Safety Officer (SHSO) will be present onsite during the conduct of all field operations, will be responsible for all health and safety activities, and has the authority to make all health and safety related decisions. The SHSO ensures that all personnel working onsite are qualified according to applicable Environmental Protection Agency, Occupational Safety and Health Association (OSHA) and state requirements. The determination of hazard concentrations will be made by the SHSO in consultation with the CHSM. The SHSO has stop-work authorization which he or she will execute upon determination of an imminent safety hazard, emergency situations, or other potentially dangerous situation, such as detrimental weather conditions. Authorization to proceed with work will be issued by the SHSO or CHSM in consultation with the SM after such action. The SHSO or SM will initiate and execute all contact with emergency facilities and personnel when this action is appropriate. The SHSO will also monitor decontamination procedures to determine their effectiveness. When such procedures are found to be ineffective, appropriate steps shall be taken to correct any deficiencies. The SHSO for this site is Ron Lombino. An assistant SHSO may be designated by the SHSO if required but must be pre-qualified and approved by the CHSM.

Office Health and Safety Manager

The New York Office Health and Safety Manager (OHSM) is responsible for providing support, as needed, to the Project and serves as back-up to the Site Health and Safety Officer. The OHSM assures that field personnel assigned to the project receive a health and safety orientation and are provided with the necessary personal protective equipment and clothing. The OHSM may periodically perform field audits, participate in field assessments and prepare information to be used for safety communication. The OHSM for this project is Ray Fitzpatrick.

Project Personnel

Project personnel will be responsible for: complying with this HASP; taking all reasonable precautions to prevent injury to themselves and to their fellow employees; performing only those tasks that they believe they can do safely; immediately reporting any accidents and/or unsafe conditions to the SHSO; notifying the SM and the SHSO of any special medical problems (e.g., allergies) and making certain that all on-site personnel are aware of any such problems.

3.0 SITE HISTORY AND PHYSICAL DESCRIPTION

This section provides a brief summary of the history and physical description of the Site.

The Site is located on 29th Street, between 7th Avenue and 28th Street, in the Borough of Manhattan, City and State of New York. The Site is comprised of one rectangular parcel (Tax Lot 31 of Tax Block 779) measuring 46-feet wide and 100-feet long. The Site is bordered to the north by a twelve-story industrial and manufacturing use building; to the east by a twenty one-story mixed commercial and office use building; to the south by 29th Street beyond which is a six-story mixed commercial and office use building, and to the west by a seven-story mixed commercial and residential use building.

The approximately 4,500 square foot Site, consists of a fee based parking lot containing multiple hydraulic car stacking lifts. One car is positioned at ground level while one additional car is held in the lift. There are five parking lifts with a holding capacity of three cars per lift and approximately 35 parking spaces on the ground. Aside from a small kiosk used by the parking attendant and the above mentioned car lifts, there are no other improvements at the Site.

4.0 SITE-RELATED INCIDENTS, COMPLAINTS AND ACTIONS

Historical evidence supporting the potential occurrence of releases exists in two forms, those supported by documentation, and those based on the knowledge of Client personnel. These incidents are presented below by geographical area with documented information first, then "knowledge" information procured from Client personnel. Locations of the tanks, buildings, and Site features mentioned in this HASP are shown on maps maintained in on-site files.

A Phase I Environmental Site Assessment completed in 2015 identified the following recognized environmental concerns (RECs):

- Historical onsite uses: The Site was formerly utilized as a furrier, a chemical supply company and as a fee based parking facility. These historical operations include the long-term storage and parking of automobiles and the potential use of chlorinated hydrocarbons and humectants such as glycerin, ethylene glycol or sorbitol solutions may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site.
- Possible Groundwater and Soil Vapor Contamination: The potential impacts from historical use of the surrounding properties include use as furriers. The operations associated with several nearby properties are indicative of the use of benzene, chlorinated hydrocarbons, humectants, or sorbitol solutions.

Although not technically defined as RECs, the following is a list of potential business environmental risks at the Site that could impact potential redevelopment activities the Site:

- There is the potential that the Site is underlain by historic urban fill. This is common in the five boroughs of New York City. It is recommended that subsurface soil be fully characterized, if future redevelopment activities require excavation.
- The Site has been identified as an E-Designation (E-276) for Hazardous Materials, Exhaust Stack Limitations and Air Quality Protocol. In order to address the Hazardous Materials E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.

5.0 HAZARD ASSESSMENT

5.1 Chemical Hazards

Investigation results and materials storage records indicate that benzene, toluene, ethylbenzene, xylenes (BTEX), lead, total petroleum hydrocarbons (TPHs) and other petroleum-related constituents are present at the Site. The toxicological, physical, and chemical properties of these potential contaminants are presented in Table 1. This table includes action levels (permissible exposure levels), which will establish the level of protection. The potential for encountering these hazards exists during intrusive activities such as working at active and former petroleum refinery sites, while working on or near ASTs/USTs containing or formerly containing BTEX and excavation/earth moving activities with soils potentially impacted by BTEX. Material Safety Data Sheets (MSDSs) / Safety Data Sheets (SDS) for chemical products found at the Site are provided in Appendix B where they are available for review by project personnel during field operations.

5.1.1 Carbon Monoxide Hazards

Carbon monoxide (CO) is a colorless, odorless, and toxic gas, which is predominately produced by incomplete combustion of carbon-containing materials. Incomplete combustion occurs when insufficient oxygen is used in the fuel (hydrocarbon) burning process. Common sources of CO may include: motor vehicle exhausts, fuel burning¹, furnaces, coal burning power plants, small gasoline engines including electric generators, demolition equipment, chain saws, lawn mowers and power washers, marine engines, fuel powered forklifts, propane or kerosene-powered heaters, and fuel burning water heaters.

Exposure to CO impedes the blood's ability to carry oxygen to body tissues and vital organs. When CO is inhaled, it combines with hemoglobin (an iron-protein component of red blood cells), producing carboxyhemoglobin, which greatly diminishes hemoglobin's oxygen-carrying capacity. **Hemoglobin's binding affinity for CO is 300 times greater than its affinity for oxygen.** As a result, small amounts of CO can dramatically reduce hemoglobin's ability to transport oxygen.

Common symptoms of CO exposure are headache, nausea, rapid breathing (i.e., shortness of breath), weakness, exhaustion, dizziness, and confusion (i.e., light headedness). Hypoxia (severe oxygen deficiency) due to acute CO poisoning may result in reversible neurological effects, or it

¹ Fuel burning may include natural gas, propane, fuel oil, kerosene, gasoline, coal, or other carbon-based items.

may result in long-term (and possibly delayed) irreversible neurological (brain damage) or cardiological (heart damage) effects.

CO exposure can be dangerous during pregnancy for both the mother and the developing fetus. Please contact CDC-INFO (800-232-4636) if you have any questions regarding CO exposure during pregnancy.

At work sites where carbon-containing fuels are used, such as in internal combustion engines and generators, the exhausts from these units can contain significant concentrations of CO. In situations where the exhausts create exposure to CO, the exhausts of these units should be extended via appropriate hoses/piping to well ventilated exterior areas (i.e., outside and downwind of structures). Where the concentrations of CO exceed the following “action levels”, notify the Project Manager and immediately implement the corresponding actions to mitigate exposure.

Action Levels Table (CO)

Carbon Monoxide (CO) Action Levels²	
Concentration of CO in air	Action
< 25 ppm	Inspect exhaust system for leaks or other sources of CO. Monitor initially and every 15 minutes during use of CO-generating equipment.
25 – 50 ppm	Ventilate area. Monitor continuously and record measurements. Contact PM.
> 50 ppm	Stop work activities. Ventilate area.

5.2 Physical Hazards

A variety of physical hazards may be present during Site activities. These hazards are similar to those associated with any construction-type project. These physical hazards are due to motor vehicle and heavy equipment operation and hazardous walking and working surfaces. In particular, when entering or exiting a bermed area surrounding a storage tank, use the stairways provided. Do not enter or exit the bermed area by walking on the bermed surface itself.

² Based upon The American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (TLV) of 25 ppm as an 8-hour time-weighted average (TWA) [ACGIH 2014 TLVs® and BEIs®] and OSHA’s Permissible Exposure Limit (PEL) of 50 ppm as an 8-hour TWA concentration [29 CFR Table Z-1].

A hard hat must be worn at all times while working at the base of the cliffs. Additionally, when performing activities at the Site, a hard hat and reflective vest must be worn at all times. Workers must also be aware of electrical hazards, such as overhead power lines, while performing their assigned tasks. These hazards are not unique and are generally familiar to most field personnel. These will be addressed in accordance with Roux's Lock, Tag and Try Program. Additional task-specific requirements may be covered during safety briefings.

5.2.1 Flammability/Explosive Hazards

A variety of highly flammable/explosive materials are stored at the Site. Prior to performing activities near potentially flammable/explosive materials (i.e., within storage tank bermed areas), all applicable sections of this HASP and any Client procedures specific to these areas need to be thoroughly understood and adhered to. Any questions or concerns should be directed to the SHSO or the Client's Project Engineer.

5.3 Biological Hazards

Biological hazards include exposure to poison ivy/oak, the possibility of disease carrying insects (i.e., ticks) and a variety of wild animals (i.e., coyotes, raccoons, etc.).

5.3.1 Insect Stings

Stings from insects are often painful, may cause swelling, and can be fatal if a severe allergic reaction, such as anaphylactic shock, occurs. If a sting occurs, the stinger should be scraped out of the skin, opposite of the sting direction. The area should be washed with soap and water, followed by an ice pack. Personnel allergic to bee and/or wasp stings shall alert their PM, SHSO and coworkers immediately, and provide/self-administer medicine and antidotes to treat allergic reactions immediately as prescribed by their personal physician, or if the victim has a history of allergic reaction, he/she should be taken to the designated hospital.

5.3.2 Tick Injury Prevention Program

Ticks may carry Lyme disease, Rocky Mountain spotted fever or other diseases. As such, Roux Associates has instituted a program to prevent tick bites and to provide prompt, adequate and appropriate notifications and treatment in the event of a work-related tick bite. This SOP applies to all Roux Associates employees and their subcontractors and is additionally addressed by applicable JSAs.

5.3.3 Project Planning

Pre-planning is the first step in tick avoidance. Where possible, plan the work to avoid tick-infested areas.

- Avoid brushy, overgrown grassy and wooded habitats, particularly in spring and early summer when nymphal-stage ticks feed.
- Remove leaves, tall grass and brush from areas surrounding work areas (to include residential Sites), thereby reducing tick, deer and rodent habitat.
- Consider having a licensed applicator apply tick-toxic chemicals (e.g., Damminix, Dursban, Sevin, etc.) to surrounding work or residential areas to suppress the tick population.
- Consider performing work during dormant (sub-freezing) seasons; or not during maximum season (spring and early summer) unless it is not practical or rescheduling may introduce other hazards.

5.3.4 Tick Injury Prevention Measures

Where avoidance of tick habitat or clearing of the area is not possible, follow Roux Associates' Tick Prevention SOP which includes the use of PPE and other measures to avoid tick bites. These include:

- Using Permethrin on clothes to kill ticks on contact;
- Wearing light-colored clothing so that ticks can be more easily seen and removed before attachment occurs;
- Wearing long-sleeved shirts and tucking in (or taping) pant legs into socks or boots to prevent ticks from reaching the skin;
- Wearing high boots or closed shoes that cover the entire foot;
- Wearing a hat; and
- Spraying insect repellents containing n,n-diethylm-toluamide (DEET) on exposed skin, excluding the face, in accordance with United States Environmental Protection Agency (USEPA) guidelines.

Tick prevention measures as described above must be implemented prior to entering a potentially tick-infested area. This usually means that the PPE needs to be in place and properly worn before stepping off of a paved or concrete area onto a grassy or wooded area. Pant legs need to be tucked into socks. Where Tyvek is used, the pant legs need to be taped at the ankles.

Insect repellent should be applied in accordance with the manufacturer's instructions. In the event of sensitive ecosystems ensure that the application does not need to be applied at a certain distance from the habitat.

The PPE needs to remain on with the tucking or taping of pant legs, all closures fastened, etc., until leaving the potentially tick-infested area. Upon leaving the area, remove the PPE and bag it to prevent ticks from traveling and subsequently attaching themselves to your skin.

Workers are to inspect themselves and co-workers frequently to see if any ticks are on their clothing and remove them as soon as they are identified. If an embedded tick is found, it should be promptly removed with tweezers. This should be done by grasping the tick firmly and as close to the skin as possible. Then, with a steady motion, pull the tick's body away from the skin. Cleanse the area with an antiseptic. **DO NOT** use petroleum jelly, a hot match, nail polish or other products to remove the tick. **Preserve the tick for analysis (i.e., by placing in a zip lock bag, envelope or jar). The tick will be analyzed to determine if it contains the bacteria capable of causing Lyme disease.** After returning home, it is also important to do another thorough examination while showering as a further check that no ticks were missed in previous inspections. Also, it is recommended that any work clothes be washed and dried at high temperatures.

5.3.5 Responding to Known or Suspected Tick Bites

Any discovery of a tick embedded in the skin where the tick contact may have occurred at work will require (in addition to project management) immediate contact of the Office Manager, OHSM, and CHSM.

Medical practitioners consulted by Roux Associates recommend not administering an antibiotic until AFTER symptoms such as rash, flu-like symptoms, fever, joint or muscle aches, nausea or vomiting develop which could take a few days. Therefore, for tick bites determined to be work related, **antibiotics should not be prescribed or administered until AFTER the results of the tick testing are reviewed and until after any characteristic symptoms develop.**

5.3.6 Tick Incident Investigation and Reporting

Investigation and reporting of a work-related tick bite will follow established incident investigation and reporting procedures. The Roux Associates Health & Safety Lessons Learned

(H&SLL) / Accident Report Forms (ARF) will be used for documenting incidents as appropriate, and are provided in Appendix C. .

5.3.7 Animals and Animal Wastes

There is potential for various wildlife to reside within the structures, including, but not limited to pigeons, bats, mice, rats, squirrels, raccoons, stray dogs, and feral cats. Certain animals can represent significant sources (vectors) of disease transmission. Precautions to avoid or minimize potential contact with (biting) animals (such as some of the above listed) or animal waste and/or dead animals should be considered prior to all field activities. Rats, squirrels, raccoons, feral cats, and other wild animals can inflict painful bites which can also cause disease (as in the case of rabid animals). Site personnel should avoid contact with any of the above.

If contact occurs, be sure to clean the area thoroughly with soap and water as soon as possible. If a bite occurs, the area should be cleaned thoroughly immediately with soap and water and medical attention should be sought.

5.3.8 Blood-Borne Pathogens

The majority of the occupational tasks on-Site will not involve a significant risk of exposure to blood, blood components, or body fluids. The highest risk of acquiring any blood borne pathogen for employees on-Site will be following an injury. When administering first aid care, there are potential hazards associated with blood borne pathogens that cause diseases such as Human Immunodeficiency Virus (HIV), Hepatitis B (HBV), Hepatitis A (HAV), Hepatitis C (HCV), or the Herpes Simplex Virus (HSV). An employee who has not received the appropriate certification and blood borne pathogens training should never perform first aid and/or cardiopulmonary resuscitation (CPR).

In order to minimize any potential pathogen exposure, all employees should use the hand washing facilities on a regular basis. The decontamination area will provide an adequate supply of water, soap, and single use towels for hand washing. Additionally, the following universal precautions should be followed to prevent further potential risk:

- Direct skin or mucous membrane contact with blood should be avoided.
- Open skin cuts or sores should be covered to prevent contamination from infectious agents.

- Body parts should be washed immediately after contact with blood or body fluids that might contain blood, even when gloves or other barriers have been used.
- Gloves and disposable materials used to clean spilled blood shall be properly disposed of in an approved hazardous waste container.
- First aid responders shall wear latex or thin mil nitrile gloves when performing any procedure risking contact with blood or body substances.
- Safety glasses will be worn to protect the eyes from splashing or aerosolization of body fluids.
- A CPR mask will be worn when performing CPR to avoid mouth-to-mouth contact.
- Cut-resistant work gloves will be worn to minimize the risk of injury to the hands and finger when working on all equipment with sharp or rough edges.
- Broken glass or possible contaminated material shall be avoided with unprotected hands.

5.3.9 Mold

A collection of moisture inside on-Site structures may lead to the growth of mold within the structures.

Although mold affects individuals differently and to different degrees, the following are some of the most common adverse health effects:

- Respiratory problems – wheezing, difficulty breathing;
- Nasal and sinus congestion;
- Eyes – burning, watery, reddened, blurry vision, light sensitivity;
- Dry, hacking cough;
- Sore throat;
- Nose and throat irritation;
- Shortness of breath and lung disease;
- Chronic fatigue;
- Skin irritation;
- Central nervous system (headaches, loss of memory, and mood changes);
- Aches and pains;
- Fever;

- Headaches;
- Diarrhea; and
- Immune suppression.

Decisions about removing individuals from an affected area must be based on the results of a medical evaluation, and be made on a case-by-case basis.

Workers that discover the visible presence of mold in excess of ten square feet need to notify the SHSO for consultation. If a worker smells mold and feels that he/she is experiencing symptoms of exposure, he/she should retreat and report the symptoms to the SHSO.

5.3.10 Other Biohazards

Other biological hazards include mosquitoes which generally live in the vicinity of brush, trees, and stagnant water. Some areas have mosquitoes that carry viruses (for example, West Nile virus, or Eastern Equine Encephalitis). Another category of biohazards include plants such as poison ivy, poison oak, and poison sumac. If exposed to these plants, personnel will wash skin thoroughly with soap and water or post-contact cleansers.

5.4 Heat/Cold Stress

Heat and cold stress are potential hazards associated with heavy physical activity and/or the use of personal protective equipment in hot or cold weather environments. Heat and Cold stress are discussed in Sections 9.13 and 9.14. Protection against sun exposure by wearing a sun screen, hat, and long-sleeved shirts must be implemented when warranted in addition to frequent and proactive hydration of workers.

5.5 Noise

Noise is associated with the operation of heavy equipment, power tools, pumps, and generators. Personnel with 8-hour time weighted average (TWA) exposures exceeding 85 decibels (dB) must be included in a hearing conservation program in accordance with 29 CFR 1910.95. High noise operations will be evaluated by the SHSO. Noise exposure will be controlled through the use of hearing protection such as ear plugs or ear muffs or by maintaining set-backs from high-noise equipment as warranted.

5.6 Hazards Caused by Roux's Work

Roux Associates will advise the Client of any unique hazards presented by its work or of any hazards found by Roux during the course of its work for the Client.

- Heavy equipment and motor vehicle traffic- Workers shall wear fluorescent, reflective Class 3 vests or high visibility outerwear in high traffic areas and utilize traffic cones, barricades and caution tape to protect work areas, as necessary;
- Slip, trip, fall hazards associated with uneven terrain, obstacles, and slippery or icy surfaces- General housekeeping will be performed to reduce slip, trip and fall hazards;
- Sharp edges, broken glass, exposed nails, rusty metal (wear leather or ANSI Level 2 cut-resistant gloves);
- Pinch points (wear leather or ANSI Level 2 cut-resistant gloves);
- Overhead hazards (wear hard hats as applicable); and
- Flying objects and airborne particulate hazards (Wear safety glasses, goggles, or face shields when appropriate).

5.7 Electrical Hazards

Portable pumps, generators, and other power tools require proper grounding and/or a ground fault circuit interrupter (GFCI) before operation. Personnel should never attempt to move an operating pump or generator.

6.0 TRAINING REQUIREMENTS

6.1 Basic Training

All site personnel who will perform work in areas where there exists the potential for toxic exposure will be health and safety trained prior to performing work onsite per OSHA (29 CFR 1920.120(e)). Initial and annual training will include the locations of and proper use of safety equipment such as portable fire extinguishers. American Red Cross basic first aid and adult CPR will be offered to employees approximately every two years. Training records will be maintained by the SHSO onsite and as described in Section 6.4. OSHA HAZWOPER training will be provided annually and is limited to first responder awareness level only. Where training is required by a specific health or safety standard, this will be conducted initially and annually and will include the information summarized in the Toxicological Table, Table 1 of this HASP.

6.2 Site-Specific Training

Training will be provided by the SHSO and SM that specifically addresses the activities, procedures, monitoring and equipment to be utilized by site personnel and visitors. The training will include site and facility layout, hazards, emergency services at the site, and will detail all provisions contained within this HASP. Site-specific training will be documented and kept as part of the project records.

6.3 Safety Briefings

Project personnel will be given briefings by the SHSO, the PM and/or the Client's Project Engineer on an as-needed basis to further assist them in conducting their activities safely. Safety briefings will be provided each morning and when new operations are to be conducted; changes in work practices must be implemented due to new information made available and before work is begun at each onsite work area. Safety briefings will include a discussion of anticipated hazards, review Job Safety Analyses for tasks to be implemented, pertinent Loss, Lessons Learned, Peer Observation finding, and safety violations. These include not following Client rules or procedures, not following established safe work practices, and lack or improper use of personal protective equipment/clothing, etc. On-site safety briefings will be documented daily on the forms included as Appendix D (Health and Safety Briefing/Meeting Log and Daily Site Safety Checklist), and will be kept by the SHSO as part of the project records. In addition, when activities are to be conducted which are not specifically addressed by this HASP, appropriate JSAs

will be reviewed to determine the appropriate levels of health and safety required. If a JSA for the specific activity does not exist, one will be prepared by the field work team, reviewed for completeness by the Project Manager, and implemented as required by the work scope. Copies of the completed JSA forms for various tasks are included in Appendix B. Modifications to JSAs will be documented on these forms and maintained in the project file. Observed safety violations will be addressed by coaching and mentoring of personnel.

6.4 Record Keeping Requirements

All record keeping requirements mandated by OSHA (29 CFR 1910.120) will be strictly followed. Specifically, all current personnel training records, medical fit for duty papers, and respirator fit test forms will be required before work can begin and maintained onsite during the length of the project. These records along with injury/incident reports, medical examination records and exposure monitoring records will become a permanent part of the project records. Each subcontractor will maintain the above-mentioned records for his employees.

Medical and exposure records maintained per 29 CFR 1910.1020 will be maintained for at least the duration of employment plus 30 years. Training records will be maintained for 3 years from the date of training.

Medical and exposure records shall be made available upon request to employees, and to the Assistant Secretary or the Director (OSHA) for examination and copying. Medical records must have written consent of employee before being released. Transfer of records will be in compliance with 29 CFR 1910.1020 (h).

7.0 ZONES, PROTECTION, AND COMMUNICATIONS

7.1 Site Zones

A three zone approach to site operations to control the potential spread of contamination will be employed. The three zones are:

- The Exclusion Zone;
- The Contamination Reduction Zone; and
- The Support Zone.

The establishment of work zones will ensure that: personnel are properly protected against the potential hazards in the area where they are working; work activities and potential contamination are limited to the specific areas; and personnel can be easily located and evacuated in an emergency.

The establishment of work zones and the levels of protection required within the zones will be determined on a case-by-case basis. The SHSO, PM and the Client's Project Engineer will determine the need for work zones, and based upon Site-specific knowledge and data, determine the levels of protection within the established zones. The following sections provide general specifications for the three work zones.

7.1.1 Exclusion Zone

The area(s) which contain, or are suspected to contain, hazardous materials or activities will be considered the Exclusion Zone (EZ). The SHSO may establish more than one restricted area within the EZ when different levels of protection may be employed or different hazards exist. Signs will be posted in and around areas required to be posted by a specific health or safety standard. No personnel are allowed in the EZ without:

- The proper personal protective equipment;
- Medical authorization per Section 8.4;
- A need to be in the zone; and
- Training certification.

During excavation, drilling and sampling activities, the Exclusion Zone is defined as the excavation and a 10-foot radius around the excavation boundary, or drilling or sampling locations. For the purposes of this project, the Exclusion Zone(s) will be delineated once the work sites have been determined.

7.1.2 Contamination Reduction Zone

A Contamination Reduction Zone (CRZ) will be established between the Exclusion Zone and the Support Zone. The CRZ will contain the contamination reduction corridor (CRC) and is designed to reduce the probability that the uncontaminated clean areas will become contaminated or affected by other site hazards. It is the area where decontamination of personnel and equipment takes place and serves to limit the physical transfer of hazardous substances into clean areas. Decontamination shall be performed in geographical areas that minimize the exposure of uncontaminated employees or equipment to contaminated employees or equipment. The CRZ is to be used for general site entry and egress including access for heavy equipment for investigation activities. The CRZ will also contain safety and emergency equipment (see Section 7.2.3). No personnel are allowed in the CRZ without:

- The proper personal protective equipment;
- Medical authorization per Section 8.4;
- A need to be in the zone; and
- Training certification.

7.1.3 Support Zone

The Support Zone (SZ) is considered the uncontaminated area and will be separated from the CRZ by the "Contamination Control Line". The SZ will contain the support facility that will provide for team communications and emergency response. Appropriate sanitary facilities and safety and support equipment will be located in this zone. The majority of site operations as well as site access of authorized persons will be controlled from this location. The support facility will be located up-wind of site operations, if possible, and may be used as a potential evacuation point. No potentially contaminated personnel or materials are allowed in this zone.

7.1.4 Buddy System

Select field activities conducted in contaminated, hazardous, and remote areas of the Site may require the use of the buddy system. Instances when the buddy system should be employed include, but are not limited to activities performed in wetland areas (i.e., surface-water sampling, etc.), excavation activities, drilling activities and confined space entry (permit required and non-permit required). Prior to commencing with field tasks in a potentially hazardous area, the need for using the buddy system should be evaluated. If required, a buddy should be able to:

- Provide his/her partner with assistance;
- Observe his/her partner for signs of chemical or heat/cold exposure;
- Periodically check the integrity of his/her partner's protective clothing; and
- Notify the SHSO or others if emergency help is needed.

7.2 Personal Protection

This section describes the levels of protection that will be required by on-site personnel during Site activities.

7.2.1 General

The level of protection to be worn by field personnel and visitors will be defined and controlled by the SHSO, the PM and the Client's Project Engineer. Where more than one hazard is indicated, further definition shall be provided by review of Site hazards, conditions, and operational requirements and by monitoring at the particular operation being conducted.

Intrusive activities (i.e., drilling, excavation activities, etc.) include any Site activity which will, or potentially will, result in exposure(s) to hazardous or toxic chemicals or physical agents at or above the permissible exposure limit (PEL), or to flammable or oxygen-deficient atmospheres. Prior to commencing with any field activity, the potential for such conditions should be evaluated to determine air monitoring requirements. General procedures for air monitoring are described below.

During intrusive activities, continuous monitoring will be performed using the photoionization detector (PID) and Dräger or Sensidyne tubes for initial and periodic real-time measurements of benzene. Personnel monitoring utilizing activated charcoal tubes may also be performed in areas

where high benzene concentrations were present during previous investigations. If personal monitoring is needed, it will only be undertaken under the direction and direct supervision of the CHSM.

The use of Dräger or Sensidyne tubes for benzene will allow the SHSO to make an immediate decision on the adequacy of protection against this compound. Should the PID or Dräger or Sensidyne tubes indicate that any detectable concentration for this constituent has been exceeded, work will cease in this area until:

- Workers have donned a full-face air-purifying respirator; or
- The concentration levels for benzene are below the Dräger or Sensidyne tube detection levels.

Based upon the results of air measurements of intrusive activities in these worst case areas, the level of personnel protection will be established for the remainder of the Site. Protection may be upgraded or downgraded by the SHSO in conjunction with the PM based upon the PID instrument and Dräger or Sensidyne tube results.

All non-intrusive activities that preclude contact with contaminated media will be performed in Level D protection without continuous monitoring, unless periodic PID monitoring indicates additional monitoring is warranted. However, initial monitoring may be necessary utilizing the PID and the Dräger or Sensidyne tubes and/or personal monitoring (charcoal tubes).

7.2.2 Respiratory Protection and Clothing

Three levels of protective equipment are discussed below including Level D, Level C, and Level B.

Level D Protection

1. Personal Protective Equipment:
 - High visibility/reflective coveralls/clothing
 - Cut Resistant gloves (or leather work gloves);
 - Boots/shoes, leather, or chemical-resistant, steel toe and shank;
 - Ice cleats⁽¹⁾;
 - Boots (outer), chemical-resistant (disposable)*;

- Chemical resistant gloves – nitriles*;
- Chemical resistant clothing (e.g., Tyveks)*;
- Fire Retardant Clothing⁽²⁾*;
- Safety glasses or chemical splash goggles⁽³⁾;
- Hard hat; and
- Hearing protection.

* Optional for activities except when handling petroleum product (i.e., well bailing) and materials (i.e., soil, sorbent products, etc.) exhibiting high degrees of petroleum contamination

- ⁽¹⁾ Ice Cleats to be worn with approved safety shoes when working in areas with snow/ice cover.
- ⁽²⁾ Fire retardant coveralls required in areas of hot work/areas with potential for flash (i.e., truck flammable loading rack, within tank berms)
- ⁽³⁾ Clear lenses to be worn when working in low light areas inside site buildings and outside during overcast days that may limit visibility.

2. Criteria for Selection.

- Non-intrusive activities and intrusive activities in areas where the potential airborne hazards are substantially characterized and do not pose a threat of exposure in excess of one-half the PEL.
- PID instrument (such as the MiniRAE 3000 or other comparable instrument) readings in the breathing zone are less than 5 ppm and benzene and furfural are not detectable utilizing colorimetric indicator tubes (e.g., Dräger or Sensidyne). Work functions preclude splashes, immersion, or potential for unexpected inhalation of any chemicals.

Notes: 1. Benzene and furfural may also be monitored initially and periodically in the breathing zone utilizing activated charcoal sampling devices.

- 3. Modifications of Level D will be used to increase or decrease the level of skin protection during activities that increase or preclude, respectively, the degree of contact with chemical hazards. Modifications for increased protection may include the use of chemical resistant coveralls (e.g., Tyveks) and chemical resistant gloves. Chemical resistant coveralls, gloves and boots will be used when the handling of petroleum products is required (i.e., well bailing). Any modifications of Level D will require approval of the SHSO and PM.

Protection may be upgraded or downgraded by the SHSO in conjunction with the Project Principal on the basis of action levels presented below:

Action Levels for Respiratory Protection (Total Organic Vapors)

Total Organic Vapors in Breathing Zone (ppm)⁽¹⁾	Action
≤ 5	No Action
> 5 – < 25	Cease Field Operations
≥ 25	Cease Field Operations

⁽¹⁾ Based on relative response (sensitivity of PID to total organic vapors).

PID Action Levels

If photoionization detector measurements are above 5 ppm-v but below 25 ppm-v above background for five minutes in the breathing zone, employee protection will be upgraded to Level C with the use of a full-face respirator.

If PID measurements exceed 25 ppm-v above background for five minutes in the breathing zone, work activities will cease until airborne vapor levels can be reduced to less than 25 ppm-v and are quantified or the SHSO determines alternate methods to be followed in order to proceed.

Most activities are conducted outdoors, where breathing of high vapor levels are not likely in aboveground areas. Excavations which are not to be entered are likely to have higher vapor concentrations. Where a spill occurs in a basement or other indoor area, ventilation will not be as good as outdoors and extra care shall be taken in monitoring vapor levels.

Action Levels for Oxygen Levels and Combustible Gases

COMBUSTIBLE GASES ¹	
0-2.0 – 2.0% LEL	Continue monitoring
2.0 – 5.0% LEL	Notify SHSO
5.0% LEL or greater	Potential explosion hazard Interrupt task / Evacuate Area

Action Levels for Oxygen Levels and Combustible Gases

OXYGEN ¹	
20.8% O ₂	Oxygen level normal
Greater than 22.0% O ₂ / Less than 20.0% O ₂	Oxygen enriched / deficient – notify SHSO
Greater than 23.5% O ₂ / Less than 19.5% O ₂	Oxygen enriched / deficient Interrupt task / Evacuate area

¹ Action levels are based on Environmental Protection Agency Standard Operating Safety Guides; Table 5-1, Atmospheric Hazard Action Guidelines may be further restricted based on the CIH's professional judgment and experience.

Level C Protection

1. Personal Protective Equipment:

- Full-face, air-purifying, cartridge-equipped respirator (MSHA/NIOSH specifically approved for protection from organic vapors per OSHA 1910.1028);
- Chemical-resistant clothing (coverall; hooded, two-piece chemical splash suit; chemical-resistant hood and apron; disposable chemical-resistant coveralls);
- Gloves (outer), chemical-resistant - nitriles;
- Gloves (inner), chemical-resistant - latex;
- Boots (inner), chemical-resistant, steel toe and shank;
- Boots (outer), chemical-resistant (disposable*);
- Hard hat;
- Hearing protection;
- Escape mask*.

* Optional

2. Criteria for Selection.

Meeting any of these criteria warrants use of Level C protection.

- Airborne hazards are known to be present but are unlikely to exceed protection factors provided by air-purifying respirators.
- Continuous total organic vapor readings in the breathing zone register between 5 ppm and 25 ppm on a PID (such as the MiniRAE 3000 or other comparable instrument), benzene and furfural readings utilizing colorimetric indicator tubes (e.g., Dräger or Sensidyne) are detectable but less than 5 ppm.

- Measured air concentrations of known organic vapors will be reduced by the respirator to, at, or below one-half the permissible exposure limits, and the individual and combined compound concentrations are within the service limit of the respirator cartridge.
- Atmospheric contaminant concentrations do not exceed Immediately Dangerous to Life and Health (IDLH) concentrations.
- Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect the small area of skin left unprotected by chemical-resistant clothing.
- Job functions have been determined not to require self-contained breathing apparatus.

Notes: 1. Benzene and furfural may also be monitored initially and periodically in the breathing zone utilizing activated charcoal sampling devices.

2. Modifications of Level C will be used to increase or decrease the level of skin protection during activities that increase or preclude, respectively, the degree of contact with chemical hazards. Modifications for increased protection may include the use of chemical resistant coveralls (e.g., Tyveks) and chemical resistant gloves. Any modifications to Level C will require approval of the SHSO and PM.

Level B Protection

1. Personal Protection Equipment:

- Pressure-demand, self-contained breathing apparatus (MSHA/NIOSH approved);
- Chemical-resistant clothing (overall and long-sleeved jacket; coveralls; hooded, one or two-piece chemical-splash suit; disposable chemical-resistant coveralls);
- Gloves (outer), chemical-resistant;
- Gloves (inner), chemical-resistant;
- Boots (inner), chemical-resistant, steel toe and shank;
- Boots (outer), chemical-resistant, (disposable);
- Hard hat;
- Hearing protection; and
- Two-way radio communications (intrinsically safe).

2. Criteria for Selection

Meeting any one of these criteria warrants use of Level B protection:

- PID instrument (such as the MiniRAE 3000 or other comparable instrument) readings in the breathing zone are greater than 25 ppm and less than 500 ppm, benzene and

- furfural are detectable at concentrations at or above 5 ppm utilizing colorimetric indicator tubes (e.g., Dräger or Sensidyne).
- Airborne hazards are known to be present, but are not identified or quantified.
 - The type(s) and atmospheric concentration(s) of toxic substance(s) have been identified and require the highest level of respiratory protection, but a lower level of skin and eye protection. These would be atmospheres:
 - ♦ With IDLH concentrations;
 - ♦ Exceeding limits of protection afforded by a full-face, air-purifying respirator; or
 - ♦ Containing substances requiring air-supplied equipment, but substances and/or concentrations do not represent a serious skin hazard.
 - The atmosphere contains less than 19.5% oxygen.
 - Site operations make it highly unlikely that the small, unprotected arc of the head or neck will be contacted by splashes of extremely hazardous substances.
 - If work is performed in an enclosed space where the exposure to toxics or an oxygen deficient atmosphere may be present.

7.2.3 Safety Equipment

Basic emergency and first aid equipment will be available at the Support Zone and/or the CRZ as appropriate. This shall include first aid kit, emergency eyewash, fire extinguishers, and other safety-related equipment. Basic emergency and first aid equipment is available onsite. Field personnel will be notified of the locations of emergency and first aid equipment prior to commencing with field activities.

Hand Tools

Where hand and power tools are used and employees are potentially exposed to the hazard of falling, flying, abrasive, or splashing objects, or are exposed to harmful dust, fumes, mists, vapors, or gases, the employees shall be provided the appropriate Personal Protective Equipment as necessary to protect them from the hazard.

Communications

Mobile Telephones – for communication with emergency support services/facilities. All Roux Associates, Inc. site personnel will be equipped with a mobile phone. Mobile communications, however, will be prohibited when the user is within the work area to avoid injuries resulting from distraction.

8.0 MONITORING PROCEDURES FOR SITE OPERATIONS

8.1 Air Quality Monitoring During Site Operations

The SHSO will monitor wind direction and temperature during monitoring and record all data in a log book. All monitoring equipment will be calibrated to the manufacturer's specifications each day prior to use and documented in Site field books.

8.2 Air Quality Monitoring During Intrusive Activities

Intrusive activities include any Site activity which will, or will possibly, result in exposure(s) to hazardous or toxic chemicals or physical agents at or above a permissible exposure limit (PEL), or to flammable or oxygen-deficient atmospheres. Prior to commencing with any field activity, the potential for such conditions should be evaluated to determine air monitoring requirements. General procedures for air monitoring are described below.

Air monitoring will be performed to establish the concentrations of volatile organic compounds during invasive activities using the following instrument(s):

- Photoionization detector;

The PID will be used to provide direct readings of organic vapor concentrations during intrusive activities to determine that personnel protection is adequate.

8.2.1 Level D Intrusive Activities

Level D intrusive activities will initially include all intrusive Site activities. These investigations/activities will begin utilizing Level D protection as described in Section 7.2.2, with upgrading as necessary to assure adequate personnel protection.

The SHSO will monitor the breathing zone with the PID in continuous operating mode and with the alarm activated. The alarm will be set at 5 ppm, which is below the permissible exposure level (PEL) for all constituents of concern, except benzene and furfural. If the PID indicates the 5 ppm concentration has been exceeded, the SHSO will order cessation of the activity and the exclusion zone cleared of all personnel until the PID indicates a reading less than 5 ppm, or until the nature of the hazard has been more thoroughly evaluated.

8.2.2 Level C Intrusive Activities

Level C intrusive activities will initially include only those activities which require upgrading from Level D. Level C protection will be as described in Section 7.2.2, with upgrading, as necessary, to Level B to assure adequate personnel protection. Downgrading to Level D protection will also be possible if monitoring demonstrates no inhalation hazard exists for the activity.

The SHSO will monitor the breathing zone with the PID in continuous operating mode and with the alarm activated. The alarm will be set at 5 ppm, which is below the permissible exposure level (PEL) for all constituents of concern except benzene and furfural. If the PID indicates the 5 ppm concentration has been exceeded, the SHSO will initiate measurements utilizing the colorimetric indicator tubes for benzene and furfural.

If the PID readings exceed 25 ppm total organic vapor, or the benzene and/or furfural colorimetric indicator tube readings exceed 5 ppm, the SHSO will order cessation of the activity until: 1) the PID indicates a reading less than 25 ppm, and the benzene and/or furfural concentrations are below 5 ppm based upon the colorimetric indicator tube readings, 2) all potentially exposed personnel have donned Level B respiratory protection or, 3) the nature of the hazard has been more thoroughly evaluated and it is determined that the measured concentrations do not pose a potential exposure in excess of the PEL utilizing the Level C protection.

To confirm the adequacy of respiratory protection, personnel monitoring utilizing activated charcoal sampling devices may be performed to measure the airborne concentrations of benzene and furfural and possibly other organic compounds (as necessary) at the beginning of new activities and periodically during intrusive activities. These samples would be sent to an AIHA accredited laboratory for analysis using the approved NIOSH analytical methods.

8.2.3 Level B Intrusive Activities

Level B intrusive activities will initially include only those activities that require upgrading from Level C, and only those activities required to bring work to a safe stoppage. No work is currently planned utilizing Level B protection, and this HASP will require amendment at such time as Level B work becomes necessary (except for safe work stoppage activities).

When Level B protection is utilized, the SHSO will monitor the breathing zone with the PID in continuous operating mode and with the alarm activated. The alarm will be set at 100 ppm. If the PID indicates the 100 ppm concentration is exceeded, the SHSO will order cessation of the activity until: 1) the PID readings are below 100 ppm or; 2) until the nature of the hazard has been more thoroughly evaluated and it is determined that the measured concentrations do not pose a potential exposure in excess of a PEL utilizing the Level B protection.

To confirm the adequacy of respiratory protection, personnel monitoring utilizing activated charcoal sampling devices may be performed to measure the airborne concentrations of benzene and furfural and possibly other organic compounds (as necessary) whenever Level B protection is utilized.

8.3 Air Quality Monitoring During Non-Intrusive Activities

Non-intrusive activities include any Site activity which would not reasonably be expected to result in exposure(s) to hazardous or toxic chemicals or physical agents at or above the permissible exposure limit (PEL), or to flammable or oxygen-deficient atmospheres. Based upon the current understanding of Site conditions no monitoring is required during non0intrusive activities.

8.4 Medical Surveillance Requirements

Medical surveillance specifies any special medical monitoring and examination requirements as well as stipulates that all Roux Associates personnel and subcontractors contracted directly by Roux Associates are required to pass the medical surveillance examination or equivalent for hazardous waste work required by 29 CFR 1910.120.

The examination will be taken annually, at a minimum, and upon termination of employment with the company at no cost to employees. Additional medical testing may be required by the CHSM, or CHSM in consultation with the company physician and the SHSO, if an overt exposure or accident occurs, or if other site conditions warrant further medical surveillance. .

Medical examinations and procedures shall be performed by or under the supervision of a licensed physician. Medical surveillance is provided without cost to the employees.

9.0 SAFETY CONSIDERATIONS FOR SITE OPERATIONS

9.1 General

In this section, non-monitoring, safety-related procedures are described. In general, all site activities should be conducted in accordance with the Client's Safe Work Practices Requirements and Contractor Safety Rules & Work Procedures included as Appendix E.

9.2 Site Walk-Throughs

Safety considerations during site walk-throughs are important since this activity will usually precede all other field operations. Air monitoring will be performed as indicated in Section 8.0 and will be used to assist in prescribing levels of protection for future site operations, designating site layout and identifying areas of particular hazard, if any.

9.3 Construction Activities

Activities involved with construction of remedial action treatment systems will initially be considered non-intrusive activities. However, initial and/or periodic monitoring, as described in Section 7.2 may be performed by the SHSO.

A variety of physical hazards may be present during any construction-type project. Personnel should be aware of safety issues associated with; noise, cold, hot work such as welding, cutting and burning, heavy lifting, rough terrain, heavy equipment operation, ladders, scaffolding, excavating and trenching, underground and overhead utilities, electrical hazards, and the hazards associated with hand and power tools. These hazards are not unique and are generally familiar to most construction personnel.

9.4 Heavy Equipment and Traffic Safety

The SHSO will be present onsite during all invasive operations and will provide health and safety monitoring to ensure that appropriate levels of protection and safety procedures are utilized.

This Site utilizes all of the mechanical equipment used on any major construction site. Typical machinery to be found includes pumps, compressors, generators, portable lighting systems, pneumatic tools (drum openers), hydraulic drum crushers, pug mills, forklifts, trucks, dozers, and

backhoes, drill rigs. It poses a serious hazard if not operated properly, or if personnel near machinery cannot be seen by equipment operators.

Roux SOP 1.13R1 outlines Roux policies and procedures regarding Heavy Equipment Exclusion Zone (HEEZ) set up and use. The objective of the Exclusion Zone Policy is to establish the minimum clearance distance that must be maintained between workers and heavy equipment while equipment is in operation (i.e., engaged or moving). The intent is to have no personnel or other equipment entering the HEEZ while the equipment is in operation/moving, to ensure that Roux and Subcontractor employees are not unnecessarily exposed to the hazards of the equipment. Appendix F provides Roux Associates' Heavy Equipment Exclusion Zone SOP.

In addition, the following safety procedures relating to traffic safety must be followed while performing on-site and off-site activities. Refer to Appendix G for Client's Traffic Control Procedures.

On-Site Traffic Safety Procedures

When performing activities on, or adjacent to on-site roads, the following traffic safety procedures must be followed.

- High-visibility coveralls must be worn during Site activities as described in Section 7.2 of this HASP. If possible, the coveralls being worn should be modified via wearing of a reflective vest or with a reflective, reflective stripe(s) when working on, or adjacent to all paved and unpaved roads at the Site.
- When performing activities on, or on the shoulder of any paved roads (e.g., Site entrance and exit roads, the primary roads leading to a truck loading rack, paved areas at a truck loading rack), a minimum of two people must be present. One person will serve as a "traffic watchman" whose sole responsibility is to monitor traffic conditions and alert worker(s) of potential traffic hazards. The "traffic watchman" must be alert at all times and focused on traffic conditions. At no time should the "traffic watchman" engage in activities other than monitoring traffic conditions.
- When performing activities at wells, well vaults, manholes, etc., on, or adjacent to all paved and unpaved roads at the Site, the work vehicle should be positioned, to the fullest extent possible, to form a barrier between the worker(s) and oncoming traffic. In addition, each work vehicle will be equipped with a minimum of four high visibility traffic cones. All traffic cones will be placed as necessary to alert traffic of ongoing activities.
- All Client and Roux Associates subcontractors performing work at the Site must also adhere to the above safety procedures.

Off-Site Traffic Safety Procedures

When performing activities on or adjacent to off-site roads, the following traffic safety procedures must be followed.

- When performing activities on, or adjacent to off-site roads (paved and unpaved), a reflective vest or high visibility outerwear will be worn at all times.
- As described in on-site procedures, when performing activities on, or adjacent to off-site paved roads, a “traffic watchman” must be used at all times.
- As described in on-site procedures, when performing activities on, or adjacent to off-site roads, the work vehicle should be positioned, to the fullest extent possible, to form a barrier between the worker(s) and oncoming traffic. In addition, a minimum of four 42” high traffic cones will be placed as necessary to alert traffic of ongoing activities.

9.5.1 Inspection

Each piece of potentially hazardous equipment (i.e., power tools,) will be inspected for proper and safe operation prior to its use.

- All mechanical and rigging equipment will be inspected by the operators prior to beginning this work effort, and at least daily thereafter, to ensure proper operating capability and that all guards are adequate and in place. Defective equipment must be repaired or replaced prior to continued use/operation.
- Inspect all cables, sheaves, slings, chains, hooks, and eyes prior to use.
- Secure equipment firmly or make sure it is supported.
- Be sure all power lines are inactivated, removed, or at a safe distance.
- Always use proper loading for capacity at lifting radius.
- Keep all equipment lubricated and maintained.
- Employ signal persons whenever needed.
- Make certain that signals are understood and observed.

9.6 Drilling Operations

The SHSO will be present onsite during all Roux Associates contracted, and when requested, Client contracted, drilling operations. The SHSO will provide health and safety monitoring to ensure that appropriate levels of protection and safety procedures are utilized. The proximity of chemical, water, sewer, and electrical lines will be identified by the Client’s Project Engineer before any subsurface activity or sampling is attempted. Refer to Appendix H for the Roux

Associates' Subsurface Utility Clearance Procedure, which provides guidance regarding the identification of subsurface structures through exploratory test-hole advancement to target depths in order to be protective of underground utilities potentially in the borehole location and the health and safety of both onsite personnel and the public.

Proper stockpiling, containment, and disposal practices will be utilized in regard to the potential amount of waste generated during operations. The location of safety equipment and evacuation procedures will be established prior to initiation of operations according to this HASP. The use of hard hats, eye protection, ear protection, hand protection, and steel-toed boots will be required during all drilling operations.

9.7 Excavation and Backfill Operations

The SHSO will be present onsite during all Roux Associates contracted excavation and backfill operations and will provide health and safety monitoring to ensure that appropriate levels of protection and safety procedures are utilized. The proximity of chemical, water, sewer, and electrical lines will be identified by the Client's Project Engineer before any subsurface activity or sampling is attempted.

The following safe work practices will be followed during this task:

- The proximity of chemical, water, sewer and electrical lines will be identified by a facility representative prior to any subsurface activity beginning.
- Roux's subsurface protocol or the Client's protocol will be used, whichever is more stringent.
- While excavating, stay out of the reach of the backhoe arm's swing by standing at the end of the excavation, not near the sides (sides have the potential to cave in).

Maximum Allowable Slopes

Soil or Rock Type	Maximum Allowable Slopes (H:V) ¹ for Excavations less than 20 Feet Deep ³
Stable Rock	Vertical (90°)
Type A ²	¾ : 1 (53°)
Type B	1 : 1 (45°)
Type C	1½ : 1 (34°)

Maximum Allowable Slopes

OSHA (29 CFR 1926.652, Subpart P, Appendices A and B)

Notes:

- ¹ Numbers shown in parentheses next to maximum allowable slopes are angles expressed in degrees from the horizontal. Angles have been rounded off.
- ² A short term maximum allowable slope of 1/2H : 1V (63°) is allowed in excavations in Type A soil that are 12 feet (3.67 m) or less in depth. Short term maximum allowable slopes for excavations greater than 12 feet (3.67 m) in depth shall be 3/4H : 1V (53°).
- ³ Sloping or benching for excavations greater than 20 feet deep shall be designed by a Registered Professional Engineer.

Proper stockpiling, containment, and disposal practices will be utilized in regard to the potential amount of waste generated during operations. The location of safety equipment and evacuation procedures will be established prior to initiation of operations according to this HASP. The use of hard hats, eye protection, ear protection, hand protection and steel-toed boots will be required during excavation or other heavy equipment operations.

9.8 Overhead/Underground Power Lines

The positioning or operation of heavy equipment in the vicinity of utility services will not be initiated until the activities have been coordinated with the Client's Project Engineer and SM. Operation of equipment adjacent to or under overhead power lines, in such a manner that encroaches on authorized clearances, will not take place unless one of the following are satisfied:

- Power has been shut off and positive steps are taken to prevent the lines from being energized;
- The equipment does not have the ability to move laterally or horizontally within the minimum clearance specified in the table below, from energized power lines;
- The equipment has been positioned and blocked to allow no part, including cables, to come within the minimum clearance specified in the table below; or
- Excavation operations are not initiated within 25 feet of the verified position of underground power lines.

Minimum Required Clearances for Energized Overhead Power Lines

Nominal System Voltage of Power Line (K V)	Minimum Required Clearance (feet)
0-50	10
51-100	12
101-200	15
201-300	20
301-500	25
501-750	35
751-1000	45

1 kilovolt (KV) = 1,000 volts

9.9 Heavy Equipment Decontamination

If a steam cleaner will be utilized to decontaminate equipment, personnel should exercise caution as the high pressure steam can cause severe burns. Protective gloves, face shields, hard hats, steel-toed boots, and Tyvek suits or rain gear will be worn when using steam cleaners.

9.10 Hot/Cold Work

Roux Associates shall not perform welding unless specific clearance and a hot work permit have been obtained from the Client's Project Engineer, PM or SM. Any contractors or Roux Associates personnel performing welding must adhere to the Client's Hot Work Procedures (see Appendix E) and the procedures outlined below.

Welding equipment shall be chosen for safe application to the work and shall be installed properly. Employees designated to operate welding equipment shall be properly instructed and qualified to operate it. Mechanical ventilation shall be provided when welding or cutting:

- Where there is less than 10,000 cubic feet of air per welder;
- Where the overhead height is less than 16 feet; and
- Where required by Client practices and procedures (e.g., Confined Space Permitting).

Proper shielding and eye protection shall be used to prevent exposure of personnel to welding hazards. Proper precautions (isolating welding and cutting, removing fire hazards from vicinity,

etc.) for fire prevention shall be taken in areas where welding or other "hot work" is being done. All welding operations and other "hot work" shall be scheduled and performed in accordance with the Client's permitting system. The SHSO will be responsible for securing these permits.

9.11.1 Welding in Confined Spaces

All welding and cutting operations carried out in confined spaces shall be adequately ventilated to prevent the accumulation of toxic materials or possible oxygen deficiency and shall be performed in compliance with the Client's and Roux Associates' Confined Space Entry Procedures (Appendices E and I). In general, oxygen shall never be used for ventilation. In such circumstances where it is impossible to provide ventilation, OSHA requires airline respirators or hose masks approved by the National Institute for Occupational Safety and Health (NIOSH) for this purpose to be utilized. In areas immediately dangerous to life, NIOSH approved powered air purifying respirators (PAPR) or self-contained breathing apparatus (SCBA) shall be used. These exposures and tasks are not to be performed by Roux employees. If the work requires welding in confined spaces, this will only be performed by a qualified welder who is Confined Space Entry Trained (for permit-required entries) and provided with procedures and PPE that satisfy OSHA 29 CFR 1910.134.

9.12 Asbestos

Asbestos may be present at the site as pipe wrap, as part of the pipe material itself (asbestos-cement pipe), or as part of other building materials (e.g., in floor tiles and roofing). Asbestos shall be abated by a licensed abatement contractor according to all applicable laws and standards. Personnel should be aware of the presence of asbestos and avoid contact with friable material. Asbestos-cement pipe can emit airborne fibers if the materials are cut or sawed, or if they are damaged during demolition operations. Handling of these non-friable materials shall be limited to activities that will not generate airborne fibers.

9.13 Heat Stress

Heat stress is a significant potential hazard and can be associated with heavy physical activity and/or the use of personal protective equipment/clothing in hot weather environments.

Heat cramps are brought on by prolonged exposure to heat. As an individual sweats, water and salts are lost by the body resulting in painful muscle cramps. The signs and symptoms of heat stress are as follows:

- Severe muscle cramps, usually in the legs and abdomen;
- Exhaustion, often to the point of collapse; and
- Dizziness or periods of faintness.

First aid treatment includes shade, rest and fluid replacement. Normally, the individual should recover within one-half hour. If the individual is not better within 30 minutes and the body temperature has not decreased, the individual should be transported to an occupational health clinic or hospital for medical attention.

Heat exhaustion may occur in a healthy individual who has been exposed to excessive heat while working or exercising. The circulatory system of the individual fails as blood collects near the skin in an effort to rid the body of excess heat. The signs and symptoms of heat exhaustion are as follows:

- Rapid and shallow breathing;
- Weak pulse;
- Cold and clammy skin with heavy perspiration;
- Skin appears pale;
- Fatigue and weakness;
- Dizziness; and
- Elevated body temperature.

First aid treatment includes cooling the victim, elevating the feet, and replacing fluids. If the individual is not better within 30 minutes and the body temperature has not decreased, the individual should be transported to an occupational health clinic or hospital for medical attention. A New York vicinity city map with the location of Bellevue Hospital Center and City MD and Urgent Care Facility is included as Figure 3 and 4 (see colored tabs).

Heat stroke occurs when an individual is exposed to excessive heat and stops sweating. This condition is classified as a **MEDICAL EMERGENCY** requiring immediate cooling of the victim and transport to an emergency medical facility. The signs and symptoms of heat stroke are as follows:

- Dry, hot red skin;
- Body temperature approaching or above 105 degrees F;
- Large (dilated) pupils; and
- Loss of consciousness - the individual may go into a coma.

First aid treatment requires immediate cooling and transportation to an emergency medical facility.

Heat stress is a significant hazard if any type of protective equipment (semipermeable or impermeable) which prevents evaporative cooling is worn in hot weather environments.

9.14 Cold Stress

Cold stress is a danger at low temperatures and when the wind-chill factor is low. Prevention of cold-related illnesses is a function of whole body protection. Adequate insulating clothing must be used when the air temperature is below 40°F. A work/rest regimen will be initiated when ambient temperatures and protective clothing cause a stressful situation. In addition, reduced work periods followed by rest in a warm area may be necessary in extreme conditions. The signs and symptoms of cold stress include the following:

- Severe shivering;
- Abnormal behavior;
- Slowing;
- Weakness;
- Stumbling or repeated falling;
- Inability to walk;
- Collapse; and/or
- Unconsciousness.

First aid requires removing the victim from the cold environment, and preventing further body heat loss by covering the victim lightly with blankets. Do not cover the victim's face. If the victim is still conscious, administer hot drinks and encourage activity such as walking, wrapped in a blanket. If the victim's conditions do not improve, seek further medical attention.

9.15 Communications

- Telephones
Telephones will be available for communication with emergency support services/facilities. Telephones are located in the kiosk and are available for communication with emergency support services. In addition, Site personnel are equipped with cellular telephones. Applicable telephone and cellular phone numbers are provided in Section 1.0 (page 3) and in the colored tab section located in the back of this HASP.
- Hand Signals
To be employed by personnel required to use Level C respiratory protection. They shall be known by the entire field team before operations commence and covered during Site-specific training.

Hand Signals

SIGNAL	MEANING
Hand gripping throat	Out of air, can't breath
Grip partner's wrist	Leave area immediately
Hands on top of head	Need assistance
Thumbs up	I'm alright, okay
Thumbs down	No, negative

9.16 Additional Safe Work Practices

Refer to the SHSO for specific concerns on each individual site task. The safety rules listed below, as well as in the Client's Safe Work Practices Requirements (Appendix E), must be strictly followed:

- Inform SM of planned activities and evaluate the degree of health and safety protection required for each task;
- Practice contamination avoidance, avoid any skin contact with potentially contaminated materials (i.e., surface or ground water, soil, etc.);
- Hard hat and safety eye protection will be worn when inside the exclusion zone;

- Do not carry gum, cigarettes, food drink or cosmetics of any kind into contaminated areas;
- Wash hands before handling food and drink and other activities that could cause hand-to-mouth transfer of contaminants;
- Appropriate foot, hearing, eye, head and hand protection will be worn by those directly involved in the work efforts when warranted;
- No facial hair that interferes with the face to face piece seal of respirators will be allowed;
- Personnel not involved in the operations, excavating, or monitoring activities will remain a safe distance from the equipment;
- Do not climb over/under obstacles or barricades;
- Be alert to your own physical condition;
- Watch your buddy for signs of fatigue, exposure, heat or cold stress, etc.;
- No work will be conducted without adequate light;
- Report all accidents, no matter how minor, immediately to the SHSO and the Project Engineer; and
- **KNOW YOUR HEALTH AND SAFETY PLAN.**

10.0 DECONTAMINATION PROCEDURES

10.1 Contamination Prevention

One of the most important aspects of decontamination is the prevention of contamination. Good contamination prevention should minimize worker exposure and help ensure valid sample results by precluding cross-contamination. Procedures for contamination avoidance include:

Personnel

- Do not walk through areas of obvious or known contamination;
- Do not handle or touch contaminated materials directly;
- Make sure all personal protective equipment (PPE) has no cuts, tears or other signs of deterioration prior to donning;
- Fasten all closures on suits, covering with tape, if necessary;
- Take particular care to protect any skin injuries;
- Stay upwind of airborne contaminants; and
- Do not carry cigarettes, gum, etc., into contaminated areas.

Sampling/Monitoring

- When required by the SHSO, cover instruments with clear plastic, leaving opening for sampling and exhaust ports; and
- Bag sample containers prior to the placement of sample material.

Heavy Equipment

- Care should be taken to limit the amount of contamination that comes in contact with heavy equipment;
- Excavated soils should be contained and kept away from workers; and
- Decontaminate equipment prior to moving to another work area.

10.2 Decontamination

The SHSO shall be responsible for determining appropriate decontamination methods for all Site activities. Decontamination water should be collected, handled, drummed, and/or containerized prior to determination of classification and appropriate disposal method (see Section 11.0).

Equipment Decontamination

Sampling equipment will be decontaminated through the following steps, if necessary:

- fresh water rinse;
- non-phosphate detergent wash;
- fresh water rinse; and
- distilled water rinse.

11.0 DISPOSAL PROCEDURES

All discarded materials, waste materials, or other objects shall be handled in such a way as to preclude the potential for spreading contamination, creating a sanitary hazard, or causing litter to be left onsite. All potentially contaminated materials should be bagged, drummed, or placed in waste wranglers, as necessary, and placed in a designated area determined by the Client.

All personal protective clothing and sorbent products contaminated with petroleum product will be stored in waste storage containers (i.e., waste wranglers). Additionally, all petroleum products generated from product recovery activities (i.e., well bailing, etc.) will be drummed and stored within the hazardous waste storage area or placed in drums/storage tanks positioned in an area to be determined. All hazardous waste storage containers, tanks and drums will be labeled with the appropriate hazardous waste labels and/or placards. All contaminated materials will be disposed of in accordance with appropriate regulations. All non-contaminated materials shall be collected and bagged for appropriate disposal as normal domestic waste.

PPE & equipment shall be decontaminated, cleaned, laundered, maintained or replaced as needed to maintain their effectiveness. Employees whose non-impermeable clothing becomes wetted with hazardous substances shall immediately remove the clothing.

12.0 EMERGENCY PLAN

As a result of the hazards onsite and the conditions under which operations are conducted, the possibility of an emergency exists. An emergency plan is required by OSHA (29 CFR 1910.120) to be available for use and is included below. A copy of this plan shall be available in the Support zone at each work site.

In the event of an emergency situation, such as fire, explosion, significant release of particulates, etc., all persons in both the restricted and non-restricted areas will evacuate and assemble near the Support Zone or other safe area as identified by the Site Emergency Coordinator(s). The Site Emergency Coordinator(s) will have authority to initiate proper action if outside services are required. Under no circumstances will incoming personnel or visitors be allowed to proceed into the area once the emergency signal has been given. The SHSO or SM must see that access for emergency equipment is provided and that all spark-producing apparatus has been shut down once the alarm has been sounded. Once the safety of all personnel is established, the fire department and other emergency response groups will be notified by telephone of the emergency. Then, other personnel listed in Section 12.4 shall be notified.

12.1 Site Emergency Coordinator(s)

The Site Emergency Coordinator(s) are:

- Site Manager;
- Site Health and Safety Officer;
- Project Engineer; and
- Facility Manager.

The Site Emergency Coordinator(s) shall implement this emergency plan whenever conditions at the site warrant such action. The coordinator(s) will be responsible for assuring the evacuation, emergency treatment, emergency transport of site personnel as necessary, and notification of emergency response units and the appropriate management staff.

12.2 Evacuation

Withdrawal Upwind

The work party will continually note general wind directions while onsite. Upon noting the conditions warranting movement away from the work site, the crew will move upwind a distance of approximately 100 feet or farther, as indicated by the site monitoring instruments. Donning SCBA and a lifeline, SHSO will return to the work site to determine if the condition noted was transient or persistent. If persistent, on-site personnel will be notified of the situation and the need to leave the site or don SCBA. When access to the site is restricted and escape possibly hindered, the crew may be instructed to evacuate the site rather than move upwind, especially if withdrawal upwind moves the crew away from escape routes.

Site Evacuation

Upon determination of conditions warranting site evacuation, the work party will proceed upwind of the work site and notify the SHSO and the Client's Project Engineer of site conditions. If the hazard is toxic gas, respirators will be donned. The crew will proceed to the field office to assess the situation. The advisability and type of further response action will be coordinated and carried out by the SHSO, the PM and the Client's Project Engineer. Site evacuation routes are illustrated in Figure 7.

12.3 Potential or Actual Fire or Explosion

If the potential for a fire exists or if an actual fire or explosion occurs, the following procedure will be implemented:

- Immediately evacuate the site as described above (Section 12.2);
- Notify Client's Project Engineer, SHSO and PM; and
- Notify fire and security. Call **911**
Fire Department – 911
Police Department – 911

12.4 Environmental Incident (Release or Spread of Contamination)

If possible, the spread of contamination should be controlled or stopped. The Facility Manager must be informed of the need to contact police and fire authorities to inform them of the possible or immediate need for nearby evacuation. If a significant release has occurred, the National

Response Center and other appropriate groups should be contacted by the Facility Manager or his designee. Those groups will alert National or Regional Response Teams as necessary. Following these emergency calls, the remaining personnel listed in the table below shall be notified:

Emergency Telephone Numbers

Type	Name	Telephone #
Fire Department	FDNY	911
HazMat Emergency Response		911
Law Enforcement	NYPD	911
Hospital	Bellevue Hospital Center	(212) 562-4141
Ambulance	FDNY	911
Urgent Care Center	City MD	(646) 596-9267
National Response Center (Release or Spill)		(800) 424-8802
Facility Manager	Lance Howard	(646) 734-0738
Site Health and Safety Officer	Ron Lombino	(631) 969-2010
Project Manager	Richard Maxwell	(631) 921-9531
Corporate H&S Manager	Joseph Gentile	(856) 832-3768 (Office) (610) 844-6911 (Cell)

These contacts and phone numbers will be posted in the SZ.

12.5 Personal Injury

If on-site personnel require emergency medical treatment, the following steps will be taken:

- 1) Notify the Project Manager, Principal, and/or other Roux Senior Management for Illness or Injury Case Management protocol to be initiated.
- 2) Notify the Fire Department or Ambulance service and request an ambulance or transport the victim to the hospital, as appropriate.
- 3) Decontaminate to the extent possible prior to administration of first aid or movement to emergency facilities.
- 4) First aid will be provided by emergency medical services (EMS) or by on-site personnel trained in first aid, CPR, and blood borne pathogens, if available.
- 5) The OHSM will supply medical data sheets on the victim (if a Roux Associates, Inc. employee) to appropriate medical personnel.

Accident Report Forms and Medical Services Form are provided in Appendices F, G, and H.

12.6 Overt Personnel Exposure

If an overt exposure to toxic materials should occur, the exposed person shall be treated onsite as follows:

Skin Contact:	Wash/rinse affected area thoroughly with copious amounts of soap and water, then provide appropriate medical attention. An emergency shower or drench system shall be accessible at the Site at all times. Utilizing eyewash, eyes should be rinsed for at least fifteen (15) minutes upon chemical contamination.
Inhalation:	Move to fresh air and/or, if necessary, decontaminate, and transport to the hospital.
Ingestion:	Decontaminate and transport to emergency medical facility.
Puncture Wound or Laceration:	Decontaminate and transport to emergency medical facility. SHSO will coordinate with the CHSM and the HR Director to obtain medical information on the injured if necessary.

12.7 Adverse Weather Conditions

In the event of adverse weather conditions, the SHSO will determine if work can continue without sacrificing the health and safety of field workers. Some of the items to be considered prior to determining if work should continue are:

- Heavy rainfall;
- High wind;
- Potential for heat stress;
- Potential for cold stress and cold-related injuries;
- Limited visibility;
- Potential for electrical storms – stop work for a minimum of 15 minutes after observing a lightning strike and for at least 15 minutes after the storm has passed;
- Potential for malfunction of H&S monitoring equipment or gear; and
- Potential for accidents.

12.8 Reportable Incidents at the Site

Since submission of the revised HASP, there has been zero reportable incident(s) at the Site. Any incident where Roux Associates' or Roux employees' vehicles are involved in a collision with structures, equipment, other vehicles, or pedestrians will result in the notification of Roux Associates personnel and Client Managers and completion of an *ACORD*[®] Automobile Loss Notice Form (attached as Appendix J).

14.0 APPROVALS

By their signature, the undersigned certify that this HASP is approved and will be utilized at the 211 West 29th Street Facility.

TABLE

1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at the Site

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
Acenaphthene	83-32-9	None established	None established	None established	None established	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, respiratory system	Eyes, skin, respiratory system	Brown solid
Acetone	67-64-1	TWA 500 ppm STEL 750 ppm	TWA 250 ppm (590 mg/m ³)	TWA 1000 ppm (2400 mg/m ³)	2500 ppm [10%LEL]	inhalation, ingestion, skin and/or eye contact	Irritation eyes, nose, throat; headache, dizziness, central nervous system depression; dermatitis	Eyes, skin, respiratory system, central nervous system	Colorless liquid with a fragrant, mint-like odor BP: 133°F F.P: 0°F UEL: 12.8% LEL: 2.5% Class IB Flammable Liquid
Anthracene (Coal Tar Pitch Volatile)	65996-93-2	TWA 0.2 mg/m ³	Ca TWA 0.1 mg/m ³ (cyclohexane-extractable fraction)	TWA 0.2 mg/m ³ (benzene-soluble fraction)	Ca [80 mg/m ³]	inhalation, skin and/or eye contact	Dermatitis, bronchitis, [potential occupational carcinogen]	respiratory system, skin, bladder, kidneys	Black or dark-brown amorphous residue. Combustible Solids
Antimony	7440-36-0	TWA 0.5 mg/m ³	TWA 0.5 mg/m ³	TWA 0.5 mg/m ³	50 mg/m ³ (as Sb)	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat, mouth; cough; dizziness; headache; nausea, vomiting, diarrhea; stomach cramps; insomnia; anorexia; unable to smell properly	Eyes, skin, respiratory system, cardiovascular system	Silver-white, lustrous, hard, brittle solid; scale-like crystals; or a dark-gray, lustrous powder. BP: 2975°F
Arsenic (inorganic)	7440-38-2 (metal)	TWA 0.01 mg/m ³	Ca C 0.002 mg/m ³ [15-min]	TWA 0.010 mg/m ³	Ca [5 mg/m ³ (as As)]	Inhalation; ingestion; skin absorption; skin and/or eye contact	Ulceration of nasal septum, dermatitis, GI disturbances, peripheral neuropathy, resp irritation, hyperpigmentation of skin, [potential occupational carcinogen]	Liver, kidneys, skin, lungs, lymphatic sys	Metal: sliver-gray or tin-white, brittle, odorless solid BP: sublimates
Asphalt fumes	8052-42-4	TWA 0.5 mg/m ³ (fumes)	Ca C 5 mg/m ³ [15 min]	None established	Ca [IDLH value has not been determined]	Skin absorption; inhalation; skin and/or eye contact	Irritation eyes, resp sys	Eyes, respiratory system	Black or dark brown cement-like substance Combustible solid
Barium	7440-39-3	TWA 0.5 mg/m ³	None established	TWA 0.5 mg/m ³	None established	Inhalation, ingestion, skin contact	Irritation skin, respiratory system, digestive system	Skin, eyes, respiratory system	Yellow white powder BP: 1640 C
Benzene	71-43-2	TWA 0.5 ppm STEL 2.5 ppm	Ca TWA 0.1 ppm STEL 1 ppm	TWA 1 ppm ST 5 ppm	Ca [500 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, respiratory system; dizziness; headache, nausea, staggered gait; anorexia, lassitude (weakness, exhaustion); dermatitis; bone marrow depression; [potential occupational carcinogen]	Eyes, skin, respiratory system, blood, central nervous system, bone marrow	Colorless to light yellow liquid with an aromatic odor [Note: Solid below 42 °F] BP: 176°F Fl.Pt. = 12°F LEL: 1.2% UEL: 7.8% Class B Flammable liquid
Benz[a]anthracene	56-55-3	None established [skin cancer]	None established	None established	None established	Inhalation; ingestion; skin absorption; skin and/or eye contact	Irritation eyes, skin, respiratory system, CNS; skin cancer	Skin	Pale Yellow crystal, solid BP: 438 C
Benzo[a]pyrene	50-32-8	None established [skin cancer]	TWA 0.1 mg/m ³	TWA 0.2 mg/m ³	None established	Inhalation; ingestion; skin absorption; skin and/or eye contact	POISON. This material is an experimental carcinogen, mutagen, tumorigen, neoplastigen and teratogen. It is a probable carcinogen in humans and a known human mutagen. IARC Group 2A carcinogen. It is believed to cause bladder, skin and lung cancer. Exposure to it may damage the developing fetus. May cause reproductive damage. Skin, respiratory and eye irritant or burns.	Skin, eye, bladder, lung, reproductive	Yellow crystals or powder [found in cigarette smoke, coal tar, fuel exhaust gas and in many other sources] BP: 495 C
Benzo[b]fluoranthene	205-99-2	None established [skin cancer]	TWA 0.1 mg/m ³	TWA 0.2 mg/m ³	None established	Inhalation; ingestion; skin and/or eye contact	No data were identified on the toxicity of benzo[b]fluoranthene to humans. Based on results of studies in animals, IARC concluded that benzo[b]fluoranthene is possibly carcinogenic to humans	Respiratory system, skin, bladder, kidneys	Off-white to tan powder
Benzo[k]fluoranthene	207-08-9	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, respiratory tract, gastrointestinal; fatal if swallowed, inhaled, absorbed through the skin; vomiting, nausea, diarrhea	Lungs, respiratory system	Yellow crystals BP: 480 C
Beryllium	7440-41-7 (metal)	TWA 0.00005 mg/m ³	Ca C 0.0005 mg/m ³	TWA 0.002 mg/m ³ C 0.005 mg/m ³ (30 minutes) with a maximum peak of 0.025 mg/m ³	Ca [4 mg/m ³ (as Be)]	inhalation, skin and/or eye contact	Berylliosis (chronic exposure): anorexia, weight loss, lassitude (weakness, exhaustion), chest pain, cough, clubbing of fingers, cyanosis, pulmonary insufficiency; irritation eyes; dermatitis; [potential occupational carcinogen]	Eyes, skin, respiratory system	Metal: A hard, brittle, gray-white solid. BP: 4532°F
Bis(2-ethylhexyl) phthalate (Di(2-ethylhexyl)phthalate)	117-81-7	TWA 5 mg/m ³	TWA 5 mg/m ³ STEL 10 mg/m ³ (do not exceed during any 15-minute work period)	TWA 5 mg/m ³	None established	inhalation, skin and/or eye contact	Irritation eyes, skin, nose, throat; affect the nervous system and liver; damage to male reproductive glands	Eyes, skin, nose, respiratory system, nervous system, reproductive system, liver	Colorless to light colored, thick liquid with slight odor
Butane	106-97-8	STEL 1000 ppm	TWA 800 ppm (1900 mg/m ³)	None established	None established	inhalation, skin and/or eye contact (liquid)	Drowsiness, narcosis, asphyxia; liquid: frostbite	central nervous system	Colorless gas with a gasoline-like or natural gas odor. BP: 31°F UEL: 8.4% LEL: 1.6% Flammable Gas

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
2-Butanone (Methyl Ethyl Ketone or MEK)	78-93-3	TWA 200 ppm (590 mg/m ³) STEL 300 ppm (885 mg/m ³)	TWA 200 ppm (590 mg/m ³) STEL 300 ppm (885 mg/m ³)	TWA 200 ppm (590 mg/m ³)	3000 ppm	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose; headache; dizziness; vomiting; dermatitis	Eyes, skin, respiratory system, central nervous system	Colorless liquid with a moderately sharp, fragrant, mint- or acetone-like odor. BP: 175°F Fl.P: 16°F UEL(200°F): 11.4% LEL(200°F): 1.4% Class IB Flammable Liquid
n-Butylbenzene	104-51-8	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; CNS depression, lung damage; nausea, vomiting, headache, dizziness, weakness, loss of coordination, blurred vision, drowsiness, confusion, disorientation	Eyes, skin, respiratory system, central nervous system	Colorless liquid with a sweet odor BP: 183 C Fl.P: 59 C UEL: 5.8% LEL: 0.8%
sec-Butylbenzene	135-98-8	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, upper airway; central nervous system, headache, dizziness; gastrointestinal disturbance	Respiratory system, central nervous system, eyes, skin;	Colorless liquid BP: 344°F Fl.P: 126 °F UEL: 6.9% LEL: 0.8% Combustible liquid
tert-Butylbenzene	98-06-6	None established	None established	None established	None established	inhalation, skin absorption, ingestion,	Eye and respiratory irritant; CNS depression; liver or kidney damage	Respiratory system, central nervous system, eyes, liver, kidney	Colorless liquid with an aromatic odor BP: 168 - 169 C Fl.P: 34 C UEL:5.6 % LEL: 0.8 %
Cadmium	7440-43-9 (metal)	TWA 0.01 mg/m ³	Ca	TWA 0.005 mg/m ³	Ca [9 mg/m ³ (as Cd)]	inhalation, ingestion	Pulmonary edema, dyspnea (breathing difficulty), cough, chest tightness, substernal (occurring beneath the sternum) pain; headache; chills, muscle aches; nausea, vomiting, diarrhea; anosmia (loss of the sense of smell), emphysema, proteinuria, mild anemia; [potential occupational carcinogen]	respiratory system, kidneys, prostate, blood	Metal: Silver-white, blue-tinged lustrous, odorless solid. BP: 1409°F
Carbon Disulfide	75-15-0	TWA 1 ppm	TWA 1 ppm (3 mg/m ³) STEL 10 ppm (30 mg/m ³) [skin]	TWA 20 ppm C 30 ppm 100 ppm (30-minute maximum peak)	500 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Dizziness, headache, poor sleep, lassitude (weakness, exhaustion), anxiety, anorexia, weight loss; psychosis; polyneuropathy; Parkinson-like syndrome; ocular changes; coronary heart disease; gastritis; kidney, liver injury; eye, skin burns; dermatitis; reproductive effects	central nervous system, peripheral nervous system, cardiovascular system, eyes, kidneys, liver, skin, reproductive system	Colorless to faint-yellow liquid with a sweet ether-like odor. BP: 116°F Fl.P: -22°F UEL: 50.0% LEL: 1.3% Class IB Flammable Liquid
Carbon Monoxide	630-08-0	TWA 25 ppm	TWA 35 ppm C 200 ppm	TWA 50 ppm	1,200 ppm	inhalation	Carboxyhemoglobinemia	Blood	Colorless, odorless gas
Chlorobenzene	108-90-7	TWA 10 ppm	None established	TWA 75 ppm (350 mg/m ³)	1000 ppm	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose; drowsiness, incoordination; central nervous system depression; in animals: liver, lung, kidney injury	Eyes, skin, respiratory system, central nervous system, liver	Colorless liquid with an almond-like odor BP: 270°F Fl.P: 82°F UEL: 9.6% LEL: 1.3%
Chloroethane (Ethyl Chloride)	75-00-3	TWA 100ppm	Handle with caution in the workplace	TWA 1000 ppm (2600 mg/m ³)	3800 ppm [10%LEL]	inhalation, skin absorption (liquid), ingestion (liquid), skin and/or eye contact	Incoordination, inebriation; abdominal cramps; cardiac arrhythmias, cardiac arrest; liver, kidney damage	Liver, kidneys, respiratory system, cardiovascular system, central nervous system	Colorless gas or liquid (below 54°F) with a pungent, ether-like odor. BP: 54°F Fl.P: NA (Gas) -58°F (Liquid) UEL: 15.4% LEL: 3.8% Flammable Gas
Chloroform	67-66-3	TWA 10 ppm	Ca STEL 2 ppm (9.78 mg/m ³) [60-minute]	C 50 ppm (240 mg/m ³)	Ca [500 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; dizziness, mental dullness, nausea, confusion; headache, lassitude (weakness, exhaustion); anesthesia; enlarged liver; [potential occupational carcinogen]	Liver, kidneys, heart, eyes, skin, central nervous system	Colorless liquid with a pleasant odor BP: 143°F
Chromium	7440-47-3	TWA 0.5 mg/m ³ (metal and Cr III compounds) TWA 0.05 mg/m ³ (water-soluble Cr VI compounds) TWA 0.01 mg/m ³ (insoluble Cr IV compounds)	TWA 0.5 mg/m ³	TWA 1 mg/m ³	250 mg/m ³ (as Cr)	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin; lung fibrosis (histologic)	Eyes, skin, respiratory system	Blue-white to steel-gray, lustrous, brittle, hard, odorless solid. BP: 4788°F
Chrysene; Phenanthrene; Pyrene; Coal tar pitch volatiles	65996-93-2	TWA 0.2 mg/m ³	Ca TWA 0.1 mg/m ³ (cyclohexane-extractable fraction)	TWA 0.2 mg/m ³ (benzene-soluble fraction)	Ca [80 mg/m ³]	Inhalation, skin and/or eye contact	Dermatitis, bronchitis, [potential occupational carcinogen]	Respiratory system, skin, bladder, kidneys	Black or dark-brown amorphous residue. Combustible Solids
Coal Tar Pitch Volatiles; Chrysene; Phenanthrene; Pyrene	65996-93-2	TWA 0.2 mg/m ³	Ca TWA 0.1 mg/m ³ (cyclohexane-extractable fraction)	TWA 0.2 mg/m ³ (benzene-soluble fraction)	Ca [80 mg/m ³]	Inhalation, skin and/or eye contact	Dermatitis, bronchitis, [potential occupational carcinogen]	respiratory system, skin, bladder, kidneys	Black or dark-brown amorphous residue. Combustible Solids
Copper	7440-50-8	TWA 0.2mg/m ³ (fume) 1 mg/m ³ (dusts and mists)	TWA 1 mg/m ³	TWA 1 mg/m ³	100 mg/m ³ (as Cu)	Inhalation, ingestion, skin and/or eye contact	Irritation eyes, respiratory system; cough, dyspnea (breathing difficulty), wheezing	Eyes, skin, respiratory system, liver, kidneys (increase(d) risk with Wilson's disease)	Noncombustible Solid in bulk form, but powdered form may ignite. BP: 4703°F

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
Crude Oil	8002-05-9	None established	TWA 350 mg/m ³	None established	1100 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, respiratory system; lung damage; dermatitis; central nervous system effects	central nervous system	Viscous clear, yellow, brown, greenish black liquid, strong hydrocarbon and sulfur (rotten egg) odor when containing H ₂ S. BP: 30 -1000°F Fl.Pt.: -40°F LEL: 3% UEL: 12.5% Flammable liquid and vapor
1,2-Dichlorobenzene	95-50-1	TWA 25 ppm STEL 50 ppm	C 50 ppm (300 mg/m ³)	C 50 ppm (300 mg/m ³)	200 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, nose; liver, kidney damage; skin blisters	Eyes, skin, respiratory system, liver, kidneys	Colorless to pale-yellow liquid with a pleasant, aromatic odor. [herbicide] BP: 357°F Fl.P: 151°F UEL: 9.2% LEL: 2.2% Class IIIA Combustible Liquid
1,4-Dichlorobenzene	106-46-7	TWA 10 ppm	Ca	TWA 75 ppm (450 mg/m ³)	Ca [150 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Eye irritation, swelling periorbital (situated around the eye); profuse rhinitis; headache, anorexia, nausea, vomiting; weight loss, jaundice, cirrhosis; in animals: liver, kidney injury; [potential occupational carcinogen]	Liver, respiratory system, eyes, kidneys, skin	Colorless or white crystalline solid with a mothball-like odor. [insecticide] BP: 345°F Fl.P: 150°F LEL: 2.5% Combustible Solid
1,1-Dichloroethane	75-34-3	TWA 100 ppm	TWA 100 ppm (400 mg/m ³)	TWA 100 ppm (400 mg/m ³)	3000 ppm	inhalation, ingestion, skin and/or eye contact	Irritation skin; central nervous system depression; liver, kidney, lung damage	Skin, liver, kidneys, lungs, central nervous system	Colorless, oily liquid with a chloroform-like odor. BP: 135°F Fl.P: 2°F UEL: 11.4% LEL: 5.4%
1,2-Dichloroethane (Ethylene Dichloride)	107-06-2	TWA 10 ppm	Ca TWA 1 ppm (4 mg/m ³) STEL 2 ppm (8 mg/m ³)	TWA 50 ppm C 100 ppm 200 ppm [5-minute maximum peak in any 3 hours]	Ca [50 ppm]	inhalation, ingestion, skin absorption, skin and/or eye contact	Irritation eyes, corneal opacity; central nervous system depression; nausea, vomiting; dermatitis; liver, kidney, cardiovascular system damage; [potential occupational carcinogen]	Eyes, skin, kidneys, liver, central nervous system, cardiovascular system	Colorless liquid with a pleasant, chloroform-like odor. [Note: Decomposes slowly, becomes acidic & darkens in color.] BP: 182°F Fl.P: 56°F UEL: 16% LEL: 6.2% Class IB Flammable Liquid
1,1-Dichloroethane	75-35-4	TWA 100 ppm	Ca (lowest feasible concentration)	TWA 1ppm	Ca [N.D.]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, throat; dizziness, headache, nausea, dyspnea (breathing difficulty); liver, kidney disturbance; pneumonitis; [potential occupational carcinogen]	Eyes, skin, respiratory system, central nervous system, liver, kidneys	Colorless liquid or gas (above 89°F) with a mild, sweet, chloroform-like odor. BP: 89°F Fl.P: -2°F UEL: 15.5% LEL: 6.5% Class IA Flammable Liquid
1,2-Dichloroethene (total)	540-59-0	TWA 200 ppm	TWA 200 ppm (790 mg/m ³)	TWA 200 ppm (790 mg/m ³)	1000 ppm	inhalation, ingestion, skin and/or eye contact	Irritation eyes, respiratory system; central nervous system depression	Eyes, respiratory system, central nervous system	Colorless liquid (usually a mixture of the cis & trans isomers) with a slightly acrid, chloroform-like odor BP: 118-140°F Fl.P: 36-39°F UEL: 12.8% LEL: 5.6% Class IB Flammable Liquid
cis-1,2-Dichloroethene	156-59-2	TWA 200 ppm	TWA 200 ppm	TWA 200 ppm	None established	inhalation, skin absorption, ingestion	Harmful if swallowed, inhaled, or absorbed through skin. Irritant. Narcotic. Suspected carcinogen	Skin	Colorless liquid BP: 60 C Fl.P: 4 C UEL: 12.8% LEL: 9.7 %
trans-1,2-Dichloroethene	156-60-5	TWA 200 ppm	None established	TWA 200 ppm STEL 250 ppm (skin)	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Narcotic. Irritation eyes, skin, respiratory tract, mucous membrane; CNS depression.	Respiratory tract, mucous membrane, eyes, skin, CNS	Colorless liquid with a fruity pleasant odor BP: 48°C Fl.P 6C UEL: 12.8% LEL: 9.7%
Dibenzo[a,h]anthracene	53-70-3	None established	None established	None established	None established	Inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin	Eyes, skin; skin photosensitization.	Colorless crystalline powder BP: 524°C

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
Diesel Fuel #2	68476-34-6	TWA 100 mg/m³	None established	Designated as an OSHA Select Carcinogen	None established	ingestion, skin and/or eye contact	Kidney damage; potential lung damage; suspected carcinogen; irritation of eyes, skin, respiratory tract; dizziness, headache, nausea; chemical pneumonitis (from aspiration of liquid); dry, red skin; irritant contact dermatitis; eye redness, pain.	Eyes, skin, kidneys	Clear yellow brown combustible liquid; floats on water; distinct diesel petroleum hydrocarbon odor. BP: 356-716°F Fl.P: 154.4-165.2°F LEL: 0.6% UEL: 7.0%
2,4-Dimethylphenol	105-67-9	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, respiratory system, mouth, throat, stomach; dizziness, weakness, fatigue, nausea, headache; systemic damage; moderate to severe eye injury.	Skin, CVS, eyes, CNS	Clear, colorless liquid with a faint ether or chloroform-like odor BP: 178°F
Duosol	78207-03-1	None established	None established	None established	None established	ingestion, skin and/or eye contact	Irritation eyes, skin; Dermatitis	Eyes, skin	White solid with alcohol odor
Ethylbenzene	100-41-4	TWA 100 ppm	TWA 100 ppm (435 mg/m ³) STEL 125 ppm (545 mg/m ³)	TWA 100 ppm (435 mg/m ³)	800 ppm [10%LEL]	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, mucous membrane; headache; dermatitis; narcosis, coma	Eyes, skin, respiratory system, central nervous system	Colorless liquid with an aromatic odor. BP: 277°F Fl.P: 55°F UEL: 6.7% LEL: 0.8% Class IB Flammable Liquid
Fluoranthene	206-44-0	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; possible burns; heart and liver injury, pulmonary edema, respiratory arrest, gastrointestinal disturbances.	Heart, liver, lungs.	Yellow needles.
Fluorene	86-73-7	None established	None established	None established	None established	inhalation, ingestion, skin and/or eye contact	Irritation skin, digestive tract	Skin	White crystals BP: 563°F
Fuel Oil #2	68476-30-2	TWA 100mg/m³	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; CNS effects; nausea, vomiting, headache, cramping, dizziness, weakness, loss of coordination,, drowsiness; kidney, liver damage	Eyes, skin, CNS	Clear or yellow to red oily liquid, kerosene-like odor BP: 347 - 689 °F UEL:5-6% LEL: 0.7-1.0%
Furfural	98-01-1	TWA 2 ppm	None established	TWA 5 ppm (20 mg/m ³) [skin]	100 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, upper respiratory system; headache; dermatitis	Eyes, skin, respiratory system	Colorless to amber liquid with an almond-like odor. BP: 323°F Fl.P: 140°F UEL: 19.3% LEL: 2.1% Class IIIA Combustible Liquid
Gasoline	8006-61-9	TWA 300 ppm STEL 500 ppm	Carcinogen	None established	Ca [IDLH value has not been determined]	Skin absorption; inhalation; ingestion; skin and/or eye contact	Eyes and skin irritation, mucous membrane; dermatitis; headache; listlessness, blurred vision, dizziness, slurred speech, confusion, convulsions; chemical pneumonitis; possible liver, kidney damage [Potential occupational carcinogen]	Eyes, skin, respiratory system, CNS, Liver, Kidneys	Clear liquid with a characteristic odor, aromatic Fl.Pt = -45°F LEL = 1.4% UEL = 7.6% Class 1B Flammable Liquid
Hexachlorobutadiene	87-68-3	TWA 0.02 ppm	Ca TWA 0.02 ppm (0.24 mg/m ³) [skin]	None established	Ca [N.D.]	inhalation, skin absorption, ingestion, skin and/or eye contact	In animals: irritation eyes, skin, respiratory system; kidney damage; [potential occupational carcinogen]	Eyes, skin, respiratory system, kidneys	Clear, colorless liquid with a mild, turpentine-like odor. BP: 419°F
Hydrogen Sulfide	7783-06-4	TWA 1 ppm STEL 5 ppm	C 10 ppm (15 mg/m ³) [10-minute]	C 20 ppm 50 ppm [10-minute maximum peak]	100 ppm	inhalation, skin and/or eye contact	Irritation eyes, respiratory system; apnea, coma, convulsions; conjunctivitis, eye pain, lacrimation (discharge of tears), photophobia (abnormal visual intolerance to light), corneal vesiculation; dizziness, headache, lassitude (weakness, exhaustion), irritability, insomnia; gastrointestinal disturbance; liquid: frostbite	Eyes, respiratory system, central nervous system	Colorless gas with a strong odor of rotten eggs. BP: -77°F UEL: 44.0% LEL: 4.0% Flammable Gas
Indeno[1,2,3-cd]pyrene	193-39-5	None established	None established	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; possible human carcinogen (skin); weakness; affect liver, lung tissue, renal tissue; impairment of blood forming tissue	Skin	Fluorescent green-yellow crystalline solid BP: 536 C
Isopropylbenzene (Cumene)	98-82-8	TWA 50 ppm	TWA 50 ppm (245 mg/m ³) [skin]	TWA 50 ppm (245 mg/m ³) [skin]	900 ppm [10%LEL]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, mucous membrane; dermatitis; headache, narcosis, coma	Eyes, skin, respiratory system, central nervous system	Colorless liquid with a sharp, penetrating, aromatic odor. BP: 306°F Fl.P: 96°F UEL: 6.5% LEL: 0.9%
p-Isopropyltoluene	99-87-6	None established	None established	None established	None established	inhalation, skin absorption, eye contact	Irritation skin	CNS, skin	Colorless, clear liquid, sweetish aromatic odor BP: 350.8°F Class III Flammable liquid

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
Kerosene	8008-20-6	TWA 200 mg/m ³	TWA 100 mg/m ³	None established	IDLH value has not been determined	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat; burning sensation in chest; headache, nausea, lassitude (weakness, exhaustion), restlessness, incoordination, confusion, drowsiness; vomiting, diarrhea; dermatitis; chemical pneumonitis (aspiration liquid)	Eyes, skin, respiratory system, central nervous system	Colorless to yellowish, oily liquid with a strong, characteristic odor. BP: 347-617°F Fl.P: 100-162°F UEL: 5% LEL: 0.7% Class II Combustible Liquid
Lead	7439-92-1	TWA 0.05 mg/m ³	TWA (8-hour) 0.050 mg/m ³	TWA 0.050 mg/m ³	100 mg/m ³ (as Pb)	inhalation, ingestion, skin and/or eye contact	Lassitude (weakness, exhaustion), insomnia; facial pallor; anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; paralysis wrist, ankles; encephalopathy; kidney disease; irritation eyes; hypertension	Eyes, gastrointestinal tract, central nervous system, kidneys, blood, gingival tissue	A heavy, ductile, soft, gray solid. BP: 3164°F Noncombustible Solid in bulk form
Manganese	7439-96-5 (metal)	TWA 0.02 mg/m³	TWA 1 mg/m ³ STEL 3 mg/m ³	C 5 mg/m ³	500 mg/m ³ (as Mn)	inhalation, ingestion	Manganism; asthenia, insomnia, mental confusion; metal fume fever; dry throat, cough, chest tightness, dyspnea (breathing difficulty), rales, flu-like fever; low-back pain; vomiting; malaise (vague feeling of discomfort); lassitude (weakness, exhaustion); kidney damage	respiratory system, central nervous system, blood, kidneys	A lustrous, brittle, silvery solid. BP: 3564°F
Mercury (organo) alkyl compounds (as Hg)	7439-97-6	TWA 0.01 mg/m ³ STEL 0.03 mg/m ³ [skin]	TWA 0.01 mg/m ³ STEL 0.03 mg/m ³ [skin]	TWA 0.01 mg/m ³ C 0.04 mg/m ³	2 mg/m ³ (as Hg)	inhalation, skin absorption, ingestion, skin and/or eye contact	Paresthesia; ataxia, dysarthria; vision, hearing disturbance; spasticity, jerking limbs; dizziness; salivation; lacrimation (discharge of tears); nausea, vomiting, diarrhea, constipation; skin burns; emotional disturbance; kidney injury; possible teratogenic effects	Eyes, skin, central nervous system, peripheral nervous system, kidneys	Appearance and odor vary depending upon the specific (organo) alkyl mercury compound
Mercury compounds [except (organo) alkyls] (as Hg) Mercury	7439-97-6	TWA 0.025 mg/m ³ (elemental and inorganic forms)	Hg Vapor: TWA 0.05 mg/m ³ [skin] Other: C 0.1 mg/m ³ [skin]	TWA 0.1 mg/m ³	10 mg/m ³ (as Hg)	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; cough, chest pain, dyspnea (breathing difficulty), bronchitis, pneumonitis; tremor, insomnia, irritability, indecision, headache, lassitude (weakness, exhaustion); stomatitis, salivation; gastrointestinal disturbance, anorexia, weight loss; proteinuria	Eyes, skin, respiratory system, central nervous system, kidneys	Metal: Silver-white, heavy, odorless liquid. [Note: "Other" Hg compounds include all inorganic & aryl Hg compounds except (organo) alkyls.] BP: 674°F
Methyl Ethyl Ketone or MEK (2-Butanone)	78-93-3	TWA 200 ppm STEL 300 ppm	TWA 200 ppm (590 mg/m ³) STEL 300 ppm (885 mg/m ³)	TWA 200 ppm (590 mg/m ³)	3000 ppm	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose; headache; dizziness; vomiting; dermatitis	Eyes, skin, respiratory system, central nervous system	Colorless liquid with a moderately sharp, fragrant, mint- or acetone-like odor. BP: 175°F Fl.P: 16°F UEL(200°F): 11.4% LEL(200°F): 1.4% Class IB Flammable Liquid
Methyl tert-butyl ether (MTBE)	1634-04-4	TWA 50 ppm	No established REL	None established	None established	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, mucous membrane, respiratory; dizziness, nausea, headache, intoxication	Eyes, skin, mucous membrane, respiratory system, central nervous system	Colorless liquid BP: 55.2 C
Methylene Chloride (Dichloromethane)	75-09-2	TWA 50 ppm, A3 - suspected human carcinogen	Ca	TWA 25 ppm STEL 125 ppm	Ca [2300 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; lassitude (weakness, exhaustion), drowsiness, dizziness; numbness, tingle limbs; nausea; [potential occupational carcinogen]	Eyes, skin, cardiovascular system, central nervous system	Colorless liquid with a chloroform-like odor BP: 104°F UEL: 23% LEL: 13%
Naphtha (Rubber Solvent)	8030-30-6	None established	TWA 100 ppm (400 mg/m ³)	TWA 100 ppm (400 mg/m ³)	1000 ppm [10%LEL]	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose; dizziness, drowsiness; dermatitis; in animals: liver, kidney damage	Eyes, skin, respiratory system, central nervous system, liver, kidneys	Reddish-brown, mobile liquid with an aromatic odor BP: 320-428°F Fl.P: 100-109°F Class II Combustible Liquid
Naphthalene	91-20-3	TWA 10 ppm [skin]	TWA 10 ppm (50 mg/m ³) STEL 15 ppm (75 mg/m ³)	TWA 10 ppm (50 mg/m ³)	250 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes; headache, confusion, excitement, malaise (vague feeling of discomfort); nausea, vomiting, abdominal pain; irritation bladder; profuse sweating; jaundice; hematuria (blood in the urine), renal shutdown; dermatitis, optical neuritis, corneal damage	Eyes, skin, blood, liver, kidneys, central nervous system	Colorless to brown solid with an odor of mothballs. BP: 424°F Fl.P: 174°F UEL: 5.9% LEL: 0.9%
Nickel	7440-02-0 (Metal)	TWA 1.5 mg/m ³ (elemental) TWA 0.1 mg/m ³ (soluble inorganic compounds) TWA 0.2 mg/m ³ (insoluble inorganic compounds) TWA 0.1 mg/m ³ (Nickel subsulfide)	Ca TWA 0.015 mg/m ³	TWA 1 mg/m ³	Ca [10 mg/m ³ (as Ni)]	inhalation, ingestion, skin and/or eye contact	Sensitization dermatitis, allergic asthma, pneumonitis; [potential occupational carcinogen]	Nasal cavities, lungs, skin	Metal: Lustrous, silvery, odorless solid. BP: 5139°F
Nitrobenzene	98-95-3	TWA 1 ppm	TWA 1 ppm (5 mg/m ³) [skin]	TWA 1 ppm (5 mg/m ³) [skin]	200 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; anoxia; dermatitis; anemia; methemoglobinemia; in animals: liver, kidney damage; testicular effects	Eyes, skin, blood, liver, kidneys, cardiovascular system, reproductive system	Yellow, oily liquid with a pungent odor like paste shoe polish. BP: 411°F Fl.P: 190°F LEL(200°F): 1.8%
Petroleum hydrocarbons(Petroleum distillates)	8002-05-9	None established	TWA 350 mg/m ³ C 1800 mg/m ³ [15 min]	TWA 500 ppm (2000 mg/m ³)	1,100 [10% LEL]	Inhalation; ingestion; skin and/or eye contact	Irritation eyes, skin, nose, throat; dizziness, drowsiness, headache, nausea; dried/cracked skin; chemical pneumonitis	CNS, eyes, respiratory system, skin	Colorless liquid with a gasoline or kerosene-like odor BP: 86-460°F Fl. Pt = -40 to -86°F UEL: 5.9% LEL: 1.1% Flammable liquid

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
Phenol	108-95-2	TWA 5 ppm [skin]	TWA 5 ppm (19 mg/m ³) C 15.6 ppm (60 mg/m ³) [15-minute] [skin]	TWA 5 ppm (19 mg/m ³) [skin]	250 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, nose, throat; anorexia, weight loss; lassitude (weakness, exhaustion), muscle ache, pain; dark urine; cyanosis; liver, kidney damage; skin burns; dermatitis; ochronosis; tremor, convulsions, twitching	Eyes, skin, respiratory system, liver, kidneys	Colorless to light-pink, crystalline solid with a sweet, acrid odor. BP: 359°F UEL: 8.6% LEL: 1.8%
Polychlorinated Biphenyls (PCBs) (Chlorodiphenyl (42% Chlorine))	53469-21-9	TWA 1 mg/m³		0.5 mg/m ³	5 ppm	Dermal; inhalation; ingestion; skin and/or eye contact	Irritation eyes; chloracne; liver damage; reproductive effects; [potential occupational carcinogen]	Eyes, skin, liver, respiratory system	Colorless to light-colored, viscous liquid, hydrocarbon odor, BP: 617 - 734°F, non-flammable, LEL: NA, UEL: NA
n-Propylbenzene	103-65-1	None established	None established	None established	None established	inhalation, ingestion, skin and/or eye contact	Harmful if swallowed, Irritation eyes, skin, digestive tract, respiratory tract, central nervous system	Eyes, skin, central nervous system, respiratory system	colorless or light yellow liquid BP: 159 C FLP: 47 C UEL: 6% LEL: 0.8%
Selenium	7782-49-2	TWA 0.2 mg/m ³	TWA 0.2 mg/m ³	TWA 0.2 mg/m ³	1 mg/m ³ (as Se)	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat; visual disturbance; headache; chills, fever; dyspnea (breathing difficulty), bronchitis; metallic taste, garlic breath, gastrointestinal disturbance; dermatitis; eye, skin burns; in animals: anemia; liver necrosis, cirrhosis; kidney, spleen damage	Eyes, skin, respiratory system, liver, kidneys, blood, spleen	Amorphous or crystalline, red to gray solid. [Note: Occurs as an impurity in most sulfide ores.] BP: 1265°F
Silver	7440-22-4 (metal)	TWA 0.1 mg/m ³ (metal, dust, fume) TWA 0.01 mg/m ³ (Soluble compounds, as Ag)	TWA 0.01 mg/m ³	TWA 0.01 mg/m ³	10 mg/m ³ (as Ag)	inhalation, ingestion, skin and/or eye contact	Blue-gray eyes, nasal septum, throat, skin; irritation, ulceration skin; gastrointestinal disturbance	Nasal septum, skin, eyes	Metal: White, lustrous solid BP: 3632°F
Slop Oil	69029-75-0	None established	None established	None established	None established	Inhalation; ingestion	Irritation eyes, skin, gastrointestinal tract	Eyes, skin, gastrointestinal tract	Clear light to dark amber liquid, with mild hydrocarbon odor. BP: >500°F FLP: 250°F
Sulfuric Acid	7664-93-9	TWA 0.2 mg/m ³	TWA 1 mg/m ³	TWA 1 mg/m ³	15 mg/m ³	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat; pulmonary edema, bronchitis; emphysema; conjunctivitis; stomatitis; dental erosion; eye, skin burns; dermatitis	Eyes, skin, respiratory system, teeth	Colorless to dark-brown, oily, odorless liquid. BP: 554°F Noncombustible Liquid
Tetrachloroethene	127-18-4	TWA 25 ppm STEL 100 ppm listed as A3, animal carcinogen	Ca Minimize workplace exposure concentrations	TWA 100 ppm C 200 ppm (for 5 minutes in any 3-hour period), with a maximum peak of 300 ppm	Ca [150 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat, respiratory system; nausea; flush face, neck; dizziness, incoordination; headache, drowsiness; skin erythema (skin redness); liver damage; [potential occupational carcinogen]	Eyes, skin, respiratory system, liver, kidneys, central nervous system	Colorless liquid with a mild, chloroform-like odor. BP: 250°F Noncombustible Liquid
Toluene	108-88-3	TWA 20 ppm	TWA 100 ppm (375 mg/m ³) STEL 150 ppm (560 mg/m ³)	TWA 200 ppm C 300 ppm 500 ppm (10-minute maximum peak)	500 ppm	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, nose; lassitude (weakness, exhaustion), confusion, euphoria, dizziness, headache; dilated pupils, lacrimation (discharge of tears); anxiety, muscle fatigue, insomnia; paresthesia; dermatitis; liver, kidney damage	Eyes, skin, respiratory system, central nervous system, liver, kidneys	Colorless liquid with a sweet, pungent, benzene-like odor. BP: 232°F FLP: 40°F UEL: 7.1% LEL: 1.1% Class IB Flammable Liquid
1,1,1-Trichloroethane (Methyl Chloroform)	71-55-6	TWA 350 ppm STEL 450 ppm	C 350 ppm (1900 mg/m ³) [15-minute]	TWA 350 ppm (1900 mg/m ³)	700 ppm	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin; headache, lassitude (weakness, exhaustion), central nervous system depression, poor equilibrium; dermatitis; cardiac arrhythmias; liver damage	Eyes, skin, central nervous system, cardiovascular system, liver	Colorless liquid with a mild, chloroform-like odor. BP: 165°F UEL: 12.5% LEL: 7.5%
1,1,2-Trichloroethane	79-00-5	TWA 10 ppm [skin]	Ca TWA 10 ppm (45 mg/m ³) [skin]	TWA 10 ppm (45 mg/m ³) [skin]	Ca [100 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, nose; central nervous system depression; liver, kidney damage; dermatitis; [potential occupational carcinogen]	Eyes, respiratory system, central nervous system, liver, kidneys	Colorless liquid with a sweet, chloroform-like odor. BP: 237°F UEL: 15.5% LEL: 6%
Trichloroethene	79-01-6	TWA 10 ppm STEL 25 ppm	Ca	TWA 100 ppm C 200 ppm 300 ppm (5-minute maximum peak in any 2 hours)	Ca [1000 ppm]	inhalation, skin absorption, ingestion, skin and/or eye contact	Irritation eyes, skin; headache, visual disturbance, lassitude (weakness, exhaustion), dizziness, tremor, drowsiness, nausea, vomiting; dermatitis; cardiac arrhythmias, paresthesia; liver injury; [potential occupational carcinogen]	Eyes, skin, respiratory system, heart, liver, kidneys, central nervous system	Colorless liquid (unless dyed blue) with a chloroform-like odor. BP: 189°F UEL(77°F): 10.5% LEL(77°F): 8%
1,2,4-Trimethylbenzene	95-63-6	TWA 25 ppm	TWA 25 ppm (125mg/m ³)	None established	N.D.	Inhalation; ingestion; skin and/or eye contact	Eye, skin, nose, and throat, resp syst irritation; bronchitis; hypochromic anemia; headache, drowsiness, weakness, dizziness, nausea, incoordination, vomit, confusion; chemical pneumonitis	Eyes, skin, resp sys, CNS, blood	Clear, colorless liquid with a distinctive, aromatic odor BP: 337°F FLP: 112°F UEL: 6.4% LEL: 0.9% Class II Flammable liquid
1,2,4-Trimethylbenzene	95-63-6	TWA 25 ppm	TWA 25 ppm (125 mg/m ³)	None established	N.D.	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat, respiratory system; bronchitis; hypochromic anemia; headache, drowsiness, fatigue, dizziness, nausea, incoordination; vomiting, confusion; chemical pneumonitis (aspiration liquid)	Eyes, skin, respiratory system, central nervous system, blood	Clear, colorless liquid with a distinctive, aromatic odor. BP: 337°F FLP: 112°F UEL: 6.4% LEL: 0.9% Class II Flammable Liquid

Table 1. Toxicological, Physical, and Chemical Properties of Compounds Potentially Present at 1590 White Plains Road, Bronx, New York

Compound	CAS #	ACGIH TLV	NIOSH REL	OSHA PEL	IDLH	Routes of Exposure	Toxic Properties	Target Organs	Physical/Chemical Properties
1,3,5-Trimethylbenzene	108-67-8	TWA 25 ppm	TWA 25 ppm (125mg/m ³)	None established	N.D.	Inhalation; ingestion; skin and/or eye contact	Eye, skin, nose, and throat, resp syst irritation; bronchitis; hypochromic anemia; headache, drowsiness, weakness, dizziness, nausea, incoordination, vomit, confusion; chemical pneumonitis	Eyes, skin, resp sys, CNS, blood	Clear, colorless liquid with a distinctive, aromatic odor BP: 329°F FL.P: 122°F Class II Flammable liquid
1,3,5-Trimethylbenzene	108-67-8	TWA 25 ppm	TWA 25 ppm (125 mg/m ³)	None established	N.D.	inhalation, ingestion, skin and/or eye contact	Irritation eyes, skin, nose, throat, respiratory system; bronchitis; hypochromic anemia; headache, drowsiness, lassitude (weakness, exhaustion), dizziness, nausea, incoordination; vomiting, confusion; chemical pneumonitis (aspiration liquid)	Eyes, skin, respiratory system, central nervous system, blood	Clear, colorless liquid with a distinctive, aromatic odor. BP: 329°F FL.P: 122°F Class II Flammable Liquid
Vinyl Chloride	75-01-4	TWA 1 ppm	Carcinogen	TWA 1 ppm C 5 ppm [15-minute]	Ca [IDLH value has not been determined]	inhalation, skin, and/or eye contact (liquid)	Lassitude (weakness, exhaustion); abdominal pain, gastrointestinal bleeding; enlarged liver; pallor or cyanosis of extremities; liquid: frostbite; [potential occupational carcinogen]	Liver, central nervous system, blood, respiratory system, lymphatic system	Colorless gas or liquid (below 7°F) with a pleasant odor at high concentrations. BP: 7°F UEL: 33.0% LEL: 3.6% Flammable Gas
Xylene (m, o & p isomers)	108-38-3, 95-47-6, 106-42-3	TWA 100 ppm STEL 150 ppm	TWA 100 ppm (435 mg/m ³)	TWA 100 ppm (435 mg/m ³)	900 ppm	Skin absorption, inhalation, ingestion, skin, and/or eye contact	Irritation eyes, skin, nose, throat; dizziness, excitement, drowsiness, incoordination, staggering gait; corneal vacuolization; anorexia, nausea, vomiting, abdominal pain; dermatitis	Eyes, skin, respiratory system, central nervous system, gastrointestinal tract, blood, liver, kidneys	Colorless liquid with an aromatic odor BP: 282°F, 292°F, 281°F Fl. Pt. 82°F, 90°F, 81°F LEL: 1.1%, 0.9%, 1.1% UEL: 7.0%, 6.7%, 7.0% Class C Flammable Liquid
Zinc Oxide	1314-13-2	TWA 2 mg/m3 STEL 10 mg/m³	None established	TWA 10 mg/m3 (for zinc oxide fume)	None established	skin and/or eye contact, inhalation, ingestion	Irritation eyes, skin, respiratory tract; gastrointestinal disturbances	Eyes, skin, respiratory system,	Bluish gray solid BP: 1664.6°F Flammable

2014 TLVs® and BEIs®, American Conference of Industrial Hygienists

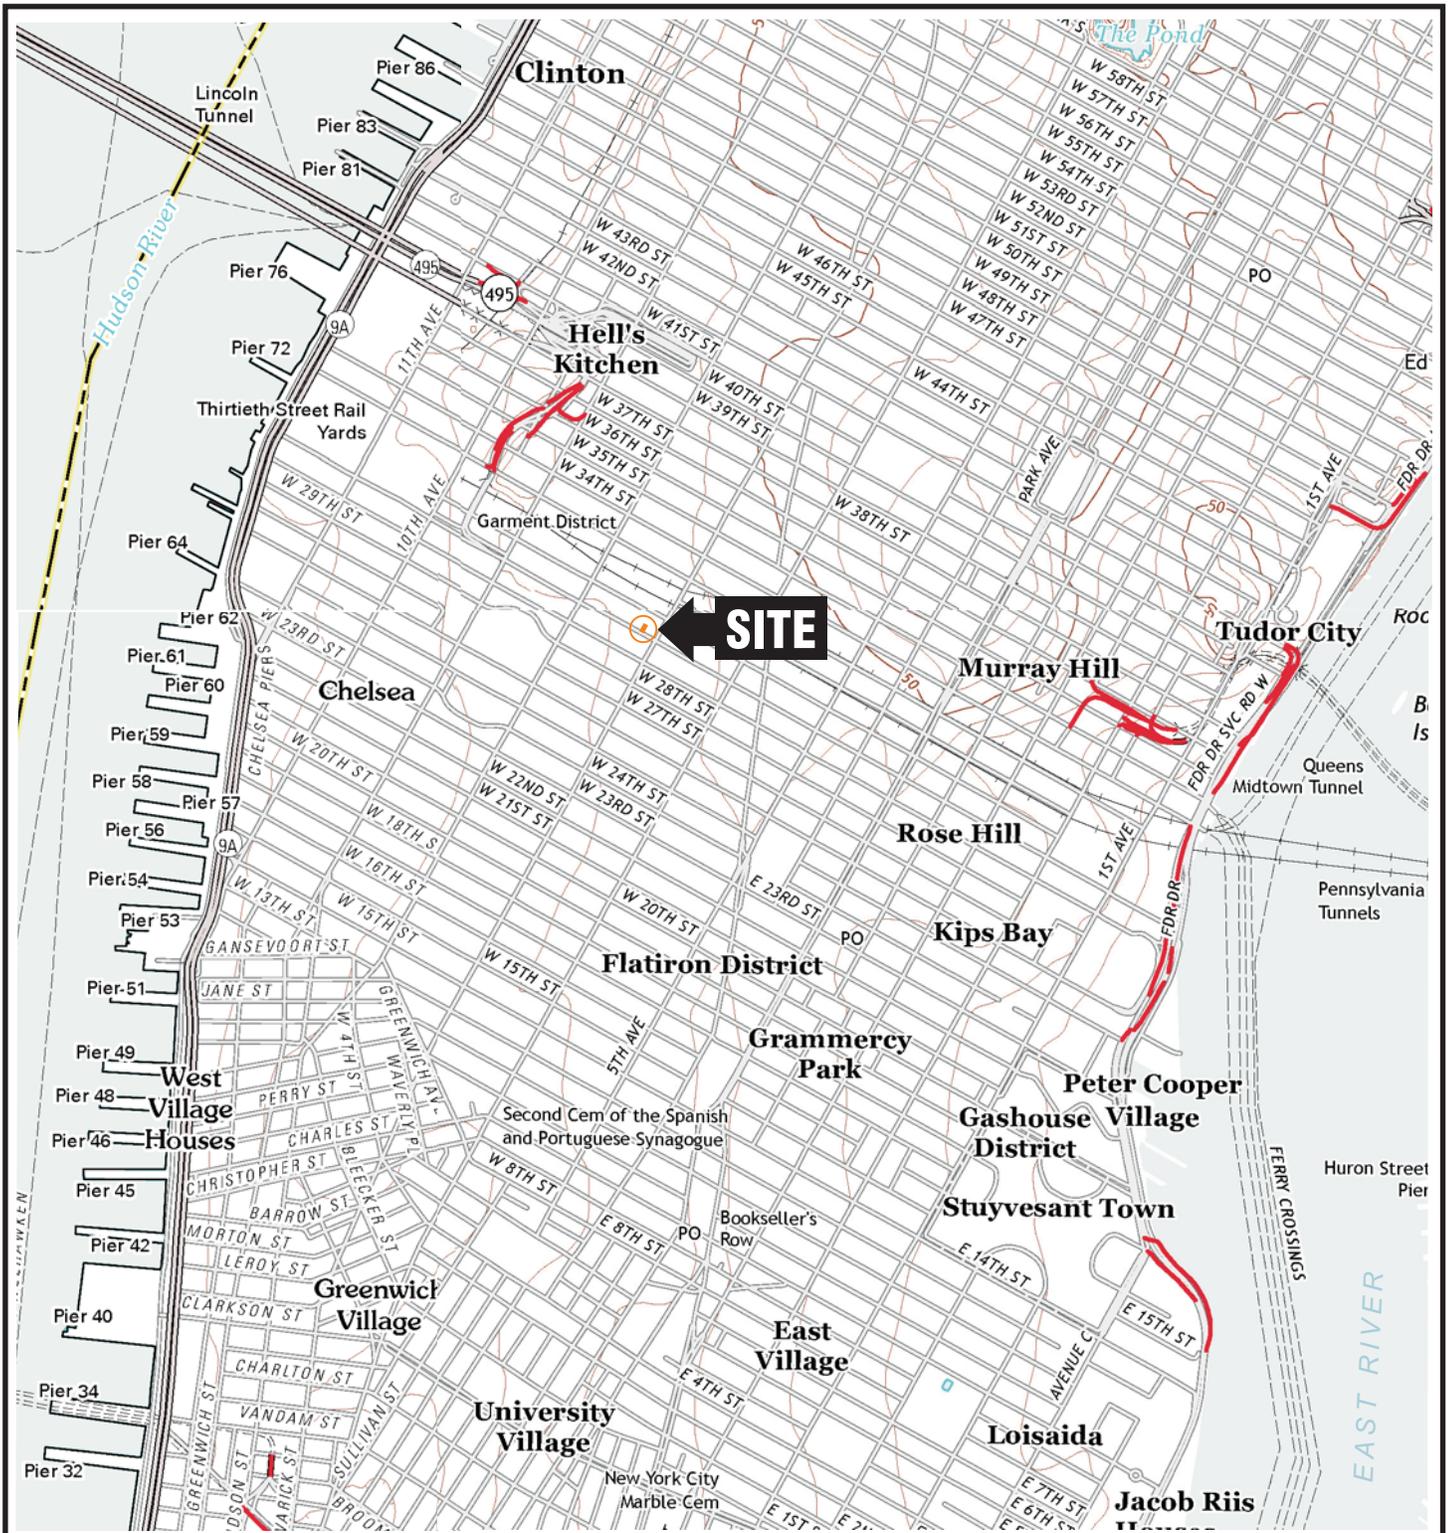

Abbreviations:

ACGIH – American Conference of Governmental Industrial Hygienists.
 BP – boiling point at 1 atmosphere, °F
 C – Ceiling, is a concentration that should not be exceeded during and part of the working exposure.
 CAS# – Chemical Abstracts Service registry number which is unique for each chemical.
 Ft Pt. – Flash point
 IDLH – Immediately Dangerous to Life and Health concentrations represent the maximum concentration from which, in the event of respirator failure, one could escape within 30 minutes without a respirator and without experiencing any escape-impairing or irreversible health effects.
 LEL – Lower explosive (flammable) limit in air, % by volume (at room temperature)
 mg/m³ – Milligrams of substance per cubic meter of air
 NIOSH - National Institute for Occupational Safety and Health.
 OSHA – Occupational Safety and Health Administration
 PEL - OSHA Permissible Exposure Limit (usually) a time weighted average concentration that must not be exceeded during any 8 hour work shift of a 40 hr work week.
 ppm – parts per million
 REL – NIOSH Recommended Limit indicated a time weighted average concentration that must not be exceeded during any 10 hour work shift of a 40 hr work week
 STEL – Short-term exposure limit (ST)
 TLV - ACGIH Threshold Limit Values (usually 8 hour time weighted average concentrations).
 TWA – 8-hour, time-weighted average
 UEL – Upper explosive (flammable) limit in air, % by volume (at room temperature)

APPENDIX A

Job Safety Analysis Forms*

JOB SAFETY ANALYSIS		Cntrl. No.	DATE:	<input checked="" type="checkbox"/> NEW <input type="checkbox"/> REVISED	PAGE 1 of 2
JSA TYPE CATEGORY GENERIC		WORK TYPE	WORK ACTIVITY (Description)		
DEVELOPMENT TEAM	POSITION / TITLE		REVIEWED BY:	POSITION / TITLE	
REQUIRED AND / OR RECOMMENDED PERSONAL PROTECTIVE EQUIPMENT					
<input type="checkbox"/> LIFE VEST <input type="checkbox"/> HARD HAT <input type="checkbox"/> LIFELINE / BODY HARNESS <input type="checkbox"/> SAFETY GLASSES	<input type="checkbox"/> GOGGLES <input type="checkbox"/> FACE SHIELD <input type="checkbox"/> HEARING PROTECTION <input type="checkbox"/> SAFETY SHOES	<input type="checkbox"/> AIR PURIFYING RESPIRATOR <input type="checkbox"/> SUPPLIED RESPIRATOR <input type="checkbox"/> PPE CLOTHING:	<input type="checkbox"/> GLOVES: <input type="checkbox"/> OTHER		
REQUIRED AND / OR RECOMMENDED EQUIPMENT					
Required Equipment:					
Commitment to LPS – All personnel onsite will actively participate in SPSA performance by verbalizing SPSAs throughout the day.					
EXCLUSION ZONE: A _ foot exclusion zone will be maintained around (indicate equipment).					
Assess 1JOB STEPS	Analyze 2POTENTIAL HAZARDS		Act 3CRITICAL ACTIONS		
1. [INSERT JOB STEP]	1a. CONTACT: [INSERT HAZARD]	1a.			
	1b. CAUGHT: [INSERT HAZARD]	1b.			
	1c. FALL: [INSERT HAZARD]	1c.			
	1d. EXPOSURE: [INSERT HAZARD]	1d.			
	1e. EXERTION: [INSERT HAZARD]	1e.			
	1f. ENERGY SOURCE: [INSERT HAZARD]	1f.			
2. [INSERT JOB STEP]	2a. CONTACT: [INSERT HAZARD]	2a.			
	2b. CAUGHT: [INSERT HAZARD]	2b.			

¹ Each Job or Operation consists of a set of tasks / steps. Be sure to list all the steps needed to perform job.

² A hazard is a potential danger. Break hazards into five types: Contact - victim is struck by or strikes an object;

Caught - victim is caught on, caught in or caught between objects; Fall - victim falls to ground or lower level (includes slips and trips); Exertion - excessive strain or stress / ergonomics / lifting techniques; Exposure - inhalation/skin hazards.

³ Using the first two columns as a guide, decide what actions or procedures are necessary to eliminate or minimize the risk. List the recommended safe operating procedures. Say exactly what needs to be done - such as "use two persons to lift." Avoid general statements such as, "be careful."

	<p>2c. FALL: [INSERT HAZARD]</p> <p>2d. EXPOSURE: [INSERT HAZARD]</p> <p>2e. EXERTION: [INSERT HAZARD]</p> <p>2f. ENERGY SOURCE: [INSERT HAZARD]</p>	<p>2c.</p> <p>2d.</p> <p>2e.</p> <p>2f.</p>

REQUIRED AND / OR RECOMMENDED EQUIPMENT					
Required Equipment: Site map and/or guide familiar with Site, operating cell phone or walkie-talkie if Site allows.					
Commitment to LPS – All personnel onsite will actively participate in SPSA performance by verbalizing SPSAs throughout the day.					
EXCLUSION ZONE (EZ): A minimum 10' exclusion zone will be maintained around equipment.					
Assess JOB STEPS	Analyze 2POTENTIAL HAZARDS	Act 3CRITICAL ACTIONS			
1. Check in with Site manager.	1a. CONTACT/EXPOSURE/FALL: Lack of communication could result in H&S incident.	1a. Inform Site personnel of work scope, timeline and location(s). 1a. Inquire about hazards and other activities taking place at the Site. 1a. Discuss emergency evacuation procedures and muster points with Site manager..			
2. Traversing the Site and setting up at work locations.	2a. CONTACT: Property damage and personal injury caused by obstructions/vehicles or unauthorized personnel at remote Sites. 2b. FALL: Uneven terrain and weather conditions. Overgrown shrubs and vines. Equipment in the work zone. 2c. OVEREXERTION: Muscle strain while carrying equipment. 2d. EXPOSURE: Biological hazards - ticks, bees/wasps, poison ivy, insects, etc. (Ticks are most active any time the temperature is above freezing, typically from March to November.)	2a. Maintain speed limit of 5 mph on-site. 2a. All equipment must be stowed and secured prior to moving. Use wheel chocks on all construction vehicles when not in motion. 2a. Drive on established roadways. 2a. Yield to all pedestrians. 2a. Do not back up vehicle without spotter where visibility is limited; use pull-through spots or back into parking spots; use an audible signal (horn/back-up alarm) when backing up vehicles. 2a. Wear high visibility clothing/safety vest. If working at remote Site, add orange accessories during hunting season. 2b. Inspect walking path for uneven terrain, weather-related hazards (i.e., ice, puddles, snow, etc.), and obstructions prior to mobilizing equipment. 2b. Use established pathways and walk on stable, secure ground. 2b. Communicate traversing hazards with others 2c. When carrying equipment to/from work area, use proper lifting techniques; keep back straight, lift with legs, keep load close to body, never reach with a load. Ensure that loads are balanced to reduce the potential for muscle strain. Use mechanical assistance or make multiple trips to carry equipment. 2c. Two people or a mechanical lifting device are required when lifting objects over 50 lbs or when the shape makes the object difficult to lift. 2d. Inspect area to avoid contact with biological hazards. 2d. Ticks: <ul style="list-style-type: none"> • Treat outer clothing including pants, shirts, socks, boots and hats the evening before use with Permethrin (allowing at least two hours before use). • Apply DEET to exposed skin before travelling to the Site and reapply after two hours. • Check for ticks during and after work. 2d. Bees: Use bee spray to remove nests. Protect exposed skin with insect repellent. 2d. Poison Ivy: <ul style="list-style-type: none"> • Identify areas of poison ivy and spray with weed killer. Don Tyvek and rubber boots while traversing poison ivy areas. • If skin comes in contact with poison ivy, wash skin thoroughly with soap and water. 			

¹ Each Job or Operation consists of a set of tasks / steps. Be sure to list all the steps needed to perform job.

² A hazard is a potential danger. Break hazards into five types: Contact - victim is struck by or strikes an object; Caught - victim is caught on, caught in or caught between objects; Fall - victim falls to ground or lower level (includes slips and trips); Exertion - excessive strain or stress / ergonomics / lifting techniques; Exposure - inhalation/skin hazards; Energy Source – electricity, pressure, compression/tension.

³ Using the first two columns as a guide, decide what actions or procedures are necessary to eliminate or minimize the risk. List the recommended safe operating procedures. Say exactly what needs to be done - such as "use two persons to lift." Avoid general statements such as, "be careful."

	<p>2e. EXPOSURE: Heat Stress & Cold Stress. Personal injury from working in inclement weather conditions.</p>	<p>2e. Wear sunscreen with SPF 15 or greater on exposed skin whenever 30 minutes or more of sun exposure is expected.</p> <p>2e. Watch for heat stress symptoms (muscle cramping, exhaustion, dizziness, rapid and shallow breathing). Take breaks as needed.</p> <p>2e. Watch for cold stress symptoms (severe shivering, slowing of body movement, weakness, stumbling or inability to walk, collapse). Take breaks as needed.</p> <p>2e. Wear appropriate rain gear as needed.</p> <p>2e. Take frequent breaks if tired, wet, or cold/hot. Drink water.</p> <p>2e. If lightning is observed, wait 30 minutes after last thunder boom/lightning bolt in a sheltered location (car acceptable) before starting work again.</p>
<p>3. Define and secure the work area.</p>	<p>3a. CONTACT: Personal injury or property damage from other vehicles on-site.</p>	<p>3a. Face traffic, maintain eye contact with oncoming vehicles, and establish a safe exit route.</p> <p>3a. Look both ways in high traffic areas.</p> <p>3a. Position vehicle to protect against oncoming traffic.</p> <p>3a. Use 42" traffic cone and caution tape to delineate work area. Use a spotter in high traffic areas.</p> <p>3a. Wear high visibility clothing/safety vest.</p>
<p>4. Walking near heavy equipment and machinery.</p>	<p>4a. CONTACT: Personal injury from Site and roadway traffic. Personal injury from flying debris.</p> <p>4b. OVEREXERTION: Personal injury from lifting/moving/rotating equipment.</p> <p>4c. EXPOSURE: Hearing damage from excavation activities. Inhalation/exposure to hazardous vapors and or dust.</p> <p>4d. EXPOSURE: Working in a remote area.</p>	<p>4a. See 3a.</p> <p>4a. Place traffic cones to re-direct traffic flow around work area and to alert others as to activity taking place. Evaluate possible need for police detail and request as needed.</p> <p>4a. Maintain a minimum exclusion zone of 10 feet from all equipment. Task specific JSAs should be referenced to determine the actual exclusion zone for the piece of equipment being used.</p> <p>4a. Keep body parts out of the line of fire of pinch points.</p> <p>4a. Routinely inspect work area and be aware of location of all Site personnel. Make eye contact with spotter, if provided, or operator prior to entering the work area.</p> <p>4a. Wear safety glasses at all times.</p> <p>4b. See 2c.</p> <p>4c. Monitor air quality with multi-gas meter and dust meter, if necessary. Use water to suppress dust, if necessary. Wear dust mask, if necessary.</p> <p>4c. Wear hearing protection if >85 dBA.</p> <p>4c. Always wear leather gloves when handling any tools or equipment. Wear cut-resistant gloves (Kevlar or similar) when handling sharp objects, glassware or cutting tools.</p> <p>4d. Use the "buddy system" whenever possible. If working alone, contact PM upon arrival/departure, as well as during work activities prior to commencing work.</p> <p>4d. Always carry a communication (i.e., cell phone, walkie-talkie) or directional (i.e., map, compass, etc.) device when traversing remote areas.</p>
<p>5. Working in adverse weather conditions.</p>	<p>5a. EXPOSURE: Heat Stress & Cold Stress. Personal injury from working in inclement weather conditions.</p>	<p>5a. Watch for heat stress symptoms (muscle cramping, exhaustion, dizziness, rapid and shallow breathing). Take breaks as needed.</p> <p>5a. Watch for cold stress symptoms (severe shivering, slowing of body movement, weakness, stumbling or inability to walk, collapse). Take breaks as needed.</p> <p>5a. Wear appropriate rain gear as needed.</p> <p>5a. Take frequent breaks if tired, wet, or cold/hot. Drink water.</p> <p>5a. If lightning is observed, wait 30 minutes after last thunder boom/lightning bolt in a sheltered location (car acceptable) before starting work again.</p>
<p>6. Departing Site.</p>	<p>6a. EXPOSURE: Exposure to unnecessary hazards should personnel believe Roux is on-Site during an emergency and conduct a search.</p>	<p>6a. Sign out or notify Site personnel of your departure.</p>

¹ Each Job or Operation consists of a set of tasks / steps. Be sure to list all the steps needed to perform job.

² A hazard is a potential danger. Break hazards into five types: Contact - victim is struck by or strikes an object; Caught - victim is caught on, caught in or caught between objects; Fall - victim falls to ground or lower level (includes slips and trips); Exertion - excessive strain or stress / ergonomics / lifting techniques; Exposure - inhalation/skin hazards; Energy Source – electricity, pressure, compression/tension.

³ Using the first two columns as a guide, decide what actions or procedures are necessary to eliminate or minimize the risk. List the recommended safe operating procedures. Say exactly what needs to be done - such as "use two persons to lift". Avoid general statements such as, "be careful".

JOB SAFETY ANALYSIS		Cntrl. No. GEN-010	DATE: 1/15/2014	<input type="checkbox"/> NEW <input checked="" type="checkbox"/> REVISED	PAGE 1 of 2
JSA TYPE CATEGORY GENERIC		WORK TYPE Site Recon	WORK ACTIVITY (Description) Mobilization/Demobilization		
DEVELOPMENT TEAM		POSITION / TITLE	REVIEWED BY:	POSITION / TITLE	
Jared Lefkowitz		Staff Assistant Scientist	Daniel Abberton	SHSM	
John Williams		OHSM	Mike Ritorto	Project Hydrogeologist	
			Joe Gentile	CHSM	
REQUIRED AND / OR RECOMMENDED PERSONAL PROTECTIVE EQUIPMENT					
<input type="checkbox"/> LIFE VEST <input checked="" type="checkbox"/> HARD HAT <input type="checkbox"/> LIFELINE / BODY HARNESS <input checked="" type="checkbox"/> SAFETY GLASSES		<input type="checkbox"/> GOGGLES <input type="checkbox"/> FACE SHIELD <input checked="" type="checkbox"/> HEARING PROTECTION (as needed) <input checked="" type="checkbox"/> SAFETY SHOES: <u>Steel Toe or composite toe</u>	<input type="checkbox"/> AIR PURIFYING RESPIRATOR <input type="checkbox"/> SUPPLIED RESPIRATOR <input checked="" type="checkbox"/> PPE CLOTHING: <u>Fluorescent reflective vest of high-visibility clothing;</u> <u>sleeved shirt; long pants</u>	<input checked="" type="checkbox"/> GLOVES: <u>Leather, nitrile, and cut resistant (as needed)</u> <input type="checkbox"/> OTHER	
REQUIRED AND / OR RECOMMENDED EQUIPMENT					
Required Equipment: None					
Commitment to LPS – All personnel onsite will actively participate in SPSA performance by verbalizing SPSAs throughout the day.					
EXCLUSION ZONE: A minimum exclusion zone of 10' will be maintained around moving equipment (if heavy equipment is utilized)					
Assess JOB STEPS	Analyze POTENTIAL HAZARDS	Act CRITICAL ACTIONS			
1. Mobilize/demobilize and establish work area	<p>1a. FALL: Slip/trips/falls from obstructions, uneven terrain, weather conditions, heavy loads, and/or poor housekeeping.</p> <p>1b. CONTACT: Personal injury and/or property damage caused by being struck by Site traffic or equipment used in Site activities.</p> <p>1c. CAUGHT: Personal injury from pinch points and being in line-of-fire of vehicle and/or equipment.</p>	<p>1a. Use 3 points-of-contact/ensure secure footing when entering and exiting vehicle.</p> <p>1a. Inspect walking path for uneven terrain, steep hills, obstructions, and/or weather-related hazards (i.e., ice, snow, and puddles) prior to mobilizing equipment. Use established pathways. Walk on stable/secure ground.</p> <p>1a. Do not climb over stored materials/equipment; walk around. Practice good housekeeping; organize and store equipment neatly in one area.</p> <p>1a. Wear boots with adequate treads.</p> <p>1a. Delineate unsafe areas with 42" cones, caution tape and/or flagging.</p> <p>1b. Observe and maintain the posted speed limits.</p> <p>1b. When first arriving onsite, park vehicles in designated parking space and/or out of the way locations. Use parking brake on all vehicles and tire chocks on work trucks and trailers.</p> <p>1b. Check in with Site Manager/Supervisor to ensure coordination with other Site activities and to discuss any special hazards. Ensure that short-service employees (SSE) are identified.</p> <p>1b. Identify potential traffic sources.</p> <p>1b. Wear PPE including high visibility clothing or reflective vest.</p> <p>1b. Use a spotter while moving work vehicles; plan ahead to avoid backing whenever possible.</p> <p>1b. Maintain a minimum 10' exclusion zone when vehicles are in motion. When backing up truck rig with an attached trailer use a second spotter if there is tight clearance simultaneously on multiple sides of the equipment or if turning angles limit driver visibility.</p> <p>1b. Delineate work area with 42" cones, flags, caution tape, and/or other barriers.</p> <p>1b. Position "Work Area" signs at Site entrances, if possible, or at either side of work area.</p> <p>1b. Position largest vehicle to protect against oncoming traffic.</p> <p>1b. Face traffic, maintain eye contact with oncoming vehicles, use a spotter, and establish a safe exit route.</p> <p>1b. Observe potential overhead and ground surface features that may interfere with moving equipment. Clear the path of physical hazards prior initiating mobilization.</p> <p>1c. Make sure driver has engaged parking brake and placed wheel chocks in a position to prevent movement. Be sure that vehicle is parked in front/down gradient of work area.</p> <p>1c. Wear leather gloves when handling any tools or equipment. Wear cut-resistant gloves (Kevlar or similar) when handling sharp objects/cutting tools/glass.</p> <p>1c. Keep body parts away from line-of-fire of equipment.</p> <p>1c. Always carry tools by the handles and/or designated carrier. Ensure sharp-edged tools are sheathed/secure.</p>			

¹ Each Job or Operation consists of a set of tasks / steps. Be sure to list all the steps needed to perform job.

² A hazard is a potential danger. Break hazards into five types: Contact - victim is struck by or strikes an object; Caught - victim is caught on, caught in or caught between objects; Fall - victim falls to ground or lower level (includes slips and trips); Exertion - excessive strain or stress / ergonomics / lifting techniques; Exposure - inhalation/skin hazards; Energy Source – electricity, pressure, compression/tension.

³ Using the first two columns as a guide, decide what actions or procedures are necessary to eliminate or minimize the risk. List the recommended safe operating procedures. Say exactly what needs to be done - such as "use two persons to lift." Avoid general statements such as, "be careful."

		<p>1c. Remove any loose jewelry. Avoid wearing loose clothing and/or ensure loose clothing is secure.</p> <p>1c. Secure all items on the equipment, tighten up any items or features that have potential to shift or break during mobilization.</p>
